# The Independent's Fourth Annual Contest For American Schools

## Eight Stories of Good Cheer

**G**OOD CHEER! What meaning in the words! Good Cheer! Not a grumpy pessimism that scowls on everything in life; not a foolish optimism that blinds itself to truth; not apeline buffoonery that plays the fool—just Good Cheer: heartiness, zest in life, gladness of being alive, the eternal spirit of youth, comradeship, fellow-feeling, good friendship, cheerful old age, happy lovers, pleasant memories, party, festival, and high occasion—Life, bright-eyed, sparkling, cordial, greeting one with a hearty handshake, slapping one on the back, and saying: "Good Cheer, my Friend, Good Cheer!"

If the world ever needed Good Cheer it needs it now. It always needs Good Cheer in the darkest hours. It was that spirit that uplifted President Lincoln in the sad years of the Civil War, and made his heart strong for kindness, and manly for action; it is that spirit that led President Wilson to help decorate a Christmas tree, and to play with the children in the White House—radiant, manly Good Cheer that lightens the heart, strengthens the soul, and makes one strong for the hard daily task.

In this time, especially, THE INDEPENDENT takes great pleasure in announcing that, beginning with the number for March 2, 1918, it will publish a series of eight selections of Good Cheer, four of which will be from English literature, and four from American literature. A short introduction giving all that is necessary for a full understanding and appreciation will precede every selection.

The selections are not preachments, not moralizings—they are just stories of happiness and joy-in-life. They are masterpieces in writing. They awaken appreciation of artistic effects. They strengthen the love of good literature. They bring old names to the front, but by no means exclude the new. A better, broader, more representative series of stories of Good Cheer could hardly be found.

The eight stories, selected and edited by Frederick Houk Law, will be printed in the following order:

1. The Cheeryble Brothers' Banquet, by Charles Dickens.  
Heartiness and Good Cheer in the business world, with a welcome for all.
2. The Party at the Red House, by George Eliot.  
High festival in an English country village in the days of old.
3. Colonel Newcome's Return, by William Makepeace Thackeray.  
The beauty of loving memories and old associations.
4. The Little Minister Dines Out, by James Matthew Barrie.  
A heroine as mischievous as Rosalind in "As You Like It"; a lover as ardent as Orlando; and a poverty-stricken woman honored by unusual guests.
5. An Old-Fashioned Christmas Dinner, by Washington Irving.  
An old-time Christmas dinner with the happy spirit of a thousand different years combined in one.
6. Colonel Carter Welcomes a Friend, by F. Hopkinson Smith.  
A hearty greeting, the warm hand of friendship, and entertainment by a kindly, childlike character.
7. What Happened at School, by Jean Webster.  
School-girl letters full of youth, high spirits, and the fun and pranks of modern school life.
8. Mrs. Wigg's Benefit Dance, by Alice Caldwell Hegan.  
An unexpected party so full of joy that it leads to the conclusion that the world is full of goodness.

THE INDEPENDENT offers a Good Cheer Certificate for the best composition out of every ten submitted by any literary society, school, or college in the United States or its possessions, the composition to be based upon the above named eight stories of Good Cheer. Any American educational institution, private or public, elementary, secondary, or collegiate, or any regularly organized literary society, may take part in the contest, but no certificate will be awarded to an institution or society unless at least ten persons take part in the contest. Every competitor must complete an original composition of from 500 to 2500 words on the general topic "Good Cheer," and must make reference to all of the articles in the series. The composition may be in any form that the competitor wishes to employ. It may be narration, description, exposition, or argument. It may be given in dramatic form, in verse, in a series of connected stories, or in any form that can be devised. The judges will give special consideration to originality of treatment.

The awards will be made under the direction of instructors, or by regularly appointed committees. The only condition is that the instructor, or the chairman of the committee, shall, in every case, forward to the School Editor of THE INDEPENDENT the names of the ten competitors, and a copy of the composition to which the award has been made. The Good Cheer Certificate will be sent at once to the winning competitor.

The contest is open free to all schools and literary societies. A subscription to THE INDEPENDENT is not obligatory. Your school or society does not have to compete with any other.

THE INDEPENDENT, 119 West 40th Street, New York City:

We wish to enter THE INDEPENDENT Good Cheer Contest for American schools. It is probable that ..... persons will compete. Please prepare Good Cheer Certificates for one out of every ten of that number.

Signed ..... City.....

School ..... State .....

# JANUARY BOOKS

## THE MILLENNIAL HOPE: A PHASE OF WAR-TIME THINKING

By **SHIRLEY J. CASE**, *Professor of Early Church History and New Testament Interpretation, the University of Chicago.*

Are the ills of society to be righted by an early and sudden destruction of the present world, or is permanent relief to be secured only by a gradual process of strenuous endeavor?

Are human efforts to make the present world a safer and better place in which to live, misguided? Has God, as an Almighty Potentate, foreordained to failure all the efforts of men to establish improved forms of government?

"By persuading men that rapid deterioration and early destruction of the present world are determined by divine decree, the enemy of reform has a mighty instrument for strangling the citizen's sense of duty. This is equally true whether the call to service is merely local or whether it is national or international."

\$1.25, postage extra.

## THE THIRD AND FOURTH GENERATION:

### AN INTRODUCTION TO HEREDITY

By **ELLIOT R. DOWNING**, *Associate Professor of Natural Science in the School of Education, The University of Chicago.*

Within a generation science has acquired much accurate knowledge regarding the phenomena of heredity and the laws governing them. Already this new information has been applied by the plant and animal breeder with important economic results. It has probably even greater value in its application to human parenthood and the problems of racial betterment. It is, then, information that should be familiar to all people, not merely to the scientist.

The selected bibliography affords reference to more detailed discussions.

*Suitable as a textbook for classes of young people in Sunday school, high school and college.*

*Of interest to the individual reader.*

\$1.00, postage extra.

## THE POLISH PEASANT IN EUROPE AND AMERICA

### Monograph of an Immigrant Group

By **WILLIAM I. THOMAS** and **FLORIAN ZNANIECKI**, *the University of Chicago*

A series of several volumes, the first two of which are announced for publication in January, 1918, under the title

### Primary-Group Organization

*Each volume \$2.50, postage extra.*

The main purpose of the series is to show the dependence of the individual on society, and the dependence of society upon the individual; and eventually to determine in a scientific manner what are the laws of this dependence, and how the relation can be controlled in such a way as to make an ideally efficient society.

The materials incorporated and their systematization will prove of interest to students of history, psychology, economics, education, political science, etc. The information and the sociological laws will be of immediate practical applicability in social questions like immigration, crime, and war.

*Further information regarding the series, or individual volumes of the series, will be furnished on request*

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY  
SECTION I. COMPOSITION.

##### The Story of the Week.

1. Write a letter such as the Secretary of the Treasury might have written in explaining the reasons for requiring all foreign insurance companies to secure licenses.
2. You are to speak at a dinner given to a number of private soldiers who have gone from your community. Take for your topic the subject of army promotions.
3. You are at a meeting of a labor union. Speak for or against a motion for cheap labor in California.
4. Read "The Loyalty of Teachers." Write a letter to The Independent telling what your school, and your teacher, are doing from patriotic motives.
5. You are member of an art society. Write a letter to be signed by the president of the society expressing appreciation of Mr. Morgan's recent gift to art.
6. Write a paragraph of contrast on American commerce today and in the time of Edmund Burke.

##### Editorial Articles.

1. You are at a neighborhood meeting. Give a talk on "The Undesirability of Commerce." Make your talk apply to local conditions.

##### Shadows of War. By Markarid Garodian.

1. The article is probably a shorthand report of what the thirteen-year-old girl said. Why are her own words given, without elaboration? What is one of the means of attaining pathos? How does the article make you feel toward the governments of Turkey and of Germany?

##### Our Uncensorious Censor. By Donald Wilhelm.

1. Sum up the facts that article gives concerning George Creel, and his work. Explain how these facts have been made interesting. Write a similar article about one of your teachers, or some other person with whose work you are familiar.

##### Sectionalizing Public Opinion. By Will Payne.

1. If you agree with the article, write a letter to your Congressman asking for a change in the postal provisions, and summarizing the points made here, in support of your request. If your teacher says the letter is good, send it to your Congressman.

##### Live Wire Housekeeping.

1. Write an advertisement for any of the articles named on the page.

##### Food Will Win the War.

1. Give a talk in which you show how America may conserve her supply of food.

##### The Room You Live In. By Agnes Foster Wright.

1. Summarize the principles for making a room attractive.

##### Given Four Walls and a Ceiling. By Louise Day Putnam Lee.

1. Give a talk in which you show in what the real beauty of a room consists.

##### The Period Styles. By George Leland Hunter.

1. Give a talk in which you point out the different styles of furniture, and their respective elements of beauty.

##### The Motorist's Winter Problems. By Clarkson Lloyd.

1. You are at a meeting of automobile owners. Give a talk on the care of automobiles in winter.

#### SECTION II. LITERATURE.

##### The New Books.

1. What is an autobiography? Why is Professor Matthews' autobiography of unusual interest?
2. Tell something concerning the literary work of every one of the following: Austin Dobson, DuMaurier, Thomas Hardy, William Black, Stevenson, Kipling, Henry James, Hawthorne.
3. Tell something about the following: "ballades and other French forms" of verse; The New Arabian Nights; McAndrews' Hymn.

#### SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in the news of the week: aliens, anarchy, tapestry, jetties, compromise, inaccessible, dynasty, annuities, indemnities, embargo, bibliography.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. Bringing the War Home to the People—"Our Uncensorious Censor."

1. What impression of the personal and mental characteristics of the Director of Public Information do you get from this article?
2. What had Mr. Creel accomplished before he was chosen to fill his present position? Why was he chosen?
3. What are the means which Mr. Creel is using in bringing the war home to the people?
4. Why has the author chosen the above title for his article?

##### II. Nationalism and the Public Press—"Sectionalizing Public Opinion."

1. Compare this article with the editorial, "A Bill for the Promotion of Sectionalism," published in The Independent, October 6, 1917. In which of the two is the case presented most forcefully?
2. Why does the author of this article believe that newspapers and periodicals should be treated like letters rather than like parcels by the post office? Do you agree with him?
3. Why, according to his judgment, is it bad practise to separate reading matter from advertisements in administering postal rates?

##### III. The Railroad Situation—"The Railroad Crisis," "The Railroads Nationalized."

1. What are the conditions which have brought about the financial embarrassment of the American railroads?
2. Why does the author of "The Railroad Crisis" say (third paragraph): "... the remedy is not subsidies in the form of large loans," etc.?
3. "The war is to blame, of course, for emphasizing the condition." How far is this true?
4. What were the arguments presented in favor of increasing freight rates? against increasing them? How will the Government probably handle this situation now that it has taken over the administration of the railroads?
5. Sketch, as far as you are able, the plan of organization that the Government will probably adopt in its administration of the railroads.
6. "After the railroads the coal mines, the telegraph and telephone lines—in fact every natural monopoly of national scope." List as many monopolies of this sort as you can and describe the present situation of each, pointing out why Government control is needful.

##### IV. Distribution and Exchange—"The Undesirability of Commerce."

1. In most books on Economics you will find some statement to the effect that the extent of a country's commerce is a fair index of that country's civilization. In what sense is this true?
2. Can you reconcile the above statement with the declaration: "For commerce is a necessary evil"?
3. Answer the question: "What should a country or community import?"
4. How far do you agree with the assertion made in the last paragraph of the editorial? Do the facts as you know them justify the last sentence?

##### V. Turkish Atrocities in Armenia—"Shadows of War."

1. From the account given in this article, write a description of social conditions in Armenia as they existed previous to the beginning of the war.
2. Write a similar description of conditions which have resulted from the war.
3. Are conditions in Armenia worse than conditions in Belgium? What is the basis for your statement?

##### VI. The Problem of Food—"Food Will Win the War."

1. Compare the beginnings of food control in Germany with the methods at present in use in the United States. Do you see any signs of the adoption of German methods in this country?
2. What, according to the experience of Germany, is the first step necessary for intelligent food control?
3. What conclusions do you draw from a study of the comparative table of food consumption given at the bottom of column 2?

## *A Gorham Resolution for 1918*

At this season of the year when Good Resolutions are the order of the day, The Gorham Company, sharing the common aspirations and hopes of mankind, renews its annual resolve to dedicate itself to making the world richer for its labors, to esteem silversmithing as an art as well as a business, and to measure its success by the artistic value of its achievements rather than by the volume of its sales.

## THE GERMAN PEACE PROPOSALS

**T**HE reply of the Central Powers—that is, the reply of Germany, which is the master of them all—to the peace terms of the Russian Bolsheviks is an admission of defeat. The Austrian Foreign Minister, who acts as spokesman for the Teutonic allies, declares that “for the sake of conquest they will not prolong the war a single day.” The purpose for which Germany entered the war was clearly and unmistakably a purpose of conquest. The frank and unequivocal admission that she has renounced this purpose is a square-cut confession of failure to achieve it. At the same time there is nothing in the Teutonic reply to indicate any change of heart in those who control the Teutonic destiny. The German leaders admit that they cannot succeed in their purpose at the present time; but they do not even pretend that they abjure that purpose for the future.

The terms of the Teutonic reply should be considered in two aspects: their relation to the proposals of the Bolsheviks and their relation to the fundamental purpose of the Allies who are still fighting the German menace. The first consideration, however, has hardly more than an academic interest, for the Bolshevik terms have never received the approval of the Allies.

The proposals of the Bolsheviks were these:

- 1—No compulsory annexation of territory taken during the war.
- 2—Restoration of political independence to all nations deprived of independence by the war.
- 3—National groups not independent before the war to decide by referendum whether they shall become independent or give their allegiance to some power.
- 4—In any territory occupied by mixed peoples the rights of the minority to be defended by laws insuring educational freedom and administrative autonomy.
- 5—No belligerent country to pay indemnities, but compensation for losses of private persons thru the war to be provided from a special fund contributed by all the belligerents on a proportional basis.
- 6—The same principles to apply to colonies as to the parent country.
- 7—No economic war after the war.

The reply of the Central Powers to these proposals, taken at its face value—which the experience of the present war has proved to be a highly hazardous way to take any word from a Teutonic source—and reduced to its lowest terms stands thus:

- 1—Agreed.
- 2—Agreed.
- 3—Rejected.
- 4—Agreed, with the proviso that the protection of minorities is purely a matter of internal politics.
- 5—Agreed; but interpreted to mean that each belligerent power would have only to make indemnification for ex-

penditure for the support of its prisoners of war and for illegal acts of damage done in its own territory against civilian alien enemies.

6—Agreed, as to the return of captured colonies; but rejected as to the right of colonial peoples to determine their destiny by an expression of popular will.

7—Agreed.

Whether the terms of this reply will prove satisfactory to the Bolsheviks, or will afford a basis upon which they can proceed to negotiate further with the Central Powers, it is impossible for us to say. The processes of the Bolshevik mind are not easy to predict.

But the most important question for the American people to consider is what relation these proposed terms of the Central Powers bear to the fundamental purpose for which the American nation and its Allies are fighting. In essence the German proposal is merely for a restoration of the *status quo ante bellum*. The German mind as it seeks peace emphasizes the past; the mind of America and its Allies is primarily concerned with the future. The thought which the masters of Germany would like to have their enemies accept is, Let us make it as tho all this had never happened. The thought which the peoples of the Allied nations hold sacred is, It never must happen again.

There is nothing in the German proposal which looks toward the future. There is nothing which would involve the rendering impotent for the years that are to come of the Prussian military spirit and ambition. The terms of peace which the American people will accept must contain some such assurance—assurance not in words but in facts.

The judgment which the American people should pass upon these plausible but sinister proposals of the German autocracy has already been set forth by the President of the United States. His reply to the peace proposal of the Pope last August should be set down side by side with the German reply to the Bolsheviks and the two documents studied, not so much in particulars and detail, as in fundamental significance. The proposal of the Pope went much farther than the present Teutonic terms in that it suggested disarmament and a concert of nations based upon the principle of arbitration. But, like the present proposals, it postulated the restoration of the *status quo ante* as a basis for the whole. The full and complete reply to this proposal which President Wilson then made is the one which we should make now if the German proposals were to be transmitted to us either directly or indirectly. He said then, as we could not but say now:

The object of this war is to deliver the free peoples of the world from the menace and the actual power of a vast military establishment controlled by an irresponsible government, which, having secretly planned to dominate the world, proceeded to carry the plan out without regard either to the sacred obligations of treaty or the long-established practices and long-cherished principles of international action and honor; which chose its own time for the war; delivered its blow fiercely and suddenly; stopped at no

THE AUTOCRAT

THE DEMOCRAT

MORRIS

barrier, either of law or mercy: swept a whole continent within the tide of blood—not the blood of soldiers only, but the blood of innocent women and children also and of the helpless poor: and now stands balked but not defeated, the enemy of four-fifths of the world.

This power is not the German people. It is the ruthless master of the German people. It is no business of ours how that great people came under its control or submitted with temporary zest to the domination of its purpose: but it is our business to see to it that the history of the rest of the world is no longer left to its handling.

To deal with such a power by way of peace upon the plan proposed by his Holiness the Pope would, so far as we can see, involve a recuperation of its strength, and a renewal of its policy would make it necessary to create a permanent hostile combination of nations against the German people, who are its instruments: and would result in abandoning the new-born Russia to the intrigue, the manifold subtle interference and the certain counter-revolution which would be attempted by all the malign influences to which the German Government has of late accustomed the world. Can peace be based upon a restitution of its power or upon any word of honor it could pledge in a treaty of settlement and accommodation?

The Bolsheviki may be willing to accept the German terms; but the Central Powers in proffering them have declared that peace can only come on this basis if all the belligerents agree as well. This the Allies will not do. To make a peace like that would be to abandon everything for which they have made the supreme sacrifice.

## THE ALLIES ALREADY VICTORIOUS

THE terms of peace proffered by the Germans indicate a failure to perceive or an unwillingness to admit that the actual state of things is overwhelmingly in favor of the Allies. The enemy cannot be blind to the fact that superiority of the Allies in number, resources and position make their complete victory inevitable if the war should be long enough continued, but it is not sufficiently realized, either here or abroad, that the Allies have already within three and a half years accomplished greater conquests than any nation or coalition of nations since history began.

"Look at the map!" cry the Germans and their co-belligerents in this country. Well, look at the map. Look at the whole map, not merely the map of the European peninsula. This is not a European war, altho some nearsighted folks called it so at first. It is a world-wide war and involves vaster issues than the shoving of a boundary line back or forth a few miles in the valley of the Rhine, the Vistula, the Tagliamento or the Vardar. The stake is not the balance of power in Europe, but the hegemony of the globe, and this stake has been won by the Allies.

What do we see when we look at a map of the globe? First, that three-fourths of it consists of oceans, all of which are under the control of the Allies. Germany and her allies are in a state of siege and can be kept so indefinitely. Their commerce on the high seas has been extinguished ever since the war began.

Second, the enemies of Germany now comprize sixteen nations occupying a territory of 38,842,000 square miles and including 1,410,000,000 inhabitants. This is more than thirty times the area and more than ten times the population of the Central Powers. This advantage increases continually as the years go on, for the population of the Allies multiplies more rapidly and has opportunity for indefinite expansion.

Third, the Allies have absolute control of all the neutral nations, and can, if they desire, cut some of them off from the Central Powers or others from the outside world.

Fourth, the Allies have already conquered 82 per cent of the German Empire and 66 per cent of the Ottoman Empire as they were before the war. This comprizes 1,733,000 square miles. On the other hand, the Central Powers have conquered 158,000 square miles. This means a net gain of 1,575,000 square miles, an area more than seven times the size of Germany.

But, it may be objected, all land is not alike; a square mile in New Guinea has not the same value as a square mile in Germany. Of course not. The square mile in New Guinea is vastly more valuable for agricultural purposes. Java, which is a neighbor of New Guinea, supports a population more than twice as great as Germany per square mile. The German Government, hard up for oil and glycerin, would gladly trade its most fertile farmland for an equivalent acreage of coconut groves if that were somehow possible.

But, it may be again objected, a square mile of Kamerun desert is not of the same value as a square mile of Alsatian coalfields in its supply of motive power. Of course not. A square mile of tropical soil receives more solar energy than is yielded by all the coal mines of Germany in a year. Its supply is inexhaustible, while the European coal-fields will run short in a few centuries. The experiments with solar engines in Egypt prove that it is possible to utilize the energy of the sun's rays, and if this can be made practicable on a large scale Timbaktu and Memphis may again become centers of civilization.

But, one may say, Africa is not so desirable for a place of residence as Germany. So we think, but once the world thought otherwise and may think so again. Would those who lived in the Garden of the Hesperides (now Italian Libya) consider the advisability of moving to the shores of the Baltic? We need not guess about it. Tacitus, who might be called a pro-German, says explicitly that no one who could live in Africa would ever leave it for such a gloomy and inclement region as Germany. The northern lands became habitable by civilized men thru the discovery of heating appliances. Now that cooling appliances are known, the tropics may once more become favored places of residence.

The fact is that nobody can tell with any certainty what land will be most valuable in the future. To prove this statement we need not resort to speculation as to remote possibilities, but we may refer to history. We should see that English statesmen once weighed the island of Martinique against all Canada and were disposed to think the former more valuable. Voltaire said that it was absurd to fight over a few acres of snow, meaning by that Canada. Equally foolish American statesmen thought that Louisiana, that Florida, that California, that Alaska, that Hawaii, that the Philippines were not worth having. The Fiji Islands were offered to Great Britain in 1858 for \$45,000, payable to the United States. The offer was declined, but in 1874 Great Britain paid \$575,000 for the islands, and now would not take five millions for them.

The Transvaal, once thought not worth the trouble of hoisting a flag over, was found to be worth fighting over when it began to pour forth gold and diamonds. When Bismarck took away Alsace-Lorraine he contemptuously told the French that they could seek compensation in Africa. They took his advice and now Germany shudders at the soldiers and supplies that France draws from an African empire larger than all Europe.

The German colonial empire consists of what none of the other fellows wanted, and the British colonial empire consists of what England could not induce the other fellows to take. Yet these once contemned parcels of land are now esteemed so valuable that the question of their possession is likely to prolong the war indefinitely. It is very unsafe to assume that real estate values will remain forever fixed at what they would bring today at sheriff's sale.

As far as the war has yet gone England has won and Germany has lost. Who says so? England's worst enemy, Admiral von Tirpitz. So says also the *Neuste Nachrichten* of Kiel; that if peace should be made on the map as it stands England would actually be "everywhere triumphant." Germany would be only too glad to get back to the *status quo ante* for she has not only suffered but has lost ground thru the war. Her declared willingness to ma-

peace on the Russian principle of no annexations on either side proves that she regards her conquests as less valuable than those of her enemies.

There are a number of things that we want changed before we stop fighting. We should like to see several crowns knocked off. We should like to see the Balkan crazy-quilt taken apart and put together in a better pattern. We should like to see the shining armor of Germania and the naked sword of Attila laid away in a museum. But it is well to remind ourselves in the confusion of issues that if peace should be made with the map as it stands—which God forbid—the Allies would be victorious. If the German line should never be budged back another yard—tho we hope it will—Germany would have lost the greater part of her possessions and prospect.

## THE RAILROADS NATIONALIZED

THE President has taken over the railroads. Fifty-five great railroad systems, and countless smaller transportation units, aggregating a quarter of a million miles of line, are now under the supreme direction of one man. It is a fearless act, a stupendous undertaking. But it was inevitable, if we were to utilize to the full in the war American resources. Success in war demands unity of purpose, concentration of effort, simplification of control, elimination of lost motion. We were not getting these indispensable things in the field of transportation. Where lay the fault does not matter now. The one way out was to pull the whole thing together into a single coherent system.

We should not stop there. Unification of effort and control in other directions is no less essential to success in our herculean undertakings. After the railroads the coal mines, the telegraph and telephone lines—in fact every natural monopoly of national scope. War demands everything, not only of the individual but of the nation. We have met with ready hand each demand as it has been made manifest. We shall not withhold our hand until the goal is attained.

But after the war, what? That remains to be discovered. The world after the war will not be the same old world. Just how it will differ it would be foolhardy to try to predict now. But vastly different it will be.

We do not believe that the steps which we are now taking in the nationalization and concentration of great business activities will be retraced. What war impels us to now we will learn to value too much to throw away. We believe that one of the great national possessions with which the Great War will repay our sacrifices will be a realization of the soundness of the nationalization of natural monopolies.

## THE UNDESIRABILITY OF COMMERCE

THE war is teaching us a lesson that we ought to have learned without it, namely, that much of our commerce was unnecessary and much more of it was undesirable. Mr. Houston is sending out urgent appeals to the farmers to raise more food for the home market and Mr. Hoover urges everybody to live more on local products. Insular England and isolated Germany have discovered how to dispense with the greater part of their former importations and will probably never again become so dependent as they used to be upon foreign sources. It is greatly to be hoped that peace may soon remove the present impediments to freedom of trade, but at the same time we may hope that the indefinite expansion of commerce in the future may be checked not by submarines or legislation, but by the development of community self-support.

For commerce is a necessary evil. Always to some extent necessary. Always to some extent an evil. Its object is to remedy a deficiency. It is the cure of a disease, the disease of privation or incapacity. Why do you buy anything? Because you lack something. Why do you sell anything? Because the other party lacks something. It is an exchange

advantageous to both parties but yet involves a loss to both, and the greater the distance the greater the loss. Last year the people of the United States paid the railroads of the United States \$3,400,000,000 out of which the railroads made a profit of about a billion. The cost of the short haul transportation and local handling of long distance commodities must amount to many billions more. How many of these billions might have been saved if each locality had lived so far as possible on its own products cannot be told because it has never been tried.

On the contrary the world before the war had come to regard commerce as a fine thing in itself and worthy of continual encouragement. The expansion of trade was considered as an index of prosperity. So it is, but so also is the consumption of champagne and the purchase of diamonds and all other forms of wastefulness. A city bragged about the number of carloads or shiploads that entered its markets. It might as well have bragged of the number of hospital cases treated or wooden legs supplied. Hospitals and wooden legs are splendid things for people who are short of health or limbs. A city should have as many of them as it needs, but the fewer it needs the better.

What should a country or community import? Whatever it cannot raise or make about as good and nearly as cheap as it can buy from abroad. Oregon can never hope to raise bananas. It has then a right to import them, but at the same time it might well use more of its own excellent apples and fewer bananas than if it were Cuba. Nebraska cannot grow cane but it can grow beets, which supply sugar equally good. Only in certain favored parts of the world can cotton be grown, but why should cotton mills be confined to the New England streams from which they once drew their power? Australia sends her wool half way around the world to England and brings back her cloth by the same round-about route, which is the same as sending the wool she needs on a superfluous circumnavigation of the globe. Why not send once for all one ship to Australia loaded with the operatives to set up the necessary factories? And while ships were employed in bringing New Zealand butter and cheese to Liverpool the fine dairy lands of the British Isles were lying empty and unused. We hear much of the wasted energy when two milk or grocery wagons pass on the street, but little attention is paid to the drain upon civilization caused by the trains and ships that in time of peace are continually going in opposite directions laden with the same or similar commodities.

One cause of this superfluous commerce is the fondness for the foreign, which is a common failing of human nature. Distance lends enchantment and products are without honor in their own country. Another cause is the centralization of certain industries in a particular place, a centralization often due not to the gain of large scale production but to the accident of priority and the maintenance of monopoly. As capital becomes better distributed and artificial restraints are removed and the methods of industrial efficiency are extended to all races and nations it will be possible for every land to provide for its own needs within the limits imposed by its natural resources. Trade will thus be freed from the artificial stimulation that has exaggerated it and it will fall naturally to the exchange of those commodities that cannot be produced as well in one place as another. Climate and mineral deposits will always give some localities an advantage over others in certain products, and the exchange of these affords a legitimate reason for a commerce which may in the future be greater than in the past and yet relatively less in proportion to the civilization it will support. For we should all be richer if we did not spend so much of our wealth in the superfluous swapping of it. The gain in self-support, self-reliance and self-respect that would come to a locality from the development of its economic independence would be greater than the financial advantage.

# THE STORY OF THE WEEK

## THE GREAT WAR

*December 21*—Italians regain lost ground at Monte Asolone. Heavy German artillery fire at Ypres.

*December 22*—Germans bombard Rheims. Peace talk begins at Brest-Litovsk and Bolsheviks state Russian terms.

*December 23*—British advance in Palestine. Germans gain a little ground near Ypres.

*December 24*—Germans break Italian line. Great air battles on west front. British bombard Mannheim.

*December 25*—Italians rally and regain some ground. Central Powers conditionally approve Bolshevik peace terms.

*December 26*—Italians repel German assaults. Sir R. Wemyss succeeds Sir J. R. Jellicoe in British naval command.

*December 27*—Two attacks by Crown Prince at Verdun repulsed. British bombard Germans at Roulers.

Government is regarded with general satisfaction by the railroad companies themselves, by financiers, and by manufacturers, shippers and the industrial and commercial world, as a necessity of the situation created by the war, which will, however, by no means necessarily establish a precedent for maintenance after the return of peace. The Government will operate the railroads as a single integral system, unfettered by the anti-trust and other laws which have restrained combinations among the roads themselves. It will make whatever readjustments of rates may seem necessary and equitable, and it will also deal with the questions of wages and hours of labor, which are again becoming acute. It is assumed that there will soon be an increase in freight rates; probably of the fifteen per cent for which the roads themselves recently asked. Otherwise, it is estimated, there would be a deficit of

\$100,000,000 a year for the Government to meet. Further legislation to perfect the system of Government operation will be sought, if required, from Congress.

## Shipbuilding Prospects

Despite the inexcusable delay of past months, due to indecision and divided councils, the Shipping Board now reports that fine progress is being made in shipbuilding, with a prospect that more than 5,000,000 tons will be completed during the coming calendar year. The emergency ship program calling for the construction of 8,246,308 tons is now nearly one-fifth—on December 1, 18.2 per cent—completed. How great an increase of the mercantile marine this means may be seen in the fact that in 1916 the entire steam tonnage in our foreign trade fleet was only 1,573,705 tons. The greatest tonnage of iron and steel steamships built

## National Control of Utilities

The most important step thus far taken toward mobilizing

the resources of the country for efficiency in the war was that of December 27. The President, acting under the authority bestowed upon him by the law of August 29, 1916, took over for national governmental control and operation all railroads in the United States and its territories, together with their appurtenant and auxiliary steamship and barge lines, telegraphs and telephones. This act became effective and operative at noon on December 28. The railroads and their appurtenant utilities were placed under the general direction of William Gibbs McAdoo, the President's son-in-law, who retained meanwhile his office as Secretary of the Treasury.

The railroad companies, their bond and stock holders and creditors, are assured by the President's proclamation that their interests will be "as scrupulously looked after by the Government as they could be by the directors of the several railway systems." There is guaranteed to them an income equal to their average net operating income for the three fiscal years ended June 30, 1917, and the roads and all other property, fixed and movable, will be maintained by the Government so as to be returned to the owners at the end of the war in as good condition as they were when they were taken from them. The companies are also assured against any further increase in taxation, since the net income guaranteed is computed after the deduction of taxes. According to the reports of the Interstate Commerce Commission the railroads of the country, thus taken over, comprise 230,906 miles, with a net operating income, averaged in the last three fiscal years, of \$947,267,472 a year.

This gigantic undertaking of the

THE DIRECTOR-GENERAL OF RAILROADS

By proclamation of the President, Secretary of the Treasury William Gibbs McAdoo assumed control on December 28 of all the railroads in the United States. The first aim of the Government control is, of course, to relieve freight congestion: traffic will be re-routed over the shortest lines and terminals used in common as an immediate step toward transportation efficiency

in the United States in any preceding year in this century was 442,625 in 1908. In few other years has it been more than half as much.

**Progress of Investigations** Congressional investigations into the conduct of the war are continuing during the recess, and are eliciting many charges and counter-charges of favoritism, intrigue and delay. Apparently various manufacturers were ready to at the beginning of the war to enter promptly upon the work of supplying arms, clothing, etc., but were kept waiting for weeks or months by the indecision, disagreements and red tape methods of the departments, boards and officials at Washington. A machine gun was rejected by the Ordnance Bureau which has been eagerly accepted and adopted by the British army, and which Germany earnestly sought to secure. The chairman of the Shipping Board testified that contracts for \$100,000,000 worth of ships, made by a former manager of the board, were "held up" by his successor for nearly two months. In view of these and other revelations the President has sent to all the executive departments copies of a letter recently addressed by the Secretary of Commerce to his bureau chiefs, urging them to "eliminate red tape" and to increase expedition and efficiency.

The Senate investigating committee would not give the Food Administrator, Mr. Hoover, the opportunity which he desired to reply to the criticisms which several witnesses had directed at him, but on December 25 his statement was made public by the President. He attributes the shortage of sugar to the immense shipments from America to Europe, and insists that without the fixing of prices by agreement, for which he was criticized, the cost of sugar to the consumer would have risen to two or three times the present figure.

**Keep Liberty Bonds Above Par** The Secretary of the Treasury states that he is convinced that the selling of Liberty bonds at a discount is a part of a German conspiracy to impair the credit of the United States and to deter the public from further investments in Government securities. Following out this belief, a bill was recently introduced into Congress which would make it unlawful to buy or sell for less than par and accrued interest any Government bonds issued since April 6 last. This bill was referred to the Judiciary Committee of the House and may be reported out and passed after the holiday recess, if attempts to depress the price of Liberty bonds continue.

**The Second Conscription** The stupendous task of classifying nearly nine million men thruout the United States marks the beginning of the second draft under the conscription law. The local boards are now sending out copies of the printed questions which all registered men are required

#### THE NEW ASSISTANT SECRETARY OF THE TREASURY

Thomas B. Love, who has just been appointed assistant under Secretary McAdoo, will supervise the work of the war risk insurance bureau and of the internal revenue bureau. Mr. Love was state commissioner of insurance and banking in Texas and has been doing volunteer work recently under the Commissioner of Internal Revenue.

to answer, to five per cent of the men each day until all have been served. The questions are to be answered within seven days; a time which some think not too long for a thoughtful disposition of the sixteen pages of questions. Indeed, the questions are so elaborate and puzzling that the Government has arranged for thousands of lawyers to give their services in advising and assisting men who are at a loss as to how to answer all the questions. After the questions have been answered and returned, there will be physical and medical examinations, as in the first conscription.

**Promotions in the Army** General Pershing has opened the way from the ranks to supreme command. An order issued by him to the army in France provides for promotion from the ranks, so that any private may become an officer, and pos-

sibly rise to be General of the Army. All temporary appointments and promotions are to be on a selective basis, as in the British army, and recommendations for them must be based solely on the demonstrated fitness and capacity of the candidates. Under the temporary system, which is new to the American army, a lieutenant may for apparent merit be made a temporary captain or major, and will hold the place until his fitness for it is proved or disproved. In the latter case, he is reduced to his former place; but if he "makes good" he is confirmed permanently in the higher rank.

**Food and Fuel Supplies** It was announced on December 24 that there was on hand, in storage and in the market, enough wheat and flour to supply all the needs of this country for five months, even if the marketing of wheat from farms should entirely cease. The stock of breadstuffs was therefore considered ample for our own use and for a fifty per cent increase of the supply to the Allies over that of last year.

At the same time numerous large wholesale and retail firms were warned that they were in danger of losing their licenses to do business because of the unwarrantably high prices which they were demanding for necessities.

The National Fuel Administrator issued an order authorizing state administrators to discriminate, in their judgment, among industries, so as to favor the most necessitous, and between all industries and domestic consumers in favor of the latter; and express the opinion that all coal mines would have to be taken over by the Government for control and operation during the war.

**Aliens to Be Licensed** The President has issued an order requiring all foreign insurance companies, whether Allied or neutral, which wish to continue doing business in this country, to secure licenses from the Treasury Department before February 1 next. This action is taken in order to guard more perfectly against the transmission to the enemy of information which might react to the detriment of the United States. In making it known the Secretary of the Treasury said that he recognized the fact that it was desirable for companies to have information about the risks which they insured which, in some cases, would be of value to an enemy of this country. The order applies to none but foreign companies, but the hope is expressed that American companies will voluntarily cooperate with the Government by taking measures to prevent important information from becoming available to disloyal persons.

**The Shifting of Trade** American foreign commerce in 1917 has shown a noteworthy shifting of sources and destination, due, of course, to the war. Before the war imports from Europe were greater than from any other grand division of the world; but now they are less than from North America, South America or Asia. As

Carter in New York Evening Sun

#### WHARF RATS

The rats wear Hun helmets and they are gnawing at the supplies for American forces at the front

compared with those in 1913, the year before the war, imports from Europe have fallen from \$865,000,000 to \$460,000,000, while those from North America (Canada, Newfoundland and Mexico) have risen from \$390,000,000 to \$860,000,000; from South America from \$198,000,000 to \$580,000,000, and from Asia from \$281,000,000 to \$740,000,000. The chief increase in exports has been, of course, to Europe, because of our supplying the needs of the Allies, the figures having risen from \$1,500,000,000 in 1913 to \$4,110,000,000 in 1917. Exports to North America rose from \$601,000,000 to \$1,210,000,000, and to South America from \$147,000,000 to \$310,000,000; in each case more than doubling. The increase to South America was probably more in actual volume and less merely in rise of price, than that of any other part of the world, and was due to the fact that the United States took the place of European countries which because of the war were unable to continue their trade with that continent.

**Vast Value of Commerce** Actual reports and careful estimates show that the value of American foreign commerce has been far greater in the calendar year 1917 than in any preceding year, and more than double that of 1913, the year preceding the war. Imports and exports totaled about \$4,250,000,000 in 1913, and will probably exceed \$9,000,000,000 in 1917. This does not mean, however, that the volume of trade has so greatly increased, tho it has increased in some directions to a considerable extent, but that the values of both imports and exports have risen. Thus, taking the figures for September, 1913, and 1917, prices of imports of raw silk have risen from \$3.43 to \$5.59 a pound; cattle hides from 19 cents to 27 cents; goat

skins from 26 cents to 42 cents; and clothing wool from 24 to 46 cents. Similarly, prices of exports have risen: Wheat from 94 cents to \$2.32 a bushel; corn from 78 cents to \$1.96; steel from \$21 to \$84 a ton; and raw cotton from 13 to 25 cents a pound.

**National Labor Exchanges** The Council of National Defense has asked the various state councils of defense to coöperate with the Department of Labor in organizing and conducting a national system of labor exchanges. In this way it is hoped to solve the problem of labor distribution and to avoid such unsatisfactory conditions as the congestion of labor at one point and scarcity of it at another. "The Department of Labor," says Mr. Gifford, the director of the Council of National Defense, "plans to extend its system of exchange through funds at the disposal of its war emergency employment service. The war emergency employment service will consist of the United States Employment Service, the Public Service Reserve, the Boys' Working Reserve and the state labor exchanges. This whole system will be coördinated with the new system of exchanges of the state councils of defense, by the appointment by the Secretary of Labor of the chairman of each state council committee as Federal director of the war emergency employment service. Thus the national and local machinery will be tied firmly together."

**Embargo on Wool** The scarcity of wool, and the almost prohibitive increase in price of it, amounting to 200 per cent, have evoked from the War Trade Board an order for a practical embargo on that important and essential commodity. Henceforth no woolen goods may be exported

if in the judgment of the board the wool is needed here for the use of the army or navy. Importers, on the other hand, will be required to pledge themselves to sell the wool to nobody but actual manufacturers, and to give the Government an option to purchase it all at a price five per cent less than that obtained for it on July 30 last. This action is expected to stabilize the market, restrict prices, encourage importations, and prevent speculation and hoarding.

**Progress of Temperance** General Pershing on December 21 issued an order prohibiting the use of distilled spirits and of all alcoholic beverages except light wines and beers, by members of the American army in Europe, forbidding soldiers to buy or to accept as presents any strong liquors, and providing summary punishment for all who violate the rule.

Ex-President Roosevelt has written a letter urging prohibition of intoxicants during the war, not only to all soldiers and sailors but also to all men doing vital work for those services in connection with railroads, factories, mines or shipyards.

The Canadian Government has prohibited the importation of intoxicating liquors into the Dominion, beginning on December 24, and has announced that it is investigating and considering the question of prohibiting at an early date the manufacture of such liquors in Canada during the war and for a year following the return of peace. The order bans all beverages containing more than two and a half per cent of alcohol.

**Propaganda of Treason** Some sensation was caused on December 24 at "a Pacific port" of the United States by the discovery of a lot of arms and ammunition concealed

#### A HUNDRED AND TWENTY MILE BRIDGE IN FLANDERS

It is almost an open question, whether Flanders mud is land or water. In some section of the front the troops have gone beating to battle. Here the swamps were impassable either by boat or on foot, and the troops had to lay a hundred and twenty mile pontoon bridge to go forward

in the hold of a Russian ship which was under the control of a Bolshevik crew. These were believed to be intended for delivery to the Industrial Workers of the World, since several I. W. W. papers were found among them. A quantity of strong liquor was also hidden with the arms.

American customs officials report that they have recently found many letters containing inscriptions in invisible ink, or in cipher code, concealed among the clothing or other effects of ships' crews bound to and from Scandinavian ports; indicating a regular system of communication between this country and Germany and Austria.

French investigators have found that the recent disasters to the Italian arms were preceded by a widespread German propaganda in the Italian army, including the distribution of pacifist literature, and by illicit fraternization between Italian and Teutonic troops at the front, which officers, presumably corrupted by German spies, did not check nor punish.

**Civil War in Russia** The civil war in Russia continues between the Bolsheviks on the one hand and the Ukrainians and Cossacks on the other. The Ukrainians refuse to permit food supplies to be sent from their country into northern Russia, and the Bolsheviks are endeavoring to invade the south and seize Odessa and the food supplies. For this purpose they are said to have organized and armed a large detachment of German prisoners of war to aid them.

The Bolsheviks have complained that American agents in Russia were assisting the Cossacks, and that the American Ambassador himself was doing so; and they made bitter threats of reprisals. They seem to have mistaken Red Cross relief work for military aid.

The latest returns indicate a strong

majority against the Bolsheviks in the Constituent Assembly. There have been elected 420 Social Revolutionists, 60 Mohammedans, 25 Cossacks, 25 Maximalists, 24 Constitutional Democrats, and 4 Jews; and 225 Bolsheviks, who will be opposed by all the others. The Social Revolutionists will thus have a considerable majority over all others.

**Parleying Over Peace** Peace negotiations between the Russian Bolsheviks and Germany have exhibited much activity but little efficiency, and have been chiefly useful to Germany in affording an opportunity to transfer troops from the eastern to the Italian and western fronts, in cynical disregard of the terms of the truce. The negotiations were begun on December 22 at Brest-Litovsk, Russia, in "a solemn sitting," at which were present the Foreign Ministers of Germany and Austria-Hungary and many other prominent ministers, generals and other officials from those countries, Bulgaria, Turkey and Russia. The session was opened by Hakkı Pasha, of Turkey, and Dr. von Kuehlmann, the German Foreign Minister, was unanimously elected president. After the adoption of rules of procedure, at the president's suggestion, the chief Russian delegate presented the terms of peace which had been formulated by the Workmen's and Soldiers' Deputies. These terms provided:

First, that there shall be no compulsory annexation of territory taken during the war, but there shall be speedy evacuation of such territory; second, that political independence shall be restored to all nations deprived of independence by the fortunes of war; third, that national groups not independent before the war shall decide by a referendum whether they shall become independent or give their allegiance to some power; fourth, where mixed nationalities occupy any territory the rights of the minority shall be defended by a separate law assuring educational freedom and administrative autonomy, if possible; fifth, no bel-

ligerent country shall be required to pay contributions, and private persons shall be compensated for losses incurred thru the war from a special fund contributed by all the belligerents on a proportional basis. The same principles shall be applicable to colonies as to the parent countries. Finally, there shall be no boycotting of one country by another.

The reply of the Central Powers was made on Christmas Day by Count Czernin, the Austro-Hungarian Foreign Minister. He said that the Central Powers were ready to sign at once peace terms which would be just to all belligerents. They disclaimed intentions of conquest and approved the principle of no forcible annexations or indemnities. No nation should be deprived of political independence because of the war. The question of the subjection of peoples which have not political independence to other countries could not be solved internationally, but must be left for each government and its people to deal with according to their constitution. It was a *sine qua non* that all Germany's colonies should be restored to her. Count Czernin thought that peace could thus be secured, practically on the basis proposed by Russia, provided that all the belligerents would agree to it in good faith.

Meantime the Bolshevik leaders, speaking to their followers in Russia, declared their determination not to accept offensive terms of peace from German militarism. If such were offered, they would reject them and seek to rouse the youth of the nation to fight against them. But, added Leon Trotsky, if, exhausted as we are by this unprecedented slaughter, we must accept the terms of the German Emperor, we would accept them only in order to rise together with the German people against German militarism as we did against Czarism.

In contrast to this was the declaration of the German Emperor, made to his soldiers on the western front on December 22, in which he said:

The year 1917, with its great battles, has proved that the German people has in the Lord of Creation above an unconditional and avowed ally on whom it can absolutely rely. Without Him all would have been in vain.

We do not know what is still in store for us, but you have seen how in this last of the four years of war God's hand has visibly prevailed, punished treachery and rewarded heroic persistence. From this we can gain firm confidence that the Lord will be with us in the future also.

If the enemy does not want peace then we must bring peace to the world by battering in with the iron fist and shining sword the doors of those who will not have peace.

**The State of Germany** Indications accumulate of internal troubles in the German Empire.

The Social Democratic paper *Vorwärts* of Berlin declares that the great masses of the German people are not merely hungry but actually starving, tho the agricultural producers and rich townspeople have plenty since they are permitted to hoard supplies. "Forty millions of the masses are starving," declared this paper, "and are unlikely to sit silent. We might have within a month an absolute catastrophe in Germany and a collapse even worse than Russia." For these utterances the pa-

AS FAR AS THE EYE CAN SEE

One of the storerooms in a British munitions plant where the shells are painted and inspected before being sent to the front

per was punished by suspension of publication for three days, but the truth of its statements does not seem to have been disproved or denied.

Serious troubles have arisen between the Government and the Social Democrats, involving the forcible suppression of a number of meetings of the latter. These troubles arose largely over the comments of the Socialists upon the Russian peace negotiations and their hostile reflections upon the Pan-German program and policy.

A destructive explosion and fire occurred on December 21 in the great Krupp arms and munitions works at Essen, the conflagration lasting for twenty-four hours.

Meantime it is announced that the seventh German war loan realized 12,625,660,200 marks, or \$2,903,901,846 at normal rates of exchange.

An interesting sidelight upon Germany's treatment of subject peoples is afforded in a recent advertisement in the *Deutsche Tageszeitung* of Berlin, which announces "Fifty Polish workers, twenty men and thirty girls, to be exchanged for the same number of other workers. Address offers to," etc. These persons, as the *Berliner Tageblatt* observes, "are offered for exchange, just as cattle are exchanged. These fifty people certainly were not asked for their consent, any more than draft oxen or cows are asked."

**Redeeming the Holy Land** The Christmas season was celebrated by the British forces in Palestine by pretty steadily and effectively pushing forward their occupation of that country. A general advance northward is being made on a line stretching across the country from the Mediterranean Sea to the valley of the Jordan. On December 24 they had traversed much of the famous Plain of Sharon and were meeting with only nominal resistance.

**On the West Front** The great German drive, expected on the West front, has not yet occurred. There have been daily assaults of a minor character, at all points along the line, as if the Germans were testing the Allied lines in hope of discovering a weak spot. But the lines have held firm, and no advantage has been gained by the attacks. A savage bombardment of Rheims occurred on December 21, apparently with no other object than spiteful destruction. There was much artillery activity at Ypres, also. Two furious attacks at Verdun were made on December 26 by the German Crown Prince, but they were completely repulsed with heavy losses. Air fighting was more violent than usual. In the three days of December 21, 22 and 23, French aeroplanes engaged in a hundred combats, in which eighteen German planes were destroyed, and twenty tons of explosives were dropt upon German camps, factories, railroad stations and marching troops. On December 24 a British air squadron began the work of reprisals for German air raids of England, by flying over Mann-

FORWARD SLIDE!

A practise advance thru barbed wire entanglements

heim, in the Grand Duchy of Baden, several hundred miles from the border, and dropping a ton of bombs, which did much damage to the chief railway station and to several factories. British aeroplanes caused the explosion of a German ammunition train at Roulers, in Belgium, and the consequent destruction of a large part of that town.

**Portugal Loyal** The revolution in Portugal has not affected the loyalty of that country to the Allied Powers in the Great War. Fears were at first felt and exprest that it would do so, based merely upon the circumstance that the Government which had been turned out was the one which had led Portugal into the war. But the Portuguese Legation at Washington on December 18 officially declared that these fears were groundless, and that suggestions that the revolution had been in the interest of Germany were "merely one more device of the all-pervading German propaganda intended to sow dissension among the Allies. The foreign policy of the new Government," it added, "rests and will continue to rest on the maintenance of the alliance with England in hearty coöperation with the other Allies."

**On the Italian Front** The heaviest fighting of the week has been on the Italian front, where the Germans and Austrians have been struggling desperately to break thru to the Venetian plains before they become utterly snowbound in the mountains. On December 21 the Italians assumed the offensive and retook some of the ground which they had lost at Mount Asolone; compelling Berlin to admit that the Teutons were on the defensive. Three days later the Teutons suddenly opened a tremendous artillery fire near the head of the Frenzela valley, in the Asiago sector, and followed it with an infantry drive almost completely thru the Italian lines.

Among the Teutonic troops were recognized many which had been brought thither from the Russian front. More than 9000 prisoners were taken and the situation seemed more ominous for Italy than at any time since the first great German drive. But within twelve hours by almost superhuman exertions the Italians not only checked the German onset but actually succeeded in rolling it back for some distance and in regaining much ground and many batteries and guns. The invasion was thus held in a deadlock, with time, in conditions of weather, making steadily in favor of the Italian forces.

A raid was made upon the Italian lines near Treviso on December 26 by a fleet of twenty-five German and Austrian aeroplanes. It was repulsed with the loss of at least eleven of the planes.

**British Naval Command** Sir John R. Jellicoe retired from his place as First Sea Lord, the active head of the British navy, on December 26, and will be elevated to the peerage. He was succeeded by Sir Rosslyn Wemyss, who has been one of the most aggressive "fighting admirals" of the navy, and whose accession to supreme command may mean the adoption of a more vigorous policy.

**British Colonies and Conscription** While Canada has just voted strongly in favor of the conscription system for the army, Australia has with similar emphasis recorded itself against it. The ballots in the referendum were 938,000 against and 764,000 for conscription. These figures do not include the soldier vote, which is being separately canvassed, but there is little reason to suppose that it will materially change the result. New South Wales gave a majority of 115,000 against conscription, while Victoria, which last year voted for it, gave a small majority against it.

In Canada, as formerly noted, Quebec

International Film

**FROM SEAMAN TO MINISTER OF MARINE**  
A revolutionary appointment by the present Russian Government advances Ordinary Seaman Debinkef to the supreme command of the Russian navy

was the only province to vote against conscription. A sequel to the election was the introduction, on December 21, of a resolution in the Provincial Assembly of Quebec, declaring it to be the opinion of that house that the province would be disposed to accept the rupture of the Federation Pact of 1867—in brief, to secede from the Dominion—if the other provinces regarded it (Quebec) as an obstacle to the union, progress and development of Canada. This movement for secession is said to be led by Henri Bourassa, a French journalist of Quebec, who has been called “the La Follette of Canada.”

#### The Halifax Disaster

What are practically the final statistics of the disaster at Halifax show that 854 identified and 304 unidentified dead bodies have been recovered, about 4000 persons were seriously injured, the property loss was \$40,000,000, the cost of temporary shelter and relief will be \$5,000,000, and indemnities and annuities to the disabled and destitute will amount to \$5,000,000 more.

#### Viscount Ishii on America

Viscount Kikujiro Ishii, the head of the Japanese mission which recently visited this country, has returned home with most favorable impressions. At a great banquet of prominent men in Tokio he declared that he brought back to all the people of Japan from all the people of America a message charged with an earnest spirit of good will and a sincere desire for a good understanding and friendship. “Let there,” he said, “be no doubt among you as to the sincerity of the message. There was no false note in it; there was no discordant tone in the voices welcoming us. . . . The true gold of

America lies at the very heart of its people.” He described the agreement between America and Japan concerning China as one which would be beneficial to all three countries, and which he believed China herself would welcome and approve when she understood its purport, and he concluded with the suggestive declaration that the common foe of Japan and America has been the worst enemy of China.

#### The World's Harvests

The International Institute of Agriculture at Rome makes the following estimates of the chief crops of the world, not including Germany and her allies, as compared with the average of the same crops for the last five years: Wheat, 1,868,000,000 bushels, or 85.6 per cent of the five years' average; corn, 3,312,000,000 bushels, or 114.1 per cent; rye, 147,000,000, or 92.2 per cent; barley, 587,000,000 bushels, or 96 per cent; oats, 2,682,000,000, or 113.9 per cent; rice, 70,000,000 bushels, or 115.5 per cent; flaxseed, 38,000,000 bushels, or 69.8 per cent; potatoes, 719,000,000 bushels, or 112.4 per cent; sugar beets, 10,000,000 tons, or 106.6 per cent; tobacco, 1,186,000,000 pounds, or 120.5 per cent.

#### The Loyalty of Teachers

Following the dismissal of a few university and college professors for alleged disloyal utterances and acts, charges of “holding views subversive of discipline and tending to undermine good citizenship” were preferred against three male High School teachers in New York. One was charged with having failed to reprimand a pupil for sending a “vicious and villainous” letter to President Wilson and with having countenanced unpatriotic sentiments in his classroom. The second was charged with having said that he would maintain an attitude of neutrality if the comparative merits of anarchy and republicanism were discussed in his classroom. The third was charged with having said that he would not permit a soldier in uniform to speak in his classroom, and with having prepared a bibliography containing improper matter. After prolonged investigation and trial, and a fortnight's deliberation, all three were dismissed from service by a more than two-thirds vote of the Board of Education. In addition the board, at its final meeting on December 26, abolished the teaching of German and other foreign languages in fifty-two of the sixty-two elementary schools in which they had been taught.

Meantime numerous schools and boards of education thruout the country are discarding certain text books which had been in use for some time, in which not only was Germany exploited and praised in extravagant terms but also naturalized Germans in America and their children were exhorted to cherish a devotion to the Fatherland incompatible with loyal American citizenship. Thus one of these books, widely used, stated that “none of Germany's children loves her so much as the Germans who have come to Amer-

#### FRANCE TAKES ON AN AMERICAN DEPARTMENT

Jules Cambon, formerly French Ambassador to the United States, has been appointed director of a new department under the French Government to assist in every way possible the American expeditionary forces and American relief activities in France

ica. Germans who have left the Fatherland must never forget the German tongue, but must hold it as the dearest of all gifts, or we be to them.” It is held by American educators that such teachings to the children of German immigrants are not calculated to make them true Americans in mind and heart.

#### Morgan Art for the Museum

The gratifying announcement was made at the December monthly meeting of the trustees of the Metropolitan Museum of Art, in New York, that Mr. J. Pierpont Morgan had given to that institution the greater part of the enormous and invaluable collection of works of art which his father had amassed during many years and at vast expense; including all now on exhibition at the Museum except the bronze statue of Eros from Bosco Reale. This gift comprizes more than 3000 objects, besides the famous Greau collection of ancient glass and pottery, which contains 4500 more, largely fragments. Since the death of the elder Morgan there had been much doubt and speculation concerning the disposition which would be made of his collections, and it was feared that they would be broken up and dispersed. His son did, indeed, sell a number of objects, and many others were given to the Morgan Memorial in the Wadsworth Athenæum at Hartford, Connecticut.

But the gift now made to the Metropolitan Museum comprizes the most interesting and most valuable part of the whole. It is conservatively calculated that if thrown upon the market, even at this time, it would realize between \$8,000,000 and \$10,000,000.

# SHADOWS OF WAR

BY MARKARID GARODIAN

**M**Y father was a merchant at Harpoot. He bought and sold beautiful Oriental rugs. Many American people came to him because my father was a Christian and a merchant whose word they could depend upon. He could speak English and he had studied in America when he was a young man.

We had a beautiful home and were very happy then. Our house was shut off from the street by a high wall. A little gate opened from the street into the courtyard in front of our home. This court was a lovely place. There were shady trees and bright-colored flowers all about. In one corner was a fountain or pool of cool running water.

Our house was two stories high. A hallway opened in the front, running thru the house. My mother had made this place very beautiful with draperies and plants. Here our father often received his friends and our mother served coffee to them.

On either side of this hall were rooms with divans and many colored rugs. Our very prettiest rooms were on the second floor. To reach our second-story rooms we went up steps outside the house on to a balcony that hung over the garden. We children used to have happy times playing there.

The smaller children went to the American Mission School and my brother and I were in the American College, where our uncle was professor. In the school there were five hundred students. We studied history, mathematics, literature and languages. My brother and I speak English and French as well as Armenian and Turkish.

We lived happy, peaceful lives until two years ago. Our father took us for delightful picnics on holidays. He was very good to us and had planned that our oldest brother would study medicine in America when he grew up.

But my father is gone now; everything is gone except my two brothers.

One day two years ago we came home from school early in the afternoon. The day was Hrand's birthday and Hovanis and I knew that mother had planned a surprise for him. We hurried home from school so that we might help her with the preparations.

We found our father at home, although it was only mid-afternoon. One of the city police

*Markarid Garodian is an Armenian girl thirteen years old. She is one of the two and a half million refugees in the Near East for whom the American Committee for Armenian and Syrian Relief are attempting to provide the necessities of life. Markarid's father was massacred, her mother driven out in the desert, her baby sister starved to death. She was taken into a harem. She escaped, joined her brothers in a long trip over the Dersim Mountains to a relief station in Erenzum, Russia. Two of the children died on the way. Two brothers, and this girl, finally reached safety and joined the throng of homeless people who daily gather about the fire at the relief soup kitchen for their steaming bowls of vegetable soup and coarse bread. THE EDITOR*

was with him. The man was telling my father that he must leave his store, his home and his family, and go away to work on the roads.

My mother was crying and clinging to father's arm.

"You cannot go, you must not go," she kept saying over and over.

We children began to cry, too.

Our father, turning to us, bid us keep still. Then he talked with our mother, telling her that she must be very brave.

The officer stood impatiently waiting and said, "You must come now."

Our father kissed us good-by and went away.

We never saw him again.

We heard that fifty Armenian business men, our father with them, were driven out to work for days and days building roads and then later killed.

A week after our father was taken away our uncle and all of the men of the town, including the professors in

the colleges and all the rest of the business men were thrown into prison and tortured. We could sometimes hear their screams as we passed by the prison.

The head of our mathematics teacher was cut off and put out on a stick outside the prison wall.

After our father had gone away with the officer our mother did not send us to school. We were very sad and lonely. We thought we were very, very unhappy then, but we were comfortable and had plenty to eat because our father had left two bags of money and we could go out and buy things in the market place.

Then one day a terrible thing happened. An officer came to the house and said our mother would have to go away and leave us.

She had only a few hours to get together a little bundle of food and clothing. She took only a small portion of the money my father had left with her; the rest of it she told Hovanis to hide in the garden to use very carefully when we needed it.

Our mother and dozens of other women were crowded into springless carts. Mounted soldiers were in charge of the deportation. There was not room enough in the cars for all the women and some of them were made to walk behind. We stood at the gate and saw them go.

Before she went, my mother cut off my long hair, she cut my eyebrows and tried to make me less beautiful. I did not know why then, but I know now. She knew what would happen to all the pretty Armenian girls.

My brother and I tried to be brave after our mother had gone because of the little ones. My mother had told us we must care for them. We made up games and amused them in the daytime.

I did my best to prepare the food that Hovanis bought in the market with our money. Our house was very lonely and empty, but we had plenty to eat and were warm and comfortable.

A few weeks after my mother was taken away all of the twenty-five thousand Armenian people remaining in Harpoot were ordered deported. We were told in the evening that we must be ready to go the next morning. We got together [Continued on page 41]

# SECTIONALIZING PUBLIC OPINION

BY WILL PAYNE

AUTHOR OF "THE AUTOMATIC CAPITALIST" AND "THE LOSING GAME"

LIKE nearly every one else who writes professionally for publication I am much interested in the postal provisions of the new revenue law. My occupation largely depends upon them, for they propose pretty effectually to destroy the only remunerative market for the professional writer in the United States.

My earliest ventures in that field were directed to a monthly magazine which was—and is—highly respectable. Some very distinguished authors—who depended on something besides their pen for a livelihood—had written for it. Its circulation was practically confined to the North Atlantic seaboard, and for a story that cost me two or three weeks' effort it paid me thirty dollars. There was glory, perhaps; but for the purpose of earning a livelihood peddling shoe-strings offered superior attractions.

So I am not a disinterested witness, but have a strictly selfish motive in objecting to those postal provisions. So have the great majority of those who write professionally. Mainly it is only by reaching a great audience, thru national circulation, that a writer can get more than a day laborer's compensation for his work. And the new postal provisions mean to destroy national circulation. They mean, finally, shoe-strings for the writer.

But to those provisions every disinterested witness ought to object, for they mean sectionalism.

No government, I believe, applies a zone system to letter postage. And no government raises revenue, thru the post office or any other agency, simply to get revenue. It always considers the effect upon the public of raising revenue in one manner rather than another. For example, our Government, in raising war revenue, might easily and cheaply have levied stiff import duties on tea and coffee. It wouldn't do that because it thought the public effect of "taxing the poor man's breakfast" would be injurious.

Like every other government, so far as I know, it made a flat rate for letter postage, applicable to the whole country alike. If it had been looking simply to revenue it would undoubtedly have charged more for carrying a letter across the continent than for carrying it across the street. But it was looking to public effect. It wanted people across the continent to communicate with each other as freely as people across the street, so that wherever they were within the United States they would feel no mark of division, but a sense of unity in a single nation.

Many governments have gone much further. Our Government, for example, will carry a letter

to Canada or to England as cheaply as across the street. It figures that the freest possible communication, the easy interchange of ideas and information, promotes trade; that it is good business to make one rate on letters all the way from San Francisco to London because letters bring business.

Naturally, also, the Government made a flat rate, applicable to the whole country alike, for newspapers and periodicals—for among literate people newspapers and periodicals are, after all, the great means of keeping people in touch, of understanding one another, of that circulation of ideas and information which promotes national unity and trade.

But the new postal provisions propose to cut the country into zones and to apply postal rates which, finally, will prevent most newspapers and periodicals from circulating far from home. The final effect of those provisions will be to stop national circulation of printed matter and build up sectional circulation.

They propose to do this under a pitifully shabby and transparent subterfuge. They make a flat rate, applicable to the whole country alike, for that part of the publication which is devoted to reading matter—simply increasing the present rate twenty-five per cent the first year and fifty per cent thereafter. Then, as to that part of the publication which is devoted to advertising, they set up eight zones, with increasing rates for each zone, the rates being raised progressively for three years until finally—except as to circulation comparatively near home—they amount to increases of five hundred, six hundred, seven hundred, nine hundred and one thousand per cent over present rates.

In effect they say to the publisher, "Just cut out your advertising and you can circulate as far as you please." Of

course every intelligent person knows that modern newspapers and periodicals subsist on advertising. Without it not a country-town weekly, farm paper, church paper, metropolitan daily or nationally circulated magazine could pay its expenses.

The publishing business is one of the least profitable in the United States—probably the least profitable of any business of like extent. It never was very profitable, taking it by and large. Just now tremendous increases in the cost of paper, ink and labor have cut profits almost to the vanishing point, taking the industry as a whole.

True, some newspapers and a few periodicals, with big circulation and large advertising patronage, make handsome profits. But Congress doesn't tax John Smith fifty per cent of his income because his neighbor, John Rockefeller, is a millionaire.

If Congress wished to tax advertising on the same basis that it taxes every other business—that is, to take for war purposes a certain per cent of the net profit—there could be no objection. But in fact Congress does tax advertising that way. If the advertising yields a profit it pays a "war-profits" tax and an income tax like any other business.

THE postal provisions propose to increase one of the most important items in publishing cost five hundred per cent or more, irrespective of whether there is any profit at all. It is the same thing as raising a retail merchant's rent three or four fold—not a tax, but a ruinous increase in the cost of doing business.

They point to parcels post rates where a zone system very properly applies. But there is no analogy. The true analogy is to letter postage, for in every social and economic respect the newspaper and periodical is a magnified letter—a great agency for keeping people in touch with one another, for the circulation of information and ideas, for promoting trade relationships. The goods sent by parcels post automatically absorb the cost of carriage as they go along.

The new postal provisions propose to apply to newspapers and magazines. When they come fully into effect the cost of carrying a given newspaper or periodical a short distance will be two cents and a long distance ten cents. With that difference in selling price, long distance circulation would cease in all save a few exceptional cases and we should have only sectionally circulated printed matter. If there is anything in the world this country has no use for it is sectionalism.

## A PRAYER FOR WORLD FRIENDSHIP

BY HARRY EMERSON FOSDICK

*Father of all nations, endue us with vision, and courage, and resource in Thee, that the crisis of the world may become the opportunity of the Kingdom. Guide our country, empower our churches, inspire and restrain ourselves and all men that righteousness may triumph. For wisdom to discern the means most profitable to abiding peace and international concord; for leaders to point the way and for multitudes to follow them, till all nations are one fraternity, we pray to Thee. Make real the brotherhood of man, O God, and glorify our race in a fellowship of friendly peoples. O Love, crucified afresh by the sin of the world, after this Calvary, grant us, we beseech Thee, an Easter Day and a triumphant Christ. Amen.*

Three new pilots making their test flights in army planes at one of the Government schools for aviators in the United States

# OUR UNCENSORIOUS CENSOR

BY DONALD WILHELM

**G**EORGE CREEL is one of those individuals whom one must catch in transit—hard to get into focus, therefore, hard to catch whole, hard, even, to swat and sweep in fragments upon a magazine page.

Which is one reason why he is one of the most interesting specimens alive, as well as a good teller of yarns, a fighter, and a fierce hater of Germans!

"Undoubtedly something of Creel's rare capacity to kindle devotions," Peter Clark Macfarlane wrote admirably in *Collier's* four years ago, "is written in his face. We see at a glance the broadish round-cornered brow of the intuitional type of mind which sees widely and thinks clearly but emotionally. The nose is strong and full—feeling again!—but not the sloppy kind of feeling!—rather a tense and refined emotionalism, as indicated by the sharp inturn of the nostrils at the base and the manner in which they quiver in excitement." And now skipping a little—"glance at his hair, carried straight back as if by the headlong speed with which the man dives into whatever enterprize commands his allegiance. But do not think he dives recklessly. Consider his eyes. They are brown and recessed, but gather light. They are woman's eyes, for sympathy and softness, but when wrong has roused them they are warrior's eyes and flash with battle light. For this young George Creel is a fighter, a champion in the lists for the lowly. He has an instinct for humanity. And so, just from looking at his picture we can begin to understand his troubles,"—his troubles, yes, and, incidentally, his passion to reach that mystical entity called the heart of the human race, the very breath of America—to reach it in homes and hamlets, factories and fields, all over the world.

Isn't it clear, thus, that he is an unusual censor?

But look:

"Creel," I asked him, "do you like to censor?"

"I have never in my life," he said, biting off his words, "put emphasis on destruction. All my life I have fought for freedom of speech and freedom of the press." And he has! He has fought with feet and fingers, head and heart and soul.

In Kansas City, at eighteen, a cub reporter on the *World*, he fought with his editor—and forthwith made off to New York City on a cattle train, there to write; to assail magazine editors with jokes—for sale!—meanwhile, and, when the weather was propitious, earning one or two square meals and a roof

*Packard Studios, Chicago*

*George Creel—the "National Censor" who believes that "we do not need less criticism in war time, but more"*

without many leaks, shoveling snow. He cleared, at last, toward spring, for Kansas City. He started a paper there. And he fought! And only his ideals were constant. Yet in ten years he had established himself in nearly all ways under the sun—financially even. But only to give his paper away! With fifty dollars to make for Denver—according to his lights politically a great and wicked city. There, in its rare atmosphere, where an editorial writer wore a flowing necktie and signed his name, he espoused, first, municipal ownership of local waterworks. He won!

In the next session of the Legislature the Senate blocked the initiative, referendum and direct primary law after Creel and the House espoused it. Then said George Creel, in black and white, double-leaded double-dyed editorial, certain senators—these, by name—ought to be hanged, which naturally offended them.

Then followed a libel suit, for \$100,000. In court, amid other brilliant speeches, when Creel was urged to retract: "Never! Never! The hemp! The hemp! The hemp!" He won—again! Then more winning fights! But at last the *Post* intimated, and he said, that he was on his way!

So the present Censor became a magazine writer and was one, enthusiastically, until he was asked to go

back to the high country and write for the *Denver Rocky Mountain News*.

He went at once into the fight for commission government. Twenty thousand signatures to a petition were secured—yet that petition was thrown into a waste basket. Thereupon the young editorial writer roused Denver and got 35,000 citizens out on the east lawn of the Capitol one bleak and silent day and passed the resolutions he had written—"one of the most remarkable demonstrations," Mr. Macfarlane testified, "ever witnessed in an American city, and it clearly showed Creel's great genius for firing and directing the public mind."

Then, with two others, he was made a member of a Board of Excise, Fire and Police Commissioners. Promptly he took the clubs away from the policemen. He let the I. W. W. talk all they wanted to, and they quit talking. He took up the most complex social questions and championed methods of solution until, having in his straightforward, earnest way made enemies enough, the city of Denver verily raised itself up high above the Rockies and dropt itself on him, squeezing him and his wife—Blanche Bates in her stage days—out of Denver—which repented, anon.

And then he rested! But only till the second day and then he saw that there must be light lest the torch of Liberty be sunk in a sea of corporation iniquity.

So, like a real American eagle, he picked out the big game, and in one or two magazines blazed away at it, helping, even, the publicity squad of the Wilson Campaign Committee put what he called the "rhinoceros birds"—the guardians and publicity agents of some big corporations—to flight. Then the war came to America and when the Secretaries of State, War and Navy asked the President to appoint "a man of proven courage" to be chairman of a Committee on Public Information, the President appointed George Creel. The newspapers looked upon him as a censor—naturally, since a stern censorship bill was before Congress—and in less time than it takes to say so this Young David had no less than about five or ten thousand Goliaths in the Fourth Estate, with clubs and sixteen hundred other weapons, on his trail. They misunderstood their David. That was very sad, but it did not spoil David's appetite.

"Why, it's war!" I told him, naturally.

"I'm used to it!" he said.

But the really astounding thing was not that not one of all the thousand

newspaper and magazine men in Washington got him understandingly on paper, not that, tho the press and Heaven and Congress spared not the wind to this shorn lamb with no prerogatives or power, but that this lamb settled agreeably into the collar and accomplished one of the biggest, most comprehensive but least expensive achievements of war time Washington.

Every day, now, he sits in his office, a youngish man facing a tremendous responsibility, and uses the Navy radio—the greatest in the world—to whisper round the earth four or five thousand words—the President's or other's—to thwart any one in any attempt to malign the U. S. A.

Every day his skilled news gatherers, all under oath of allegiance to the United States, all trusted alike by the Government and by the newspaper correspondents, the thousand of whom the Government officials hardly could see every day in the precarious days of war, get the news from the departments concerned most intimately with the prosecution of the war.

They go back to the two old adjoining red-brick dwellings on Jackson Park, hard by the White House, the State, War and Navy Departments, all of which, like the Department of Justice, the committee serves, and write this news. It is approved, carefully, as would not be possible otherwise, then released to all the newspapers and all the press, or, if it is not news that best can be telegraphed, sent by mail to all the papers large and small in America, with release date specified upon it.

This same news is used in a noteworthy little daily newspaper published by the committee—*The Official Bulletin*—which is edited by one man and an assistant, printed by the Government Printing Office and distributed to senators, representatives, post offices, editors, libraries, and to private individuals (who pay five dollars a year for it) to number of more than 80,000. This daily is truly an invaluable record of official news. It likely will never be discontinued.

The committee has a division, i. e., one room, one director, one stenographer, coöperating with the newspaper syndicates.

It has the Four Minute Men—fifteen thousand of whom are speaking in the intermission of motion picture theaters in every state of the Union—all supplied simultaneously, week by week, with information prepared by the committee.

The committee has a Speakers' Division, too, with Arthur E. Bestor, head of the Chautauqua, in charge, which sends out men, singly or in groups, across country—a reserve force administered wherever the purposes of democracy require it.

And the movies, too, figure largely in the Creel plan. Hundreds of thousands of feet of film are sent from the Committee on Public Information to every part of America every week, and to Russia also, to Scandinavia, Switzerland, Holland, Spain and South Amer-

ica—stirring pictures sent whirling by Creel, the enthusiast for democracy, and his Committee of Public Information; pictures that show the industrial and social progress of the United States, our war preparations, our purposes and "clean ambitions"—Creel's happy phrase.

Creel has mobilized the artists of the nation, putting Charles Dana Gibson at the head of them and from the pens and brushes of these men are flowing the posters, the car cards, the pictorial appeals with which the Energetic One is beginning to flood the country.

Then there is a division of Foreign Language Newspapers, posting whole columns of Creel Americanism before infinite numbers of very foreign noses able to scent good English. And there is a division serving specifically the needs of the rural press and the religious press. And the women's pages, too—material sent out in galley sheets prepared with reference to each particular need.

But these are just a few of the things that the Constructive, Uncensorious Censor is doing, and if they prove, by the way, that he is a bull in a china shop, then a bull in a china shop he

"I emphatically refuse to be classified," says Mr. Creel, "except as an American"

should be—by all the laws of citizenship. He has the historical ability of the country writing books, and the writer writing aspirations, and the school teachers doing their bit, and the country schoolma'ams doing theirs, and 300 volunteer translators busy, and many more means for molding sentiment here and abroad. He has utilized, in a word, about every means conceivable for stimulating the spirit of Americanization everywhere. He uses that expression "Americanization" advisedly—this Censor. America for him, and for the many other young men who are calling a new America into being—men such as Raymond Fosdick—America means a river ever widening, ever changing, ever growing in volume, ever working swiftly past mossy old rocks in the stream of things out to the currents of deepest, because most efficacious, truth.

"Democracy," he told me one night, sitting there at his small square desk on which rests amidst much else a framed picture of two youngsters, "democracy is the struggle everlasting. It ought never to be considered as an automatic device; no, never!"

He went on: "It's the automatic nature of our citizenship that is at fault. Why, a vote is about as thrilling a thing as one can conceive of, when you think of its possibilities, but the average man discharges it in a spirit of peevish martyrdom. The only elections, in fact, in which there is any real feeling are those in which we all get drunk on political partizanship."

He got up, clipped his words short: "A boy gets to be twenty-one years of age and becomes a voter automatically, as a matter of course!"

He was asked how he would accord the vote.

He brought his fist down: "We ought to make him work for a vote, *make him work for it!*"

Now all this, it may be discerned, does not sound censorious. For the first time, actually, a war censor lays title to being constructive, not censorious. He hates the word "censorious." He did not want the original censorship bill framed by the Department of Justice to pass Congress. He didn't want—he doesn't want—to be a censor.

"I want the public to see every blade of grass growing in wartime Washington," he told me, early in the war.

And again: "We do not need less criticism in time of war, but more. Incompetence and corruption, bad enough in time of peace, take on an added menace when the nation is in arms."

And the reader can imagine, and I know, the incredulity in the face of a young Canadian newspaper man—incredulity staying there for days in which he told his story over and over—who went furtively into the committee headquarters, expecting doubtless to meet a tall, grave figure with a black beard and blue pencil, frowning upon all a newspaper man's expectancies. "I want to write about Washington affairs," he explained to the Uncensorious Censor, "but I shall not criticize any of your officials." [Continued on page 42]

WILL YOU WALK INTO MY PARLOR?

Analyze the beauty of this room and you will find that it depends chiefly on the harmony of its architectural proportions, enhanced by the rather subtle and yet precise balance in furniture arrangement. Trowbridge and Ackerman, architects

# The Countryside

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## GIVEN FOUR WALLS AND A CEILING

IT is a mistake to suppose that so called "interior decoration" is only concerned with curtains, furniture, etc., for these things stand only as secondary considerations and the emphasis rightly placed is on the architectural features, since a room that is beautiful in proportion with well placed doors, windows and fireplace and well studied cornice, etc., is in itself a beautiful room requiring little or no decoration while, on the other hand, a room that is ugly in proportion will never be really pleasing no matter what is put into it. We do not wish, however, to minimize the importance of good decoration and furnishing for if these things are not carefully chosen and carefully related to their setting they may ruin a room otherwise beautiful.

Unfortunately too many architects will sacrifice the architectural merits of their interiors that the exterior may meet with approval, and especially is this so if the rooms are not to be paneled but have four plain plaster walls. Nevertheless there may be great architectural merit in just four plain plaster walls if the proportion is

BY LOUISE DAY PUTNAM LEE

pleasing and the windows and doors are well placed and beautiful. How often one will discover when the house is nearly built that there is a very small room with ceilings so high that it will forever impress one as a well hole, or that a window has been placed with its trim jammed into a corner! It is possible for the architect to find a way out of such difficulties and the thoughtful householder will help him by not making impossible demands upon him.

The real beauty of a room then is dependent upon proportion and line, and the relation to each other of such fundamental and structural features as windows, doors, fireplace and cornice. What then is decoration and what part does it play in the beauty of a room? Unfortunately by the word decoration is usually meant "trimmings" and we have been educated to believe that the real beauty of a thing is determined by its "trimmings." As a matter of fact, decoration is a purely secondary consideration and only of beauty when it

falls as such into the general whole. Decoration does not exist of itself but its purpose is to emphasize

the structural lines, to break up large areas in a pleasing and interesting way, but never to detract from nor weaken the main structure. It should be placed only in places which are naturally centers of interest such as fireplace windows, etc. It should be always subordinate to the main structure and there should be a common element of harmony between them in line and color. The minute you become more conscious of the decoration than of the thing decorated, it begins to savor of bad taste. It has been truly said that good taste in art as well as in people observes the following rule: "Good taste never exaggerates, is never aggressive, has nothing for show only, but is always simple, consistent and sincere."

Of all people the Greeks were the most keenly alive to beauty thru line and proportion, and we are, perhaps, particularly unappreciative. All of us respond in a certain degree to that more primal instinct, color, but the emotional appeal of line and

A room that "ties together." The furniture is chosen to conform in scale and character to the architectural treatment of the whole

*The beamed ceiling and absence of window trim give an impression of strength and solidity, maintained by the heavy, simple furniture*

proportion, the one which we feel more than we suppose, does require a conscious cultivation in order to be fully appreciated. We should deliberately endeavor to base our judgment on these fundamentals and regard them of primary importance, for color cannot cover defects of line and proportion tho it may, to a certain extent, distract the eye from them. Color, then, stands in the light of decoration, and should be a subordinate, tho an important secondary consideration. Photography is an excellent medium in helping one to appreciate the relative importance of line and color. We should, then, school ourselves to observe the contour of all objects, first to consider the line itself and then to see its relationship to the lines of the object to which it is related. For example, a wall or a floor is bound by horizontal or vertical lines, and the rugs upon the floor or the pictures on the wall become related to their background harmoniously in proportion as the lines coincide in movement or direction. This is why it is difficult to use a round picture on the wall, or square mats on a round table, for every line is contrary to the boundary line. This is why the triangular lines of a picture wire are inharmonious and also the reason that they attract our eye to the picture hook. The eye unconsciously follows a line to its end and when there is a marked contrast in the direction of a line, as in the case of the triangular picture wire, the eye is attracted there as surely as it would be by a marked color contrast. Rugs placed cat-a-corner on the floor create ugly angles and being contrary to the boundary lines are not in harmony with them, and are quite as disorderly as a picture which is hung crookedly on the wall.

It is essential to observe the contour of furniture when making a selection and not let the eye be distracted by color or other ornamentation; also the contour of the furniture should be considered in relation to the room in which it is to be placed. There has been in all periods a close analogy be-

tween the interior architecture and the furniture, and in its proper sense furniture is the architectural accompaniment. This is particularly noticeable in the Italian Renaissance and Early English periods, but it is no less true in every other style. Therefore in the selection of our furniture we should learn to consider the relation of the lines which will be created when any piece is placed in juxtaposition with the architectural background, and other pieces of furniture in the room. It does not take a very keen appreciation of scale and line to see that a delicately inlaid mahogany Sheraton chair is not pleasant nor related when placed in an oak paneled room of Elizabethan style and proportion, but it may not seem as clear until our attention is called to it, that a Queen Anne or Chippendale high-boy with a broken pediment top is not harmonious when placed in a room with a low stud. Furniture of this

type was designed for a room with lofty ceilings where the line of the cornice was so far away from the top of the furniture that the eye did not take in both lines at once and consequently the relation between them was not clear enough to make the in-harmony marked. If, however, the high-boy is placed so that the line of the angle of the wall and ceiling is seen at the same time, an unpleasant relationship is established.

Since the relation of one line to another is the basis of all design it will prove most instructive to form the habit of observing the contour and the relation of one form to another in every object that comes before us. If a thing is bounded by curved lines, observe and decide whether the curve is a graceful one, whether it has a feeling of strength which comes from simplicity and balance, or whether on the other hand it is weak and non-structural and "wiggles." Observe the relation of one straight line to another and see that the angles created are pleasing ones, whether this be in the placing of furniture or in a design. Thought along these lines will show at once why it is bad to place an upright piano or a bureau across a corner.

The question of what constitutes a well proportioned room is not one readily answered, for certain periods have developed the low ceiling room with great charm, while another age has insisted upon a lofty ceiling as being more truly beautiful. The so-called Greek Law of Proportion which is a rule deduced from the scale employed in the majority of Greek buildings, declares in substance that the divisions of spaces into such relations as  $1/2$  or  $1/4$  or  $1/3$  are not interesting because they are obvious and quickly calculated by the eye, whereas a more subtle relationship such as  $5/7$  or  $7/11$  is less monotonous and more pleasing. This is in the main an excellent rule to use when deciding the height of a dado, bookcase, fireplace, etc. There are, however, other considerations, such as the structural features which already exist in a room, which will help [Continued on page 37]

*The decorative value is purely architectural*

# A Homestead of Hospitality

*Old Colonial days give the dominant note to both the architecture and furnishing of this modern house. Thru the old-fashioned front door with its quaint fanlight and iron lantern above, you enter a long hall leading straight thru the house. The living room and library open from it and the stairs are at one side. The door at the far end of the hall leads to a broad terrace overlooking the lawns. The house is set rather high, surrounded by big trees*

*The outdoor living room is confessedly modern with its wicker easy chairs and colorful grass rug. But indoors the Colonial atmosphere is maintained in spite of "all the modern improvements." The photograph of the living room fireplace at the top of the page proves its charm*

# THE PERIOD STYLES

## How to Mix Without Messing Them

BY GEORGE LELAND HUNTER

*Rococo Chippendale*

*Gothic Chippendale*

*Ladder Chippendale*

*A Charles II chair*

*Queen Anne Chair*

Shibboleths are the first aid of the incompetent. When women have no taste, they camouflage the fact with "homelike" and "simple." When architects and decorators are uncertain about the period styles, they lean on "originality" and "individuality."

The illustrations of these two pages are all of furniture permanently on exhibition at the Metropolitan Museum of Art. I hope that my readers will note that photographic representations do not give an adequate idea of how works of art really look, and will seize the first opportunity to examine the originals. An actual personal acquaintance with a few good pieces is worth more than the reading of all the books and magazine articles ever printed.

At this point I should like to state that the primary purpose of this series of articles is to help those who buy rather than those who sell. Let who will educate the designer and the maker, I confine myself to those in front of the counter, because to my mind that is the side which is most important. Every time money is spent for bad art, a premium is put on bad art, and just as surely every time money is spent for good art, a premium is put on good art.

A rich man is measured and should be measured not by what he knows about art, but by the art that he buys. If in art as in business he employs expert advisers, the result is sure to be much

more satisfactory than if he tries to go it alone. A conspicuous, indeed the most conspicuous, example of a rich man who applied business methods to the purchase of art was the late J. Pierpont Morgan. His acquisitions from Europe of tapestries and furniture, paintings and sculpture, forced America just as powerfully to the front in art as his business genius forced America to the front in finance.

The chairs in the column on the left are English; those in the column on the right are French; all the latter except the Empire one, from the Hoentschel collection presented to the Museum by Mr. Morgan. I think it is obvious that mixing all of

*A heavy Jacobean oak cupboard*

these chairs in one room would be messing them, even without the addition of the five cabinets. It would be like an orchestra with every instrument playing a different tune.

Order, so the ancient motto declares, is Heaven's first law. It is also the first law of decoration and furnishing. The moment you put the German baroque cabinet in a room, you have ruled out all of the chairs illustrated except those labeled Charles II and Queen Anne, and even they seem trivial by comparison tho they also are baroque in style, the former an English baroque based on Flemish, the latter an English baroque based on Louis XIV.

If instead of the heavy German cabinet, bulbous and ponderous with large curves, you select the Sheraton desk with its accentuation of straight lines both horizontal and vertical, then the obvious harmony is the Louis XVI armchair, with the Louis XV side chair as a more vivacious and the Empire easy chair as a more formal alternative. If you select the Empire desk, you are restricted to the Empire chair, with the Queen Anne chair as a possible alternative. The Louis XVI chair is too gentle and delicate to stand juxtaposition with the massiveness of Empire. Equally incongruous would be the juxtaposition of Louis XV with the Jacobean cupboard.

These incongruities are incongruities not only of shapes

and masses, but also of material and texture and color. The oak of Jacobean does not look well with the walnut of Louis XV, nor with the brass and mahogany of Empire. The stripes of the Louis XVI brocade are not friendly with the rococo tapestry of the Louis XV armchair.

Sometimes the difficulty is solved by confining the Louis XV furniture to a Louis XV room, the Empire furniture to an Empire room, etc. This is the method rightly employed in constructing example rooms in museums or shops, for the education of the public; and when the shibboleths are not too much accentuated, it works very well in private residences and avoids the discords dear to the style-deaf. But often it is necessary to utilize furniture that has been inherited or given, and to mix without messing it. Then the most complete knowledge of the period styles, and the most exquisite taste resulting from wide experience is not too much. Innate good taste, if such there be, is not enough. One needs also, and especially, the feeling for line and shape and color and texture which is developed only by familiarity with classic examples.

One needs to study the Gothic of the fifteenth century as manifested in France and Flanders, and the Renaissance of the sixteenth century as manifested in Italy and France and Flanders and England; and the Baroque of the seventeenth, and the Rococo and Classic of the eighteenth centuries, as manifested in the same countries. Then one is able to understand why Louis XVI, tho more gentle and on a smaller and more familiar scale, responds so sweetly to the vibrations of Italian Renaissance; and how Charles II and Queen Anne share with German Baroque the sculptural qualities that characterize most furniture of the seventeenth century; and how the Rococo that dominated Louis XV dominated also Chippendale, tho by him mixt freely (but without messing) with Louis XIV and Dutch and Gothic or even Chinese.

Then one must become familiar with the part that Chinese played in European

*The German baroque cabinet dominates a room*

art of the eighteenth century, and understand why the Bishop collection of Chinese jade at the Museum is appropriately installed in a Louis XV room, and why there is so much Chinese in the style of Adam as interpreted in the Vanderbilt Hotel, and so little in the style of Adam as interpreted by the same architects at the Ritz-Carlton. Most of all one must become familiar with the facts that are fundamental such as: (1) Renaissance and Louis XVI are straight-line styles, the former palatial and the latter residential; (2) Baroque is a large curve and broken line style, but symmetrical; (3) Rococo is a small curve, unsymmetrical and naturalistic style, half way

in scale between Baroque and Louis XVI. But this familiarity must be a familiarity not of mere phrases; it must be a familiarity tied up with actual examples completely

*Empire desk, mahogany and brass*

*The Louis XV side chair or the Empire easy chair would go with this Sheraton desk*

seen and permanently visualized. Then one may be able to mix the period styles without messing them. Until then, common sense, and the consultation of decorators and salesmen who really know, will help.

For example, suppose one has inherited a miscellaneous collection of Colonial furniture which makes the house where it is installed look like an auction shop. How is it possible to eliminate the incongruities, and silence the discords? This is a question that confronts many Americans, and that cannot be solved by recourse to our Colonial museums, most of which are illustrations of how not to do it, with notable exceptions like the Dyckman House in New York and the Pendleton collection in Providence.

First, assemble the furniture by periods. Let the first grouping contain the pieces that suggest Jacobean, even if they were constructed at a much later date. Let the second group contain the pieces that suggest Charles II, William and Mary, and Queen Anne. Let the third group contain the pieces that suggest Chippendale. Let the fourth group contain the pieces that suggest Sheraton. Let the fifth group contain the pieces that suggest Empire.

It will be noticed at once that the

Jacobean group consists of one or two chests and wainscot chairs, the finer pieces of oak, and the cheaper pieces of pine, which would be entirely out of place in a Chippendale or a Sheraton or an Empire environment, but which would show to best advantage in an oak-paneled hall or dining room or living room.

The second group consists largely of walnut chairs with lofty backs like the Charles II and Queen Anne chairs illustrated on the opposite page, or of tables and lowboys and highboys elaborate with carving and turning like the William and Mary cabinet illustrated on this page. This group demands more fuss and feathers, with more gold and more draperies and more upholsteries. It corresponds to the French Louis XIV group which it echoes, but with important modifications due to English ancestry.

The Chippendale group (see illustrations on the opposite page) permits all the variety that the most rebellious soul could wish. The architectural woodwork of the period deserted the natural oak of the sixteenth and seventeenth centuries to imitate the white of marble, and the typical so-called Georgian interior is massive with moldings and mantels, and with tabernacles for doors and windows. But soon after the death of George I in 1727, the exhortations of Sir William Kent and other English architects who re-breathed the spirit of Inigo Jones and Palladio, began to lose their power, and heavy sculptural architectural ornament was replaced by wall paper. Especially appropriate for rooms containing Chippendale furniture are wall papers showing the Chinese influence that dominated Europe marvelously in the eighteenth century, and that is visible in the front legs and brackets of the Gothic Chippendale chair illustrated on the opposite page. The Chippendale group corresponds to that of Louis XV in France, but is heavier and retains more of the feeling of Louis XIV and Queen Anne.

*A William and Mary cabinet*

The Sheraton group marks an abrupt contrast to those of Chippendale. Chinese takes the place of Rococo, needless are no longer in vogue, shapes and colors become lighter, curves yield to straight lines, carving is replaced by paint and inlay. The architectural ornament in wood and plaster shows pilasters and pediments, and egg-and-dart and key moldings, and other ancient Greek and Roman motifs galore, all on a delicate scale in low relief, and in sympathy with the gray-toned and striped wall papers and damasks that they framed.

With Empire, we return to heavy Classic, but of a type that is stupid and uninteresting as compared with Italian Renaissance or Early Georgian (see the two chairs illustrated on this page). The Empire desk illustrated is not a fair example, being lighter in line and of better proportions than many of its European contemporaries. It was made in New York in the first quarter of the nineteenth century by Duncan Phyfe, who ranks high among American cabinet makers. Empire furniture demands larger spaces and heavier colors and a more detached arrangement than the styles that preceded. But many of the lighter Empire and post-Empire pieces made in England and America can be used with the Sheraton group. The heavier Empire pieces with their dazzling sheen should be kept by themselves.

Assembled along these lines, a miscellaneous collection of Colonial furniture can be distributed thru a house in such a way as to avoid the appearance of crowding, which is the most obvious and significant sign of bad taste.

# Live Wire Housekeeping

*A warm plate is often a necessity. Can you think of a cleaner, more convenient way of heating it? \$12 (2 cents an hour)*

*To visit the furnace or the jam closet after dark a safe light is important. This nickel lantern costs \$3.50*

*Coffee—bubbling and appetizing — freshly made for each meal. An attractive urn like this one costs \$17*

*Fuse trouble? Lights all out. This six-in-one gives you your lights again by a slight turn making a new contact. Cost, 30 cents*

*Thoro, sanitary and ache-less sweeping can be assured by use of the electrically operated vacuum cleaner. This style costs \$52.50*

*To make delicious toast, right on the breakfast table, just as you want it, no more than you need, hot and appetizing*

*Do you share by a poor light? This mirror has its own lights in the rim arranged to illuminate the glass. \$6 up. It costs  $\frac{1}{2}$  cent an hour to light it.*

*To beat an egg "in no time" while you are doing something else. An electric egg-beater like this relieves cooking of one of its biggest nuisances. It costs from \$12.50*

*After the home shampoo this dryer saves time and discomfort. It blows warm air wherever directed. Cost, from \$16.50 up*

*In the corner of the pantry, convenient and accessible, out of the way and efficient, have an electric dish-washing machine. Cost, \$75*

The electric range is neat and clean—no ashes, no wood, no coal to bother you. Always ready. There are many sizes and many prices. This one is \$60

By the bed side ready for any emergency—the white enameled taper in its nickel stand gives light by pressure of the thumb—\$3.50

So many delicious dishes can be made with the electric grill at the left! The pans are of aluminum. It has four heats

On the cold wintry mornings there will be no chimney trouble to prevent your having waffles if you use this iron below. \$15 up. It costs 5½ cents an hour to run it

For less than ½ a cent an hour this pad supplies local heat wherever wanted. A blessing to the invalid, a comfort to all. From \$3.50 up

The milk-warmer will be appreciated these cold nights by many who now have to use matches and alcohol or gas. Cost \$8.50

300,000 stitches for one cent—that is the operating cost of this sewing machine motor. \$15

To be sure it is just right just as you want it—why not boil your matutinal egg on the table? This little affair costs \$6.25 and you can boil six eggs in it for ½ a cent

A visible cheerful glow adds to the comfort of capable heat. These radiators cost from \$7.50 up. This one costs 5 cents an hour to furnish heat

No need to use matches in lighting either the gas range or the overhead light. Electric lighters \$1.50 and \$2

*A room that is arranged for comfort—big easy chairs with lamps conveniently placed and a pleasant open fire*

## THE ROOM YOU LIVE IN

**T**EA is being served. Uncomfortable ladies in stiff, shiny, silk dresses are trying to look—they have given up trying to be—comfortable, on slippery hair-cloth sofas. Every third lady sits apart on a slippery straight back-chair. She cannot hear what her neighbor says so she smiles at intervals. She does not move her chair closer—experience has taught her that a parlor “suite” is planned, purchased and placed for a particular arrangement. She enjoys her tea and departs. Thus was the tea party and parlor of about fifty years ago.

Then came the plush period, where tea tables with ridiculously tiny scalloped cups and souvenir spoons were laid always out, collecting the day’s dust. Tea tables were merely foolish accessories.

Now comes the time and the living room when we en-sconce ourselves in luscious divans or enveloping wicker chairs, and a spot-less tea tray, fresh from the pantry, is passed to comfortable, thoroly happy guests.

In no other room have we come such a long way toward livableness as in the living room. Once the bare requisites of the room are understood the elaboration both in quantity and quality can readily follow.

There are two things to remember—choosing thoroly comfortable livable furniture and then arranging the pieces so as to form groups, suggesting

BY AGNES FOSTER WRIGHT

a center of interest. Even one chair and a table make a comfortable convenient group, provided the chair is really comfortable and the table large enough to hold a lamp, books and magazines and smoking things. One should get into a habit of saying, when one places a chair, “What is a person going to do, when he sits in it?” So then add the table for a light or a low bench for books or a sewing basket or a smoking stand. Remember furniture is made for the requisites of living. Fancy the boredom of people sitting alone in a corner or in a passageway between two doors. Make your furniture invite sociability.

Before the fireplace—one presupposes a fireplace in every living room—an all-over

upholstered divan forms the nucleus from which we build up our livable living room. Economize on everything else, but get a real down upholstered six or seven foot divan. It has more sitting capacity than three chairs and costs less.

The large pieces do the actual furnishing and the smaller ones fill in spaces and create the “homey” atmosphere. Put bright pieces in dark corners, as a dark piece will lose itself in the shadows.

A very sensible and workable scheme for furnishing is to draw a floor plan to scale—say  $\frac{1}{4}$  inch to a foot, using white paper for the plan, and yellow for the furniture, which also should be drawn to scale.

In that way you will not only be better able to judge convenience, balance, uncluttered floor space—which makes

so much for the dignity of a room, but you can demonstrate to others, so that, when the actual placing time comes you know to a foot where each piece should go. Remember, it is always better to leave a space empty than to have it occupied by a badly placed piece of furniture. The usual arrangement for a divan is to put behind the divan a long narrow table. “Refectory” table with a light on either end and flower bowls, books, magazines or writing equipment in the middle.

There are variations from this arrangement, how-

*Who wouldn't enjoy working in a room like this, with its bookcases and desk table*

ever, which are as satisfactory. For instance, the divan may be put lengthwise at the side of the fireplace, a small table at the outside end and the long table opposite the divan with a large chair at the further end. Or else the long table may be put opposite the fireplace and two chairs with a small table between opposite the divan; in any case, see that as many people as possible get direct light. A large chair with no light near enough to read or sew by is a distinctly poor arrangement.

Sometimes, after purchasing an upholstered divan and a long table, both expensive pieces, all-over upholstered chairs are prohibitive in price. Large wicker chairs, with cretonne upholstered backs and seats, are inexpensive, comfortable and look luxurious; if the cushions are of velour the effect is even better, as velvet or velour have a most enriching effect on the room. Do not group furniture in the middle of the living room. If the center space is kept clear the size of the room is much increased.

Opposite the fireplace group there is generally a good space for a group consisting of an oval gate-legged table and several chairs. A gate-legged table is a good living room buy, as it can conveniently be made smaller. In case one has a living room and dining room combined, it is an excellent

piece, as, being oval, a tête-à-tête dinner may be served using it in its narrow width, and for a dinner for six it is of conveniently large size.

Every living room should have a desk, if possible, for the exclusive use of guests. It is unpleasant to feel the month's bills of the family are under one's nose when visiting. If not possible to allow exclusive use to guests, then see that the main drawer is well equipped with the essentials and then there is no excuse for rummaging. It is these little conveniences that contribute so much toward making a living room livable.

One very essential piece of furniture to my mind is a low stand or table of a size

to hold a tea or coffee tray. There is a certain touch of hospitality about a low table for tea or coffee serving. Little tables which fold down are excellent for such a purpose, and, by the way, a low table is much more graceful to serve from than a high one.

There should always be several straight-backed chairs that can be moved about in a living room—men are restless and like to take the chairs and "visit" about with them.

Lots of lamps of all sizes are of the greatest aid in making a living room attractive. The shades should not be too brilliant and "spotty" but a warming glow should be shed. This is often done by inter-

lining a silk shade with orange, rose or yellow. Unlit, the shade fits softly into the background, but lit a glow of color is shed that is charming. In the case where parchment shades are used the inside may be painted any of these warm tones. Parchment and silk shades always look well in the same room and afford a pleasing variety. On pottery and wrought iron or bronze lamps, parchment shades are preferable and on porcelain and gilt standards silk shades are more suitable. Shades made of silk gauze are particularly attractive, as the fabric is [Continued on page 39]

*Obviously a room for tea and talk, predominantly feminine. Interesting wall treatment*

*The charm of this living room comes from the wise choice and arrangement of a few comfortable and thoroly good pieces of furniture*

# YOUR PLACE IN YOUR TOWN

BY HAROLD A. CAPARN

FORMER PRESIDENT OF THE AMERICAN SOCIETY OF LANDSCAPE ARCHITECTS

**I**NDIVIDUALISM is the proud boast of the American. He prides himself on being no man's man. He scorns to be a brick in a wall, a cog in a machine. He wants to live his own life in his own way in his own house, to think his own thoughts and vote his own vote.

But individualism can be and is constantly misunderstood, misused, run into excesses and wrong directions. Take, for instance, the American house and lot. Without any desire to injure or ignore his neighbor, it seldom occurs to a householder that in the design and arranging of his place he should consider the other individuals, his neighbors, the whole street, the whole town in fact. What he does on his property makes a difference to the block he lives on and to the town at large.

To begin with the house, the center of all, for which the lot exists. How often does a homebuilder reflect that the exterior of his house is of even greater importance to his fellow citizens than to himself? Yet this must be so, for while the owner sees it only, say, twice a day, when he leaves and returns to it, his neighbors are looking at it all day long, every one who passes along the street from January 1 to December 31. So the look of one's house would seem to be really the concern of other people. Then, what should one do about it?

This is a difficult question to answer, but it is asked so that we may make the attempt. The first suggestion is in deciding on a design for your house, approach the subject in a right frame of mind. That is, don't build in a spirit of ostentation or self-advertisement, or of merely making something different from other people. Think of a structure as simple, handsome and well designed as possible within the appropriation, not as conspicuous. Let every part express some reasonable and practical purpose, eschew complexity with its resulting expense in construction, upkeep and repair, and be suspicious of mere ornament or frills of any kind. This does not mean to avoid such things altogether, but to be sure you are right before going ahead with them. If you do this you are pretty sure to get a house that is as conspicuous and individual as you may desire. And in order to get it, you should have a good architect to design it if you possibly can. And before you begin, if you or any members of your family are sensitive to such things, walk up and down the block and the adjoining blocks a few times, trying to get the spirit of what is good in them, and get the architect to do the same. Then he will probably go home and design something quite different from what he has seen but somehow in harmony with it. All this applies to any kind of house in any style or materials; and we trust that our optimism as to the architect will be justified by the reader's experience.

All that precedes and follows assumes that you, the imaginary homebuilder, desire to get on the bandwagon and follow the procession of those who wish to treat their houses and lots as part of the community, and to consider that the neighbors have their share in the appearance of each house and lot. Not in the back, for that is mostly invisible from the street, but in the front, that is, in the part between the house and street line. Here is where some of the contradictoriness of our individual-

ism comes in. We throw open the entire front for the contemplation and benefit of passers-by, and then disregard them as far as the treatment of it goes; we think only of the lot for its own sake and without relation to what is to the right and left of it. Almost every one wants to have his lot so done that it will be plainly separated from those on either side. As a matter of fact, every one loses, both individuals and the community, by this jealousy over boundaries, this insistence on having one's front yard distinct from the neighbor's.

**T**HEN what should we do about it? Two alternatives are possible. One is to run all the fronts of all the lots on a block together so that no break will be visible, and the treatment would be homogeneous; so that, as far as appearance went, there would be but one long unbroken foreground to all the houses from one cross street to another.

This idea will come as a shock to many a good American who has rather hazily regarded his right to fend off his neighbors as more than a right, a duty in fact. Yet what would any one lose thereby? It is perfectly clear that every one would gain, because not only would the look of the street be greatly improved, but each owner would profit by all the lots on both sides of him and since it is the almost universal American practise to dedicate the front yard to the public, to leave it in full view of every one, surely it is inconsistent to cut a row of them into unrelated parts instead of pooling them for the common good. In arguing for the correlation of front yards, I am not suggesting to the gentle reader something that has not been done before. There are many instances around and about, some of them no doubt accidental, and there are entire blocks treated in one scheme in the level cities of the Great Lakes. And those streets are as beautiful as can be found anywhere.

The second alternative, the other way of correlating the front yards, is not to treat them as one, but to separate them, and to separate them well and consistently. It's not so much the separation, or, rather, semi-separation of the lots that produces the usual hap-hazard effect, as the fifty-seven varieties of separation, all disagreeing with each other: one with a fence, another with one kind of hedge, a third with another kind, a fourth with a bank, a fifth with a few straggling bushes, a sixth with some bunchy and self-conscious shrubbery, a seventh with—but no! go and look for yourself. If any one of these methods of division were adopted consistently thru a block, that block might look very attractive. For instance, if every lot were surrounded by a privet hedge, all trimmed alike, it would probably be the best looking block in town. Do not imagine that we are saying that the only way to make a block look well is by using one kind of separation, similar hedges or fences all thru. This is the easiest way and the surest to produce a good result. Several kinds of separation might be appropriately used in a block, but they would be proportionately more difficult to keep consistent.

So much for the boundaries of your place. There may seem to be a good deal of it, but any one who has read so far is likely to see that it is an important question and worth discussing at length. Next,

as to what is within the boundaries, considering it, not as is customary for itself alone, but in relation to what is on both sides of it, and up and down and across the street. If the joint-stock idea of throwing all the front lawns together should be adopted, careful designing will be required to produce a satisfactory effect; not that the problem is difficult, but it requires a good deal of self-restraint, that rare quality in amateur planning. It is even more than usual, a question of What to Leave Out. There might be shrubbery and tree planting and even flowers near the houses, and some more in relation to the sidewalk, depending on the size of the houses and lots and the setback of the building line; but flower beds and isolated "specimen" shrubs or trees in the middle of the lawns (or rather lawn, for we are assuming the grass to be in one unbroken sweep), should be used with caution, and it would be safer to omit them altogether; a very few might spoil the effect of the whole composition. As for flower beds, there is no place for them in a front lawn. But even with these restrictions, there is a good deal of latitude in planting such a layout, and endless possibility of varied effect by the use of different kinds of planting material; for instance, one house might specialize in rhododendrons, another in conifers, another in one or more kinds of deciduous shrubs, another might feature magnolias or dogwoods or flowering crabs or lilacs and so on, yet all make a harmonious succession.

But if, on the other hand, the subdivision is strongly marked by hedges or fences, the several lots could be treated with entire freedom; the hedges or fences would tie the whole together so effectively that it would take a very eccentric handling of any lot to make it seriously injure the appearance of them all.

**T**O summarize all this discussion in a few words: There are two ways, generally speaking, to get the best from each place individually and make it contribute most to the general good, the look of the block and the impression of the town. One is to correlate the front lawns, to treat them in effect, as one; the other is to separate the front yards and correlate the division lines. The great difficulty here is not to make the whole look well, given the opportunity, but to make the owners see it that way, to be willing to suppress their rugged individualism to that extent. To show how this may be done, is not the purpose of this article. We would rather follow the easiest way and slide from under such an enterprise.

For the purposes of this writing we have reached some kind of decision on what to do about the boundaries and what is within them. So we have obviously reached the sidewalk which is under the control of the civic authorities. Like the lots themselves, the sidewalk and the planting space, if there is one, should be consistent. The sidewalk, of course, should be of the same width and material thruout. The planting space should have trees if possible; trees are a powerful unifier of ill-assorted yards, and they should all be of the same size, and evenly spaced; and if the planting space is wide enough, and conditions permit, there may also be shrubs of one or more kinds, which will add greatly to the attractiveness and apparent width of the street.

Planting lettuce with the asparagus saved space and protected the lettuce from sun

Another example of space economy—late cabbage between the rows of early potatoes

Fill up the ranks in the garden—lettuce here where the onions failed to grow

## PAPER PLANTING

BY HUGH FINDLAY

A maximum yield should be the chief aim of every progressive gardener for 1918. A succession of planting should be so outlined that as soon as the garden trenches are vacated by one crop, another and possibly two crops will take its place. Not even a day should be lost between the time one crop is taken from the land and another is planted and whenever possible and practical the succession crops, as lettuce, should have had several weeks' start before transplanting. For example, two rows of the dwarf smooth peas planted 3 feet apart about as soon as the soil is fit to work. Between these, a row of loose leaf lettuce may be transplanted. If the plants are a fair size and healthy and the soil loose and rich this crop will be ready for use in from four to five weeks. The peas will be harvested, if planted April 15, about the first of July. The ground is now vacant and late cabbage plants started in June may be transplanted. The rows should be 3 feet apart and the cabbage planted 18 to 24 inches apart in the rows. It takes late

cabbage about 110 to 120 days to mature so that a crop of summer radish may be sown between the rows of cabbage which will mature in about five weeks.

Intensive gardening should always be practised on limited spaces of ground.

This concentration of effort means economy in labor for the same plowing or spading, harrowing and cultivation will be sufficient for more than one crop. Of course it means an increase in hand labor to keep the soil well tilled and the weeds under control but the results more than pay.

THERE are a few principles to keep in mind in either succession or companion cropping.

1. Make specific plans for intensive gardening before spring.

2. Order enough seed to carry out your plans so that there will be no delay when operations begin.

3. Study carefully the length of time it

takes for each variety to mature so that certain combinations may result in a satisfactory harvest.

4. Order varieties suited to the season. For example, spring radish sown in July will be pithy while summer radish are firm and a fine flavor.

5. Do not crowd the plants in your desire to get a maximum yield from a limited space. Give each plant sufficient room to mature so that it is perfect in form and a good flavor. But do not waste space.

6. Remember that to take three to four crops from the soil in a single season means a demand on both moisture and food. Supply sufficient of both so that the plant may not be checked in its growth at any period from germination until maturity.

7. Last but not least, stick to your original plan and carry it thru.

There are numerous plans of intercropping and it is impossible to outline them all here but, the following will prove satisfactory if properly carried out.

1. The seed of the early cabbage (C) is sown in flats under glass March 1, transplanted two inches apart each way in a second flat March 25, and planted to the open April 20. The lettuce (L) plants (loose leaf) are started about the same time. The radish (R) seed is sown about April 15 and matures May 25.

	Days from seed to maturity	Amount for 50 ft. row
15" C 10" L 10" CLC	C 105	C 1 oz.
R.....V.....	L 70	L 1 oz.
15" C 10" L 10" CLC	R 40	R 1 oz.

2. Early beet (B) seed may be planted under glass March 1, transplanted into a rich soil April 5, and finally shifted to the open May 1. Between the rows of beets, early carrots (C) may be sown April 15. After these two crops are removed, late cabbage (LC) may be planted in July. The seed sown the latter part of May, the plants transplanted. Between the rows of cabbage, summer (SR) radish may be sown.

	Days from seed to maturity	Amount for 50 ft. row
15" B 4" B 4" B	B 150	B 1 oz.
C 4" C 4" C	C 120	C 1 oz.
15" B 4" B 4" B	LC 150	LC 1 oz.
	SR 45	SR 1 oz.

3. Another very good combination is to sow the smooth dwarf varieties of peas (P) as soon as the soil is fit to work and at the same time sow early radish (R) between the rows of peas. Both of these crops may be removed in July and followed by late celery (C). Celery seed sown in April, transplanted once before shifting it to the garden.

	Days from seed to maturity	Amount for 50 ft. row
18" P.....	P 60-80	P 1 pint
18" R.....	R 40	R 1 oz.
18" P.....	C 120-150	C 1 oz.

4. The seed of early turnips (T) may be sown as soon as the severe frost has passed. Between the rows, onion (O) sets for bunch onions may be planted. Following these a late crop of string beans (B) and summer radish (SR) may be planted. With this combination the soil should be very rich and the soil cultivated very frequently.

	Days from seed to maturity	Amount for 50 ft. row
18" T 6" T 6" T	T 65	T 1 oz.
O 1" O 1" O	T 145	O 1 oz.
18" T 6" T 6" T	B 65	B 1 oz.
	SR 40	SR 1 oz.

5. The seed of tomatoes (T) may be started under glass in March. Transplanted into pots or strawberry baskets filled with rich soil about April 15 and finally shifted to the garden about June 5. Before the tomatoes are planted and trained to stakes, a crop of loose leaf lettuce (L) and transplanted beets (B) may be taken off. Between the tomatoes a second crop of lettuce may be raised late in the season.

	Days from seed to maturity	Amount for 50 ft. row
18" L 10" L 10" L	T 150	T 1 oz.
B.....	B 135	B 1 oz.
18" L 10" L 10" L	L 70	L 1 oz.

# What to Do in January

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## ORCHARD AND BERRIES

**Snow Injury** The heavy snow fall and occasional thaw in January cause much damage in the orchard. The weight of the snow breaks down the limbs. Get under the branches, lift up on them with a long pole and shake off the snow.

**Pruning** This is a good time to prune the apple tree. Cut the limbs off at the collar or close to the trunk. Do not leave long stubs to dry back and finally rot. Paint all wounds with a thick paint. The saw should have small teeth on one edge, must be very sharp and well set.

After using the saw, clean it with one-half kerosene and one-half linseed oil mixt. Never allow the saw to rust or become gummy.

Do not overprune so that the tree forms water spouts along the main branches. Keep in mind that you have not removed the roots while you remove much of the head or top of the tree. The supply of sap must go somewhere. Take about three years to renovate an old tree.

Make sure that an itinerant pruner understands his business before you let him touch your trees.

**Peach Orchard** Do very little pruning in the peach orchard. Cut out only the limbs that cross or rub. It is not a good practise to allow too much sunshine to burn into the head of the tree by taking out the center branches.

**Currants and Gooseberries** This is the month to cut out the old wood. Do not over-prune and remember that the new crop is born on the previous year's growth.

**Spray Material and Spraying** In the South, January is a good month to spray for the San Jose Scale.

Some orchardists spray at this time in the North for the same pest. It is not necessary to use salt in the mixture to make it stick or try to apply it hot in order to make it effective. Spray with a strong solution (Dormant Spray) one part of the lime sulfur to eight parts of water. This strength is always applied before the buds start. Never spray against the wind. Wait for a calm day. Cover every twig and branch. Thoro work is of the greatest importance. Never apply poison with the dormant spray.

Apples, plums, cherries and pears may be sprayed this month in order to destroy the scale.

## FLOWER GARDEN

**Flower Garden** Do not fail to place some fresh suet in the garden every day. Also a little warm water will be welcomed by the birds.

**Spray Materials** Get in your supply of Bordeaux Mixture, Lime Sulfur, Flowers of Sulfur, White Arsenate and Paris Green. Be prepared. Keep the poison under lock and key.

**Seed** Order your seed now. When it arrives place it where it is cool and dry and out of the reach of mice.

**Garden Indoors** Keep water in the furnace. The air is more moist and there is less gas. If ferns are raised, keep a pan of water near them. The air should not be dry.

**Foliage Plants** No group of plants will be more satisfactory for the indoor garden than the Rex Begonia, B. Argentea Guttata, B. Metallica, all three of which have ornamental foliage. The best flowering begonia is "Glory of Cincinnati."

**Vines** The window garden may be made very attractive by placing such vines as the Tradescantia and vinca for trailing over the edge of the box. For supports the Hibera Algeriensis for shady positions, and Hoya Carnosa with its waxen flower as well as the Jasimum Gracellimum with its fragrant blossom for sunny places.

**Water Garden** Plan a water garden for next year. Order the water-lily roots and aquatic plants early. They are going to be scarce this spring. The first orders will receive the first attention.

## GREENHOUSE

**Seedage** This is the month to sow the seed of heliotrope, pansies, carnations, verbenas, petunias, forget-me-not, marguerites and mignonette for spring bloom.

Cyclamen seed should be sown now. Cover them with sand twice their own length. It takes about four weeks for them to germinate. The seed forms the bulb which should be kept in a cool house.

**Cuttings** Make cuttings of carnations, roses, and all spring bedding plants. Keep the night temperature about 50 degrees and the day 60 to 65 degrees F. After the cuttings are placed in clean sand, water them freely. Shade them on bright days. Remove the covering each evening. Pick off all yellow leaves from the rose cuttings.

**Bulbs** Bring the Easter bulbs gradually to the light. Do not over-water them or keep them too warm.

Cyclamens may be kept blooming for a long time if kept in a cool place. When the flowers begin to come small, it is a sign that the bulb needs a rest. The soil should be gradually dried but the bulb should not be allowed to shrivel.

Freesias planted now may be placed in the light. The root and top grow equally well at the same time.

Be sure that all the bulb pots are full of roots before the pots are exposed to the light.

**Hardwooded Plants** Such plants as spirea, hydrangea, lilac and Deutzia should be brought out of storage and gradually thawed out. Each day sprinkle the wood with water so as to soften the bud. Be careful not to overwet the soil but keep it moist. If given the proper care these plants will bloom for Easter.

**Lily of the Valley** Clumps of lily of the valley may be brought from any seed house at this time. The cold storage roots are frozen and should be thawed out slowly. Plant them in a light rich soil and keep them in a dark cool place for a few weeks. Bring to the light. If the plant shows signs of sending out shoot stems and foliage keep it in the dark for a few days. Plants may be grown in cocoafiber and transplanted to fancy table dishes. Never allow water to touch the flower but keep the soil moist. Decrease the watering as soon as the flower buds form. Bloom may be forced with bottom heat in from twenty to thirty days.

**Cut Flowers** Flowers to be shipped should be cut in the morning, plunged into cold water, and kept in a dark cool place over night. Wrap the bloom of roses, violets, sweet-peas, etc., in oil paper. Never sprinkle the flower. The cardboard box should be lined with oil paper and a little ice placed at the base of the stems. The moist tissue paper will absorb most of the water as the ice melts.

## VEGETABLES

**Soil** Bring in sufficient garden loam, decayed sod and sand so that they may thaw out before the end of the month. Leaf mold for the bottoms of the flat will not only aid in drainage but also act as a sponge to keep the soil above it moist. Water seeds and seedlings as little as possible but never allow the soil to become dry. One-half sifted garden loam and one-half sand mixt make a fine soil for a seed bed.

**Seedage** The last of the month in mild climates, sow a few seeds of early cabbage, beets, lettuce and early cauliflower.

**Commercial Fertilizers** For such leaf crops as lettuce, spinach or endive buy in a supply of nitrate of soda.

It takes about two pounds to one square rod of soil. It should be applied just before a rain. It may also be applied by dissolving three-quarters to seven gallons of water. Never allow the soda crystals to come in contact with the foliage. For stem builders, potatoes, etc., buy Kinit, four pounds to one square foot, or sulfate of potash two pounds to one square foot. Both of these fertilizers are hard to secure. Substitute the above potash by applying freely hardwood ashes.

The best fruit builder for tomatoes, egg-plant and all the root crops is phosphoric acid. It may be supplied by using five pounds of ground rock, two pounds acid phosphate, five pounds of dissolved bone or basic slag to one square rod of soil. The dissolved bone meal is considered the best for the vegetable garden.

**Stable Manures** There will be a great demand on sheep manure next spring. Buy early. Fifteen pounds will cover a space of 100 square feet.

**Vegetables** Keep cow or horse manure covered so as not to lose the nitrogen which might escape in the form of gas. During the January thaw, turn the manure pile over and mix a little soil with it.

**Garden Tools and Equipment** Before the spring drive on the garden trenches be equipped with a digging fork, iron rake, light hoe, garden line, and a narcross weeder. Do not buy cheap or combination tools.

Make or buy a supply of labels, stakes and tomato supports.

Plant protectors for such crops as cucumbers and squash should be bought now. Glass will be higher next spring.

**Garden Space** Economize in garden space in making your plans. It is better to concentrate your effort on a small space and make a success than to spread your efforts out and only make a partial success.

**Garden Records** With the incoming of your garden seeds check them up and see that you receive what you ordered. Start on January 1 to make a garden record. Make a note each day of the weather conditions, temperature, etc. Keep careful notes on seed germination, transplanting, kind of soil used and general appearance of the plants.

Now and then insert a photograph of some garden happening that will be of interest later on.

Each day add a garden quotation to your day's record.

**Boilers** Clean out the flues of the boilers at least once each week. If this is done frequently a more even heat is radiated with the use of less coal.

Illustration of a Chinese Rug made upon our own looms in China

## Symbolism in Chinese Rugs

The rugs of China, now generally admired because of their unusual color effects, have an added charm in designs evolved from the great religious beliefs under which the people have lived.

In the design illustrated above are depicted, upon a medium porcelain blue ground, the eight Buddhist symbols, also the chess board, scrolls, and musical instruments, which are symbols of the Literati. The Central medallion shows an arrangement of the Phoenix, a symbol of prosperity, while in the other medallions, is shown the "Lung," or Dragon of heaven, guarding a pearl. The designs of our Chinese Rugs follow faithfully those of the earlier periods.

We have numerous other designs ready for delivery, and can make any required size in a reasonable time. Further information will be gladly given upon request.

## THE POULTRY YARD IN JANUARY

BY E. I. FARRINGTON

**W**ITH a gradual easing up in the price of grain, poultry keepers are beginning to feel somewhat more encouraged. Even yet, tho, there is a tendency among men who make poultry keeping their business to be very cautious in their operations. This means that there is likely to be a dearth of eggs and drest poultry next season, unless the back yard poultry keeper responds freely to the request of Mr. Hoover by doubling his flock.

It is time now to plan out the work for the coming year, especially in relation to the hatching and rearing of the chickens. If an incubator or a brooder is to be purchased, the order should be put in early.

If only a few chickens are to be raised, there is no reason why setting hens should not be relied upon, so that no one need think it is absolutely necessary to have an incubator, altho the latter are very convenient. In most all sections it is possible to buy day-old chicks, and orders for them should be placed as soon as possible. The price will be higher this year than ever before. In many sections 20 cents a chick will be the usual rate.

There is a growing tendency among amateurs to buy "pound chickens," as they are called. That is to say, chicks which are four or five weeks old, and have passed the most critical period in their lives. Naturally the price is higher, some hatchers making the practise of adding 5 cents per week to the original cost of day-old chicks. Many times it is a great advantage to buy these partly grown chickens.

This is the month to start making up breeding pens, if one is to hatch from his own flock. Perhaps it will be necessary to buy a male bird in order to avoid too close inbreeding. Naturally the amateur's main object is to obtain a maximum number of eggs, for which reason he should choose the hens which are the heaviest layers, and which were the earliest to begin laying in the fall.

It is considered a wise plan to mate cockerels with hens in their second year. Of course this is not imperative, but the older hens are likely to produce rather stronger chickens than pullets, especially if the latter have been laying heavily all the season. One point often overlooked is that it is highly important that the male bird should come from a heavy laying strain of fowls. It has been shown that the

cock has a very strong influence in building up a flock of heavy laying birds.

With the better supply of grain on the market, there are more opportunities for making a choice. Of course the patriotic poultry keeper will not make free use of wheat, as that is the one grain which must be conserved. In sections where corn is plentiful, the following feeding plan can be adopted to advantage:

Dry mash—5 parts mixt feed (bran and middlings), 4 parts corn meal, 1 part beef scraps or fish meal.

Scratch feed—Cracked corn.

Green feed—Cabbages or sprouted oats.

If heavy oats happen to be plentiful at a lower cost than corn, the following ration may be tried:

Dry mash—6 parts corn meal, 3 parts bran, 1 part beef scraps.

Scratch feed—Heavy oats.

Green feed—Sprouted oats or cabbages.

These are very simple rations, but give satisfactory results. Of course they may need to be modified somewhat if a large amount of table scraps are available.

The days being short, it is necessary that the birds should be kept exercising most of the time they are off the roosts. This result is accomplished most easily by feeding all hard grain in a litter from five to ten inches deep, according to the size of the birds. It is always a good plan to throw in enough grain at night so that a little will be left to induce the birds to start scratching at daylight. If they stand around waiting for breakfast, they are likely to become chilled.

While the weather is cold, it will be necessary to visit the poultry house several times a day in order to refill the water dishes, which are likely to freeze. There are many different drinking fountains on the market, but for winter an ordinary galvanized pail is more satisfactory than most of them. If the water in such a pail freezes, it is only necessary to invert the pail and pour a little hot water on the bottom and sides. This will immediately loosen the cake of ice and let it fall out.

Poultry keepers who have to be away all day can purchase heated fountains which require attention only once in twenty-four hours. It will be impossible for the hens to keep up heavy egg production unless they have plenty of water.

This flock of Barred Plymouth Rocks on an Oklahoma farm earns \$500 a year

## GIVEN FOUR WALLS AND A CEILING

(Continued from page 24)

to determine the problems. For example, if a mantel already exists in the room, it would be better to build a bookcase either the same height as the mantel, or considerably lower, or considerably higher, for there is a certain restless and unsatisfying element introduced by lines which are almost but not quite level. It is far better to have a marked difference or no difference at all.

This is also true of the shape of a room: one that is obviously square or markedly rectangular is more pleasing than one that is nearly and yet not absolutely square. However, the arrangement of furniture may do much to change in effect the shape of a room, as, for instance, in a dining room which is not quite square, the furniture may be so arranged as to give the impression of an absolute square. A square room is not an interesting room to furnish, and is a particularly difficult shape for a living room as is also one that is twice as long as it is wide or one whose length is one-third longer than the width. A room that is fifteen feet by twenty-five feet or thirteen by twenty-one is extremely pleasing for a living room. It will be observed that the proportion of these rooms meets with the requirements laid down by the so-called Greek law in that the relation of width and length is not easily discernible.

It is impossible to make any arbitrary statement regarding a proper relation between the size of a room and the height of a ceiling since it may vary tremendously and still be satisfactory. In general one may say that a high ceiling lends dignity and formality to a room, whereas a low ceiling gives an atmosphere of intimacy and homeliness, and preference for one sentiment or the other is purely a matter of temperament. The high ceiling rooms of the French and Georgian Periods are very beautiful in proportion, and the reason that they are so is because the high windows and doors are in scale with them, and so the great height is lessened by contrast. If a low door, for instance, were used, the effect of the height of the ceiling would be greatly increased. Moreover, if the furniture is also in scale the height will be still further lessened in effect.

The proper spacing of the doors and windows is most instrumental in making a room beautiful or otherwise. In fact, a well proportioned window with well molded trim and an attractive division of the panes does more perhaps to lend beauty and charm than any one feature. The large plate glass window, such as was in vogue a few years ago, frequently afforded a fine view, but it certainly was not to be admired as an architectural feature since from the inside as well as the outside it gave an appearance of a great hole in the wall; also the effect of the light from such a window is harsh and casts hard and unpleasing shadows. The same space broken up into two or more windows would become an integral part of the building since the mullions or casements tie it to the structure. Moreover, a view which is broken or seen thru small openings has the added charm of mystery.

Well proportioned doors with strong, simple moldings are also of great importance and as in the case of the window, care should be taken that they should be well placed so as to have sufficient space on either side for balance. A door placed in a corner becomes an almost insurmountable problem unless it is flanked by a door on the adjoining wall whereupon it falls

Kelsey Health Heated Residence of Architect W. A. Delano, Wheatley Hills, L. I.

### Don't Confuse The Kelsey Health Heat With Furnace Heats

**KELSEY  
HEALTH  
HEAT**

**FURNACE** heats deliver small volumes of highly heated air.  
Highly heated air is scorched air.  
Scorched air is low in oxygen. It is burned out.  
Low oxygen air is not a healthy air.  
The Kelsey Health Heat works just the opposite.  
The temperature is lower, but the volume is larger, the speed higher.  
The oxygen is retained in full.

Its large volume of warmed air causes frequent complete changes of the air. Its high speed carries it to rooms impossible to heat with furnace heats. We sell furnaces for furnace heats. And the Kelsey for the Kelsey Health Heat. Naturally we know both sides of both. We are convinced the Kelsey is superior. That's why we emphasize to you its superior points. Send for booklet.

Complete Business Training included. Write for new book explaining the secrets of the New Way. Address The Tulloss School, 3861 College Hill, Springfield, O.

into a dual composition. Double doors are a fairly modern invention, designed to give a feeling of space, but more frequently they rob a room of all privacy and break it up so as to destroy any sense of unity therein. In the modern apartment a very common thing is to find the dining room and the living room made practically one by means of the wide double door. Since the original functions of the two rooms are thus practically lost, it would often seem advisable to be equally consistent, or inconsistent, and treat the dining room in a less stereotyped manner, and since the architect has made one a part of the other, to tie them closer together in the manner of furnishing.

The cornice, which may be made up of many members or moldings to break the monotony, should follow the line of the ceiling with as few breaks as possible, for this is a logical place for decoration it should not be of such a nature as to continually attract the eye of the ceiling. For the same reason a room always looks better when the heads of the windows or doors are at the same level and the molding or decoration around each door should not interfere with the structural lines but rather enhance them. Sometimes windows and doors may be brought to the same level by making ornamental doorheads, or placing a panel above the door, raising the top of the door trim to the window level. A doorhead should not come so near the cornice, however, that the eye is detracted from one to the other, for unless it is so far away that it stands as a decorative feature in itself, the doorhead and the cornice should be made to blend into one; this, of course, applies to any ornamental trim over a window as well. A doorhead that is straight in line is, of course, simpler and apt to be more restful than one which is curved or broken.

The trim on the windows and doors should be given more consideration than is customary, for it can add very largely to the charm of a room and frequently decides its character. The reason for trim is, of course, to keep the plaster from breaking, but also we have a natural structural break in our wall and feel the need of framing it as one would a picture. For this reason the members or moldings graduate in toward the door and are of varying widths to break the monotony in any interesting way. The window trim should be a little wider than at the doors, which is ordinarily five or six inches. In buildings where the plaster is placed directly on the masonry wall, trim may be omitted and a more solid and cruder effect will be gained, and the room assume more nearly the character of one of the earlier periods in architecture. Of course the wall in such a case would not be papered but painted or left rough. In such a room the early character may be still further brought out by omitting any cornice, but, when no cornice is used, the texture of the ceiling and wall should be the same.

It is careful attention to details at the outset that makes a house successful, and at the time of planning the house thorough consideration should be accorded every detail from the moldings of the trim to the purpose of each room, its lighting and the furniture that is to go into it. It is before the foundation is dug that the decorator should be consulted.

Since furniture and furnishings stand in the light of a decorative feature of the architecture, it is absolutely requisite that they be considered together. Architects and decorators are recognizing more and more the dependence of one profession upon the other, and both are desirous of seeing the house become a harmonious and homogeneous whole.

## THE ROOM YOU LIVE IN

(Continued from page 31)

transparent and has a changeable sheen which may repeat two colors of the room. Lined and interlined, they give an elusive charming lighting effect.

I have spoken of the furnishings of a livable living room before the colors and hangings, because I think that comfortable furniture and its arrangement is the most important consideration.

One hears constantly the cry, "I am tired to death of brown living rooms." It is, however, the color par excellence for a living room. But there are a hundred tones which are classed under brown. Dark, heavy brown is tiresome and has been overdone, especially combining it with mission furniture and tapestry upholstery. Lighter, more subtle color combinations may be used. The idea is to get a good background color and then get color and decoration by the curtains and upholstery. Gray is too cool a color for the living room, and also it can be used so wonderfully as a hall, dining room and bedroom color, that the living room should have another color. However, a very warm gray, almost a buff or a "beige," is to my mind the best living room background color. Heretofore I think we have been rather apt to use too dark a wall color. It is always better to have it lighter than darker, and do not forget that curtaining darkens a room very much. Combined with this beige may be a bluish-green "electric" shade, and orange, or else a blue brick-red and a little yellow, or a bottle-green and old rose and black. Keep the upholstery one color, or a closely toned combination of one or two colors, and have the curtains of figured material, cretonne or linen. The portières should be one plain tone, in order to keep them inconspicuous.

If there is a motley array of furniture in the living room, keep the carpet, hangings and furniture upholstery all to the one tone. Never put a pictorial paper on the walls as they are tiresome and distracting and one usually comes into a living room after a fatiguing day's work and it should not be overstimulated.

In case the living room is on the north of the house, or else has no direct sunlight, use under curtains of soft yellowish silk or gauze which will throw a diffused, warm light thruout the room.

Cheeriness is an asset, for every room in the house, but particularly in the living room. Have warm-toned books and bright-colored magazines on the tables—a brilliant bowl or vase here and there—soft, warmly luminous shades—and *always* flowers. A gleaming red rose, a bowl of nasturtiums, a pot of daffodils—their power to touch with life all things is as curious as it is telling.

Rooms react upon us. We are ashamed of temper in a quiet, dignified room; we are ashamed of pettiness in a well-ordered room furnished with books, piano, pictures and flowers that denote sympathy with the larger, deeper motives of life.

## GERMAN PAPERS PLEASE COPY

**S**HORTLY after the war started we were informed by the manufacturers, shopkeepers and milliners, that, since dyes could no longer be procured from Germany, no colors of any kind could be warranted as "fast." However, since then, we have learned of three colors made in the United States that positively will not "run." These colors are red, white and blue.

You will certainly appreciate a

# FOOD WILL WIN THE WAR

LESSONS IN AMERICA'S PART IN THE WORLD'S FOOD PROBLEM, PREPARED BY THE UNITED STATES FOOD ADMINISTRATION FOR THE INDEPENDENT

## How Kultur Conserves

WE have already learned that a world shortage of food due to war conditions makes conservation necessary, and that America must bear the brunt of the task of feeding the world. We have also learned that conservation means a wise use of our food, and not going without it.

Let us now see what other countries have done to solve the food problem. We will begin with the land of "Kultur."

Germany has always been autocratic. It is impossible to think that the German food problem would be handled in any way but by the state, backed up by the "majesty of the law," and the sword of the German police. Altho we do not care for this system we must acknowledge that in some circumstances it gets good results. But sometimes this German system makes mistakes. One of the mistakes was made in regard to food.

### INEFFICIENT "EFFICIENCY"

When war broke out Delbrück was Secretary of the Interior, and the food situation came under his charge. Placards were posted in railway trains and stations on which were printed, "Ten Commandments" in food conservation—the same measures that we are familiar with here. But apparently nothing in particular was done. They forgot the importance of food!

Some of Germany's scientists saw that the situation was very serious, and they went to work on a report. Sixteen men worked for over four months, and in December, 1914, their report, edited by Mr. Eltzbacher, was published. If you can get a copy of this report in your public library you will find it interesting reading.

But this very able report was only recommendation; it was not law. And Delbrück muddled along, and things got worse. He regulated food without knowing how much he had. So Delbrück issued food cards for meat, sugar, butter, bread, etc. But with one exception these cards carried no security at all. They merely meant that you had permission to cool your toes in front of a shop until your turn came to buy, and you got some of what you were after if there was any left. Grain they did know something about, and the bread cards really meant that they could get bread.

Things could not continue as they were going. On June 1, 1916, a new War Nutrition Office was started with Adolph von Batocki as Food Controller.

Quite sensibly, the first thing Batocki did was to find out just how much food there was. He did not intend to "regulate" in the dark, as Delbrück had done. The people were put on rations based on a knowledge of the amount of food available.

### WHEAT, MEAT, FAT AND SUGAR

Let us see what particular things happened to certain foods that we are especially interested in. Germany expected to be cut off from a usual import of 2,000,000 tons of wheat a year. In 1915 her own crop was not so good as in 1914. It had been forbidden to feed wheat or rye to animals, and as we know, bread cards had been issued. Bread was made with potatoes, to help out the wheat and rye shortage. This was found to be a mistake. It did not give the full food value of the potato or of the bread, and the people did not like it. On May 1, 1917, the

bread ration was reduced to 1600 grams per person a week. This is about three and a half pounds.

After the people were restricted in the use of bread they were soon cut down on the meat allowance. Two meatless days a week were required, Tuesday and Friday. Very soon they forbade the selling of pork on Wednesdays. On May 1, 1917, the meat allowance was increased somewhat. Instead of 500 grams people were allowed 750 grams a week. That is, their allowance was increased from a little over a pound to about a pound and three quarters.

Monday and Thursday were made fatless days. The fat shortage is very serious. Soap is not to be made from edible fats, and no fat may be wasted. According to the figures in the Eltzbacher Report, Germany depends on foreign countries for 42 per cent of the total amount of fat the people eat. So it is very grave indeed for her to be cut off from this supply.

One thing Germany thought she was sure of was her sugar. She had always had so much she could afford to send it away to other countries. Indeed, the sugar people persuaded the Government to send out 1,100,000 tons in October, 1914. This was a great mistake. The people ate much more sugar than usual because they were short of fats, and sugar was used in feed to save grain, so before they realized it they were facing a sugar shortage. By April, 1916, the ration was only a little over a pound per person a fortnight.

### THE FOOD RATION TODAY

From the latest information we have the food ration today, compared with what we Americans have, is as follows:

#### POUNDS PER PERSON A MONTH

	German	American
Sugar .....	.77	7.4
Wheat .....	18.97	27.7
Meat .....	2.2	12.5
Fat .....	1.4	3.4

The German fat shortage is the worst one of all; but we should not allow ourselves to be blind to her resources. She has gotten food from northern France, from Russia, and Rumania. She has put her people on a strictly scientific food ration. They are getting what they need, altho not what they would like. If they continue for any length of time to fail to get what they need, then they will show weakness; but we have no real basis for thinking they are on the verge of starvation, or deprived of needed food to such an extent as to lead to revolt or surrender.

With these facts before us we cannot fail to see the immediate necessity of helping our associates in the war by every means in our power. The resources of Germany and her rigidly scientific way of meeting the food problem are a great argument for the existence of the United States Food Administration, and should form the greatest impetus to each member of this democracy to carry out loyally and carefully whatever the Food Administration advises. "Food will win the war." We must make it *our* food, for *our* armies and for the armies of *our* friends, for *our* cause, for *our* victory.

In the next lesson we will see what Great Britain has done for food conservation.

## SHADOWS OF WAR

(Continued from page 15)

a little bundle of food to carry with us. In the morning we were driven southward toward the desert. The sun was very hot and beat upon the sand so that it burned our feet.

The soldiers drove us on and on, lashing whips over the people who lagged behind. There were women with little children in their arms and aged people who could scarcely walk. Our little brother and sister grew too weary to walk so Hovanis and I had to carry them struggling on as best we could. Sometimes we would stop because we could walk no farther. Then we would be commanded to go on.

The food we carried with us from home was soon gone. The children cried for bread. Sometimes we found berries and sometimes brother pulled up plants and we ate the roots.

We passed the bodies of other people who had dropt dead in other deportations.

We were all driven on until I was taken away from the others by a Turkish officer. He promised me he would permit Hovanis to go back home with the children. I finally made my escape but I could not find the others again. I knew that they had turned toward home so I went back along the road we had traveled.

In the daytime I hid behind rocks and bushes. At nightfall I hurried on again. Sometimes I passed little groups of people but I did not try to join them lest the Turkish officer should find me again.

I decided I would not go to Harpoot but that I would attempt to cross the mountains and go to Russia too. Days and days afterward a miraculous thing happened. In the Dersim Mountains I found my brother sitting with two of the children huddled about him.

After he had gone home, Hovanis had secured the money from where my mother had hid it in the ground. Then they had started over the mountains to look for safety in Russia.

The baby sister, Saturnig, had died before they reached Harpoot when they were returning from the desert. The little brother, Hrand, was blind from want of food. Blindness is one of the most terrible things about starvation. On the desert and here in the relief station I have seen so many people who had gone blind because they had had no food.

Hovanis had bought some food from a Kurd. We shared it. Then we struggled on over the mountains together.

We slept on the ground at night. It was bitter cold. We had no food except roots of plants and now and then something that we bought from the Kurds.

We escaped death miraculously many times. Twice Kurdish mountaineers captured us but they were willing to help us on our way when we gave them money.

The youngest brother died before we reached the relief station. The exposure and the hunger were too hard for him to bear. The ground was frozen so that we could not bury our brother. We waited two days hoping that he was not dead but at last we had to go on and leave him.

The man in charge of the relief station saw us coming. He took us into his house and gave each of us a bowl of soup. We warmed ourselves by the fire. We watch every day hoping our mother will come. We hope that all the others who are struggling across the desert will come. The hardest thing is that there is not enough food for everybody when they do come. Some days little children have to be turned away without bread or soup because there is not enough.

## The New Books

### A Backward Look

PROFESSOR BRANDER MATTHEWS, of Columbia University, has collected the reminiscences of sixty-five years of active life into a volume which contains so much of the vanished past, so much of the stir and change of a busy period, that he has given it the title of *These Many Years*, which, to a man of sixty-five, would seem a gross exaggeration. The literary lifework of Professor Matthews was tangent to that of so many of the eminent dramatists, authors, actors and men of affairs in England, France and the United States, that his autobiography takes on the character of a crowded stage of brilliant figures, a constellation of stars. The reader is properly impressed by such casual sentences as "Of our fellow-guests I can remember with certainty only Thomas Woolner, the sculptor-poet; Austin Dobson, George Du Maurier, Thomas Hardy and William Black," or "Already in 1878 Austin Dobson had told me of the ballades and other French forms which Henley was writing in a weekly called *London* then edited by him. Dobson also informed me that *London* was printing a series of strange tales called the 'New Arabian Nights,' written by a very clever young Scotchman, Robert Louis Stevenson," or by Professor Matthews' story of how Kipling recited to him "McAndrew's Hymn" before he had yet entrusted it to paper. Yet if the reader is envious of the author's fortune in knowing so many men of distinction, at least he may be glad that the privilege fell to a man who could write so charmingly about them.

Many also will appreciate Professor Matthews' account of college life in his student generation and its contrast with the ampler activities of the present day college:

Henry James once pointed out that here in the United States in Hawthorne's youth there were lacking most of the constituent elements of romance as these might be cataloged on the European continent, since we had no king and no court, no palaces and no castles, no cathedrals and no established church, no galleries and museums, no political society, and no sporting class. It would not be difficult to draw up a list of things common in nearly all the colleges of the present which were totally absent from the Columbia of my early undergraduate days. We had no dormitories; we had no gymnasium and no athletic field, no swimming pool, and no boat-house; we had no athletics at all, no track-teams, no crew, no baseball nine; we had no glee-club and no mandolin-club; we had no dramatics, no performances of plays ancient or modern; we had no intercollegiate debates; we had no college paper, daily or weekly; we had no student reading-rooms, nor had we any books that students were really expected to read.

After listing the blanks in Hawthorne's background, Mr. James suggested that "the natural remark in the almost lurid light of such an indictment, would be that if these things are left out, everything is left out." Then the acute critics added that "the American knows that a good deal remains." And we who were undergraduates at Columbia when it exhibited this "terrible denudation" know that great deal remained, even if it is not easy for us to declare this remainder with precision. The background might have its blanks, but after all the atmosphere was not so very different from what it is now. We had the unconquerable spirit of youth, and we were possessed by a feeling of solidarity. We dumbly knew that we had entered into our inheritance—even if we were incapable of appreciating its value.

*These Many Years*, by Brander Matthews. Charles Scribner's Sons. \$3.

## OUR UNCENSORIOUS CENSOR

(Continued from page 21)

"Criticize any official you want to," howled George. "The President has said he wants intelligent criticism."

"Why," a Washingtonian told him one night at a dinner where he had kept the head of the table wherever he happened to sit, "the trouble with you, Creel, is that you're not only a censor, but I doubt even if you're a reformer!"

Creel admitted, in his own idiom, that he is not a reformer, and the table-talk of the dinner went into desuetude.

"Not even a reformer?" some one mused.

"No; never. Never!" Creel shouted, hammering the table with his closed fist, biting off his words. "Anthony Comstock was a reformer! Heaven rest his soul!"

And he told me: "In the public mind reformers are persons—*persons*!—who peep thru keyholes and peep over transoms. A reformer, in fact, is a man who steals up to smell another man's breath!" Then seriously: "The word 'reformer' in the public mind has come to be associated with attack upon merely symptomatic evils, persons who interfere with the personal habits of others—bigots! But——"

"But?"

He went on: "You can't make people good by law. You've got to get down to causes. You've got to change their environment, and it will be only when we can get down to causes and take the injustice, the greed, the unhappiness out of life that we may expect spiritual progress."

He said, then, with characteristic emphasis, that he hasn't, never has had, never will have, any interest in any reform that is not constructive—that doesn't hew down to the roots—which reveals the reason, perhaps, why censoring is abhorrent to him and he is doing virtually none of it, and why constructiveness, or Americanization, are dear to his ardent soul. He is an educator, this censor. Most noteworthy Americans are.

And if it is hard to reconcile his constructiveness and the notion of radicalism that many persons will accord to his work in Denver, then:

"What I fought for out there," he told me vehemently, "was commission form of government, home rule for cities (this with fervent Irish emphasis), child labor laws, workingmen's compensation laws—laws, in a word, that are designed to make justice speedier, because we all know that poverty entails an inability to enforce certain rights."

He went on: "I wanted the right use of the school buildings by neighborhood groups. I fought for the organization of the citizenship, in short, into an all-the-year-round deliberative body. I am a single taxpayer. I have fought for equality in suffrage all my adult life. I believe implicitly in the recall of public officials."

I tried hard to get him "placed"—to get a label on him.

"You're not a reformer," he was told. "You're not a radical, you say; you're refusing to admit that you're a liberal, even, then what are you—the readers of the magazines have got to know!"

"I refuse to be classified," he said, clipping off his words, "except as an American. The average American, I know, has a passion for labels—but I want to be at liberty all my life to identify myself with anything and everything that seems fitted to advance the interests of democracy."

"Can't I even pin a blue label on you?"

"No," he laughed, "nor a red one either!"  
Washington, D. C.

## CON-SER-TEX

Save Money, Secure Satisfaction,  
Avoid Future Expense

## USE CON-SER-TEX CANVAS ROOFING

It makes a neat, attractive, durable surface which will last as long as the house itself.

This roofing material costs less than most others, is inexpensive to lay. For years has been giving satisfactory service.

Wherever a neat, artistic waterproof surface is wanted CON-SER-TEX should be used. It will not leak, buckle, crack, stretch, peel or rot.

CON-SER-TEX is a canvas roofing chemically treated to protect the fiber from mildew and the detrimental action of the oil in paint.

### Water-proof, Weather-proof, Wear-proof

CON-SER-TEX is a perfect material for a roof, porch covering, or porch floor: on sleeping balconies, garage roofs, etc. In the suburban sections of the towns and cities throughout the United States, you will find hundreds of attractive and artistic homes where CON-SER-TEX is largely used—it renders continued satisfaction.

Investigate its merits. Send us the dimensions of your roof, porch floors, sleeping balcony, or the surface you want covered. We will mail you samples showing quality, width, weight, and free illustrated copy of "Roofing Facts and Figures."

## Timely, Well-Secured Investments Netting 6%, 6½% and 7%

Your present funds can be judiciously and profitably placed in high-grade investments, fully described in our new January booklet.

The range and character of offerings are unusually varied. All issues are secured by properties of first importance to our national welfare and of sufficient value and earning power to completely safeguard interest and principal.

Included on the list are many investments that ordinarily would bring 5% to 6%, but which now yield 6% to 7%.

Short and long-time maturities. Denominations of \$100, \$500 and \$1,000. Write for Circular No. 1002AB.

BY LUIGI CRISCUOLO

## THE RAILROAD CRISIS

THE importance of the railroads as a vital part of our war machinery cannot be exaggerated. It is brought to the fore by the President's appointment of Secretary McAdoo as director general of the railroads in order that the war needs will have absolutely priority over all other business. Under such conditions, the railroads must not only carry commodities quickly and at the lowest possible cost, but they must maintain their plant in good order so that the ever-increasing tonnage can be efficiently handled. They must pay the increased cost of material, wages and taxes; they must borrow money at high rates because the purchasing power of the dollar has declined so that governments are obliged to pay 6 per cent for money and corporations are glad to secure it at 7 per cent or better.

The American people should be interested in their railroads. I say *their* railroads because it has been estimated that fifty millions of our people are either directly, or indirectly interested in the welfare of the railroads. Every person who has an insurance policy or a savings bank account or belongs to a fraternal order is interested in the railroads' welfare because most of such organizations own railroad securities. The man who is employed by a railroad is not only interested in seeing that he gets an increased wage in order that he may cope with the higher cost of living, but he should also be interested to see that in paying him an increased wage the road does not go into bankruptcy. We must not forget that many employees have invested their savings in one, or two, or ten, shares of stock in the railroad which employs them and have paid above par for stocks which are now selling below eighty.

To be able to cope with the increasing cost of operation, the remedy is not subsidies in the form of large loans at low rates, from the Government, because loans incur increased fixed interest charges and the principal must be repaid some day. The added fixed charges increase the already large burdens placed upon the railroad stockholders and cause a decreasing surplus applicable to dividends. There has been a great deal said about the *water* which should be squeezed out of railroad stocks which are not receiving dividends, but that is not the question which confronts us now. The best railroads, those whose stocks have been sold for cash at one hundred cents on the dollar, are suffering along with those whose junior stocks are largely *water*, or prospects. When we see such stocks as Atchison, Southern Pacific, Pennsylvania, Norfolk & Western, Great Northern, New York Central, Northern Pacific, etc., selling at a discount of twenty-five per cent from recent high prices, we begin to realize that we have an extremely critical condition to remedy.

The war is to blame, of course, for emphasizing the condition. In a recent issue of *The Annalist* it was pointed out in an elaborate compilation that since the first part of 1917, securities listed on the New York Stock Exchange had suffered a decline of \$5,093,834,263. Of this amount,

railroad stocks suffered a decline of \$1,490,346,800 and railroad bonds a decline of \$1,198,627,130. The decline in all classes of stocks represented \$3,668,312,588, or about 24 per cent of the par value of all stocks listed, while the decline in bonds was \$1,425,521,675, or 14 per cent of the par value of bonds listed. This does not in all cases demonstrate that intrinsic values have decreased but that the high cost of living has caused a readjustment of investment values which, coupled with drastic taxation, talk of government ownership or operation of the railroads and general uncertainties, has caused what is in reality a panicky condition.

AS has been seen, the conditions have not affected stocks alone but bonds as well, in a relatively large degree. While the demands for capital on the part of our Government and its allies have brought government bonds into direct competition with corporation securities, this fact alone has not been the cause of the decreasing values. With respect to the railroads, which are suffering most of all, we have had to contend with the decreasing net income available for interest charges so that along with increased interest charges on account of new bond issues for improvements, the result has been a smaller margin applicable to dividends on stocks. In many cases the condition has made even the safety of junior bonds questionable. Increasing taxation has had a tendency to make large investors switch their holdings from corporation securities of all sorts into Liberty Loan 3½s, which are tax exempt, and without proper support these corporation securities have been depressed to what have looked like foreclosure prices. Then, many investors have taken advantage of a provision in the income tax law by which losses in securities are allowable as a deduction from income and have sold in order to obtain the deduction even though they have bought back their securities later on.

This selling was artificial but without any growing demand for securities it depressed prices. However, this may be stopped by the recent announcement that it is likely that the Treasury Department will permit owners of securities which showed losses to deduct the losses in market values from gains during the year, provided the losses were less than the gains. It may not be necessary to effect an actual sale in order to claim the deduction on account of losses. This will tend to prevent a continuance of liquidation which kept the market in a demoralized condition for some months, with the increasing sales of corporation securities for reasons stated, the trend of the markets could only be downward so long as no reassuring word was forthcoming from Washington to the effect that the plight of the railroads was receiving favorable consideration. Still, we have been confronted with the spectacle of an enormous demand for all sorts of products, raw or manufactured, with relatively large profits ranging as high as a hundred per cent on some corporation stocks, many of which are largely *water*, while the railroads have had

to beg continually for rates which would permit them to keep their plant in order to handle the increasing volume of traffic, pay interest on their bonded debt and a fair return to stockholders as dividends.

In a recent argument before the Interstate Commerce Commission, the counsel for the railroads stated that the relief granted by the commission earlier in the year amounted to \$97,000,000 and that the rates under consideration would add \$58,000,000, making a total of \$155,000,000, altho this would account for only a little in excess of half of the great rise in wages and materials which had added \$278,000,000 to the operating costs. The predominant phases of the situation were then set forth as follows:

1. A continuous decline in net operating income accompanied by a steadily increasing basis of cost of operation; this in the face of increasing traffic, property, investment and average carload and trainload.

2. A decrease in both the supply and the character of labor available for railroad operating, which is being daily intensified and which will still more increase in the future the cost of operation.

3. The existence of deferred maintenance at a time when the highest standard known should be maintained, the further postponement of which will increase its cost and decrease the operating efficiency of the railroads.

4. Inability to secure new capital by the issuance of stock and the necessarily weakening effect on the credit of the carriers.

5. Inability to make improvements, imperatively demanded by the necessities of today and the traffic of the future.

It was also pointed out that as our armies increase into the millions, and as the carriers are called upon to meet the competition of labor with industries whose prices are regulated or unregulated, or called on to meet the competition of labor with the Government itself, the available supply of labor will decrease and its price will rise. Unless the Government is prepared not only to conscript labor for the railroads, and limit its wage, it must be argued that the present cost of labor measured by wage and efficiency, will not decrease.

THE opposition represented by the attorney for the shippers, contended that while there had been a very large advance in the cost of labor and railway supplies during the past year, the increased volume of traffic and the adoption of improved methods of operation had, offset these increased costs to such an extent that the resulting net operating income of some railroads above all expenses, hire of equipment, rentals, taxes, etc., was greater during the year ended June 30, 1917, than during any preceding year in the history of American railroads with only one exception, that of 1916. It was contended that the Eastern railroads, as a whole, made enough last year above all expenses to equal over 9 per cent on all of their capital stock outstanding and in the hands of the public while in the year before they earned 10½ per cent. The assertion was made that the depression in the security markets was not confined to railroad securities alone but to all classes including United States Government bonds. He neglected to say that the large net earnings of 1916 were made before the Adamson eight-hour law went into effect.

As the money markets of the world have been practically closed with respect to the issuance of large blocks of new railroad securities, at this critical stage when our transportation facilities must be absolutely efficient, what must be done? The attorney

## 36 Years Without Loss To Any Investor

JANUARY 1, 1918 opens another chapter in the history of S. W. Straus & Co.—36 years without loss to any investor.

This record is especially significant in the light of recent events. It plainly means sound principles and cautious practise in the purchase of securities. It means thoroughness in safeguarding them. It means conscientious and careful service rendered to the investors who have bought them. These facts are self-evident.

### 6% January Investments

WE now offer, for January investment, a well-diversified variety of sound first mortgage serial bonds, maturing in two to ten years, in \$1,000 and \$500 denominations, to net 6%. They are secured by a variety of properties, in New York, Philadelphia, Chicago, and other large cities. The fact that they are safeguarded under the *Straus Plan* and bear our recommendation is evidence of their soundness.

Every investor should post himself on the merits of these bonds, and the unusual investment safeguards of the Straus Plan. A letter or postal card will bring you full information. Write for

Orange, N. J.

for the shippers mentioned four possibili-  
ties:

1. Advance freight rates sufficient to pro-  
vide funds for extension, additions and  
equipment.

That means that the public would be re-  
quired to pay a reasonable return to the  
carriers on their own investment and to  
build railroad property for private com-  
panies and everlastingly thereafter pay a  
return upon what they build.

2. Government loans.

Instead of building the improvements and  
giving them to the carriers, and never get-  
ting anything back, but paying a return on  
them annually, a Government loan would  
enable us to secure annually what the  
money cost us and at the end of the period  
we would get the principal.

3. Government operation during the war.

This would be probably the most efficient  
method. It would enable us to eliminate  
many costly competitive services. We would  
not have to pay an exorbitantly high re-  
turn on capital in order to artificially stim-  
ulate investments. Our railroads could be  
operated as one coördinated, well-organized  
system. Railroad supplies could be pur-  
chased at Government prices. The relative  
needs of the railroads of foreign countries  
and those of the United States could be  
more intelligently considered. All unneces-  
sary work could be eliminated and cars  
and engines, as well as other parts of the  
railway plant could be more efficiently  
standardized.

4. A fourth method would be for the  
Government to build the equipment and  
new construction and then lease this to  
the railway companies.

He contended that the time for some ac-  
tion of this character had arrived and that  
if this Government could purchase cars for  
the French and Russian railroads, why  
could it not do so for American railroads,  
as a war measure? If our Government can  
build merchant ships and operate or lease  
them, why cannot it build freight cars?  
The shippers furthermore demanded a more  
adequate car supply or supply of motive  
power.

THE two arguments fail to an extent be-  
cause they are biased, each coming from  
representatives of selfish interests. How-  
ever, the railroads have my sympathy to  
some extent because they are exerting every  
effort to serve the Government even without  
the assurance of an increase in rates, be-  
cause they have seen their properties de-  
preciate along with a lessening demand for  
railroad securities from investors, while on  
the other hand industrial concerns which  
do the shipping have been reporting enor-  
mous profits and declaring large extra divi-  
dends to shareholders. There is no doubt  
that the railroads have wasted millions of  
dollars thru inefficient operation and pur-  
chasing, in not dealing direct with the large  
distributing houses when they had securi-  
ties to sell, in purchasing small competing  
lines at fancy prices which in many cases  
were built by interests friendly to the man-  
agement and in permitting many abuses in  
periods of reorganization such as the pay-  
ing of exorbitant commissions to reorgan-  
ization managers. It is a pity that in past  
years there has not been some sort of regu-  
lation preventing the building of additional  
railroads in territories which were already  
well served by existing lines. But even in  
the past few years, ambitious railroad  
presidents who wanted their purely local  
lines to grow into great systems have  
bought at high prices properties which will  
not be productive for many years. One road  
in the South was bought some years ago  
by a syndicate which has tried in vain to  
make it earn dividends, little realizing that

### DIVIDENDS

## THE BROOKLYN SAVINGS BANK

INCORPORATED 1827

PIERREPONT and CLINTON STREETS

ENTRANCES: Pierpont St. and 300 Fulton St.

Interest at 4 per cent.  
the rate of 4 per annum

will be credited to depositors January 1,

## United Fruit Company

DIVIDEND No. 74

A quarterly dividend of two per cent (two  
dollars per share) on the capital stock of this  
Company has been declared payable on January  
15, 1918, to stockholders of record at the close  
of business December 20, 1917.

JOHN W. DAMON, Treasurer.

## BROADWAY SAVINGS INSTITUTION

132nd  
Semi-  
Annual  
Dividend

5 & 7 Park Place, N. Y.

The Trustees have directed that  
interest be credited to deposi-  
tors entitled thereto at the rate  
of 4% PER ANNUM  
payable on and after  
January 21st, 1918.

H. F. Hutchinson, Prest. W. H. Rose, Secty.

## UNITED STATES REALTY & IMPROVEMENT COMPANY,

115 Broadway, New York.

December 28, 1917.

The Coupons on this Company's Twenty-year  
Debenture 5% Bonds, due on January 1st next, will  
be paid on January 2nd upon presentation at the  
Company's office, Room 315, U. S. Realty Building.  
B. M. FELLOWS, Treasurer.

## WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY

A quarterly dividend of 1 3/4% (87 1/2 cents per  
share) on the PREFERRED STOCK of this Com-  
pany will be paid January 15, 1918.

A dividend of 1 3/4% (87 1/2 cents per share) on  
the COMMON STOCK of this Company for the  
quarter ending December 31, 1917, will be paid  
January 31, 1918.

Both dividends are payable to stockholders of  
record as of Dec. 31, 1917. H. F. BAETZ, Treas.  
New York, December 21, 1917.

## WELLS FARGO & COMPANY QUARTERLY DIVIDEND.

A quarterly dividend of \$1.50 per share upon  
the capital stock of this company has been de-  
clared, payable Jan. 21, 1918, to stockholders of  
record at the close of business Dec. 31, 1917.  
The transfer books will not be closed. Checks  
will be mailed. C. H. GARDINER, Secretary.  
New York, Dec. 19, 1917.

it operated in a territory which was well served by lines having a stronger financial structure and run by railroad men instead of bankers.

One of the arguments in favor of government ownership of the railroads has been that under government ownership the consolidation of all necessary lines would make it possible to effect large economies. Charles E. Markham, president of the Illinois Central Railroad, took exception to this and stated that one reason why our railroads have not in the past effected all of the economies possible has been that the Government thru its anti-trust legislation has prohibited them from curtailing wasteful competition. When we entered the war the prohibition against concerted action and unified operation ceased to be enforced and, with the helpful coöperation of the shippers, the managements of the railways have since made increases in efficiency that are remarkable. He claimed that under private ownership there can be effected economies and efficiencies which could not exist under government ownership with all of the red tape, waste and incompetency which ordinarily characterizes government management.

The latter argument sounds plausible, but there is no reason why railroad operation under government supervision should be wasteful. If the railroads are operated by the same men who now work for the railroads, if such railroads which are pure duplications of facilities are scrapped, if the men who now work for private corporations could feel that they had permanent positions and were in effect government employees, with pensions in old age, they might be willing to work more efficiently than they do for privately owned corporations which are not now run by their stockholders but by a handful of men who have usurped the powers of the real owners of the railroads.

The best reform that could happen to the railroads would be the organization of a consolidated railroad corporation to include every essential interstate railroad system in the country, an exchange of all present securities at fair market value for securities of a new corporation, supervised by the United States Government, all stocks to be guaranteed as to dividends by the Government and all bonds issued to be guaranteed as to principal and interest. The bonds issued should be of one class only and all bonds for future requirements to be of the same class, the same as government bonds which are now issued. The railroads could be controlled by a central board of directors with seat at Washington and all stockholders and bondholders would have a right to elect a certain number of directors while the Government would be permitted to name a certain number. Security issues would have to be made under the approval of the Interstate Commerce Commission and sold on commission thru recognized investment houses which distribute directly to investors. This would avoid one unnecessary middleman.

The United States is beginning to have a conscience. The old order of politicians is fast disappearing. We have in Congress many men who are honest, much more honest than a great many of the exponents of railroads controlled by private interests. I am not inclined to be a "bear" on the United States. While many foreign governments have not made a success of their state-owned railroads, I am sure that if the United States Government turns the operation of a consolidated system of railroads over to the actual railroad men who are now operating them as separate systems, we can have an efficient system of railroads.

## What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 25th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

# THE MOTORIST'S WINTER PROBLEMS

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR EFFICIENCY SERVICE

EVERY motorist whose car is water cooled is confronted at this time of year with the ugly possibility of getting up some morning to find that the plumbing system on his car has been frozen up. Not only can a car be frozen overnight in its garage, but in the daytime also, while standing at the curb. Usually when a car is frozen considerable damage is done. Any one of a number of things may result. A water jacket may crack, or a pipe burst, or the radiator spring several leaks or perhaps be totally ruined. It pays therefore to take precautions which will insure you against such a catastrophe.

Let us consider first the problem of keeping the car warm over night. If your garage is wired for electric light this is a simple matter. In this event all you need do is to procure a couple of illuminating bulbs—preferably the old carbon filament, heat giving kind—string two wires so that the bulbs may be placed on the engine, with the hood closed, and switch on the current. Or you may obtain at almost any supply store specially designed engine warmers which use lighting current and are used under the hood in the same way. Whether you employ bulbs or a special device, it is well to cover the hood and radiator with a blanket or traveling rug or lap robe so as to conserve the heat generated under the hood and keep it from being dissipated into the surrounding air.

If you have no electricity in your garage perhaps you have gas piped in. In which case there is a safety gas garage heater which you can purchase at a cost in the neighborhood of \$25. It is guaranteed against causing explosions due to loose gasoline vapor. If there is no gas supply in your garage you can buy a kerosene heater which circulates hot water thru the car's cooling system in a continuous stream. There are also on the market more elaborate and expensive systems for multi-car garages. These burn coal and are similar to the hot water heating systems installed in residences.

While it is essential to have some means of keeping the engine warm while it is in the garage, it is very desirable to heat the whole place. For in winter it is just as necessary to be able to make adjustments and repairs as it is in the milder months. Not only that, but the paint and varnish on your car will suffer severely if the machine is allowed to stand for hours and days in varying degrees of cold. A good heater does not cost much and it will save you many times its cost.

If it should ever come to pass that you are en tour in the winter and must put up your car for the night where there is no facility for keeping it warm, drain all the water out of the cooling system. To make sure run the engine with the radiator drain cock open until no more water flows.

For winter running it is necessary to mix the water in the cooling system with other fluids that will prevent it from freezing. There are one or two reliable compounds on the market made specially for this purpose. Or you can make your own mixture thus:

For a temperature not lower than five degrees below zero use a solution of 15 parts denatured alcohol, 15 parts glycerine

and 70 parts water. For a temperature not lower than fifteen degrees below zero use about 20 parts alcohol, 20 parts glycerine and 60 parts water. Alcohol alone, mixed with water, is not very satisfactory. This solution has a lower boiling point than has water. For this reason it has a tendency to boil away and to evaporate rapidly. Adding glycerine raises the boiling point of the solution. Glycerine is rather expensive, but it does not evaporate. Also it is apt to have a deleterious effect on the rubber hose connections. But what are a few short pieces of rubber hose compared with a water jacket. At this point note that you must add alcohol from time to time to replace that lost thru evaporation.

One of the most useful and valuable of modern contrivances is the ready-to-wear radiator and hood cover. This takes the place of the lap robe or old blanket for throwing over the bonnet when the car is parked. Tho sold together the hood cover and the radiator cover are separate units. They are made to fit practically all the different makes of cars and really look very neat. The radiator cover goes over the top and sides of that member. The front of it is provided with a flap so arranged that it may be rolled up, allowing air to pass thru the radiator, or snapped close so that the entire radiator surface is covered. The hood cover goes over the hood and is so made that either side of the hood may be raised whenever it is necessary. When the engine is running the front flap is opened and rolled up, so that the radiator can do its work. In starting, if the car has been standing a long time and the engine is cold, it is a good plan to keep the flap snapped over the radiator so that the engine will quickly get hot. Don't forget, however, to roll back the flap before you actually start running the car. If you do you will soon have a serious case of overheating on your hands.

THE tailor-made hood and radiator cover are superior to the old-time rug or blanket inasmuch as they cannot slip off, or be blown off. Furthermore they are less liable to be lifted off accidentally-on-purpose.

One word of warning. Should you chance to procrastinate in the matter of filling up with anti-freezing solution or any other safeguard and find your cooling system decorated with pretty icicles, *do not attempt to thaw the engine out by running it.* This is the worst thing you can possibly do. Either heat the garage and let the car thaw gradually, which is the best way, or open the drain cock of the radiator and pour into the filler cap tepid water. Do not use

hot water. Use water that has barely had the chill taken off. It is sometimes possible to thaw out an engine and find that it is unhurt. But this seldom happens, because when water freezes it expands and unless it has plenty of room to expand in it makes room by cracking the wall which imprisons it.

Starting the engine in cold weather—as I wrote in *The Independent* for November 3—is a problem of some magnitude to the car owner who is not thoroly conversant with gasoline engines and their foibles. Here are one or two tricks: Take a kettle of very hot water and a rag. Soak the rag in the hot water and wrap it around the carburetor. This will help to vaporize the fuel. If your car has an outside intake manifold—many modern models have not—wrap hot rags around the manifold too. Another method is to open the radiator drain cock and pour warm water into the filler cap. Start with tepid water and finish up with hot. Spin the engine a few times to make the water circulate. Then, if you take the added precautions of injecting a teaspoonful of raw gas into each cylinder thru the pet cocks and cut down the carburetor air supply your engine will probably start with very little trouble. Another trick is to stuff a small sponge saturated with ether into the carburetor air intake pipe. Being highly volatile the ether will almost certainly produce the necessary starting impulses.

IF your engine boasts no pet cocks you can easily overcome this deficiency by tapping the intake manifold in the center and screwing a pet cock—or priming cup, as they are sometimes called—into the manifold itself. It is advisable to have this done by a careful mechanic who will see to it that the hole bored is properly threaded so that the pet cock will fit it exactly, without allowing gas leaks. In winter use lighter cylinder oil and transmission and differential lubricants. Heavy oils and greases which are satisfactory in summer tend to congeal and become very solid in extremely cold weather.

Your storage battery works harder in winter than in summer. Lighting up time comes many hours earlier and means that more battery current is consumed. Your average run is also shorter and slower and consequently the battery is likely to give out more current than is fed into it by the generator. It is wise to test the battery every few days with a hydrometer and if you find it is getting near to the point of discharge run the engine idle for a few hours just fast enough for the generator to keep the ammeter needle pointing to "charge" on the dial. It is interesting to note that a battery which works in the usual way one day may utterly fail to spin the motor on the morrow, providing the morrow be a good deal colder than the day before when the battery worked.

This is because cold weather reduces the power in a battery. The experience of finding that your battery has lost its follow-thru overnight will only be yours if you allow the little black box to get run down. Keep your battery well charged and well supplied with fresh distilled water and you should have no trouble with it.

*Ask the Director anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.*

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.  
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY  
SECTION I. COMPOSITION.

##### The Story of the Week.

1. You are member of a patriotic society. Explain the Russian rejection of German peace terms, and the general condition of affairs in Russia, and draw whatever hopeful conclusions you can.
2. You are to speak at a meeting in honor of a noted Italian visiting this country. Prepare a speech in which you give proper praise to the work of the Italian army.
3. You are at a meeting of farmers in your neighborhood. Show how farmers, in this country and in other lands, play a most important part in the war.
4. Give a talk in which you show why the United States should always have the largest Red Cross enrollment in the world.
5. Write a telegram of less than twenty words announcing the Guatemala earthquake.
6. Give a spirited talk in which you tell how Germany has violated the usages of all civilized nations in her treatment of the Belgian people.

##### Editorial Articles.

1. Write the full brief for an argument based on "The President's Cabinet."

##### Creative Chemistry. By Edwin E. Slosson.

1. By what means does the author make his work clear? Interesting? Emphatic?
2. Select any paragraph that seems to you especially well written. What are the characteristics that make it especially good?
3. Show how the author relates his work to history, and to literature.
4. Point out examples of figures of speech, of humor, of climax.

##### Italian Destroyers Show the Way. By Park Benjamin.

1. What is the principal thought to which the article develops?
2. Imagine that you were present in one of the daring expeditions. Give an account of the adventure, using the first person.

##### Hurley, the Pneumatic. By Donald Wilhelm.

1. Prepare a short oral exposition of Mr. Hurley's work.
2. In a single paragraph write a character sketch of Mr. Hurley.

##### Filling the Coal-Bin. By David Y. Thomas.

1. Give a talk in which you present your opinions for or against the author's principal contentions.

##### A Prayer for This Time of War.

1. Point out the elements of beauty in this prayer. What spirit is notable throughout? How does the prayer make you feel toward the people of France?

#### SECTION II. LITERATURE.

##### The Charlie Chaplins of Poetry. By Clement Wood.

1. Explain the appropriateness of the title.
2. What differences exist between poetry of the sort discussed in the article and poetry of the type you admire?

##### The New Books.

1. There are two distinct types of book reviewing here: "The Greatest Revolution" and "Japan, Germany and America." Discuss the methods and advantages of each. Which do you prefer?
2. Take a book in which you are interested and write two reviews of it: make the first one informational and concise, setting forth as briefly as seems to you wise the reasons why any one should read the book; in the second review be more personal, show the effect of the book on your own thought and digress as much as you please to give flavor to the review without detracting from its force as a whole.

#### SECTION III. WORD STUDY.

1. Give the meaning, and the derivation, of every one of the following words prominent in the news of the week: hero, partizan, inaugural, inclement, casualties, homicides, judicious, rehabilitation, jet-ies, parliament, staples, Hun, Hohenzollern.

#### SECTION IV. GRAMMAR.

1. Your teacher has asked you to write an examination in grammar, suitable for your class. Prepare ten questions based upon the leading editorial article. Prepare to answer orally every question you ask.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.  
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

##### I. Changes in the Executive Departments—"The President's Cabinet," "Ordnance Reforms," "President and Railroads," "Federal Railroadng."

1. "The President's Cabinet is a body unknown either to the Federal Constitution," etc. How do you account for this fact?
2. Seek out the quotation from Bryce. Read the chapter. Do the conditions described still prevail?
3. "So there are really two separate questions which we are considering here." State the two questions. Answer each of them.
4. Has the President thus far given any indication that he intends to follow the recommendations of the editorial writer?

##### II. The American Merchant Marine—"Hurley, the 'Pneumatic.'"

1. Write a brief history of the growth and decline of our merchant marine in the period before the development of steel ships.
2. Look up in the Statesman's Year Book or some similar manual the statistics of English, German, French, Dutch, Norwegian and American shipping. What do these statistics show? How do you account for the facts?
3. What steps were taken by the United States before we entered the war to develop a merchant marine? What steps have been taken since?
4. On the basis of the statements made in this article, account for the delays in building our new merchant marine.
5. Justify the statement: "There never was such a monopoly as the United States Shipping Board."

##### III. Diplomacy and the War—"The Revelations of Secret Diplomacy," "Russian Foreign Relations," "German Peace Rejected," "Partitioning Russia."

1. Do the revelations referred to in the editorial justify the belief that (a) "Russia entered the war . . . to advance her own imperialistic schemes," (b) that the Allies entered the war for the same reason?
2. Draw a series of maps showing the territorial rearrangement contemplated by the various secret treaties.
3. Which of the Allies seems to have made the largest demands? Which the smallest?
4. "The most startling and disconcerting of the Russian revelations are the negotiations between France and Russia," etc. What seems to have been England's position in this matter?
5. Do you find evidences in the news items that these secret treaties are now affecting relations between Russia, Germany, England Italy and France?

##### IV. Government Control and the Coal Industry—"Next," "Filling the Coal Bin."

1. Write a brief survey of the history of coal mining in the United States, paying especial attention to (a) the development of the bituminous and anthracite coal fields, (b) the rise of the "coal barons," (c) the activities of the United Mine Workers of America.
2. "The trouble is to get this coal made available for use regularly in sufficient quantities at reasonable figures." What remedies for this trouble are suggested?
3. "Shortage, exorbitant charges and chronic disorders are a natural outcome of private monopoly." How far is this true?
4. How do you account for the present shortage of coal? How is the Coal Administrator dealing with the situation? What further remedies are suggested?
5. "The time has come to declare them [the coal mines] public utilities." How does the author justify this assertion? What would be the result?

##### V. The Economic Importance of Fats—"Creative Chemistry."

1. Answer as many of the questions given at the end of the article as you can.
2. Interview some grocer in your neighborhood with a view to discovering how many products discussed in this article he uses.
3. What advantages in the field of vegetable oils did Germany possess before the beginning of the war? Describe the steps by which these advantages were lost.
4. Show how politics and prejudice have played an important part in the history of the development of the vegetable and animal oil industry in this country.

# UNION PACIFIC

## Yesterday's West —and Today's

*Daniel Webster once called the West a "land of sage brush, prairie dogs and savages."*

**T**ODAY in the 11 Union Pacific States live 11,000,000 productive Americans. The area of this half of the Republic is about equal to that of France, Germany, Austria, Spain, Italy, Norway and Sweden combined. From these great Treasure states comes an important part of such peace and war necessities as metals and lumber — live stock and wool — grain, fruit, vegetables and sugar. The annual production of these alone is valued at nearly five billion dollars.

The Union Pacific connects all parts of this territory with nearly 8,000 miles of tracks. Eastward and Westward roll a continuous procession of richly laden freight trains. And speeding by are world-famous passenger trains.

The beginning of present-day progress and prosperity, and the real union of the East and West began with the building and development of the great Union Pacific.

Nearly \$300,000,000 have been spent in the last twenty years in

making the Union Pacific of today. This has brought double tracks, perfect roadbed, low grades, light curvature, automatic electric block signals, and most modern equipment.

Success has come to the Union Pacific through the recognition of its duty to serve.

That duty is threefold. It has a duty to the Nation as a whole. It has a duty to the communities through which it runs, and it has a duty to those who are a part of it. The interest and welfare of all these is the interest and welfare of the Union Pacific.

### Some of the Products of the 11 Union Pacific States:

Grain .....	2,850,774 carloads*	Lumber .....	378,536 carloads	Sugar .....	18,980 carloads
Minerals .....	1,682,260 "	Vegetables .....	362,053 "	Wool .....	4,231 "
Live Stock .....	1,200,726 "	Fruit .....	155,534 "	Fish, Canned .....	2,209 "

A total of 6,655,303 carloads annually for these nine commodities.

\*These figures are the latest obtainable and are approximate.

*For information write*

*Gerrit Fort, Passenger Traffic Manager, Union Pacific System, Chicago*

# The Independent

WITH WHICH IS INCORPORATED  
**HARPER'S WEEKLY**

## THE PRESIDENT'S CABINET

**T**HE selection of Mr. McAdoo as Director General of Railroads creates a situation which can only be temporary. No one man can adequately discharge the duties of two such exacting offices as supreme head of the 250,000 miles of railroad lines of the country and administrator of the nation's financial affairs. Mr. McAdoo must be either Secretary of the Treasury or Director General of Railroads—he cannot successfully be both. The President should recommend to Congress at the first opportunity the creation by statute of the post of Director General. Until he does the holder of that post can receive no salary. He will presumably seek for a new Secretary of the Treasury; otherwise he would hardly have selected Mr. McAdoo for the new responsibility.

The Director General will of course continue to sit in the President's Cabinet. It is inconceivable that the holder of that vital post should be absent from the President's council table. But that will require no action by Congress. The President's Cabinet is a body unknown either to the Federal Constitution or to the Federal statute book. The nearest approach to a reference to it anywhere is the provision in the Constitution empowering the President to "require the opinion in writing of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices." But that hardly creates a coherent body such as the Cabinet has by usage come to be. In practise the members of the Cabinet are the heads of the Executive Departments established by Congress. But there is nothing anywhere to prevent the President from calling into conference with the regularly recognized Cabinet members any one whatever that he might choose. For thirty-five years the Postmaster General was deemed a subordinate in the Treasury Department, until President Jackson in 1825 invited him to Cabinet meetings. So it will merely remain for Mr. Wilson, whenever his Secretary of the Treasury and Director General of Railroads cease to be the same person, to treat the latter official as a member of his Cabinet to have him become so.

Congress should at once create by statute the new Department of Railroads and make the necessary appropriations for it. At the same time there is another new department that needs establishment. Its head should also have his place in the Cabinet. It is the Department of Munitions. We cannot too rapidly take another leaf from the book of England's experience and at the same time apply the lesson that the revelations of the past few weeks have spread before us. The supplying of munitions is no job for a soldier. The present Bureau of Ordnance in the War Department has shown that it does not know how to slash red tape, to take short cuts to concrete results, to take a broad view of an exigent situation, to get things done. The persistent refusal to adopt the Lewis gun, which has come to be in the hands of the armies of our Allies one of the indispensable

factors in this war, is sufficient proof of prejudice or stupidity to damn any bureau guilty of it. If this were all it would be enough. But there is plenty more of the same kind. The present chief of the Bureau of Ordnance has earned transfer to some less strategic point in the war machine. But mere change of personnel will hardly solve the difficulty. What is needed is a new department with no soldier, but a civilian, at its head, with a seat in the President's Cabinet.

We are by no means sure that there is not needed one other Executive Department headed by a Cabinet member. Shipbuilding is a new business for the United States Government. We are compelled by force of circumstance to enter into it in no tentative way but with every ounce of energy that we have available. Without shipping we shall not win the war, whatever our allies may succeed in doing. We have tried thus far to solve our shipping problem under two heads with divided authority and responsibility. The attempt has not worked well. Already we are working with the fourth man who has tried to act as General Manager of the Emergency Shipbuilding Corporation and the second who has had a try at being head of the General Shipping Board. It is high time to establish a single head with real power and complete responsibility. We believe the President would be wise to have that man in his Cabinet.

The make-up of the President's Cabinet is his own affair. He could invite any Federal officer whatever or even an individual outside the Government service to sit as a member of this council of his advisers. He is in no way bound to follow his Cabinet's advice even if unanimous, for it is he that is responsible to the people and not his advisers. As James Bryce has pointed out:

An American administration resembles not so much the cabinets of England and France as the group of ministers who surround the Czar or the Sultan, or who executed the bidding of a Roman emperor like Constantine or Justinian. Such ministers are severally responsible to their master, and are severally called in to counsel him, but they have not necessarily any relations with one another, nor any duty of collective action. So while the President commits each department to the minister whom the law provides, and may if he choose leave it altogether to that minister, the executive acts done are his own acts, by which the country will judge him; and still more is his policy as a whole his own policy, and not the policy of his ministers taken together.

So there are really two separate questions which we are considering here. The first is, To whom shall the functions of running the railroads, providing munitions, and building and operating the new merchant marine be entrusted by law? On this point we believe that each of these functions should be discharged by a separate Executive Department on an equality with the existing Departments of State, War, Navy, Commerce, and so on. The head of each department should be selected as are the present executive heads and be responsible only to the President. The second question is, Whom shall the President consider as members of his Cabinet and

# CARTOON COMMENT

## WHAT NEXT IN RUSSIA?

### THE PEACE OF RUSSIA

In this satiric cartoon from "Esquella," Barcelona, the Russian peasant is represented as stopped, just as he was about to lay down his rifle, by a sudden thought. Japan and Uncle Sam furnish the thought, "If you quit the rifle you'll meet trouble here," says Japan, pointing a gun in his face. "If you quit the rifle you shan't eat," warns Uncle Sam behind him, holding the heavy money bag

### A CONSEQUENCE

Russia as she sees herself, in "Novi Satirikon," Petrograd. "The more they squabble about the land at the rear," says the Russian deserter, "the more we lose here at the front"

### THE REVOLUTIONARIES

Well-ordered Holland despises the savage tactics of the Russian revolutionaries. "They are wolves who eat each other up," says the cartoon from "De Amsterdammer," Amsterdam

### SAID THE SPIDER TO THE FLY

"Greetings, brother, let us discuss peace." The spider is the German "socialist," and the Russian socialist the fly. Drawn by Knott in the "Dallas News," Texas

### STUCK IN THE MUD

"London Opinion's" pessimistic comment on the Russian steam-roller which ought to be forging thru the quagmires of revolution and getting on firmer ground now

invite to the Cabinet meetings as his special advisers? We believe Mr. Wilson would be wise to treat in that way his Director General of Railroads (as soon as he is not the same person as his Secretary of the Treasury), his Secretary of Munitions and his Director General of Shipping (when Congress shall have created those two offices).

The first step of course is for the President to recommend to Congress the establishment of these new offices. He should take that step without delay.

## NEXT

**A**FTER the railroads the coal mines. The war cannot be won without coal. Whatever is essential to success in the war should be under direct and unequivocal government control. Mr. Wilson should take over the nation's coal mines forthwith.

## EDUCATION OVER THERE

**O**F education the war has exacted heavy toll. Oxford, Cambridge, Paris, Bordeaux, gave almost their all. More recently our own institutions have responded so generously to their country's call that some of the smaller colleges are reported scarcely to be marking time. Educators everywhere are thinking of the days when peace will come to stay and education be its sure bulwark. *Kultur* has become synonymous with militarism. The manifesto of 3200 German educators cannot be mistaken: "The salvation of European civilization depends on German militarism." But culture stands for peace, and Gilbert Murray speaks for it in his assertion that such an institution as Oxford represents "the habit of living for the things of the spirit."

To make culture international, we must have more educational reciprocity with our Allies. Without sacrifice of academic standards it must be made easier for properly prepared students to profit by the best that France and England have to give. Recent visitors to Europe indicate that there is understanding of the problem "over there," and readiness to meet us on the way. Oxford, Cambridge, Bordeaux, Dijon are in fact working out details for the interchange of students with America, and especially our women's colleges are already bringing foreign students over.

The American University union is established both in Paris and London. The Association of American Colleges, meeting January 10 to 12 in Chicago, gives its opening and its closing session to the subject. Educational reciprocity seems in fact the main theme of the program. Ways and means will be discussed. The appointment of a delegation of American educators to go as soon as possible across the seas for a series of conferences in England and France will be suggested. Educational reciprocity intelligently established and systematically conducted can be made one of the stoutest bulwarks against war in the future, one of the surest safeguards for a lasting peace.

## GOD SAVE OUR MEN!

**I**T is a gratifying little circumstance, in these days when the English-speaking peoples stand shoulder to shoulder in defense of humanity, that "God Save the King" and "America" are set to the same tune. There comes down to us from Canada a new verse that fits in equally well with either of the two versions, theirs and ours. It is already being sung here as well as there. It runs thus:

God bless our splendid men.  
Send them safe home again.  
God save our men!  
Happy and glorious,  
Dauntless and chivalrous,  
Winners of freedom.  
God save our men!

It should be sung whenever "America" is used. It strikes a note to which every American heart must thrill a response.

## THE REVELATIONS OF THE SECRET TREATIES

**H**OWEVER much we may distrust the Russian revolutionists and condemn their proposed withdrawal in the most critical period of the war, it is important that we should understand their point of view. We must realize: first, that they are more interested in the revolution than in the war; second, that they are determined to overthrow the capitalistic system in all countries; and third, that, having abolished the Czar's government, they decline to acknowledge any obligation to fulfil its pledges. By those who regard the State as a continuing entity and its agreements with foreign powers as permanently binding upon other administrations and future generations, this renunciation and publication of the secret treaties of the old régime will be called treachery, ingratitude, a betrayal of friendship, a breach of trust, a violation of confidence. But it does not matter what we call it so long as the Russians look at it differently. They think that Russia entered the war, not so much to protect Serbia, as to advance her own imperialistic schemes in the Balkans, in Asia Minor and in Persia. They suspect not only the Czar and the Kaiser of such designs, but also the Allies. The popular demand for the publication of the secret treaties was one of the motives that led to the overthrow of the autocracy and of the provisional governments that succeeded it. The first administration after the revolution was composed of moderate men like Miliukov, who refused either to repudiate or to publish the secret treaties. Consequently this government was forced to give way to the more radical group under Kerensky. Kerensky took the position that it was not honorable to renounce or to reveal these treaties without giving the Allied powers a chance to change them. Accordingly he notified the Allies that Russia was ready to abandon her claim for Constantinople, which the Allies had promised her, and he asked the Allies to revise their war aims in the same spirit. Both the British and the French premiers promised a reconsideration of the question, but when months went by and no such conference was called, the Russians lost patience and overthrew the Kerensky government.

The most extreme faction of the Socialists, the Bolsheviks, who then came into power, proclaimed their peace terms to the world and gave the Allies ten days in which to accept them under threat of making a separate peace with Germany if they did not.

As soon as the Bolsheviks got access to the archives of the foreign office last November, they began the publication of the secret documents pertaining to the war, and these have been printed in the Petrograd papers every few days since. But only brief and fragmentary abstracts of them have been permitted to reach America, and even these have been ignored by some of our newspapers, altho they are of quite as much importance as the white, orange, yellow, and red books that were devoured with such avidity at the beginning of the war. Of the English papers the *Manchester Guardian* publishes the fullest account of the Russian revelations.

Of these so-called "secret treaties" it may be said that most of them are neither treaties nor secret. They reveal little but what was commonly suspected before. They disclose nothing to discredit the Allies' cause as a whole, tho they show certain powers more grasping than they like to appear. For instance it appears that Italy insisted as the price of her active participation in the war upon extensive concessions in three continents, Europe, Asia and Africa. These included the Trentino and Austrian Tyrol south of Brenner Pass, Trieste, Istria, and Dalmatia as far down as Spalato. This includes territories which contain only five to ten per cent of Italians and which have never belonged to Italy since the days of ancient Rome. What is more, the extension of Italian sovereignty over the eastern coast of the Adriatic would in large part shut off from the sea the southern Slavs whom the Allies have promised to liberate and provide with a port. The Serbs have naturally been highly incensed against Italy

for thus claiming territory inhabited by their race and necessary to their national existence.

In regard to the lower coast line, Italy agreed not to oppose England, France and Russia if they gave part of Albania to Montenegro and Serbia, but Italy insisted that the chief port of Albania, Vallona, and its hinterland should be ceded to her. Not content with these promises, Italy, as we all know, has declared a protectorate over the whole of Albania, has occupied Vallona and has sent her troops so far into the hinterland that they have come into conflict with the Greeks who claim southern Albania. This action on the part of Italy alienated the Greeks, so that the Allies cannot get their support even after they had deposed King Constantine. As for the Albanians, they dislike Italians, Greeks, Austrians, Serbs and Montenegrins alike and only ask for independence. Italy further offended Greece by demanding the Dodecanese or Sporades islands in the Aegean Sea as well as Adalia on the Asia Minor coast. In Africa it was agreed that if France and England retained any of the German colonies Italy should be compensated by being allowed to expand into the hinterland from Eritrea and Somaliland. This means of course that the Italians may again take possession of Abyssinia, from which in 1895 they were so ignominiously expelled by a native rising. That would leave in the African continent only one independent state, little Liberia, our own *protégée*.

Among the further stipulations of Italy were that she get a loan of \$250,000,000 from the London market, that she be conceded the right to hold the balance of power in the the Mediterranean and that the Allies should refuse to listen to the Pope if he should attempt to act as a peace-maker. This clause, Article XV of the treaty as published in Petrograd, reads as follows:

France, Great Britain and Russia take upon themselves to support Italy in her disallowing representatives of the Holy See to take any diplomatic steps for the conclusion of peace, or regarding matters pertaining to the present war.

This received a seeming confirmation when the Pope's peace note was ignored by France, Great Britain and Russia and left to President Wilson to answer, but the British Government by the mouth of Lord Robert Cecil denies the existence of any such agreement with Italy in regard to the Pope, so the impartial student of the war will lay it upon the shelf to be proved or disproved later. Apart from this disputed point this treaty, which is said to have been signed at London, April 26, 1915, by Sir Edward Grey, the British Foreign Secretary; Paul Cambon, the French Ambassador, and Count Benckendorff, the Russian Ambassador, contains little that has not been generally known for the last two years. Probably the reader has heard the story which has been long in circulation that when the Allied Ministers visited Rome and Foreign Minister Sonnino exposed to them the full extent of the Italian demands, Premier Briand jumped up in pretended alarm and exclaimed: "Do you want our breeches, too?"

The Russian revelations also include the offers made by the Allies to induce Greece, Bulgaria and Rumania to espouse their cause. Greece was offered southern Albania (except Vallona), the island of Cyprus and a portion of Asia Minor about Aidin if she would take part in the Gallipoli campaign. Premier Venizelos wanted to accept but King Constantine refused because the Allies wanted to take from Greece the port of Kavala to give to Bulgaria as price of her neutrality. Later Constantine gave Kavala to Bulgaria when she took the German side.

Rumania by the secret treaty of August 23, 1916, got the promise of Transylvania, Bukovina, the Banat and the Dobrudja, regardless of the fact that in parts of these territories the population is mostly Magyar, Ruthenian, Serbian and Bulgarian, respectively. It appears from the documents published by the Bolsheviks that Rumania was deliberately enticed into the war by the Russian Premier Sturmer for the purpose of betraying her to the Germans. This explains

why the Germans were able to prepare in advance so as to sweep over Rumania within a few weeks and why the Russian army did not give Rumania the promised assistance. It may also explain the twin mystery of why the French and British army at Salonica under General Sarrail did not come to the rescue of Rumania as agreed. General Sarrail has recently been recalled under suspicion of treason.

The most startling and disconcerting of the Russian revelations are the negotiations between France and Russia in regard to the western frontier because it tends to confirm the charges made by the German Chancellor Michaelis that the French claimed not merely the recovery of Alsace-Lorraine but also German territory beyond the limits of the lost provinces. If we may trust the Petrograd documents, France asked that the coal region of the Saar valley be conceded to her and that all the territory west of the Rhine be taken from Germany, garrisoned by French troops and made into a buffer state. The territory thus alienated from the empire is populated by Germans and contains such undeniably German cities as Cologne, Bonn, Bingen, Coblenz, Mainz and Worms. Knowledge of the existence of this document was conveyed by the Russian Socialists to their French brethren last summer and the French Socialists called the Government to account. The session of the Chamber of Deputies was secret, so we do not know exactly what M. Ribot, the Foreign Minister, said. But, whatever it was, his explanation was unsatisfactory and he was forced out of the cabinet and later the Painlevé government was overthrown.

Sir Edward Carson in one of his speeches said that the Allies were pledged to continue the fight until France got the left bank of the Rhine. This created a furor, but his friends explained—not very complimentarily—that he was confused in his geography and supposed that Alsace-Lorraine covered all the territory west of the Rhine.

When the question was brought up in the British Parliament, November 7, 1917, Foreign Minister Balfour said:

Absurd! There never was such an agreement. . . . This is a complete mare's nest. There is no such treaty. The British Government know of no such treaty and are party to no such treaty nor do I believe that any such treaty exists.

We must of course accept this explicit denial as relieving the British Government of any complicity in the design for making the Rhine the western boundary of Germany. In how far the French Government approved of the plan is undetermined. All we know is that an active propaganda in favor of it in France and England has been permitted by the censor. An extensive literature in both languages has appeared about it. Those who are interested may be referred to the headquarters of the movement, *Comité de la rive gauche du Rhin, 38 Boulevard de Strasbourg, Paris*. It is argued that the Rhine would form a more defensible boundary than the present against German aggression. But on the other hand the alienation of such German territory would be likely to cause as much future trouble as Germany's annexation of Alsace-Lorraine has caused in the past.

The secret treaty between Russia and Japan agreeing to a mutual defense of their interests in China against any third power has been printed in American papers. The other Russian revelations we have no space to consider here.

It is impossible to say what credence should be placed upon these Petrograd publications. They are printed not to discredit the Allies, but to discredit secret diplomacy and imperialism everywhere. Trotzky, the Bolshevik Foreign Minister, says to the German Socialists: "Do as we did. Raid your own Foreign Office and see if you do not find something as bad or worse." Until that is done of course the documents published, even if they are altogether genuine and complete, present the diplomacy of the Allies in an unfair and unfavorable light. But whether they are true or false, their publication necessitates what we understand President Wilson has been urging, a restatement by the Allies of their war aims and peace terms. If these are not as stated in the Russian documents, what are they?

# THE STORY OF THE WEEK

## The War of the U-Boats

The British Government reported on January 2 that twenty-one British vessels had been sunk by U-boats or mines during the week, of which eighteen were of more than 1600 tons each. This was a large increase over the losses of the preceding week, when only twelve, of which eleven were over 1600 tons, were sunk. During the week, however, 2111 vessels safely entered and 2074 departed from British ports, and eight were attacked but escaped. At the same time there was believed to be a considerable increase in the number of submarine boats destroyed by the Allied fleets. An idea of the magnitude of the work of keeping the sea safe for commerce may be obtained from the statement that in the waters surrounding the British Isles 967 mine-sweeping vessels are constantly at work, covering 2000 square miles of sea every day. Since the beginning of the war about 8000 German mines have been swept up, of which 4600 were taken last year.

## On the West Front

Intense winter weather has restrained but not altogether checked activity on the west front of the war. Despite a snowstorm the British and French aviators bombarded German railroad stations and military centers on December 28, with much effect. The Germans retaliated with a drive at the British on Welsh Ridge, near Cambrai, on December 30, and made considerable gains on a two mile front, most of which were quickly retaken by General Byng in a counter attack. By the end of the next day the net advantage was with the British. On New Year's Day the British repulsed two small attacks, and on the French and Belgian fronts there was little but artillery firing. The Belgians defeated a German attack north of Ypres, and the French brought down six German aeroplanes. Artillery action continued on January 2 and 3, and German raids were repulsed by both the British and French. There were no indications of the great German drive which had been threatened, and the fall of snow, from a foot to several feet in depth, made it seem unlikely that one would be attempted.

## On the Italian Front

There was much more activity on the Italian than on the west front. A great artillery duel on December 28 was followed by futile efforts by the Italians to recapture ground near Monte Asolone; but Teutonic prisoners were taken on the Asiago plateau, four Teutonic bridges on the lower Piave River were destroyed, and great havoc was wrought by Italian aeroplanes upon the enemy in the Ronchi valley. Two days later one of the most brilliant actions of the whole campaign occurred, when the French troops made their first at-

## THE GREAT WAR

*December 28*—German aviators bombard Padua and destroy churches. British defeat Turks in Palestine.

*December 29*—Second German raid on Padua and other undefended cities. Bolsheviki-German peace negotiations.

*December 30*—British-German fighting near Cambrai. Great French drive on Italian front. Bulgaria accepts Russian peace.

*December 31*—Italians drive Austrians back beyond Piave River. British and French repel German attacks.

*January 1*—Austrians badly defeated in trying to recross Piave. Bolsheviki leaders repudiate "hypocritical German peace."

*January 2*—Further British gains in Palestine. Belgians, French and British foil German attacks.

*January 3*—Italians clear entire western side of Piave of enemy troops. German raids on west front repulsed.

tack upon the Austrians. This was delivered between the Piave and the Brenta, with characteristic French spirit and valor. The enemy's lines were pierced to a depth of some distance on a front of three miles, important positions near Monte Tomba were captured and some of the French detachments took more prisoners than

© Underwood & Underwood

## TO REPRESENT THE U. S. A. ABROAD

The first woman ever appointed by the government as foreign representative is Mrs. Norman DeR. Whitehouse, who is to be sent to Switzerland by the Federal Committee on Public Information to further its policy of bringing to the German people, thru neutrals, the war aims of the American people. Mrs. Whitehouse has been one of the most prominent workers for suffrage in New York; she spent some months at the American embassy in Berlin in 1914

their own numbers. Further operations on New Year's Day by the Italians drove the last of the enemy back to the eastern side of the Piave. Ten vessels laden with German and Austrian troops tried to cross the Piave at a point ten miles from the Adriatic, but were driven back; and on January 3 British troops successfully raided the east bank of the Piave. In the mountain region at the same time the Italians and British were successfully active in several minor engagements.

Meantime the Italian Government, more efficiently to prosecute the war, created a War Committee, consisting of the Premier, Signor Orlando; Baron Sonnino, the Minister of Foreign Affairs; Signor Meda, Minister of Finance; General Alfieri, Minister of War; Vice Admiral Delbono, Minister of Marine; General Dallolio, Minister of Munitions, and another minister to be nominated by the Premier. It was also announced that all enemy aliens in Italy would immediately be interned, without exception, in order to prevent spying and disloyal propaganda such as caused the débacle of last fall.

## Moving on in Palestine

Steady progress is being made by the British in Palestine. In the last days of December a violent Turkish attack northeast of Jerusalem was easily defeated with heavy losses to the Turks, and a considerable advance was made by the British toward the heart of Samaria. The campaign began to assume the aspect of a drive toward Damascus and Aleppo.

## Russian Foreign Relations

The week has seen some progress toward the establishment of better relations between the Bolsheviki government in Russia and the rest of the world, tho there have also been some movements in the other direction. The departure of the British embassy from Petrograd does not formally mean a severance of diplomatic relations. Serious troubles have arisen between the Bolsheviki and Rumania, the authorities of the latter country having arrested the envoys of the Bolsheviki, whom they would have shot as hostile agitators and spies but for the intervention of Cossacks. On the other hand, the National Labor Conference of Great Britain on December 28 sent a friendly message to the Russian Workmen's and Soldiers' Delegates, assuring them that Great Britain was waging war for the sake of democracy, and urging them not to seek a separate peace. The British Government made arrangements with the Bolsheviki for the issuing of passports to British couriers. The French Prime Minister, on the other hand, refused to grant passports to French Socialists

who wished to visit Petrograd. The Bolshevik government on January 2 announced the appointment of its first three diplomatic representatives abroad. These were Mr. Litvinoff, Ambassador to Great Britain; Mr. Karpinski, Minister to Switzerland; and Mr. Borovsky-Odofsky, Minister to Sweden. All three of these men were political exiles during the reign of the last Czar. It was intimated that Great Britain and France would presently recognize the Bolshevik cabinet as the *de facto* government of Russia.

**German Peace Rejected** The Peace Conference at Brest-Litovsk began the week with a promise of success and ended it with what looks like complete failure. So confident was the Bolshevik Foreign Minister, Mr. Trotsky, of success that on December 28 he announced his intention of demanding of the Allied powers that they should join in the negotiations, and, if they did not reply satisfactorily within ten days, of proceeding to complete a separate peace. He announced that Germany had indicated her willingness to free the territories which she had seized in the war. This latter statement was apparently believed in Germany itself, for a great outcry arose in the Pan-German press and elsewhere against any such betrayal of German interests, and it was urged that the people should hiss and hoot at the German Foreign Secretary, Dr. Von Kuehlmann, on his return to Berlin. On December 30 it was announced that Bulgaria had accepted the Russian peace terms, and the next day it was reported that peaceful commerce had been resumed between Russia and Germany, tho it must be doubted if such was the case.

Then on January 2 came a sudden reversal of affairs. The Bolshevik Foreign Minister, Mr. Trotsky, addressing the Central Committee of the Council of Soldiers' and Workmen's Delegates at Petrograd, scathingly denounced the German peace proposals as "hypocritical," and declared that Russia would not accept them, but would in preference resume the war. Mr. Kameneff, one of the Bolshevik peace delegates at Brest-Litovsk, also declared that the terms proposed by Germany were quite unacceptable, and that if they were insisted upon Russia would make peace not with the German Imperial Government, but with the Socialists of Germany, the representatives of the people. The objection of the Russians to the German terms was based upon the second article of the draft of the proposed treaty, which provided that the four great territories of Poland, Lithuania, Courland, and Esthonia and Livonia should be recognized as already having completely separated themselves from Russia; that Germany should therefore not be required to withdraw her armies from them; and that at some future time, while Germany was still in possession and occupation of them, those territories should by plebiscite determine their own political future. This was naturally interpreted by the Russians

Central News

#### GREAT BRITAIN'S NEW SEA LORD

The appointment of Admiral Sir Rosslyn Wemyss to succeed Admiral Jellicoe as director of the British navy is expected to bring about a definite change in naval policy. Admiral Jellicoe believed in the battle fleet, first, last and always. Admiral Wemyss, it is thought, will advise more effective measures against the German submarines

as meaning that all that enormous section of the Russian Empire was practically to be annexed by Germany, and that, too, under the profession of "peace without annexations"!

This emphatic rejection of a German peace by the Bolsheviks was immediately followed in Russia with preparations for a renewal of the war with a reorganized army of 3,000,000. In Germany and Austria-Hungary it caused grave concern. Emperor William called his chief counsellors into conference over it on January 2, the party leaders demanded that the Reichstag be immediately convened in special session, the Socialists express their profound dissatisfaction with the conduct of the Foreign Minister in thus seeking to annex Russian territory, and the impression was created that in a few days the German Government would be compelled to substitute new proposals.

#### Partitioning Russia

While the Germans are insisting upon the practical surrender to them of a great part of southwestern Russia as a condition of "peace without annexations," the various nationalities of Russia itself are partitioning that country into a number of separate states. A republic has been proclaimed in White Russia, with Minsk as its capital. The Cossacks declare the independence of their region, bounded by Caucasasia, Turkestan and Ukrainia. Ukrainia also, including Odessa, claims its independence. Siberia has divided itself into several separate states. Orenburg and the adjacent territory is still faithful to the Kerensky government. Trans-Caucasia has established an autonomous government, Caucasasia has done the same, and so has Tchernomorsk, a district of Trans-Caucasia; Turkestan

is more inclined to obey the Cossacks than the Bolsheviks, Bessarabia claims independence, and Finland has raised its new national flag, a golden lion on a red field. The Bolsheviks hold sway at Petrograd and insist upon their authority over all Russia, tho they are inclined to recognize the independence of the Republic of Finland. Hard fighting continues at intervals between the Bolshevik forces and the Cossacks under General Kaledines.

Meantime Ukrainia and most of the other seceding districts are sending delegates to the Constituent Assembly, indicating that they are not averse to remaining a part of Russia if a satisfactory general government is organized, and that their present revolt is directed chiefly against the Bolshevik faction. A conference of the delegates who have thus far reached Petrograd, with the exception of the Bolsheviks, and a few extremists of the Social Revolutionists, has decided to begin the sessions of the Assembly as soon as one-third of the members are present.

#### British War Losses

British casualties in the war were much fewer in the last week of December than in the preceding week, and were much fewer in December as a whole than in November. The total for December was 70,527, of which 15,850 were fatal. The total in November was 120,089. It was officially reported that the total number of British soldiers and sailors held as prisoners of war by the Central Powers, including those interned in Switzerland, was 46,712, of whom 2257 were officers. Of the whole number, 43,699 are held in Germany and only 86 in Austria-Hungary.

#### More German Vandalism

A painful feature of the Teutonic invasion of Italy is the looting and destruction of historic buildings and works of art. From such things the Austrians and Hungarians refrained, but the Germans on joining them for the present "drive" promptly engaged in the practices which had made their conquest of Belgium and northern France infamous. Statuary, paintings and whatever else of value could be taken away were stripped from public and private buildings and shipped to Germany. On December 28 a squadron of German aeroplanes raided the undefended city of Padua and bombarded it, apparently selecting as targets the most precious and sacred of its buildings. On the next night and again the next the raid was repeated. Not many persons were killed, but the destruction of priceless works of art was very great. The front of the sixteenth century cathedral was demolished; the Church of St. Anthony, in which is the tomb of St. Anthony of Padua, was badly damaged, its bronze doors being blown off; the Church of St. Valentine, the Municipal Museum, and the famous palace of Giustianini, were also wrecked. Works of art by Donatello, Titian and other great masters were badly damaged and many fine windows of stained and painted glass were shattered to fragments.

**Belgian Slavery** The Belgian Government has made charges, backed with documentary evidence from German sources, that a peculiarly detestable and savage form of human slavery is being imposed by the Germans upon Belgian civilians. Women between the ages of seventeen and thirty-five have been coerced into the hardest physical labor for the German army. Some are forced to follow the camps to do the soldiers' washing and other menial work, while many others are compelled to dig trenches and dug-outs for the army, close to the battle line and sometimes actually under fire. Belgian men, from seventeen to forty-five, have been similarly impressed, and those who would not voluntarily "accept employment" at merely nominal wages have been starved into submission, or forced to the front within the firing zone, where many of them have been shot.

**Luxemburg Speaks Up** The little Grand Duchy of Luxemburg, which yielded to German violation of its neutrality without any of the heroic resistance which Belgium offered, has just been heard from concerning prospective terms of peace. That country has established a diplomatic Charge d'Affaires at Berne, Switzerland, who has presented to the representatives of the Allied Powers a formal statement to the effect that Luxemburg would oppose the adoption of terms of peace which would leave that country in any way dependent

upon Belgium, France, Germany, or any other nation, or which did not restore to it complete political independence and also exempt it from liability to suffer any economic penalty after the war.

#### Food Cards in England

Reports that food cards were to be generally adopted in Great Britain were officially confirmed on January 3, when Baron Rhondda, the Food Controller, announced that plans had been prepared for the imposition of compulsory rationing thruout the kingdom, and that they would be put into force as soon as they were approved by the Cabinet. This was generally interpreted, by the well informed, as meaning not so much any increasing scarcity of food as a determination of the Government, in coöperation with its allies, to make an extraordinary effort to bring the war to a victorious close this year. Food would be more scarce, it was said, not because it could not be obtained, but because more ships were to be diverted to the transportation of American troops to France. It was considered wise policy to impose some privations upon the British people in order to get a million fighting Americans upon the battle front by early spring. The first step in food rationing was to limit the supply of margarine and sugar to four ounces of the one and eight ounces of the other for each person weekly, and to prohibit the sale of ice cream and water ices.

#### Japan on Guard

Japan is now the guardian of the Pacific. That is one of the interesting results of the recently concluded "gentlemen's agreement" between that country and the United States. The Japanese fleet now patrols nearly the entire Pacific Ocean, excepting the comparatively small segment lying between Hawaii and our coast; to keep it free from German raiders and other pirates, and to guard the general welfare of commerce on the high seas. This enables the United States to withdraw its vessels from those waters, and even from the Philippines, for use in the Atlantic and off the European coast.

#### Temperance in France

General Pershing's recent order against strong drink in the American army in France, forbidding soldiers to buy or to accept as gifts any intoxicants other than light wines or beer, has led to some controversy in two directions.

He was rashly suspected by some of favoring the use of wines and beer by the soldiers, and was thus compelled to explain that he did not, but would prefer total abstinence even from such drinks; but his order was thus drafted so as to conform with French regulations on the subject. On the other hand, he had some discussion with the French authorities as to the practicability of prohibiting the use of wines and beer as well as of spirits. He declared himself heartily in favor of pro-

#### GETTING ON TOWARD CAMBRAI

This view is drawn from a position above Gouzeaucourt at the time when the furthest German advance on the south side of the Cambrai salient was being checked. Across the center of the view runs the fortified Hindenburg line. Away in the middle distance is indicated the present British line by way of Flesquières, Marcoing and Gonnelleu. Beyond are the two areas, including Bourlon Wood to the north and Lateau Wood to the south, which have been surrendered to the enemy. To the south of Gonnelleu, on the St. Quentin Ridge, the present line is slightly behind the Hindenburg line. It is from Gouzeaucourt, the village shown in detail in the foreground, that we have had so many of those stories of surprise from the British correspondents. Further to the left the ground rises; it is the Borderer Ridge sloping down to a little valley which sheltered the sugar factory. Away to the left of this is Havincourt Wood, and bending slightly in the direction of Bourlon Wood we reach the villages of Ribecourt and Flesquières. It was in this neighborhood that the tanks rendered the initial success possible. Beyond, cutting the horizon, is the hill on which Bourlon Wood is situated, with Mœuvres at one end and Fontaine Notre Dame at the other. In the far distance is Cambrai. Further toward the right we have the village of Marcoing, first captured on November 20, Welsh Ridge overlooking Masnières, Bon Avis Ridge, La Vacquerie, until we descend to the lower ground to the St. Quentin Canal. This area to the right was the one which encountered the southern attack of the German forces. Fierce fighting took place round La Vacquerie

hibition for the American Expeditionary forces. But, he added:

There are obstacles to forbidding wine shops in the zone of the army to do business at all, which practically is what the French would have to do. Local sentiment will play a large part in the determination of the question.

The same order which forbade soldiers taking strong drink contained the most rigid regulations to prevent the spread of the social diseases. The two questions are connected closely. Thus far the record of the army in both respects has been most excellent. It is highly gratifying to me and is a testimonial to the high character of the American soldier. Everything possible is being done to protect his morals and his health and to make him an honor to himself and his countrymen.

**Inter-Allied Ways and Means** The State Department has given out a summary of the decisions and results of the recent conference of the Allied powers, in which representatives of the United States took a leading part. War resources are to be pooled, so that full equipment of every kind will be available to American forces abroad; American naval forces are to be more fully utilized, particularly in anti-submarine warfare; the United States will participate in the military deliberations of a Supreme War Council; an advisory board was created to advise each nation on allotment of ships; and Great Britain, France and Italy were to establish at once a compulsory control of foodstuffs in those countries.

The American delegates to the conference, on their return home, made the following recommendations to the Government and people of the United States:

That the United States exert all their influence to secure the entire unity of effort, military, naval and economic, between themselves and the countries associated with them in the war.

Inasmuch as the successful termination of the war by the United States and the

Allies can be greatly hastened by the extension of the United States shipping program, that the Government and the people of the United States bend every effort toward accomplishing this result by systematic coördination of resources of men and materials.

That the fighting forces of the United States be dispatched to Europe with the least possible delay, incident to training and equipment.

**Farm Tractors for France** The United States Food Administration is preparing to ship 1500 agricultural traction engines to France during the winter, to be used in the spring to assist in the rehabilitation and increase of French agriculture. These engines, used both for field operations and road work, will take the place of thousands of horses which have been taken for the army, and will also greatly compensate for the reduction of man power. How great a decline the war has caused in French agriculture is seen in the fact that in the uninvaded part of France in 1917 only 30,742,157 acres were cultivated for crops, against 40,657,292 acres in the same region in 1913. This is a loss of practically one-fourth. Moreover, there has been, thru the loss of man power, a decline in the productivity of the land cultivated, so that with a decrease of 25 per cent in acreage there has been a loss of 38.1 per cent in yield. If the use of tractor engines recoups these losses and restores the productivity of the years before the war, there will be an immense gain for the provisioning of the Allied nations.

**Investigations Proceeding** The Congressional investigations into various departments of executive activity continue, with increasingly contradictory testimonies. General Crozier, Chief of the Ordnance Bureau, declared that the army would be abundantly supplied with rifles by

February 1, and with machine guns by July 1. He laid much of the blame for delay at the door of the whole nation, for its anti-preparedness spirit during many years before the war. Rear-Admiral Bowles, assistant to the General Manager of the Emergency Fleet Corporation, blamed the contractors for delay in shipbuilding. The commanding generals of several training camps declared that many deaths were due to lack of clothing, and suspicious circumstances were disclosed whereby an offer of enough wool to clothe all soldiers in pure wool uniforms was declined, and the use of shoddy was officially authorized instead. There were also charges of extensive purloining of khaki cloth. Mr. Hoover, the Food Administrator, was at last called before the Senate Committee on January 2, and testified concerning the scarcity of sugar, defending himself against the criticisms which other witnesses had made.

**Ordnance Reforms** The first important result of the congressional investigations has been a complete reorganization of the Army Ordnance Bureau, announced on January 2. General Crozier, long its head, nominally remains in place, but because of his appointment to the Army War Council he is in fact completely separated from it, and General Charles B. Wheeler has become acting chief. The various branches into which the bureau was formerly subdivided, scattered about in twenty-one separate buildings in Washington, have been consolidated into four divisions, namely, of Procurement, of Production, of Inspection, and of Supply. Experienced business men will be put in charge of the Procurement and Production divisions, and the work of those divisions, which comprises the making of contracts and purchasing of all supplies, and the supervision and stimulation of the manufacture of arms and ammunition, will be entrusted to recently commissioned civilians, trained experts and men of proved business ability. This plan of reorganization, it should be added, was devised by General Crozier himself and was recommended by him in his testimony before the Senate investigating committee. The first appointment under the new plan was that of Samuel McRoberts, formerly executive manager of the National City Bank of New York, to be in charge of the Procurement Division. A similar reorganization of the Quartermaster's corps is planned, with three divisions, of Finance, of Purchase, and of Transportation. Senator Chamberlain has also introduced a bill for adding to the Cabinet a Secretary of Munitions.

**Red Cross "Over the Top"** Red Cross has gone "over the top." The membership campaign which was to have ended with Christmas Eve was prolonged a few days in many places, including New York and its vicinity, because inclement weather had interfered with meetings and canvassing; but the final result was most gratifying. The aim had been to

Underwood & Underwood

#### AMERICAN NURSES CITED FOR BRAVERY

Field Marshal Haig has honored with special mention for bravery Mrs. Janet Christie (left) and Miss Louise Marsh (right), both of the Presbyterian Hospital Unit, serving with the American Army Nursing Corps. Miss Marsh was in France two years ago with the American Field Ambulance. They both sailed from America last May with Presbyterian Hospital Unit 2

secure ten million new members, so as to increase the existing roll of five millions to fifteen millions. Instead of that, somewhat more than sixteen million new names were subscribed, swelling the whole to nearly twenty-two millions. Every one of the thirteen divisions into which the country had been portioned exceeded the quota which had been assigned to it. The Southwestern Division, comprizing Texas, Oklahoma, Missouri, Arkansas, Kansas, and parts of Tennessee and Kentucky, reported the largest number of new members, 3,250,000. Following in order came the Central Division with 2,750,000, the Lake with 2,200,000, the Atlantic with 1,600,000, the Pennsylvania with 1,450,000, the New England with 1,200,000, the Northwestern with 559,536, the Pacific with 500,000, the Northern with 388,000, the Gulf with 375,000, the Potomac with 250,000, the Southern with 250,000, and the Mountain with 181,000. These figures are not altogether complete and will all be increased somewhat by final reports.

Comparison among the various divisions is scarcely fair, since they varied greatly in population and in the numbers of members already enrolled. All parts of the country seem to have done excellently and pretty uniformly well. Before the war the United States had a much smaller Red Cross enrollment than any other great country; now it has by far the largest in the world.

**President and Railroads** Surprise was caused by the President's address to the joint session of Congress, on January 4, on the government control of railroads, not by what he said but by what he left unsaid. It had been expected that he would present a somewhat detailed plan and program of legislation on the subject. Instead, he did scarcely more than to amplify his proclamation of a week before, in which he took over the railroads and designated Mr. McAdoo as Director General. He merely enlarged upon the necessity of the step as a war measure, upon the ready acquiescence of the railroad companies, upon the desirability of making as little change as possible in the existing operating organizations, and upon the unqualified guarantee that should be given to the companies of equitable treatment and compensation. He suggested that the basis of compensation be the average net operating income of the railroads in the three years ending June 30, 1917, and recommended, "as promptly as circumstances permit," legislation guaranteeing them such compensation, and also the maintenance of their properties "in as good repair and as complete equipment as at present." All the details of this legislation, and any other that might be necessary, he left to the discretion of Congress. In closing he emphasized the necessity of protecting the interests of the multitude of investors thruout the country, suggested that it might be required to advance loans from the national treasury for the improved operation of the railroads, and

FOR A BETTER BUSINESS UNDERSTANDING BETWEEN JAPAN AND AMERICA

The Japanese Finance Commission, now in this country, represents both the government and the business men of Japan. It is working chiefly to promote better trade relations and a general understanding of economic and financial conditions between the two countries. The mission is headed by Baron Megata, formerly financial adviser to the Korean Government. The members of the mission, from left to right, are (standing) Mr. Osamu Matsumoto, Mr. Kenkiro Matsumoto, Mr. Yoshitaro Yamashita, Mr. Umekichi Yoneyama; (sitting) Baron Ito, Mr. Chozo Koike, Baron Megata, Dr. Seiji Hishida, Mr. Takenosuke Sakakuchi

assured Congress that the Director General, who was also Secretary of the Treasury, would advise with its committees on the various phases of the subject.

#### A Debt Large but Small

The new year begins with the nation bearing a public debt of \$5,615,000,000. That is five times as large as it was before the war, and is much larger than the ante-bellum debt of any other nation in the world except France. Thus stated, it seems an enormous debt. From other points of view it seems comparatively small. Thus it is about twice as great as our debt was in 1865, when it reached its highest point before the present war. But our population is now more than three times as great as it was then, and the average wealth of the people is more than three times as great; so that while our debt is twice as large, our assets are about ten times as large, as in 1865. At that time the debt was more than twelve per cent of our assets, while now it is only two and a half per cent. It is therefore evident that in proportion to our assets, which is of course the correct basis of estimate, the public debt is now only about one-fifth as great as it was at the end of the Civil War.

#### A Record in Exports

Exports from this country in the calendar year 1917 are estimated to have reached a value of more than six billion dollars, which is considerably more than in any former year. Imports were less than half that sum, and the balance of trade in favor of the United States was thus more than three billions, or as much as our entire foreign trade a few years before the war. The increase in commerce has, however, not

been as great in actual volume as these figures suggest. There has been some increase, and in certain commodities it has been large; but there has also been a very considerable increase in the price of both imports and exports. Thus the price of wheat, one of our large exports, has more than doubled, and so has that of iron and steel; so that when exports are reported by values and not by volumes there might be more than a doubling of these commodities in the statistics while our shipments of them had not increased at all.

#### Do Not Trade in Liberty Bonds

The Secretary of the Treasury has issued an appeal to merchants to stop offering to take Liberty Bonds in payment for goods. Such use of the bonds, he points out, defeats the purpose of the Government to have them purchased and held by the people at large for permanent investment. Moreover, bonds thus used are almost certain to be next thrown upon the open market, with the result of depressing the market price of the issue and making it more difficult to sell future issues.

#### Alien Enemies

A naturalized German named Paul Hennig, for five years a foreman in a large torpedo factory in Brooklyn, was last week arrested and indicted for treason, for maliciously mutilating delicate parts of the mechanism of torpedoes so that they would, on being discharged, move in a circle and strike the ships from which they had been fired, or at least would not pursue the course intended.

Three men, one of them a special inspector in the Bureau of Licenses, were arrested in New York on December 31 on charges of conspiracy to enable men

#### KEEP THE FREIGHT CARS MOVING

A fair sample of freight congestion in the eastern railroad yards. This particular one is just outside New York City

illegally to secure exemption from the military conscription, by the use of forged or fraudulent affidavits. They had been doing a large and profitable business with drafted men who were able to pay their price.

On New Year's Day nearly two blocks in the heart of the city of Norfolk, Virginia, were destroyed by fire. The conflagration appears to have been started at several points simultaneously and was accompanied by a number of explosions; for which and other reasons it was attributed to German incendiaries, and more than a dozen arrests of suspected persons were made. Only one life was lost in the fires, but the property loss was estimated at upward of \$2,000,000.

The week of February 4 has been appointed by the Department of Justice for the registering of all the half million or more unnaturalized Germans in the United States, in pursuance of the President's proclamation. This work will be done by the police and by postmasters. This registration will involve the gathering of detailed information concerning the business relations and habits of every German, together with his photograph and finger prints. After registering he must carry a certificate card, and may not change his place of residence without approval of the police or postmaster. Violation of the regulations will be punishable by internment for the war. Orders do not apply to German women nor to any persons under fourteen years of age, because these are not classed as alien enemies by law. Subjects of Austria-Hungary are not required to register.

#### More News May Be Printed

The Committee on Public Information has relaxed its requests for the withholding of news concerning the war, so as to sanction the publishing of the names of captains and gun crews of ships which resist attacks by submarines, and also the names of line officers and of regiments of the expeditionary forces. It was at first desired that all these be withheld, in order that they might not be reported to

the enemy, but it is now admitted that they are so reported by spies, without their being published; and it is regarded as desirable that they shall be published in order that men may have the stimulus and reward of public praise and credit for their deeds.

#### Federal Railroad

The Railroads War Board, consisting of the heads of five of the largest railroad systems in the country, which was formed on their own initiative in April last, resigned on December 29, on the Government's assumption of the control and operation of all the roads. The Director General of Railroads, Secretary McAdoo, thereupon appointed in its place on January 1 an Advisory Committee, to assist him in his work, consisting of John Skelton Williams, the Controller of the Currency; Hale Holden, president of the Chicago, Burlington & Quincy Railroad, and a member of the Railroads War Board which had just resigned; Henry Walters, chairman of the board of directors of the Atlantic Coast Line; Edwards Chambers, vice-president of the Santa Fe Railroad and head of the Transportation Division of the United States Food Administration; and Walter D. Hines, chairman of the executive committee of the Santa Fe Railroad and assistant to the Director General of Railroads. An order was issued for the pooling of all traffic, the common utilization of terminals, rolling stock and other facilities, the hauling of freight by the shortest routes, and the retention until further notice of all officials and employees.

The general condition of the railroads of the country is indicated in statistics for the first ten months of 1917 and estimates for the last two months. These show that while there was an increase in gross receipts over 1916 of \$451,905,438, there was a greater increase in expenses, owing to the rise in cost of fuel and other supplies and wages of employees, so that there was a decrease in net income of \$91,876,153; and the net operating return on capital invested was 5.87 per cent in 1917,

against 6.46 per cent in the preceding year.

Continuing its policy as manifested in the taking over of the railroads, the Government on December 31 took possession of the Bush Terminal piers and warehouses in Brooklyn, the largest establishment of the kind in the United States.

#### Dutch Shipping Deadlock

Announcement was made on January 1 that an agreement had at last been reached with the Dutch Government whereby the cargoes of grain and concentrated cattle fodder would be taken from the Dutch ships lying in American harbors for use in this country. These ships have an aggregate tonnage of about 500,000 tons, and most of them have been held here since July 15 last, when the embargo went into effect against shipping such cargoes to neutral countries trading with Germany. The United States has been insistent that fodder and grain shall not be shipped from this country to Holland to feed cattle which would supply Germany with fats, and the Dutch Government has at last yielded to that insistence. The latter still refuses, however, to let its vessels be put into trade with Argentina and Australia, and on that point a deadlock still exists.

#### Earthquake in Guatemala

Disasters shift impartially "from lands of snow to lands of sun." Following the appalling artificial earthquake at Halifax came all thru Christmas week a series of natural shocks in Guatemala, centering in Guatemala City. The loss of life is as yet uncertain, being variously reported at from less than a dozen to more than two thousand, but it seems certain that the destruction of buildings and other property was enormous. Nearly every house in the city was rendered uninhabitable and nearly 100,000 persons were made homeless. The presidential palace, post office, cathedral and all important buildings were wrecked, and the water mains were broken and the electric lighting and transport systems were cut off.

# ITALIAN DESTROYERS SHOW THE WAY

BY PARK BENJAMIN

**D**URING the Italian-Turkish War of 1912 the Italians undertook to force the Dardanelles in order to attack seven Turkish warships at anchor just beyond the narrowest part of the straits. This with a squadron of but five little torpedo-boats of 200 tons each. They entered at about midnight and crept along the shore, dodging the mine fields, until they were picked up by a searchlight on Cape Helles. After that they raced thru the fire of over a hundred great guns, thru the blaze of uncounted electric beams, until they reached the famous narrows which Xerxes bridged and where Leander and Lord Byron swam the Hellespont, and there, eleven miles from the entrance, they found themselves stopped by a barricade of steel cables. Altho the Turkish vessels were provokingly in sight, the invaders had no way of cutting thru the obstructions and so perforce they turned back, again went thru the hail from the forts, and after an absence of two hours rejoined the Italian fleet without the loss of a man and without serious injury to the boats. The world—Turks and their friends excepted—thundered its applause. Commander Mello of the little flotilla was made a rear admiral instantly, and subsequently became his country's Minister of Marine. The admiral of the Turkish squadron, which did nothing, was caused Turkish fashion, historically to disappear. The lesson of that daring and gallant action seemingly was that while such light and vulnerable craft as destroyers or torpedo-boats may get thru or around

mine fields and pass fortifications, they can be stopped by steel cables stretched across the channel.

The practical character of this deduction was not lost on the owners of the Austrian navy, and they proceeded to avail themselves thereof with much confidence, in order to keep over-enterprising Italian destroyers out of the Adriatic harbors, wherein His Apostolic Majesty's battleships had peacefully secluded themselves ever since the war began. There had been considerable improvement in small Italian warcraft since the Dardanelles episode. Some people thought them the best in the world, and certainly they were not very far from being so. One of them made a speed of forty-two miles an hour.

At about the time the invading Austro-German army reached the Piave River, the Germans had their newspapers say that the Austrian navy was going to do something, and, more specifically, that two battleships which had been in the harbor of Trieste for so long that grounding on their own beef-bones seemed imminent, would really come out and help the Huns take Venice. Just how that was to be done was not explained, nor was it made clear in what way the much more powerful Italian dreadnaughts, which were still persistently lingering in the vicinity of the port, were to be disposed of. The two ships selected for the task, the "Wien" and the "Monarch," were sister vessels of 5512 tons each, built in 1895. Ordinarily a battleship twenty-two

years old is a naval Methuselah, and somewhat feeble; but this pair having never done anything were well preserved, and while they both could, of course, be easily annihilated by the Italian "Giulio Cesare," for example, long before they could get near enough to the "Cesare" for their guns to reach her, still they might be formidable against gondolas, or even against cruisers, the latter, of course, if caught in a corner, and so unable to get away from ships of but seventeen-knot speed.

**M**EANWHILE the Italian aviators in going to and from their regular daily job of dropping bombs on the Austrian ships in Pola and Fiume had observed that the "Wien" and the "Monarch" were in a slip between two of the three long piers which jut into the harbor of Trieste, that not only were they protected by mine fields and fortifications, but that no less than eight steel cables were stretched across the entrance of the slip. Furthermore, to these cables were connected mines liable to blow up if the cables were unduly jarred by collision with them. Those Dardanelles cables were still rankling in the memory of the Italian navy. Here, then, was a chance to try conclusions with another barrier of the same sort, and with warships—this time threatening ones—on the other side of it.

Then followed not only the most daring single naval episode of the war, but an achievement of distinct military importance, and not to be dismissed solely with the usual tributes to personal gallantry. A dark and misty night was se-

Here lie the "Wien" and the "Monarch" where Italian torpedoes found and sunk them both at anchor in Trieste harbor

lected for the work. From the division of Italian torpedo-boats which silently stationed itself in front of the port, two small, recently built and very swift craft were chosen. Lieutenant Rizzo, a Sicilian but thirty years old, was given command of both. While a young officer is always best for a dash, a prudent senior from excess of caution sometimes sends an elderly subordinate along with him. That is why one of the boats under Rizzo's direction was steered by a non-commissioned officer, aged sixty-two. The youngster, however, decides matters—and should.

A little after midnight, the boats crept into the harbor mouth. The mist dimmed the Austrian searchlights, and the small draft of water of the vessels enabled them to avoid mines which would have been fatal to heavier ships. One of the side piers was reached without detection and found unguarded. Even with the powerful tools provided, it was a dangerous thing slowly to cut cables which, if unduly shaken, might explode a whole series of mines. Nevertheless, this was done, even when it became necessary to grapple five of the hawsers which were under water, bring them to the surface and divide them strand by strand. At length the cables gave way, the mines and nets supported by them sank to the bottom, and there was open water straight to the "Wien" and the "Monarch." The boats sped into it. A moment later two torpedoes from Rizzo's boat struck the "Wien," which sank instantly. His quick signal to the following boat released two more, which wrecked the "Monarch." The explosions suggested to the Austrians that there was trouble somewhere. It could not be in the harbor because of the impregnable cables and the mines. Therefore, they argued, it must have come from the air, as usual. Then the heavens were lit up with the

glare of countless electric beams and light bombs, and the airship guns shelled the clouds, and the other Austrian vessels in the harbor, not seeing anything to fire at, enthusiastically bombarded the Adriatic. But all this was as harmless to Rizzo and his men as the Turkish fire had been to Mello and his men five years before. As the torpedoes struck home, Rizzo's crews shouted. And as their boats ran out of danger, they sang as only Italians can.

And so it was established that into the most important port of the Adriatic defended by mines, fortifications, steel cables and nets, two little torpedo craft—smaller than many a pleasure yacht—could go and blow up battleships. And the port, too, of Germany's chief vassal, equipt with all the skill and care demanded for the protection of the German Empire against the loss of its Mediterranean outlet. The capture of the naval bases of Pola and Fiume might cripple the Austrian navy, but Germany could view this without regret, if not with complacency, since its ultimate effect would be to make her hold on Trieste more indisputable than ever by its present occupant. And consider also how seriously the permanent closing of so valuable a supply depot for the projected Hamburg-Bagdad railway might prove? Does anybody suppose that the German General Staff would leave such a harbor without all the protection from sea attack that their ingenuity could devise? Or that it has not rested in the belief that the defenses of Trieste were quite as "impossible" to overcome as those which it has provided at the North Sea bases? Was the German General Staff caught napping by this brave boy-lieutenant, or is it again a demonstrated fact that youth and courage and the taking of a great risk are still as effective as they were over a century ago when our boy-lieutenant Decatur, twen-

ty-five years old, captured and burned the "Philadelphia" in the harbor of Tripoli, and sixty years later when our other boy-lieutenant Cushing, barely twenty-one years of age, with his little steam launch and a bag of powder on the end of a spar found his way up the river to where the great Confederate ram "Albemarle" lay in supposed safety and sent her to the bottom? Nelson called Decatur's feat "the most heroic act of the age." The captain of the "Albemarle," with all the chivalry of his people, said "a more gallant thing was not done during the war."

German destroyers have twice recently come out of the North Sea bases and sunk squadrons of convoyed merchant ships, and some of their naval protecting vessels with them. And still we are told that it is "impossible" for attacking destroyers to get into these harbors, and the discovery of how not to do it is rewarded with a coronet. But do the highly skilled and elderly functionaries who are to make up the joint naval control hold fast to that belief, despite the lesson which Rizzo has taught them? If so, have not the Italians at least earned relief from blockading the Austrian fleet in the Adriatic, and the honor of being sent to the North Sea? Might it not be well to see what *they* would do there?

There are plenty more Rizzos in the Italian navy and plenty of Decatur and Cushing in our own, as splendidly daring as these young heroes who have shown the way. Let the old heads in the Boards and Admiralties stick to their counsels of caution and experience. "In the bright lexicon of youth there's no such word as 'fail.'" A naval offensive against the German bases is now necessary. Surely the Italians have proved that they have not "lost the breed of noble bloods." Nor have we. Let our boys go in together.

## A PRAYER FOR THIS TIME OF WAR

*In the earnest solemnity of this prayer of the Huguenot Church, repeated thruout France today, there is revealed the spirit of the men and women who bear the stress of this war*

**W**E bend before Thee, O Father, "in whom all families in Heaven and earth are one." In Thee "we have life and strength and being, for we are all of Thy race." Thou art our Father, O God, all-powerful and all-good, and we are Thy sons and Thy daughters.

Lord protect the homes that we have founded according to Thy command. In these days of sorrow and anguish when Thou dost knock at the door of each one of us, teach us to open to Thee that Thou mayest enter and make Thy dwelling with us.

We beseech Thee, O Lord, for our absent children, for our sons exposed each day unto death; for those wounded or ill; for those held prisoner among the enemies of our people. Fill them with generous devotion, and with unfailing endurance, that they may be "faithful unto death"! If any be called upon to give their lives for us make them to know all the joy of sacrifice without reserve, and receive them into Thy rest.

Have pity on us, O Lord, have pity on the youth of the land. Let them not be entirely cut down like the grass of the field. Save to our land and to our churches their only hope for the future. Bring back the captive in distant countries; cure the sick; free our invaded

provinces; bring about peace by the victory of the right, so that new homes may be established and our race, which Thou hast blest in former days, may be perpetuated to yet be a blessing to all the peoples of the earth.

O God, Thou hast been the God of our fathers. Be also our God and the God of our children.

We beseech Thee for the afflicted, for families in sorrow, for the despairing. Give unto each one friends of faithful and understanding sympathy. Teach them to endure grief without complaint, but to spread the fragrance of their bruised hearts upon the orphans, the disabled, the blind, those in poverty, and those driven from their homes.

Hear, O Lord, our prayer for all people upon the earth today so cruelly torn. O Thou who hast given Thy Son to the world to reconcile all men in Him by the sacrifice of the cross, fulfil Thy plans for mankind despite its faults and its deeds of evil. Reunite in one body all those whom Thou hast made to be born of one blood, and by a miracle of Thy grace, establish upon this earth, plowed by sorrow and watered by the blood of Thy children, that reign of peace and justice and brotherly kindness for which our poor hearts long.

# FILLING THE COAL-BIN

BY DAVID Y. THOMAS

PROFESSOR OF POLITICAL SCIENCE AT THE UNIVERSITY OF ARKANSAS

**T**HE first problem for all men to solve has always been that of the food supply. The next problem for civilized men is to find something with which to cook their food and, in cold countries, keep themselves warm. Food may be grown from year to year. Fuel consists mainly of coal, oil, gas and wood. The amount is pretty well fixed, for very little is added by growth. A few years ago we would have said that of these coal is easily king, but kings are unpopular now and we will simply say that it is of primary importance.

We have not yet reached the point of shortage in the potential supply of coal. Certainly there is enough for this generation. The guesses about how long it will last vary from 100 to 4000 years. The trouble is to get this coal made available for use regularly in sufficient quantities at reasonable figures.

A sharp contrast may be drawn between the situation with respect to food and that of fuel. There is a tendency toward land monopolization and this has had its effect on food production. Yet there are still millions of owners of land and even the large holdings are not inaccessible. Until the outbreak of war our supply of food was usually ample. When the President made his appeal for more food, there was a generous and effective response. Mr. Hoover, the food administrator, found a coöperative spirit.

Contrast this with the coal situation—monopoly, shortage, exorbitant charges, and chronic disorders both in peace and for six months or more of war. Only after repeated efforts was a medium of order and reason brought to this field.

**T**HE coal resources of America are enormous, estimated at fifty-one per cent of the world's supply. Once all of this potential wealth in the United States belonged to all the people. Now nearly all of it except in Alaska is in private hands. The price realized by the people was a mere bagatelle compared with the present value. A few years ago Mr. Schwab declared that the Steel Corporation would not take \$60,000 an acre for its holdings.

The evils of private ownership are shortage of supply, exorbitant charges, and chronic disorders.

Almost every year there are shortages in some communities and sometimes they are general. The middle of November the shortage was reported to be 50,000,000 tons, the production had increased 50,000,000. The immediate cause of this particular condition was the enormous increase in the Government's demand for coal. Such abnormal demands are hard to provide for. One cause of shortage is the enormous waste in mining. Experts estimate this at from thirty-three to fifty per cent. Had this been avoided this year alone, we

would have had a surplus of over 100,000,000 tons. Instead we have permanently lost four billion tons of anthracite and five billion tons of bituminous since mining began, enough to last twelve or fifteen years at the present rate of consumption. This loss can be avoided and the Government should see that it is done. Another enormous waste is in the burning, which is placed at seventy to ninety per cent. Some of this could be saved now, but our inventors will have to get busy to save the most of it. The present shortage is attributed in part to lack of cars. Doubtless this had some influence and calls for action coördinating the railroads and the mines.

Shortage, exorbitant charges and chronic disorders are a natural outcome of private monopoly. The public knows that it is likely to face a shortage and high prices at any time due to the closing of the mines by a strike or lockout. These disturbances have risen several times to the stage of actual war. In the end the public has to pay the cost of these wars, just as it pays for international wars.

**B**UT the coal barons profit. Following the disturbances of 1900 and 1902 they increased the wages of the miners thirty-two cents a ton, the price of coal to the public one dollar. The *New York Tribune* estimated their profits out of this deal at \$300,000,000 in a decade. At the end of the ten years there was another advance of ten cents to the miners and twenty-five cents to the public. The operators coolly announced that the advance was to make up the increase to the miners and to put \$4,000,000 in their treasury to cover narrowed profits for the last few years. A year later the result showed that they had collected \$13,450,000 from the public, of which \$9,550,000 went to the operators, the rest to the miners. Then in 1916 they warned the public to expect another increase of sixty cents. When we entered the war the operators seemed to think that the heyday of profits had come and again warned us to expect shortages and high prices. Then the Government stepped in.

The evidence that the profits of the operators in many cases were unreasonable is conclusive. The dividends announced in the press have ranged from five to fifty per cent. Facts published a few years ago by the Interstate Commerce Commission indicate profits of from fifty cents to two dollars a ton in the anthracite region, a total of from \$100,000,000 to \$175,000,000 a year for the whole country. Exasperated by the situation in the spring of 1917 Mayor Gossom, of Terre Haute, started a municipal coal business and sold coal without loss at \$2.75 a ton when private dealers were getting \$6. Evidently the profiteers were taking excess profits, or there were too many profiteers tak-

ing small profits. But the most convincing proof of all is the action of the operators themselves. Last June the press announced in glaring headlines: "Coal prices are to be lowered as patriotic move. Operators agree to great reduction in price in answer to plea." Then the Washington dispatch went on to say that the operators and certain Government officials in conference had agreed on a reduction of from \$1 to \$5 to the public with fifty cents additional to the Government, a loss of \$180,000,000 a year! But this act of "patriotic generosity" was denounced by Secretary Baker because the price was still "an exorbitant, unjust, and oppressive price."

**M**R. GARFIELD was asked to do for coal what Mr. Hoover was doing for food, increase production and regulate prices, but he was given insufficient powers and has had no little trouble. The coal shortage in certain communities grew acute, schools were closed, industries shut down, and in one or two cases city officials tried to seize coal from the railroads. Even the Governor of Ohio "commandeered" during the cold spell of December. It is only fair to say that the operators and miners were not responsible for all of this. Indeed, a prominent editor thinks that the burden rests upon "the strange performance in Washington last summer when the coal prices were fixed." Secretary Lane praised the operators as patriots when they surrendered that \$180,000,000, but Secretary Baker denounced them as profiteers. The coal administration took the latter view and fixed the price too low to keep the marginal mines running. That, says the editor, is the explanation in a nutshell. All he asks of the officials in Washington is that they stop "playing to the gallery when they don't know about a subject and ask some one who does." Now it is to be hoped that they will be wise enough not to ask some one who thinks it good policy to fix the price high enough to keep every little marginal mine open. If necessary to keep some of them running, it would be wiser to subsidize them by taking some of the profits which still remain to the best mines after they had "patriotically" surrendered that profit of \$5 a ton. While the shortage was acute a company which was suing its miners for damages had the amazing effrontery to complain to the jury that it was daily losing profits of \$1.10 a ton. And it was not one of the best.

Now the chief burden for the troubles of the summer and autumn rests upon the operators and miners. Evidence was produced in some quarters to show that the operators were seeking to produce an artificial shortage to boost prices. Naturally the miners wanted to share in the larger profits and demanded higher wages [Continued on page 78]

# THE CHARLIE CHAPLINS OF POETRY

BY CLEMENT WOOD

AUTHOR OF "DE GLORY ROAD" AND OTHER POEMS

POETS are queer beings, in the opinion of more normal souls; but there are degrees of queer-ness. Some followers of Musæus wear usual clothes, pay routine calls on tonsorial artists, even boast of the ability to purchase Liberty Bonds. And there are those who do none of these. Miss Lowell's classification of "Tendencies in Modern American Poetry" spreads a benignant arm around the Imagists; but even her charitable reach stopped short of the weird step-brothers and sisters of that movement—the "Others" group, grandfathered by Ezra Pound, sired by Alfred Kreymborg, and certainly not damned by those who enjoy a good chuckle at human oddity.

Out of Guido Bruno's Garret on Washington Square, in the February after the Great War started, came a Chap Book headed "Mushrooms: Alfred Kreymborg." This should not be chronicled among the atrocities of war; but it marked, perhaps, the birth of the new movement. Five months later "Others: A Magazine of the New Verse," made its ochre bow from a glutted magazine market. The first voice free-rhythming in the wilderness was here joined by four more—Mina Loy, Orrick Johns, Horace Holley, and Mary Carolyn Davies. The naming evidently came from the great American watchword, "There are others." Evidently there still were; thick and thicker the saffron pamphlets sizzled from the feverish presses; 1916 and 1917 saw respectable Anthologies edited by good King Alfred, from the Borzoi press; Robert Carlton Brown, Adolf Wolff, Kreymborg himself, emitted volumes, whose covers alone were an upper cut to the optic nerve. These products are fresh, unimitative, up-to-the-second; there is nothing in the dusty and unvers-libred past quite like them. Daily they multiply and astonish the earth, a veritable verbal Niagara of emancipated verse.

THE most popular comedian on the cinematic stage, Charlie Chaplin, is famous because he does such queer things with his feet. These versifiers excel in the same way.

France has long been the noisy battleground of rival schools of poetry. The Anglo-Saxon way is different; no loud pronunciamento heralds a new flock of rhythmists. So the "Others" began, and proceeded quietly upon the even tenor, and occasional youthful treble, of their way. Ferdinand Reyher, in the first book, offers a moderate prelude and program, entitled "Others":

We will sit in spiders' corners  
And lure shadows into our game  
To do as we wish.  
Vowels opening like salmon parasols  
Against green embroidery,  
Consonants that chime  
As clearly as rhine glasses clinking.

Before we elevate fully the salmon parasol vowels, or clink the consonants, there are a few exotic "Olives" of Orrick Johns that deserve a nibble:

Oh, beautiful mind,  
I lost it  
In a lot of frying pans  
And calendars and carpets  
And beer bottles. . . .  
Oh, my beautiful mind!

Passing from this sincere autobiographical note, we come to a *genre* character study:

Miggles—  
That was his name,  
Everybody always said,  
"Miggles did it."  
I admired you from the beginning,  
Oh, Miggles,  
Miggles!

Who could resist such a panegyric? Or this casual treatment of a less apparent theme—

Blue undershirts,  
Upon a line,  
It is not necessary to say to you  
Anything about it,—  
What they do,  
What they might do . . . blue undershirts.

The combination school of poetry! The paternal Kreymborg eulogizes, in jollier mood—

The pantaloons are dancing,  
dancing thru the night,  
pure white pantaloons,  
underneath the moon,  
on a jolly wash line,  
skipping from my room,  
over to Miranda,  
who washed them this noon.

DOWN with with rigid laws of rime!  
Down with initial capitals! Into the discard with sequence of ideas and logic, too, if we follow Miss Loy, Marianne Moore, Walter Conrad Arensberg, and their like. Miss Loy obliges us with a "Love Sing" beginning—

Spawn of fantasies  
Sitting the appraisable  
Pig Cupid his rosy snout  
Rooting erotic garbage  
Pulls a weed white star-topped  
Among wild oats sown in mucous membrane

I would an eye in a Bengal light  
A new note, at last, in the world's amorous chorus. She sings later of

Those eyes  
Of Petronilla Lucia Letizia  
Felicità  
Orsola Geltrude Caterina Delfina  
Zita Bibiana Tarsilla  
Eufemia

These lines are a burlier vers libre version of the "Recapitulation" of the French Parnassian, M. Catulle Mendes, beginning—

Rose, Emmeline,  
Margueridette,  
Odette,  
Alix, Aline,

and both suffer from what Freud might term a harem complex.

Another super-modern Sappho is

Miss Moore, with a dainty ability to dimple prose into a semblance of ode forms.

There is nothing to be said for you. Guard  
Your secret, conceal it under your "hard  
Plumage," necromancer.

O  
Bird, whose "tents" were "awnings of  
Egyptian Yarn"—

There is just a hint of a cubistic appeal to patriotic wool-knitters in this.

We must not give the feminists all our attention. Carlton Brown possesses a whimsical leviathantine humor:

I should hate to have the epidermis  
Of an ornithorincus  
On the sole of an elephantine foot.  
I prefer skipping lightly across egg shells  
In padded Chinese slippers with blue embroidered tops.

THEN Adolf Wolff, who has been dubbed admiringly "The Red Messiah of the Revolution," contributes a series of very rank "Prison Weeds"—

I break stones  
in the stone shed  
big ones  
into little ones  
big ones  
into little ones  
big ones  
into little ones  
big ones  
into little ones  
big ones  
into little ones  
I break stones  
in the stone shed.

Another botanical specimen—

I bought twenty-five onions  
from a nigger  
twenty-five onions  
for ten cents  
every night  
before the lights go out  
we each eat an onion  
weeping  
we each eat an onion.

And after the lights go out? The rest is silence. There is a latent pacifist note in this warbler's wobblings:

Trum  
tum tum  
Trum  
tum tum  
soldiers, soldiers marching by  
Trum  
tum tum  
Trum  
tum tum  
soldiers, soldiers going to die

Then a repetition of the first nine lines. This poet is a master of patterned verse—home-made patterns. An endless number of variations suggest themselves. And when we are reminded that a poet nowadays is paid by the line, the free-rhythmed cat is out of the cubist bag. If Mr. Milton has belonged in this group "Paradise Lost" might have opened—

Adam  
Eve Eve  
Adam  
Eve Eve  
Of man's first disobedience, and the fruit  
Apple

# *The Independent-Harper's Weekly* NEWS-PICTORIAL

## AMERICAN PRISONERS IN GERMANY

*These are the first photographs to reach this country showing the soldiers captured in a trench raid when the first American troops were under fire. The photographs are taken from a German paper where they were published with the information to the German people that "the American army is now in the hands of the Germans"*

*There were twelve American prisoners reported captured by the Germans in their first trench raid, but the published photographs account for only five of them. In the group below the five Sammies are being questioned by German officers in the presence of an interested crowd of soldiers. Notice officer at the extreme left!*

#### AMERICA'S ANSWER TO THE SUBMARINE MENACE

*Destroyers have proved an effective enemy to U-boats; they are used on patrol along our coast and in the North Sea and as convoys*

#### ON WATCH

The coldest job in the world is probably the midnight to four o'clock watch on a ship at sea—ice-covered steel decks underfoot—no chance of shelter from the piercing winds—the sailor needs a uniform like this

#### KEEPING WARM AT SEA

This is the first winter that Uncle Sam's Jackies have had to spend in northern waters for many years, and a new winter outfit had to be designed for extra warmth

#### THE COLD-PROOF UNIFORM

Here is a Jackie with winter equipment complete except for the heavy mittens. The high boots are fleece-lined; the over garment of trousers, jacket and hood is wind- and water-proof; and the life belt adds warmth

#### FIGHTING TWO ENEMIES AT ONCE

This gun crew is equipt to wage successful war against submarines and cold weather. The new uniform isn't so clumsy as it looks

# HURLEY, THE "PNEUMATIC"

BY DONALD WILHELM

"SHIPS and not excuses!"

That the chairman of the greatest corporation in existence gave me as his program one week after his appointment, five months before Congress called him on the carpet.

"We've got the situation well in hand. We are a going concern. The difficulties that exist are being removed as rapidly as we can remove them."

So he told the senators—from the carpet. And then he added:

"We've done the preliminary work. If we don't turn out ships steadily and rapidly from now on it will be because the man at the head of the Shipping Board and the Emergency Fleet Corporation is not efficient."

That is Hurley, the very typification of the American Business Man.

And he and his organization offer, by the way, stuff for an interesting study in comparative efficiency of Business Man, Lawyer, General and Naval Constructors, all of whom have tried their hands at the wheel.

First came on board Major General Goethals, builder of the Panama Canal, and with him Lawyer Denman, from the West. Two mighty pilots at first they seemed, but soon they were discerned to be Pride and Prejudice in something like a boa constrictor courtship and catastrophe. They were poor mates—as incompatible as could be. The wonder indeed now is that Woodrow Wilson, able judge in the national court of relations that he is, ever put this pair together on any good ship at all. For, whereas Mr. Denman had the helm, the General had had for years too much glory for any man to share alone! And who is there among students of efficiency likely to suppose, at best, that law office methods ever could operate the workings of a General?

They parted, these two, and got just as far apart from one another as they could, one going to one coast, the other, soon to be recalled by his country, going to the other.

Then came Hurley, from the Federal Trade Commission, where his specialty (he wrote a book on it) was cost accounting. And as mate for him came Washington Lee Capps, Rear Admiral—not an army constructor or engineer, but a naval constructor—not an army officer whom, on the Isthmus, no one except General Sibert dared defy to a finish, tho Secretary von L. Meyer did oust the Admiral for going before Congress and defiantly telling the truth, as he saw it; whereupon Congress went over the head of the Secretary and made the Admiral, in title, Naval Construc-

tor in pay and privileges for life; but a tall, gray, grave man, one of the world's foremost naval designers and builders—a man whose life is the long story of duty, the story of America's own K. of K. in all save conclusion.

Admiral Capps and Business Man Hurley, one time president of the Illinois Manufacturers' Association, were mated. They were of precisely the same age. But the Admiral told me one mid-day soon after his appointment, "I am very tired. I am not well. I must conserve my strength." He was, even then—four months before he retired—slow of step, emaciated, prematurely old; and Hurley is very young—yet both are 53!

And they were interesting to one another—absorbing, even—and they said so—but confined amidst all sorts of difficulties, to the very same cabin. . . . ?

Never!

Why?

We shall see why—but briefly because of the incompatibility of their respective notions of efficiency. So the Admiral went his way—into rest and retirement.

Then came another Admiral—Harris.

He is not so tall as Admiral Capps, figuratively. He was built for speed a little more. Still, he was never built to

travel with Hurley. Moreover, he was accustomed to having no one above him but Uncle Sam, who was before the war traveling for comfort, not for speed. And when he got a chance at Hurley's helm, Hurley and his Board got a chance to ask his retirement to the Navy Department, and Helmsman Hurley sustained his point—that the Emergency Fleet Corporation must be a subsidiary corporation, obedient to the central board of directors, of whom he was Chairman. For no ship, and no organization, can serve two masters.

All passed, thus, save Hurley.

HERE is Hurley: A smiling, pleasant man, whose energetic spirit struck across the reception room before he had said a word. The newspaper men flocked over to him.

"Boys," he began, leading them over to an adjoining office there on the top, the tenth, floor of the Shipping Board's building on F Street, "I've got an important conference in there in my office but you come here, I guess, to see me, and I don't like to disappoint you."

Then, seated lightly at the edge of another's man's desk, with his leg cocked akimbo over the corner of it, he looked straight at them and smiled, and kept on smiling while they volleyed questions at him. One asked him something. All laughed. He smiled, glanced at his inquisitor, Ryley, the Tribunal, then glanced at him again, and turned the smile on Ryley. To another: "Of course I don't know what Japan will do about steel for ships!" To another: "I don't think we had better go into that now." . . . To all of them, after an intimate family-like chat, for, as the wise Washingtonians whom the gods do not destroy all learn to do, he trusts the newspaper men: "What I have said is for your guidance only. I want you to prevent any misunderstanding about the situation here. But you're not to use what I said. I trust you boys, you know!"

They like him—and it is worth noting that the writer, deliberately, canvassed no less than fifteen of these very best judges of humankind when the Goethals-Denman row was on, and found not one whole-heartedly admiring of Mr. Denman—a bad sign for a man and his future, every time. They like Hurley. They like him for the lurking sense of fun and mischief in his overflowing laugh, his bouncing boylike responsiveness, his rubber-like resiliency. They like him for his apparent ingenuousness, tho he is very shrewd, and for his infectious knack of jerking one's sleeve and

© Moffett, Chicago

Mr. Hurley at his country home

searching out something humorous; for his humor-loving face with its short nose; and for his very skin—which contributes to his knack of still seeming to be a son of the common people, iron-worker, locomotive wiper and fireman—for it always seems to have been scoured.

And virile? Virile is too quiet, all too passive a word.

**P**NEUMATIC is a better word, with harder, faster connotations. He, who invented the pneumatic riveter and made a fortune from it, whose voice is heard therefore from every sky-scraper rearing its head to heaven, from every shipyard, has a throb in him, a power to strike quick, strike hard, to lend vibration to everything and everyone about him. And beyond this, a sense of motion—he is “a sort of human catapult,” one writer said, “that bowls over opposition,” and “gets there!” He can take to any old kind of track, lean out of his cab, as it were, and “get along” with irresistible propulsiveness, fairly ricocheting down the line to Destination, joyously, full of fun when going at full speed—with a mind going quite as fast—a deductive, intuitive mind that gambols ahead of slow-moving general opinion—and leads! He thinks in terms of destination—he wants to get there; he thinks in terms of results, worships results, just as any real creator does. When he followed Mr. Denman into office, he told me one day: “I’m going to have an organization worked out here so that I can tell at a glance just where every ship is.” And when the typewritten lists of ship arrivals and departures—the long list made up from telegrams and laid on his desk every morning—was handed him he looked at that list just once: “Here, Barber,” he said to his new secretary. “You send that downstairs again. Tell them to make it up like a newspaper story.”

Every day, now, that list comes up with date-lines and something graphic that fixes arrivals and departures in his mind:

“New York, December 25: The steamer Good Cheer left this morning with 5000 tons of high explosive.”

“Boston: Steamer Philadelphia, 200 passengers, here this morning, two days overdue.”

Such brisk paragraphs tell him something he remembers—just as the tabulated lists told Mr. Denman, doubtless, something his lawyer mind remembered. And such brisk paragraphs, it is worth remembering, too, would be the despair of either of the Admirals and a pretty grim and boyish way of doing business to Admiral Capps at least. Neither would such a method appeal to General Goethals—which suggests that very likely, unless the General indulged the Business Man and the Business Man indulged the General, which neither would likely do—they, too, would have got a legal separation.

Thus, even if Mr. Hurley were not as efficient as he is believed to be, we find another interesting point in this comparative study of Business Man,

Lawyer, Army Man and Sailor. Mr. Denman never bounded forward, never went intuitively—“hell bent for election,” as one newspaperman said—at anything in his life. He goes at things as a lawyer likes himself to do—inductively; gradually, step by step, saying: “Now one plus one make two—that’s two steps I’ve advanced—look back and see them! And two plus two make four—that’s four steps! Here I am on the fourth step, resting, holding a brief on my method,” yes—“and waiting for the General!” But the General couldn’t see this kind of progression. He said so. He chafed. He fretted. He pawed. He swung round in his chair, with his back to me one day, and I heard him say: “I’m sick of it!”

“Sick of what, General?” I ventured.

Then it was, again, that he said with much emphasis, so bitter, so much the victim of compressed resentment that he could scarcely enunciate, that he had nothing to say!

And the tall Admiral, who, Mr. Hurley’s testimony before the Senate committee showed, delayed two months a large group of contracts the General, before him, and Hurley, with him, had approved—might have gone along comfortably with the lawyer, step by step, calculating every detail, instead of war conclusions, measuring every inch with his yard of tape, painting and polishing and perfecting all the way, inching along—“one plus one makes two, two plus two make four,” etc.

And Hurley?

**I**NSTEAD of putting one and one together to make two, Hurley slaps one and one together and makes 11!

Then he stacks up 11 besides 11 and has 1111!

That is speed! That is imaginative-

ness!

And that is organization—if it is achieved practically! It is hard to demonstrate how he *does it*—how he sees units in complex situations and slaps these units together, as if they were bricks, and builds—builds always with an eye to what remains to be built instead of what is built. No sooner had he been appointed head of the most enormous business organization in the history of the world—except the new one, the U. S. Railroads—than he looked out toward Europe, as it were, and saw a gigantic American merchant fleet plying back and forth—a fleet so big that it could export all America, almost, in a summer’s work. At once he quivered with eagerness to begin! At once he got his feet firmly on the floor, snapped his feet firmly on the floor, snapped his fingers, cried that characteristic expression of his: “Dammit, let’s have the facts!”

He got them, got his feet firmly on them, ready to spring as it were—got them mostly as he gets all his knowledge and has got it ever since he was a traveling salesman—by interview, for he hates reports, won’t read a long one, and jumps so quickly ahead of short ones that the writers of them must be careful lest he jump awry. He got his

starting point firmly underfoot, then he called a group of men to him, with others who were there on the ground, and in less time almost than one can write it he began to apportion responsibilities: “Here, you, Hayworth! You take charge of wooden ships!” And he filled out, imaginatively, one part of his picture. “Here, you, Piez, Cary—all of you—take these jobs as I have laid them out with your coöperation. Get ’em done! Get ’em done! Get ’em in the picture!”—or words to that effect.

But he didn’t stop with that!

**H**E works with them all—but he puts responsibility on them all and makes them all accountable. In other words, he is an organization worker accustomed to pulling in harness *with* others—not ahead of others, as the General did; not behind others, as the tall Admiral did—but *with* others. His mind goes ahead, but his smiling, dynamic self is there in the harness, with a goodly sense of discipline directing it but not choking all the initiative and freedom of motion out of it. And all the time he keeps his picture in mind and keeps his values adjusted to that, subordinating parts to whole, gradually getting clear, thus, geographical and functional centers for each situation—gradually discerning units, in other words, and the necessity of a central body or board, much like the board of directors of a corporation, directing these subsidiaries, or units, and a chairman leading the board. He got this form of organization, he said, simply because it was the most efficacious he could strike upon, and with new needs, as he told the Senators, he is altering it continuously. He conceived it, in short, because it seemed to him the best, most efficient way—“the only way,” he said, of taking hold of a tremendous problem.

Admiral Capps has a mind not at all like Mr. Hurley’s—the mind of a scholar. He was tired, physically ill, mentally weary; supersensitive; a man so devoted, so habitually devoted to duty, that it lay heavily upon him and left him no humor even. A reporter—a young reporter—went into his office furtively, one foot forward, the other ready to run. The Admiral did not look up. The reporter coughed. At last he ventured: “Sir, I am a reporter—”

Instead of saying “you look like one!” or something to put this youth at ease, so that he could stand secure on one foot or the other, instead of saying something pleasant, or even “I’m too busy to talk today,” the Admiral rose to his great height, to his great dignity—and bowed! And that was the end of the interview!

That attitude has cost him dearly. He makes more enemies than friends. Friends have been for him forbidden luxuries.

His sense of duty is like that of K. of K. He told a congressional committee years back—when he was champion of the plan now becoming, it is said, effective, of putting all the navy’s construction under [Continued on page 77]

# CREATIVE CHEMISTRY

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

## SOLIDIFIED SUNSHINE

### THE UTILIZATION OF COTTONSEED AND OTHER VEGETABLE OILS

**A**LL life and all that life accomplishes depend upon the supply of solar energy stored in the form of food. The chief sources of this vital energy are the fats and the sugars. The former contain two and a quarter times the potential energy of the latter. Both, when completely purified, consist of nothing but carbon, hydrogen and oxygen; elements that are to be found freely everywhere in air and water. So when the sunny southland exports fats and oils, starches and sugar, it is then sending away nothing material but what comes back to it in the next wind. What it is sending to the regions of more slanting sunshine is merely some of the surplus of the radiant energy it has received so abundantly, compacted for convenience into a portable and edible form. In this article I shall write of some of

the fats, and in the next of the sugars. In previous articles I have dealt with some of the uses of cotton, its employment for cloth, for paper, for artificial fibers, for explosives, and for plastics. But I have ignored the thing that cotton is attached to and for which, in the economy of nature, the fibers are formed; that is, the seed. It is as tho I had described the aeroplane and ignored the aviator whom it was designed to carry. But in this neglect I am but following the example of the human race, which for three thousand years used the fiber but made no use of the seed except to plant the next crop.

Just as mankind is now divided into the two great classes, the wheat-eaters and the rice-eaters, so the ancient world was divided into the wool-wearers and the cotton-wearers. The people of India wore cotton; the Europeans wore wool.

When the Greeks under Alexander fought their way to the Far East they were surprized to find wool growing on trees. Later travelers returning from Cathay told of the same marvel and travelers who stayed at home and wrote about what they had not seen, like Sir John Maundeville, misunderstood these reports and elaborated a legend of a tree that bore live lambs as fruit. Here, for instance, is how a French poetical botanist, De la Croix, described it in 1791:

Upon a stalk is fixt a living brute,  
A rooted plant bears quadruped for fruit;  
It has a fleece, nor does it want for eyes,  
And from its brows two woolly horns arise.  
The rude and simple country people say  
It is an animal that sleeps by day  
And wakes at night, tho rooted to the  
ground,

To feed on grass within its reach around.

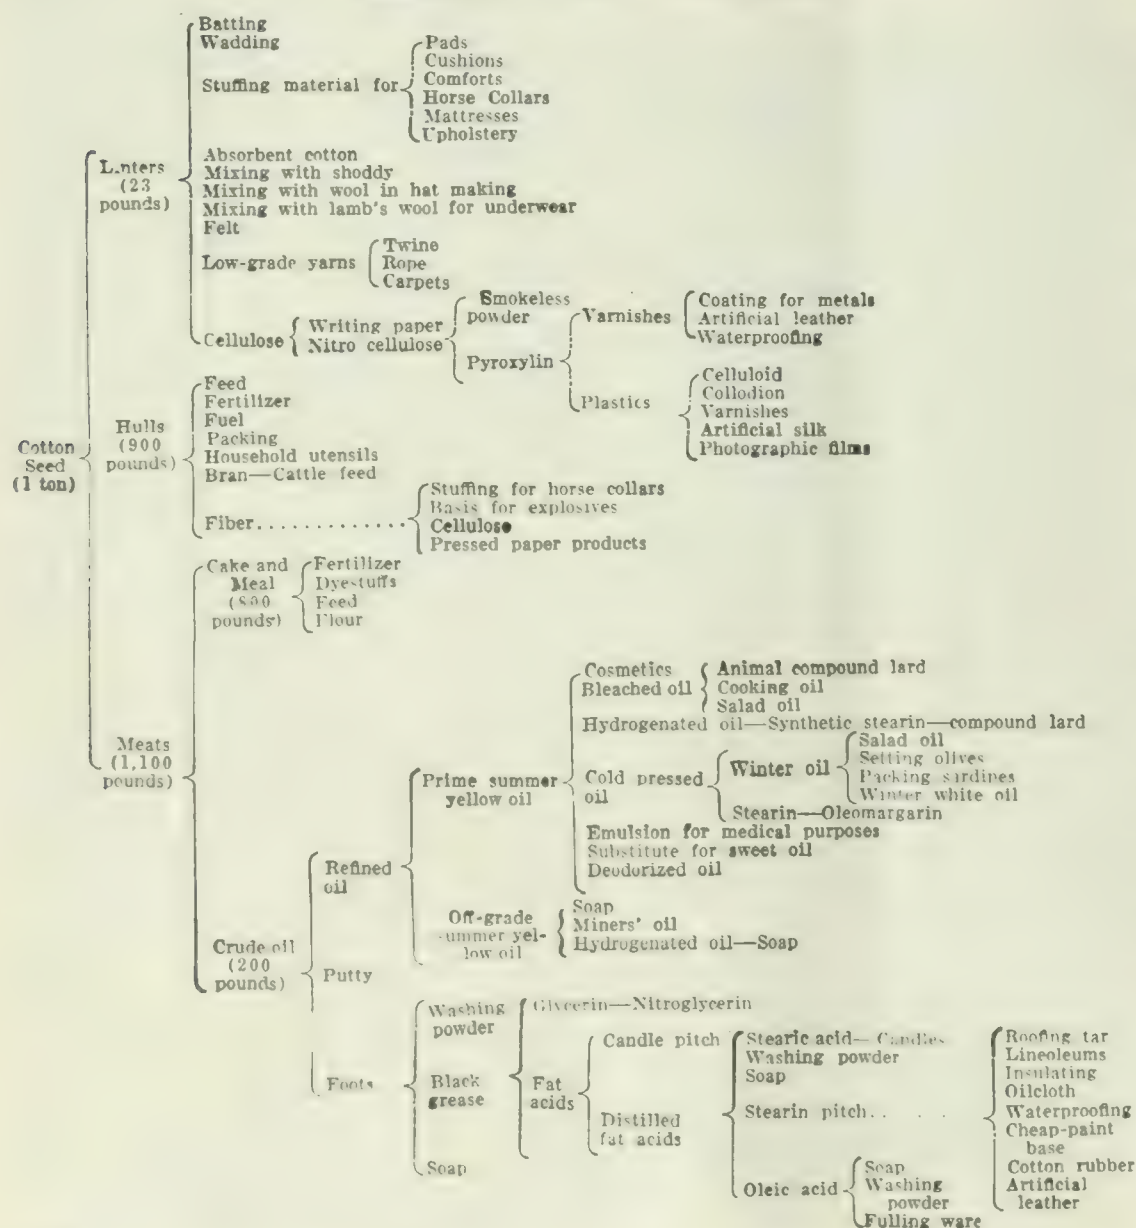

But modern commerce broke down the barrier between East and West. A new cotton country, the best in the world, was discovered in America. Cotton invaded England and after a hard fight, with fists as well as finance, wool was beaten in its chief stronghold. Cotton became King and the wool-sack in the House of Lords lost its symbolic significance.

Still two-thirds of the cotton crop, the seed, was wasted and it is only within the last fifty years that methods of using it have been developed.

The cotton crop of the United States for 1917 amounts to about 11,000,000 bales of 500 pounds each. When the war broke out and no cotton could be exported to Germany and little to England the South was in despair, for cotton went down to five or six cents a pound. The national Government, regardless of states rights, was called upon for aid and everybody was besought to "buy a bale." Those who responded to this patriotic appeal were well rewarded, for cotton rose as the war went on and is now selling at twenty-nine cents a pound.

But the chemist has added some \$150,000,000 a year to the value of the crop by discovering ways of utilizing the cottonseed that used to be thrown away or burned as fuel. The genealogical table of the progeny of the cottonseed herewith printed will give some idea of their variety. If you will examine a cottonseed you will see first that there is a fine fuzz of cotton fiber sticking to it. These linters can be removed by machinery and used for any

#### PRODUCTS AND USES OF COTTON SEED.

A disc huller which separates the cotton seed kernels from the thin, brown hulls

purpose where length of fiber is not essential. For instance, it may be nitrated as described in previous articles and used for making smokeless powder or celluloid.

On cutting open the seed you will observe that it consists of an oily, mealy kernel encased in a thin brown hull. The hulls, amounting to 700 or 900 pounds in a ton of seed, were formerly burned. Now, however, they bring from \$4 to \$10 a ton because they can be ground up into cattle-feed or paper stock or used as fertilizer.

The kernel of the cottonseed on being prest yields a yellow oil and leaves a mealy cake. This last, mixt with the hulls, makes a good fodder for fattening cattle. Also, as Hoover tells us, adding twenty-five per cent of the refined cottonseed meal to our war bread makes it more nutritious and no less palatable. Cottonseed meal contains about forty per cent of protein and is therefore a highly concentrated and very valuable feeding stuff. Before the war we were exporting nearly half a million tons of cottonseed meal to Europe, chiefly to Germany and Denmark, where it is used for dairy cows. The British yeoman, his country's pride, has not yet been won over to the use of any such newfangled fodder and consequently the British manufacturer could not compete with his continental rivals in the seed crushing business, for he could not dispose of his meal-cake by-product as did they.

Let us now turn to the most valuable of the cottonseed products, the oil. The seed contains about twenty per cent of oil, most of which can be squeezed out of the hot seeds by hydraulic pressure. It comes out as a red liquid of a disagreeable odor. This is decolorized, deodorized and otherwise purified in various ways: by treatment with alkalis or acids, by blowing air and steam thru it, by shaking up with fuller's earth, by settling and filtering. The refined product is a yellow oil, suitable for table use. Formerly, on account of the popular prejudice against any novel food products, it used to masquerade as olive oil. Now, however, it boldly competes with its ancient rival in the lands of the olive tree and America ships some 700,000 barrels of cottonseed oil a year to the Mediterranean. The Turkish Government tried to check the spread of cottonseed oil by calling it an adulterant and prohibiting its mixture with olive oil. The result was that the sale of Turkish olive oil fell off be-

cause people found its flavor too strong when undiluted. Italy imports cottonseed oil and exports her olive oil. Denmark imports cottonseed meal and margarine and exports her butter.

Northern nations are accustomed to hard fats and do not take to oils for cooking or table use as do the southerners. Butter and lard are preferred to olive oil and ghee. But this does not rule out cottonseed. It can be combined with the hard fats of animal or vegetable origin in margarine or it may itself be hardened by hydrogen.

To understand this interesting reaction which is profoundly affecting international relations it will be necessary to dip into the chemistry of the subject. Here are the symbols of the chief ingredients of the fats and oils. Please look at them.

Linoleic acid .....  $C_{18}H_{32}O_2$

Oleic acid .....  $C_{18}H_{34}O_2$

Stearic acid .....  $C_{18}H_{36}O_2$

Don't skip these because you have not studied chemistry. That's why I am giving them to you. If you had studied chemistry you would know them without my telling. Just look at them and you will discover the secret. You will see that all three are composed of the same elements, carbon, hydrogen and oxygen. Notice next the number of atoms of each element as indicated by the little low figures on the right of each letter. You observe that all three contain the same number of atoms of carbon and oxygen but differ in the amount of hydrogen. This trifling difference in composition makes a great difference in behavior. The less the hydrogen the lower the melting point. Or to say the same thing in other words, fatty substances low in hydrogen are apt to be liquids and those with a full complement of hydrogen atoms are apt to be solids at the ordinary temperature of the air. It is common to call the former "oils" and the latter "fats," but that implies too great a dissimilarity, for the distinction depends on whether we are living in the tropics or the arctic. It is better, therefore, to lump them all together and call them "soft fats" and "hard fats," respectively.

Fats of the third order, the stearic

group, are called "saturated" because they have taken up all the hydrogen they can hold. Fats of the other two groups are called "unsaturated." The first, which have the least hydrogen, are the most eager for more. If hydrogen is not handy they will take up other things, for instance oxygen. Linseed oil, which consists largely, as the name implies, of linoleic acid, will absorb oxygen on exposure to the air and become hard. That is why it is used in painting. Such oils are called "drying oils," altho the hardening process is not really drying, since they contain no water, but oxidation. The "semi-drying oils," those that will harden somewhat on exposure to the air, include the oils of cottonseed, corn, sesame, soy bean and castor bean. Olive oil and peanut oil are "non-drying" and contain oleic compounds (olein). The hard fats, such as stearin, palmitin and margarin, are mostly of animal origin, tallow and lard, the coconut and palm oil contain a large proportion of such saturated compounds.

Tho the chemist talks of the fatty "acids," nobody else would call them so because they are not sour. But they do behave like the acids in forming salts with bases. The alkali salts of the fatty acids are known to us as soaps. In the natural fats they exist not as free acids but as salts of an organic base, glycerin, as I explained in a previous article. The natural fats and oils consist of complex mixtures of the glycerin compounds of these acids (known as olein, stearin, etc.), as well as various others of a similar sort. If you will set a bottle of salad oil in the ice-box you will see it separate into two parts. The white, crystalline solid that separates out is largely stearin. The part that remains liquid is largely olein. You might separate them by filtering it cold and if then you tried to sell the two products you would find that the hard fat would bring a higher price than the oil, either for food or soap. If you tried to keep them you would find that the hard fat kept neutral and "sweet" longer than the other. You may remember that the perfumes (as well as their odorous opposites) were mostly unsaturated compounds. So we [Continued on page 80]

In the foreground are the big hydraulic cottonseed presses which squeeze the oil out of the hot seeds: at the right the machines that form the cakes and cook them

# THE NEW BOOKS

## The Greatest Revolution

OF no historic event of equal importance have we as yet so imperfect a comprehension as of the revolution which within the space of a few days transformed the most absolute autocracy in the world into the most radical republic. Thousands of books will be written about it but very few have so far appeared. *The Rebirth of Russia*, by Isaac F. Marcossou, is an interesting book in itself but its value is much enhanced by the fact that there are few other sources, barring the confused day to day reports of the public press, where one can read the same thrilling story. There will be more complete and adequate accounts of the revolution when time has permitted the sifting of facts and documents, but this pioneer work is like the Russian revolution itself, vivid, tumultuous, rapid, impressionistic. The most valuable parts of the book are the brief biographical sketches and pen pictures of the revolutionary leaders, many of whom the author has himself seen and interviewed during his present trip to Russia. The men of the provisional government have a threefold interest to every reader. They are the men of whom we are daily hearing in the news and whose decisions will certainly determine the destinies of one-sixth of the habitable globe and perhaps the fate of all mankind. They are also men of proved and outstanding ability. And, finally, the past careers of many of them are so varied and adventurous that they seem to belong rather to romance than to history.

*The Rebirth of Russia*, by Isaac F. Marcossou. John Lane Company, New York. \$1.25.

## Japan, Germany and America

TO me a book is not a book until I have read it a second time. After that I am willing to give it room on my shelves. And thus I come to rejoice with you on having read and reread *Japan Day by Day*, by America's nestor in science, arts and letters, E. S. Morse, of Salem and Boston. Professor Morse is in the class with John Burroughs, President Elliott and W. D. Howells. Thank God for even a few such Americans—they are the torch bearers who by their age, their industry, their unselfishness, their moral courage and the graces of a facile pen pass on to the next generation the light which led our fathers and gave us what we have today.

Morse's book is made up of the daily notes jotted down in a jinrikisha, aboard a rocking sampan, in the bustling crowd of Tokyo or in a lonely tea house of Hakodate or Kabutoyama. He notes every momentary impression of a scientist keen on the scent of archeological remains or biological data yet equally sensitive to the prattle of a happy child or the manipulation of chopsticks. These precious two volumes have the charm of Dr. Johnson's "Trip to the Hebrides" or Marco Polo's account of life at the court of Kublai Khan. Thousands may go over the same ground, but only genius can penetrate the cause of things. Every globe trotter tells us of tea houses and Geishas, pigtailed pagodas. Morse gives us 777 sketches made by himself to illustrate the shape of a dipper, the lid to a stew pan, the manner of doing a lady's hair, the transplanting of a pine tree, the disposal of sewage, the making of pottery, the type setting in a news-

paper office—indeed, were every other book on Japan lost Morse's two volumes would bring the Empire of Dai Nippon back to life as a civilization full of charm to the artist and profound instruction to an American statesman.

Let us not blink the obstinate fact that today the average American who goes to the polls and therefor elects Congressmen and consequently determines peace or war—that this very average fellow citizen somewhat cherishes the notion that not only all Chinamen are honest but that all Japanese are the reverse. And a further discovery I have made is that the average of my neighbors regard Japan as a secret enemy—the one against whom we should make preparation.

It is, of course, our duty to be prepared against any possible attack from any quarter, and human experience teaches that we must expect resentment where we have done injustice. We have deeply offended a proud people by publicly branding them as inferior, not merely to those of our own race, but to the colored voter of African descent.

Japan is dear to me from four visits (between 1876 and 1910). Like Professor Morse I have been amazed by the domestic and civic virtues of the Mikado's people, and like him profoundly grieved, if not perplexed, by the widespread and very common notion regarding Japanese honesty. Nothing in Morse's or my experience justifies such a belief—on the contrary if there is a land of transparently hospitable and confiding folk it is that land where houses are of paper and bamboo; where doors have no locks and great armies are moved, rationed and returned without the faintest suspicion of political speculation. If we must send missionaries let us hire them in Kobe and Yokohama to teach honesty in Moscow and Odessa. I had almost said San Francisco and New York.

It is our persistent menace, as a "Government by the People" that this nation should be at the mercy of emotional waves whose destructive power is enormous—and yet this power can be generated by secret enemies in our midst, backed by money and organization from alien sources. The great German propaganda is more than twenty years old and was part of a general scheme to prepare the United States for the war in which we are now engaged. Not only the Imperial staff of the German army acted as a central bureau of information on all things American; but the schools, the universities and societies for the propagation of Deutschthum and Deutsche Kultur were steered by military officials to prepare the American mind for a beneficent German Empire in which a Germanized America would be one of many provinces bowing down to a Germanized Augustus Caesar. Every American school, university or scientific institution was feeling the spell of this propaganda without knowing its source. American colleges were commencing to feel that there was little worth learning in France or England—that the goal of academic ambition was a Berlin or Leipzig Ph.D. degree. The arrogance of Prussian professors at our seats of learning was mistaken by us for the assertiveness of great masters and we little dreamed that these poisonous Pundits thought more of a

Fourth Class Red Eagle Ribbon in Berlin than the good will of their colleagues of Harvard or Ann Arbor. And then the exchange professors, and the visit of Prince Henry, and the Germanic museum for Harvard, and the Statue of Frederic for Washington and the persistent and nauseating celebration where glasses were raised to the "traditional friendship" of our two countries—and all this whilst the great general staff of Berlin was feverishly at work preparing plans for an invasion of America on the Belgian-Rumanian plan.

Japan is our enemy only in so far as we force her to declare war in defense of her national honor. She is our friend by every reason else. Germany declared war for the same reasons that Catiline prepared to plunder Rome—the booty was ample and the raiders were confident of victory. Japan is densely populated and poor—she is moreover patriotic and courageous. She is our equal—if not our superior—in many ways, and should she act the part of a Hun or a Hohenzollern she could make of this country another Belgium. But Japan is wise and has an Empire at her gates, large as the United States and full of undeveloped resources. China can occupy the Mikado for a century to come and Uncle Sam need fear no Japanese bombardment if he but treat the people of that island empire with half the courtesy he has wasted upon the double faced diplomats from Potsdam.

But in any case read the rich pages of E. S. Morse. His wisdom will enrich your minds, his cheerful wit will delight your leisure and his political foresight will stimulate your love of country.

## With Our Soldiers in France

SHERWOOD EDDY has been at the front in France so recently that his survey of the situation of our army has the freshness of a personal letter. He says he went to France "to work, not to write"—but the book is well worth his writing and America's reading:

These men are fighting for a new world. Not only German militarism, and Russian autocracy, and Turkish cruelty must be done away; but American materialism . . . organized selfishness must be purged in the fiery furnace of this war.

Mr. Eddy was at the front, under fire, among Pershing's men, in the hospitals, and has lectured to thousands of young men in Y. M. C. A. meetings. We can read between the lines the story he does not tell us of the help and inspiration his presence carried to his hearers. The needs of our soldiers abroad, and the ways in which the association is preparing to meet them, are given with the vividness of actual contact. *With Our Soldiers in France* preaches a manly religion fit for heroes and for the country that sends her sons over seas to fight for her ideals. The Young Men's Christian Association is helping the boys in their hardest fight against temptation and disheartenment. Mr. Eddy's book is a call to America to stand ready with reserves of helpers and money and sympathy to strengthen the hearts of our defenders.

*With Our Soldiers in France*, by Sherwood Eddy. Association Press. \$1.

## FILLING THE COAL BIN

(Continued from page 63)

under threats of strikes. The operators yielded gracefully when the Government intervened. That the miners did quite as much is open to question. Strikes and threats of strikes continued thruout the summer and fall. Even after Mr. Garfield had effected a reasonable wage agreement the union officials of the three southwestern districts refused to accept an automatic penalty to prevent strikes and the strikes continued. November 14 fifty-five mines in Kansas alone were reported idle, with 8000 men on strike, causing a reduction in output of 30,000 tons a day. A convention was held in Kansas City and the action of Mr. Garfield was denounced, but so small was the majority that the resolution was rescinded next day and a committee was appointed to confer with the coal administrator. Finally an agreement was reached and the mines were reopened. In December the Secretary of Labor was able to report all quiet in the industrial world, the best ever. But the nation was shivering with cold. What assurance has it that it will not have to shiver again next year, or at least as soon as the war is over and we return to pre-war conditions?

Is democracy safe when a few hundred operators—400 are said to have attended that Washington conference—have unrestricted power to fix the prices of coal and so levy tribute on 100,000,000 people, as they did before the war and will after it is over—that, too, out of wealth which formerly belonged to the public, or when a few thousand miners can shut off the supply by striking? It is true that some of this power has been limited since the war began, but it is only a war measure. How far are we going to return to the old conditions after the war? In a case growing out of the troubles in Colorado the supreme court of that state declared that "the election machinery had been turned over to the absolute domination and imperial control" of the operators; that the situation was "so repugnant to the spirit of free government as to be inconceivable" and the "result would be the destruction of popular government." A good many other suits, civil and criminal, are now pending.

In these bitter struggles the miners have generally managed to hold the greater share of public sympathy and they generally deserve it; but, after all, it really matters little to the public, so far as they are concerned, which side wins out in such contests. If the operators win, they will simply be more completely masters of the situation and can either close down their mines or exact their own prices and determine how much shall go to the miners. If the miners win, they will be able to become partners with the operators and force a more equitable division of the spoil. In either case the public, who pay the fiddler, will not be consulted. Perhaps when we get into another great crisis the operators may, as an act of "patriotic generosity," voluntarily reduce the tribute another \$180,000,000—after the Government gets hold of them.

What is the solution of the difficulty?

Several years ago an agitation was started against the sale of coal lands. A bill was finally put thru Congress providing that the mines in Alaska should be operated under lease, the Government retaining certain control over the price and the conditions of labor. Even if this law covered all our other lands, it would be a mere drop in the bucket, for the greater part of the best lands is already in private hands.

## Other Dishes are Forgotten

### When These Grain Bubbles Come

There are plenty of delightful grain foods. But a dish of Puffed Wheat obliterates the rest.

These airy grains, puffed to eight times normal size, look the superlative dish. And every taste confirms it. A boy only wonders how long they will last.

### 100 MILLION EXPLOSIONS

And Puffed Grains are what they seem—three of the greatest foods in existence. The Wheat and Rice are whole grains. And within each grain our process creates a hundred million steam explosions.

So every food cell is blasted. Digestion can instantly act. Every atom of the whole grain feeds.

All this is done by Prof. Anderson's process—by shooting the grains from guns. One result is a fairy-like food, almost as flimsy as snowflakes. Another is a nut-like flavor, due to the fearful heat.

But the great result is easy, complete digestion of every element we need.

**Puffed Wheat**      **Puffed Rice**  
and Corn Puffs  
Each 15c Except in Far West

No one today needs urging to use Puffed Wheat and Rice. But few folks get all their possible delights.

Don't merely serve like other cereals. Mix them with your fruits. Float them in your bowls of milk, use them in your soups.

Use in candy making and as garnish for ice cream. Salt or douse with melted butter for after-school confections. Few children get enough whole-grain food. Keep them supplied in these ways.

## FLORIDA TRIPS

**T**O the Sunny Southland, where cold weather vanishes and a balmy climate adds to the gayety and pleasure of winter resorts at Jacksonville, St. Augustine, Miami, Palm Beach, Key West, Tampa and St. Petersburg.

Clyde-Mallory steamers offer an ideal route to southern resorts in Florida, the Carolinas or Texas and attractive circle tours are arranged at moderate rates

**12 Day Tour — \$65.40**—New York to Key West, the "American Gibraltar", thence by the famous "Over-Sea Railway" to Miami, returning through Florida East Coast resorts to Jacksonville, and Clyde Line steamer to New York, with delightful stop-over in historic Charleston, S. C., en route.

**5 Day Tour—\$51.05**—New York to Jacksonville, and return, going via Clyde Line and returning all rail with optional routes including liberal stop-over privileges at leading Southern resorts.

Other tours to Cuba, Porto Rico, Santo Domingo, etc. Write for literature and full information.

ON THE BEACH

Private ownership is an established fact. The darkening of white ways, closing unnecessary industries, and going to bed early are only palliatives. They take us nowhere toward a solution.

In October about one thousand operators met in Pittsburgh and there this solution was offered: The elimination of the labor agitator, the prohibition of the sale of whiskey within five miles of a mine, and conscription of labor. Price fixing by the Government had already been accepted.

Some of these propositions are to be taken seriously, but carried out in a way different from that in the minds of the operators. They were thinking only of war time conditions. As these conditions are not much worse than those which prevail in times of peace, it behooves the American people to consider a permanent policy of a comprehensive character.

The coal mines are as vital to the life of the nations as are the railways and we cannot leave them any longer in the undisputed control of the operators or the miners, or of the operators and miners, should they ever agree. The time has come to declare them public utilities and put them in the hands of a commission with powers more sweeping than those now given the Interstate Commerce Commission. The policy of leasing public coal lands should be continued and extended or the public mines should be operated directly by the Government. The Interstate Commerce Commission virtually has power to fix freight rates, that is, determine the price of the products of the railways. The coal commission should have the power to fix the price of coal and the wages of miners. It might, in times of stress, see that the "marginal" mines are kept running. To take over only the power of price fixing, as was done in the powers conferred upon Mr. Garfield, is unfair to the operators and unsatisfactory to the public. It is unfair to the operators because it leaves them with an uncertain margin of profit, for after the price has been fixed, the miners may demand an increase of wages. Then the operators will have to run to the commission for an increase of price or close down, just as the railway managers now run to their commission or go into bankruptcy. Indeed, they have already commenced running to Mr. Garfield for higher prices. It is unfair to the miners because it leaves them in uncertainty. Yet, with miners making \$40 to \$75 a week, as they now do in Pennsylvania, after an advance of 22.5 per cent, the operators may reasonably ask if they are the only profiteers. It is unsatisfactory to the public because they have no protection against a shortage due to strikes and lockouts.

The law, then, should authorize the commission to fix the wages of miners. It might be well to provide that the miners must "enlist" for a term, just as men enlist for the army. They would then be protected against discharge except for cause; neither would they be allowed to quit at any time they please without good cause. In both cases the public, thru their chosen agents, would be the judge of the sufficiency of the cause.

Did some one raise the point of personal freedom? The above plan does not include conscription, as demanded by some of the operators. This step will hardly be necessary, even in time of war. Leaving this out, the freedom of the operators and miners both would still be greater than that of the public today, for their only freedom is to pay what the former demand or starve and freeze. In which condition is democracy the safer?

School of Religious Pedagogy

Dean, E. H. KNIGHT

Kennedy School of Missions

Secretary, E. W. CAPEN

Through these associated schools Hartford offers ample training, both scholarly and practical, for the Christian ministry; meets the present demand for trained lay workers in church, Sunday-school and social service; and gives special missionary preparation for the foreign field. Each of these schools has its independent faculty and its own institutional life, but together they form one interdenominational institution with the unity of a common aim and spirit.

Food Will Win the War  
Lessons in America's Part in the  
World's Food Problem, Prepared  
By the United States Food Ad-  
ministration for The Independent

Conservation Among the Allies

LAST week we saw how scientifically Germany went to work to solve her food problem, and how important it is for us to keep her enemies well supplied. This week we will see what the situation is among some of the Allies.

BELGIUM

You all know of the wonderful work of the Commission for Relief in Belgium, still headed by Mr. Hoover, now United States Food Administrator, which undertook to help that unhappy country. Today that commission is the only authorized agency by which food can be sent into the German occupied parts of Belgium. It issues a daily food ration as follows:

Bread	300 grams	690 calories
Rice, beans, peas	16 "	60 "
Bacon and lard	13 "	90 "
Herrings, coffee		50 " (average)
Soup	11 "	150 "
Sugar (native)	20 "	70 "
Butter	3 "	20 "
363 grams		1130 calories

This totals just about half the amount theoretically necessary to keep an idle man alive. Native foods are expensive and it is hard to buy what a family needs in addition to this Relief ration. For instance, many working men get only \$1 a day (5 francs). But meat costs \$1 a pound, eggs are 50 cents each, milk is 70 cents a quart, and butter is about \$1.60 a pound. This makes it hopeless for large numbers of people. It is estimated that of 7,000,000 people as many as 2,000,000 are dependent entirely on the commission's ration. The Belgians show the effect of undernourishment. The death rate has gone up this autumn to more than five times the rate in midsummer.

ITALY

By royal decree on August 2, 1916, the Italian Government took steps for the reorganization of imports and distribution of foodstuffs. Public departments were organized to deal with food consumption.

Wheat, sugar, fat, meat: Italy is badly in need of these staples. The import of cereals has been cut off and to try to offset this the Government will not let rice, macaroni, milk products, oils, etc., leave the country. One-third of Italy's export trade consisted of such wares, and she suffers by not being able to trade in them. To help her cereal problem she is milling wheat flour so as to get the most out of it. Bread must be made with other cereal flour besides wheat, and it may not be sold until twenty-four hours after baking.

The Government is trying to limit each person to 1 pound, 1 ounce of sugar a month. There is also great scarcity of butter. Olive oil is used as a substitute.

In regard to meat the situation is most serious. As the imports of frozen meat have been reduced it has become necessary to kill more of the Italians' own herds. A fourth of the cattle supply has now been slaughtered. Large numbers of hogs have been killed. Some of these were killed to make sure that corn would not be used as feed for them. The sale of fresh meat is forbidden on two consecutive days a week.

Next week we shall discuss what Great Britain and France are doing for food conservation.

January  
Opportunities  
at McCutcheon's

DURING this entire month of January we shall offer as comprehensive a stock of Household Linens as has ever been shown at "The Linen Store." There is practically nothing wanting in this collection, and *this is the more remarkable* in view of the general shortage of Linens and the difficulties of transportation.

Within the next six months the prices of Linens will unquestionably be much higher than today; besides, *it will not be possible* to secure certain lines of goods at any price.

The scarcity of Linen goods is due to the shortage of raw material and the fact that a large portion of the available supply is commandeered for military purposes.

We shall, however, at the same time that we offer special prices on a wide assortment of goods, *maintain during January throughout our entire stock, the same prices which have prevailed during the past season.* No increase will be made until after January.

Many of these goods cannot be replaced to be sold except at 25 to 33 1/3 per cent. advance on our present prices.

We have no hesitation therefore in urging upon our patrons the advisability of supplying their present and future Linen wants now.

Send for new booklet, just issued, "January Opportunities at 'The Linen Store'."

## THE CHARLIE CHAPLINS OF POETRY

(Continued from page 64)

bite bite  
Apple  
bite bite  
Of that forbidden tree, whose mortal taste  
and so it would have wolfed on.

It is apparently more difficult to write the Loy-Moore-Arensberg variety, which can be produced by what might be called the Potluck, as opposed to the Thump Thump wolfian method. But this, too, can be grasped by the beginner in a few lessons. Why not a correspondence course in the popular art? To illustrate, a poet has offered first a sample of ungyved verse, "Things," clearly entitled to glitter in this galaxy:

A lot of Mexico  
Is not the moon.  
I think the missing dawn  
Has these unexpected kaisers  
Often.  
Else, after you know each link  
Of such gone treasures there  
As roses,  
The map of asparagus,  
And something,  
I would think myself will be  
The cosmos.

Isn't that a masterpiece! The recipe? Simplicity itself. We are told first to write some nice, intelligent verse, bringing in, if possible, a variety of subjects. Then, grasping the shears firmly in the right hand, snip-snip the words apart, shake together in a derby, jardiniere, or sister's knitting bag, draw out one by one, write in irregular lines, and the verse is freed! The first word always makes an apt title. If by accident the stanza is still intelligible, repeat the process, or reverse every two words. Here is the verse from which the foregoing was distilled—lacking, of course, the untamed urge of the unfettered form:

I often think the cosmos has  
A lot of things you would not know—  
Such unexpected treasures as  
Roses, the map of Mexico,  
Kaisers, asparagus, the dawn,  
Myself, the moon, the missing link,  
And after each of these is gone  
There will be something else, I think.

As a molder of intriguing rhythms, somewhat after the "Prison Weed" formula, Kreymsborg himself takes high rank. His "Berceuse Ariettes" are all quotable. One of these little cradle songs begins:

We have a one-room home.  
You have a two-room, three-room, four-room.  
We have a one-room home  
because a one-room home is all we have.

He, however, is still bound by bourgeois cause and effect. Arensberg lets his salmon-parasol vowels and glassware consonants do more unshackled service, as in "Ing"—  
Ing? Is it possible to mean ing?

Suppose  
for the termination in *g*  
a disoriented  
series  
of the simple fractures  
in sleep  
Soporific  
has accordingly a value for soap  
so present to  
sew pieces  
and *p* says: Peace is.

Max Nordau called the use of illogical assonance "echolalia." It is one of the gentlest of the aberrations of pensive paranoiac poets.

Every indication is that the world has long possess a store of such poetry. But the discovery of a publisher to present the bedlam bards was a slower process.

Still, the Charlie Chaplins of rhythm should not be discouraged, in a world too filled with unhumorous things. They are always amusing; and sometimes poetry creeps into the pages unawares. May there long be others—and still "Others!"

## HURLEY, THE "PNEUMATIC"

(Continued from page 69)

trained constructors responsible to Washington, not to Navy Yard commanders, who are likely to be retired men of the line, not technical men, something of his notion of duty. He told them evenly, so that his hearers caught the step-by-step spirit of the man in his cold staccato, that records are on file to show the relative ability of men at Annapolis, records are on file to show their ability after graduation, and "those applicants who see me in relation to this assignment are informed that they are entering upon a more or less arduous career with prospect of very little thanks, plenty of criticism, plenty of hard work; and if under those conditions they proceed, their applications will be given consideration in due time."

How different from him—and from General Goethals and Mr. Denman—is Hurley.

"It's a big job, isn't it?" I suggested to him one day.

"Big job!" he laughed.

And it is a big job! There never was such a job! There never was such a monopoly as the United States Shipping Board—unless it be the United States Railroads—never an organization that went at a task like this. For the building one ship is in itself a thing phenomenal even to men who have built many of them, Hurley is, along with a score of other functions, building 996 of them! And, of course, he was not a ship man to begin with. Organizing and operating a shipyard is of course a sterner job even than organizing a ship and Hurley has 132 such yards going full tilt—and 74 of these were not in existence at all before January 1 of the year just past—with nearly four million tons of shipping growing pneumatically! And this, too, in spite of the necessity of giving precedence to navy construction that was the equivalent of two and a half million tons of merchant marine; this too at a time when labor and material are scarce beyond all words—material because of unprecedented industrial expansion and scarcity of labor; scarcity of labor because of expansion, the draft and an international exhaustion, when a Plattsburg for ship builders has had to be established and a thousand other problems had to be taken in hand and solved, if the work was to go on well at all.

"And if—?" I began.

"If!" he mused, and "if" went thru the window.

"Well, when you succeed—?"

He laughed. "I am going back to Wheaton, Illinois, to my farm and raise chickens and a beard!" he said. He caught out the handkerchief that lies loose in his side coat pocket, whisked it past his nose, smiled, with his hands deep in his pockets again was about to resume when, having ventured another "if" I suddenly found his pneumatic fist throbbing on the corner of the desk, rivetting this thought home: "Why, of course we're going to get these ships built!"

Then: "Why, with no mortgages coming due, no dividends to pay, no payroll to bother about, no bank balances to watch, two billion dollars to draw on and a hundred million Americans wishing us God speed, if we don't build these ships—"

"—if you don't build these ships—?"

He straightened up: "It will be because of inefficiency!"

It was characteristic of him to come to his difficulties last.

Some of his difficulties have been suggested here. But only a few of thousands—

## We Must "Follow-Up"

The story of the Gallipoli withdrawal is a tale of inadequate support. Like Salamanders clinging to the red-hot bars of a fiery furnace, the boys of Australia and New Zealand clung to the slopes of Anzac. Desperately, heroically they clung. No troops under any circumstances ever displayed greater soldierly qualities or upheld more sacredly the best traditions of England's Army. But they had to withdraw because the "follow-up" was not there.

To some of us it has been given to march with the columns of troops that go to France. And to others it is given to wave Godspeed. But he who marches and he who stays is

equally a citizen of the world's mightiest republic and equally responsible for its success in this greatest of undertakings.

Then let us at home turn from our flag waving and consider how necessary we are, how useful we must be. Those who go to fight cannot hope to win by naked bravery and we cannot hope to win unless every individual at home does *all* he can. We must have no Gallipoli.

The Bell System is only one of the myriad great and small industries which are co-operating that nothing be left undone to keep a constant, efficient stream of men, guns, ammunition, food, clothing and comforts flowing to the front.

and actually there are hundreds of thousands these days when every working-man is a problem in himself.

The labor difficulty—the business of getting men at all, and of getting trained men—is a major difficulty. I asked Mr. Hurley about that. "Do you remember," he mused, when the British Minister of Marine was asked about his hopes he said, 'With trouble or without trouble?'"

He smiled, said "trouble" meant labor, then added that, thanks largely to the work and influence of Mr. Gompers, labor generally is cooperating well, tho the great bulk of it is untrained for the task in hand.

He spoke of the difficulty in getting labor to leave labor centers and take up homes near isolated shipyards; of the difficulties in housing tens of thousands of men, of the difficulties in getting material when and where wanted, of a score of other difficulties that any business man who has had charge of, or worked with an organization new or old one-thousandth as large as this. But this army of difficulties does not dismay him. One may imagine him swinging on them as he swings on a golf ball, or taking hold of them with all the resourcefulness of a man who began by being the son of Irish immigrants, whose father was a machinist. He *was* to be a machinist. That is why, taken from school at fifteen, he had ample time to dream over his tools, to go into the car shops in Galesburg, Illinois, to become a fireman, then an engineer, then to quit that job for good and set out traveling—as a salesman selling packing for pistons and valves, on which job he got the idea of rivetting bolts when they were red hot, which resulted in his making pneumatic rivetters. He developed that idea, and finally set to manufacturing, in a barn at first, starting humbly, later selling his interest in the company he had formed for more than a million dollars. In the Middle West he was head of the Illinois Manufacturers' Association, later a member of the Federal Trade Commission, busy ascertaining the costs of many articles the Government is intent now upon fixing prices for. Then the demands on him as director of various corporations and capitalist became so great he went back to private business—for a few weeks! Then President Wilson drafted him to work with the Red Cross War Relief Board. Then he was drafted to the difficult duties of the new Export Board, and then to the Shipping Board.

It may be judged from all this that he knows the world of business, and knows ingenuities and resourcefulness and knows the value of an open mind and the joy of handling a throttle—or a wheel!

There never was a man with greater knack of infusing spirit into things and men. There never was a man, it seems, who could get more "go" into a going concern. Washington, D. C.

### PRESS CENSORSHIP IN AMERICA

An Eastern port, September 26. Troops from an English transport were landed here today. They were officially received by Mayor Mitchel and other prominent citizens.

A Western port, September 3. The members of the Imperial Japanese Mission arrived here today. The party was provided with an escort from a United States cruiser in the harbor. Troops from the Presidio saluted them at the ferry building.

An inland city, October 1. Ten thousand naval reserves arrived here during the week. They will be sent to training stations on inland bodies of water near here. The naval reserve was well represented in yesterday's patriotic parade on Michigan Boulevard.—*The Harvard Lampoon.*

## Pebbles

We wonder if the Germans when they captured Dago Island from the Russians expected to find it garrisoned by an Italian army?

"Caesar, my liege, thou art ill. Hast thou partaken of Cassius' pickled persimmons?"

"Et tu, Brute."—*Pennsylvania Punch Bowl.*

Recruiting Orator— and what motives are taking these brave young men to the front?

Voice from Rear—Locomotives!—*Cornell Widow.*

'19—What is the meaning of "camouflage?"

'21 (ignorant as usual)—A certain kind of food which has a peculiar composition and odor—

'19—You're thinking of Camembert.—*Lehigh Burr.*

A negro was recently brought into a Virginia court on a charge of larceny. After hearing the evidence the judge pondered for a moment before passing sentence and said:

"Rastus, you are fined \$10."

Whereupon the negro replied: "Boss, dat's a small skimpion. Ah got dat \$10 right down in mah left-hand vest pocket."

"Well," continued the judge, "just dig down in your right-hand vest pocket and see if you can find thirty days."—*Everybody's.*

### ENGLISH IDIOMS FOR GERMAN SCHOOLBOYS

Where is the torpedo of my grandfather?

The Iron Cross of my uncle is in the beer-garden.

For what is a treaty but to be broken?

Is not the Kultur of my Kaiser to be marveled at?

Where is the slap-stick of my Crown Prince?

The nerve of the Briton is something colossal.

For why does the Zeppelin of my field-marshal not return?

The helmet of my grand-nephew is in the music room.—*Passing Show.*

Parson Miles was a rather dry speaker, but occasionally he proved that he had a ready wit.

One evening he was addressing his congregation on the beauty of leading an up-right life, when he suddenly paused, glanced around the church, and beckoned to the sexton.

"Brown," said he, in a clear, distinct tone of voice, as the sexton approached the pulpit, "open a couple of windows on each side of the church, please."

"Beg your pardon, sir!" exclaimed the sexton, with a look of great surprise. "Did I understand you to say 'Open the windows'? It is a very bitter cold night, sir."

"Yes, I am well aware of that, Brown," was the cold, hard reply of the minister, as he gazed around the church, "but it is not healthy to sleep with the windows shut!"

Representative Cooper, of Wisconsin, was talking about Prussian militarism. "Prussian militarism," he said, "prepared for this war since '71 as frankly and openly as—as—well, as the club."

"A lady, you know, rang up the club the other evening."

"Please call my husband to—," she began, but she was interrupted.

"Your husband ain't here, ma'am," said the attendant, blandly.

"My goodness gracious me!" the lady exclaimed, "You're mighty sure about it, aren't you? And I haven't told you my name yet, either. Look here, mister, how do you know my husband isn't at the club when I haven't told you my name?"

"The attendant answered more blandly than ever: 'Nobody's husband ain't never at the club, ma'am.'"—*Washington Star.*

## CREATIVE CHEMISTRY

(Continued from page 71)

find that it is the free and unsaturated fatty acids that cause butter and oil to become rank and rancid.

Obviously then, we could make money if we could turn soft, unsaturated fats like olein into hard, saturated fats like stearin. Referring to the symbols we see that all that is needed to effect the change is to get the former to unite with hydrogen. This requires a little coaxing. The coaxer is called a catalyst. A catalyst, as I have previously explained, is a substance that by its mere presence causes the union of two other substances that might otherwise remain separate. For that reason the catalyst is referred to as "a chemical parson." Finely divided metals have a strong catalytic action. Platinum sponge is excellent but too expensive. So in this case nickel is used. A nickel salt mixt with charcoal or pumice is reduced to the metallic state by heating in a current of hydrogen. Then it is dropt into the tank of oil and hydrogen gas is blown thru. The hydrogen may be obtained by splitting water into its two components, hydrogen and oxygen, by means of the electrical current, or by passing steam over spongy iron which takes out the oxygen. The stream of hydrogen blown thru the hot oil converts the linoleic acid to oleic and then the oleic into stearic. If you figured up the weights from the symbols given above you would find that it takes about one pound of hydrogen to convert a hundred pounds of olein to stearin and the cost is only about one cent a pound. The nickel is unchanged and is easily separated. A trace of nickel may remain in the product, but as it is very much less than the amount dissolved when food is cooked in nickel-plated vessels it cannot be regarded as harmful.

Even more unsaturated fats may be hydrogenated. Fish oil has hitherto been almost unusable because of its powerful and persistent odor. This is chiefly due to a fatty acid which properly bears the un-euphonious name of clupanodonic acid and has the composition of  $C_{18}H_{28}O_2$ . By comparing this with the symbol of the odorless stearic acid,  $C_{18}H_{36}O_2$ , you will see that all the rank fish oil lacks to make it respectable is eight hydrogen atoms. A Japanese chemist, Tsujimoto, has discovered how to add them and now the reformed fish oil under the names of "talgol" and "candelite" serves for lubricant and even enters higher circles as a soap or food.

This process of hardening fats by hydrogenation resulted from the experiments of a French chemist, Professor Sabatier of Toulouse, in the last years of the last century, but, as in many other cases, the Germans were the first to take it up and profit by it. Before the war the copra or coconut oil from the British Asiatic colonies of India, Ceylon and Malaya went to Germany at the rate of \$15,000,000 a year. The palm kernels grown in British West Africa were shipped, not to Liverpool, but to Hamburg, \$19,000,000 worth annually. Here the oil was prest out and used for margarin and the residual cake used for feeding cows produced butter or for feeding hogs produced lard. Half of the copra raised in the British possessions was sent to Germany and half of the oil from it was resold to the British margarin candle and soap makers at a handsome profit. The British chemists were not blind to this, but they could do nothing, first because the English politician was wedded to free trade, second, because the English farmer would not use oil cake for his stock. France was in a similar situation. Marseilles produced 15,-

500,000 gallons of oil from peanuts grown largely in the French African colonies—but shipped the oil-cake on to Hamburg. Meanwhile the Germans, in pursuit of their policy of attaining economic independence, were striving to develop their own tropical territory. The subjects of King George who because they had the misfortune to live in India were excluded from the British South African dominions or mistreated when they did come, were invited to come to German East Africa and set to raising peanuts in rivalry to French Senegal and British Coromandel. Before the war Germany got half of the Egyptian cottonseed and half of the Philippine copra. That is one of the reasons why German warships tried to check Dewey at Manila in 1898 and German troops tried to conquer Egypt in 1915.

But so far the tide of war has set the other way and the German plantations of palnuts and peanuts in Africa have come into British possession and now the British Government is starting an educational campaign to teach their farmers to feed oil cake like the Germans and their people to eat peanuts like the Americans.

The Germans shut off from the tropical fats supply have been hard up for food, for soap, for lubricants and for munitions. Every person is given a fat card that reduces his weekly allowance to the minimum. Millers are required to remove the germs from their cereals and deliver them to the war department. Children were set to gathering horse-chestnuts, elderberries, linden-balls, grape seeds, cherry stones and sunflower heads, for these contain from six to twenty per cent of oil. Even the blue-bottle fly—hitherto an idle creature for whom Beelzebub found mischief—has been conscripted into the national service and set to laying eggs by the billion on fish refuse. Within a few days there is a crop of larvæ which, to quote the *Chemische Zentralblatt*, yields forty-five grams per kilogram of a yellow oil. This product, we should hope, is used for axle-grease and nitroglycerin, altho properly purified it would be as nutritious as any other—to one who has no imagination. Driven to such straits Germany would give a good deal for one of those tropical islands that we are so careless about. It might have been supposed that since the United States possess the best land in the world for the production of cotton-seed, coconuts, peanuts and corn that it would have led all other countries in the utilization of vegetable oils for food. That this country has not so used its advantage is due to the fact that the new products have not merely had to overcome popular conservatism, ignorance and prejudice—hard things to fight in any case—but have been deliberately checked and hampered by the state and national governments in defense of vested interests. The farmer vote is a power that no politician likes to defy and the dairy business in every state was thoroly organized. In New York the oleomargarin industry that in 1879 was turning out products valued at more than \$5,000,000 a year was completely crushed out by state legislation.\* The output of the United States which in 1902 had risen to 126,000,000 pounds was cut down to 43,000,000 pounds in 1909 by federal legislation. According to the disingenuous custom of American lawmakers the Act of 1902 was past thru Congress as a "revenue measure" altho it meant a loss to the Government of more than three mil-

\*United States Abstract of Census of Manufactures, 1914, p. 34.

lion dollars a year over what might be produced by a straight two cents a pound tax. A wholesale dealer in oleomargarin was made to pay a higher license than a wholesale liquor dealer. The federal law put a tax of ten cents a pound on yellow oleomargarin and a quarter of a cent a pound on the uncolored. But people—doubtless from pure prejudice—prefer a yellow spread for their bread, so the economical housewife has to work over her oleomargarin with the annatto which is given to her when she buys a package or, if the law prohibits this, which she is permitted to steal from an open box on the grocer's counter. A plausible pretext for such legislation is afforded by the fact that the butter substitutes are so much like butter that they cannot be easily distinguished from it unless the use of annatto is permitted to butter and prohibited to its competitors. Fraudulent sales of substitutes of any kind ought to be prevented but the recent pure food legislation in America has shown that it is possible to secure truthful labelling without resorting to such drastic measures. In Europe the laws against substitution are very strict, but not devised to restrict the industry. Consequently the margarin output of Germany doubled in the five years preceding the war and the output of England tripled. In Denmark the consumption of margarin rose from 8.8 pounds per capita in 1890 to 32.6 pounds in 1912. Yet the butter business, Denmark's pride, was not injured, and Germany and England imported more butter than ever before. Now that the price of butter in America has gone over the half dollar mark Congress may conclude that it no longer needs to be protected against competition.

The "compound lards" or "lard compounds" consisting usually of cottonseed oil and oleo-stearin, altho the latter may now be replaced by hardened oil, met with the same popular prejudice and attempted legislative interference, but succeeded more easily in coming into common use under such trade names as "cotto-suet," "Kream Krisp," "cottolene" and "crisco."

Oleomargarin now generally abbreviated to margarin originated, like many other inventions, in military necessity. The French Government in 1869 offered a prize for a butter substitute for the army that should be cheaper and better than butter in that it did not spoil so easily. The prize was won by a French chemist, Mège-Mouries, who found that by chilling beef fat the solid stearin could be separated from an oil (oleo) which was the substantially same as that in milk and hence in butter. Neutral lard acts the same.

This discovery of how to separate the hard and soft fats was followed by improved methods for purifying them and later by the process for converting the soft into the hard fats by hydrogenation. The net result was to put into the hands of the chemist the ability to draw his materials at will from any land and from the vegetable and animal kingdoms and to combine them as he will to make new fat foods for every use; hard for summer, soft for winter; solid for the northerners and liquid for the southerners; white, yellow or any other color, and flavored to suit the taste. The Hindu can eat no fat from the sacred cow; the Mohammedan and the Jew can eat no fat from the abhorred pig; the vegetarian will touch neither; other people will take both. No matter, all can be accommodated.

All the fats and oils, tho they consist of scores of different compounds, have practically the same food value when freed from the extraneous matter that gives them their

# Do Germs and Climate Cause CATARRH, COUGHS AND COLDS?

By R. L. Alsaker, M.D.

Author of

"GETTING RID OF RHEUMATISM"—"CURING CONSTIPATION," Etc.

R. L. ALSAKER, M.D.

Dear Doctor Alsaker: I have had catarrh since boyhood, and now my two children have it. During the fall and winter months my wife suffers with bad colds and the children frequently have a bad cough or sore throat.

We have taken treatment from local physicians, using the medicines prescribed; we have used sprays and salves, but have derived no lasting benefit.

We live well, eating and drinking whatever we want, but we do not dissipate in any way. Our family physician tells us that catarrh is caused by germs. Another doctor told us to blame it on the climate. If germs and the climate are the cause of these annoying troubles of the nose, throat and lungs, I don't see how any of them can be prevented, or even cured. What have you to say on the subject? J. B. W.

**T**HIS family is no exception. The majority have catarrh, either chronic or acute. Catarrh of the head is annoying—and filthy. In the throat it causes irritating cough. When it is seated in the chest it is called bronchitis. If allowed to continue, the bronchitis becomes chronic and robs the individual of refreshing sleep, comfort and health. It weakens the lungs and paves the way for pneumonia and consumption.

Catarrh of the stomach and intestines points toward indigestion. So does catarrh of the liver, which produces various ills, such as jaundice and gall-stones, often ending in disagreeable and painful liver colic.

Catarrh sometimes causes earache, headache and other forms of pain, and it lays the foundation for many diseases.

This gentleman says that he lives well, but no one lives well who is ill. That is poor living. He can continue to eat what he likes, and grow healthy, if he will only learn how.

He thinks that germs and the climate are to blame, and as germs and climate are everywhere, we are helpless. It is a tragic fate, or would be, if it were true, for we can't escape the omnipresent germs and climate.

But neither germs nor the climate cause catarrh. Catarrh is due to improper eating—so are coughs and colds—and these conditions can be prevented and cured through right eating. And here is how it happens:

When people eat as they should *not*, they get indigestion, which fills the stomach and bowels with acid, gases and poisons; a part of these abnormal products are absorbed into the blood, which becomes very impure and the whole body gets acid. The blood tries to purify itself, and a lot of the waste attempts to escape by way of the mucous membrane. This causes irritation, and the result is colds and catarrhs.

The right kind of food, properly eaten, makes pure blood and produces health.

vigor and strength. The right kind of food builds a sound body, puts catarrh, coughs and colds to flight, and paints roses on the cheeks.

Catarrh can be conquered quickly, surely and permanently. It has been done in thousands of cases. *If you have catarrh you have eaten your way to it.* You can cure yourself—you can eat your way out of catarrh into health, and while you are losing your catarrh you will rid yourself of other physical ills: The dirty tongue, that tired feeling, the bad taste in the mouth in the morning, the gas in the stomach and bowels, the headache, and other aches, pains and disabilities will clear up and vanish.

*Catarrh is a luxury, not a necessity.*

Those who get it can keep it indefinitely. They should not complain, for there is knowledge at hand that will show them how to get rid of it and *stay rid of it.*

It is marvelous what the common foods do for the sick, when properly combined and intelligently eaten. Meat, fish, dairy products, eggs, cereal foods, potatoes, vegetables, fruits, and nuts contain all the "medicinal" elements needed to build health or cure disease, if rightly used.

Health, barring accidents, is within your control. It is your privilege to break the laws of Nature and be sick, or you may observe them and be well. Your duty to yourself and your country is clear, for the Nation needs healthy men and women in this crisis. Health, which is principally the effect of foods rightly used, will win.

In my new book *Curing Catarrh, Coughs and Colds* I have explained the true cause of these annoying troubles and have outlined a pleasant plan of living that cures these ills and prevents a return.

It costs nothing to put this splendid plan of living into practice. You don't have to buy medicines or special foods. You don't have to pay doctor bills or go to health resorts. Simply follow these common-sense instructions regarding the care of the body and the correct use of the *foods you like*. Don't take my word for the splendid results obtained, but prove it in your own case and in your own home.

**PUBLISHER'S ANNOUNCEMENT:** So much nonsense has been written about health and foods that it is a relief to find a book which shows that the writer knows his subject from the ground up—knows it so well that he does not need to use a lot of so-called scientific expressions and technical terms to hide any want of knowledge. Dr. Alsaker is a regular medical graduate, a physician in active practice who has proved his knowledge in guiding the sick back to health. In reviewing Dr. Alsaker's works *The New York Tribune* says: "Written by a competent professional authority, they are fitted for the instruction of the laity; being simple, direct and non-technical. They contain no scientific disquisitions; they exploit no fads; they recommend no impossibilities." Dr. Alsaker is a new type of physician. He specializes in health, not disease. In *Curing Catarrh, Coughs and Colds* he tells you in plain English how to get rid of *Catarrh* and how to avoid "catching" coughs and colds. This is a new and broad idea—to teach the sick how to return to health and how to remain healthy. He says: "Health is the result of correct knowledge of living put into practice and it is the physician's duty to supply this knowledge." Send only two dollars for this book of health knowledge, with ten cents additional (coin or stamps) to cover postage and packing—Follow instructions for one month, then if you are not entirely satisfied with the improvement in your health return the book and your money will be refunded. *Curing Catarrh, Coughs and Colds* teaches the truth and nothing but the truth. I will show you how to live better for less money and how to have better health through better living. Frank E. Morrison, Publisher, (Estab. 1889), Dept. 109, 1133 Broadway, New York City.

# To Bankers, Lawyers, Corporations:

The demand for accurate, unquestionable means of identification, *inimitable and unchangeable from infancy to death*, becomes more insistent every day.

Finger print records are superior to any and all methods utilizing signatures, passwords, test questions, photographs or physical outline charts. Finger print identification systems are the most positive and reliable known today.

Finger print records are almost indispensable in handling transactions with persons at a distance, those seen only at long intervals of time, foreigners, illiterates, children, and those who lack business training.

With finger print identification coming into general use, it remains only to choose the best system offered.

The Bauder Inkless System of Identification is more than *safe and certain*. It is *clean and quick*. It requires no change in ordinary record and filing equipment of corporation or bank and can be used wherever positive identification is desired.

Banks can use the Bauder System for identification to avoid payment to wrong persons and to protect depositors as well as themselves. It is used for savings accounts, on letters of credit, checks and certificates of deposit.

Lawyers can use the Bauder System, with and without signature, on trust deeds, contracts, leases, wills and other documents.

Corporations can use the Bauder System for pay roll signatures, letters of recommendation, and identification cards.

Life Insurance Companies can use the Bauder System for comparing finger prints on applications for insurance when applicants appear for medical examination. Finger print records of the beneficiaries are often requested by the insured.

You will find our booklet, "Finger Prints for Bankers," contains information of interest to all men of affairs. It is promptly sent to any address on request.

## Thirty-Day Trial Free

Write us today on your firm's stationery that you want to make a test of the Bauder System and we will send you an outfit, by prepaid express, to try at our expense for 30 days. After two hours of study with the instruction chart, you will find the directions for use so simple that you can make, read and compare any and all finger prints so satisfactorily that you can identify the finger prints of different persons without doubt, hesitancy or mistake. If, at the end of 30 days, you are not satisfied, send the outfit back to us, express collect. The price of the outfit is \$50.

**Bauder Identification Company,**  
Sole Owners of Basic Patents of Inkless Finger Print  
Methods and Processes

Dept. C 712 Astor Trust Bldg., New York, N. Y.

## DIVIDENDS

# American Telephone and Telegraph Company

A dividend of Two Dollars per share will be paid on Tuesday, January 15, 1918, to stockholders of record at the close of business on Monday, December 31, 1917.

G. D. MILNE, Treasurer.

# AMERICAN TELEPHONE AND TELEGRAPH COMPANY

## Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their terms on January 1, 1918, at the office of the Treasurer in New York, will be paid by the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$418.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

characteristic flavors. They are all practically tasteless and colorless. The various vegetable and animal oils and fats have about the same digestibility, 98 per cent,\* and are all ordinarily completely utilized in the body, supplying it with two and a quarter times as much energy as any other food.

It does not follow, however, that there is no difference in the products. The margarin men accuse butter of harboring tuberculosis germs from which their product, because it has been heated or is made from vegetable fats, is free. The butter men retort that margarin is lacking in vitamins, those mysterious substances which in minute amounts are necessary for life and especially for growth. Both the claim and the objection lose a large part of their force where the margarin, as is customarily the case, is mixt with butter or churned up with milk to give it the familiar flavor. But the difficulty can be easily overcome. The milk used for either butter or margarin should be free or freed from disease germs. If margarin is altogether substituted for butter, the necessary vitamins will be sufficiently provided by milk, eggs and greens.

Owing to these new processes all the fatty substances of all lands have been brought into competition with each other. In such a contest the vegetable is likely to beat the animal and the southern to win over the northern zones. In Europe before the war the proportion of the various ingredients used to make butter substitutes was as follows:

AVERAGE COMPOSITION OF EUROPEAN MARGARIN	
	Per Cent
Animal hard fats.....	25
Vegetable hard fats.....	35
Copra .....	29
Palm-kernel .....	6
Vegetable soft fats .....	26
Cottonseed .....	13
Peanut .....	6
Sesame .....	6
Soya-bean .....	1
Water, milk, salt .....	14
	100

This is not the composition of any particular brand but the average of them all. The use of a certain amount of the oil of the sesame seed is required by the laws of Germany and Denmark because it can be easily detected by a chemical color test and so serves to prevent the margarin containing it from being sold as butter. "Open sesame!" is the password to these markets. Remembering that margarin originally was made up entirely of animal fats, soft and hard, we can see from the above figures how rapidly they are being displaced by the vegetable fats. The cottonseed and peanut oils have replaced the original oleo oil and the tropical oils from the coconut (copra) and African palm are crowding out the animal hard fats. Since now we can harden at will any of the vegetable oils it is possible to get along altogether without animal fats. Such vegetable margarins were originally prepared for sale in India, but proved unexpectedly popular in Europe, and are now being introduced into America. They are sold under various trade names suggesting their origin, such as "palmira," "palmona," "cocose," "coconut oleomargarin" and "nucoa nut margarin." The last named is stated to be made of coconut oil (for the hard fat) and peanut oil (for the soft fat), churned up with a culture of pasteurized milk (to impart the butter flavor).

Peanut butter has won its way into the American menu without any camouflage

## Blondes or Brunets?

Blondes and Brunets possess certain characteristics, certain talents and weaknesses. If you understand these you will make more of your own abilities; you will read human character more intelligently and you will find your influence over others increased as well as your intercourse with people made easier. You should read "Blondes and Brunets"—a fascinating book by Dr. Katherine M. H. Blackford, recognized as one of the world's leading scientists in character analysis. It tells how the two types developed their place in history, their character, talents, and achievements; how they work, play, sin, grow ill, recover, love, hate, and fight; where they should live, what work they should do, what faults they should overcome. Brief, scientific, enthralling. Forty-eight pages, art-craft paper binding, 15c, cloth 25c. Send money or stamps. Postage will be prepaid.

Taylor Instrument Companies

ROCHESTER, N. Y.

There's a Tycos or Taylor Thermometer for Every Purpose

whatever, and as a salad oil it is almost equally frank about its lowly origin. This nut, which grows on a vine instead of a tree, and is dug from the ground like potatoes instead of being picked with a pole, goes by various names according to locality, peanuts, ground-nuts, monkey-nuts, arachides and goobers. As it takes the place of cotton oil in some of its products so it takes its place in the fields and oilmills of Texas left vacant by the bollweevil. The once despised peanut added some \$56,000,000 to the wealth of the South in 1916. The peanut is rich in the richest of foods, some 50 per cent of oil and 30 per cent of protein. The latter can be worked up into meat substitutes that will make the vegetarian cease to envy his omnivorous neighbor. And Hoover wants us to use one-quarter peanut meal in our war-bread. Thanks largely to the chemist who has opened these new fields of usefulness the peanut-raiser is getting \$1.25 a bushel this year instead of the 30 cents that he got four years ago.

I must not omit to mention, tho I have no time to discuss, the oil that is predestined from the germ of corn, now being advertised as "mazola."

So by means of these chemical discoveries waste products have been utilized, the world is better fed and the repertory of the kitchen has been enlarged.

#### QUESTIONS

Look up in the dictionary the derivation of such words as cotton, calico, muslin, hammock, and maize. What do you learn from this about the origin of these products?

What does it tell you of the history of the plant? Why do the Germans call cotton *Baumwolle*?

What was the effect of the invention of the spinning machine and cotton gin on the history of the world? What part did cotton play in the relations between England and America during the Civil War? Why are Germany and England now struggling for the mastery of Egypt and Turkey?

Why does the Lord Chancellor of England sit on a woolsack?

In what ways does the lack of internal cotton fields impair the power of Germany in the present war? In how far would coconut groves fill this lack?

Read what you can find on the cultivation and uses of cotton, peanuts, oil palm, sesame, soya bean and the manufacture of oleomargarin.

Sir John Maundeville in his "Voyages and Travels" says that he ate the vegetable lambs and he gives a picture of them growing on trees. Look up the passage and express your opinion of Maundeville.

#### READING REFERENCES

President Scherer's "Cotton as a World Power" (Stokes, 1916) is a fascinating volume that combines the history, science and politics of the plant and does not ignore the poetry and legend.

In the yearbook of the Department of Agriculture for 1916 will be found an interesting article by H. S. Bailey on "Some American Vegetable Oils" (sold separate for five cents). See also: Thompson's "Cottonseed Products and Their Competitors in Northern Europe" (Part I, Cake and Meal; Part II, Edible Oils, Department of Commerce, 10 cents each). # WHO HANDLES YOUR FOOD?

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

**B**EING an average human being, safely past the period of adolescence, you are reasonably careful about preserving such health as you have. You dress yourself against heat and cold and rain, maintain a proper standard of physical cleanliness; pursue the usual regimen governing diet, sleep, labor and amusement; avoid drafts and contagions and, in a general way, follow the usual course in trying to keep in good health. You are not one of those curious and amusing people who makes this the chief occupation in life, to be sure; in all things you are prudent and moderate. We all know, or think we do, since the discovery and general acceptance of the germ theory, that death lurks everywhere. It is in the air, the water, letters, kisses, old books: it comes to us in candy and other packed food products. It awaits us on the hand-rail of street cars, a balustrade in the City Library, the admission ticket to the theater. As a matter of fact, the destroyer is ubiquitous and we are not artful dodger enough to evade him. He bags us all at last.

We cannot be "finicky" about this matter. We may exercise but a reasonable degree of care in defending such health as we happen to possess (and none has all he needs), and then let it go at that.

There is one hazard we take which is little thought about by any except a few investigators and scientists with a passion for all that sort of thing. Did it ever occur to you that sound, wholesome health and clean bodies were indispensable in our cooks and waiters? It is not a pleasant thought: but imagine your meal prepared by a tuberculous cook or served by a waiter whose loose life has resulted in some repulsive ineradicable malady. The urban population of the United States are much given to eating in hotels and restaurants. It is essential, therefore, that the servitors in those places be and continue in sound physical condition. Until I read a pamphlet, "The Health of Food-Handlers," lately issued by the Metropolitan Life Insurance Company, I had never been so impressed with the importance of this subject. This report embodies the results of some investigations conducted jointly by the New York City Department of Health, the American Museum of Safety, and the statistical department of the Metropolitan Life.

In compliance with a new provision of the sanitary code, requiring food-handlers to obtain certificates showing freedom from infectious communicable diseases, physical examinations of all persons handling food-stuffs in hotels, restaurants and bakeries was begun in August, 1915, by the Division of Industrial Hygiene of the Department of Health. Other places have made a start in the same direction. Chicago, the State of Indiana, and the Panama Canal Zone have tentatively inaugurated the plan, and a number of communities—Rochester, Washington, D. C., and Boston have it under consideration. The American Specialty Manufacturers' Association is advocating the plan for nation-wide adoption.

The present effort is the first that has been made to gather the facts, subject them to statistical analysis and apply them to the promotion not only of community health but in the interests of the food-handlers themselves. It is clearly obvious

that the practice of making such examinations is a protection to the patrons of restaurants, hotels, bakeries and all other places which prepare food for consumption; and it is equally clear that the system will safeguard the workers in such places who are subjected to the stress and strain of their occupations.

The analyses which follow embrace 1980 cases recorded at the Clinic of the Division of Industrial Hygiene for which complete records of intensive physical examinations were available out of 42,042 made by the Department of Health and 33,000 by private physicians, coöperating, under the supervision of the Department, during the year ending May 1, 1916. The records were tabulated by the statistical department of the Metropolitan Life and published by that company.

Of the 1980 records thus analyzed, 1604, or 81 per cent, relate to restaurant and hotel employees; 316, or 16 per cent, to workers in bakeries and confectioneries, and 60, or 3 per cent, to various other food-handlers.

The statistician states that the age distribution of the persons thus employed has an important bearing on the detailed findings, and he reports that of those registered in this study, 1587, or 80.2 per cent, were found to be between 20 and 44 years old—the main working period of adult life—only 6.8 per cent being under 20 years and 12.7 per cent, 45 or over.

By sexes, it was found that 1590 were males and 390 females.

**I**N collecting the facts for this study, the following routine was observed:

"A careful history of past and present personal illness, of sickness in the family, and of special occupational influence, was required in each case. Each patient was stripped to the waist for careful inspection, and for physical examination of the heart and lungs. An abdominal examination was also made, and the footwear was removed so that observations on the presence of flat foot and varicose veins could be recorded. Under reflected light an examination of the mouth, pharynx and nasal cavities was made in each case. . . . Whenever the history or clinical evidence caused a suspicion . . . blood was drawn for the Wassermann test."

Wherever it was possible urinalyses were made, "and when tuberculosis was suspected the applicants were made to return once and usually twice for physical re-examination and to record temperature. Every effort was made to obtain a specimen of sputum, tho without avail in a number of instances. All cases in which tuberculosis was diagnosed were examined by three physicians."

"The Talquist hemoglobinometer and the use of the eye test chart were required in each case. The average time of each examination was about forty minutes, exclusive of the time required for laboratory tests."

"The examiners were required to note only such defects as indicated a disease tendency resulting from occupational influences. A multiplicity of minute details that were wholly irrelevant from this viewpoint, . . . were omitted from these records. Admissions of personal illness were registered as subjective observations on the cards, but no statistical study was made of these complaints. Only the physician's findings are represented in this investigation. . . . The terms reported were classified in accordance with the accepted rules of the Bellevue and Allied Hospitals manual."

The computation shows a total of 2842 defects and disease among the 1980 men and women examined, of which 1837 were among the males and 1005 among the females. No illness or defect was found in 511 males and 52 females, that is to say, 32.1 per cent of the males and 13.3 per cent of the females were classed as negative cases, thus concentrating all the diseases and defects in the study on 1079

males and 338 females. The number of defects per male and female, respectively, for those having defects was 1.7 and 3.0.

It is to be observed that the food-handlers who underwent these examinations for the purpose of obtaining certificates felt reasonably certain that they were free of evidences of communicable diseases. This self-selection undoubtedly had the effect of keeping down the percentages found. As it is, 0.66 per cent of all the workers examined disclosed evidences of active and arrested tuberculosis, 0.63 among the males and 0.77 among the females. Nineteen active and 32 suspected cases of syphilis were found, and 79 Wassermann tests were made. "If the active and suspected cases be grouped together," runs the report, the rates are increased to 25.8 for males and 25.6 for females." Other diseases of interest were: 110 cases of colds, coryza and rhinitis, 3 cases of acute bronchitis, 104 cases of emphysema, 208 cases of pyorrhea, 202 cases of pharyngitis, 10 cases of tonsillitis and 144 cases of tonsillar hypertrophy.

There were 695 cases among waiters and 390 among waitresses available for study. Five active cases of tuberculosis and one arrested case is the record for waiters, a rate of 0.9 per cent, and one active, two suspected and one related to organs other than the lungs, among waitresses, a rate of nearly 0.10.

Of 278 male cooks, 72 showed no defects. One active, one arrested and two suspected cases of tuberculosis were disclosed. Three cases of alcoholism were noted. Eleven and a half per cent of the male cooks were found to be afflicted with organic heart disease. Only 11.8 per cent of the female cooks were free of defects. "Anemia was the commonest defect, being found in 52 cases, or in nearly half of those examined. There were 44 cases of varicose veins; 10 cases of pyorrhea, 22 cases of defective teeth and mouth conditions and 23 cases of flat foot."

**F**ROM the viewpoint of public health, the statistician making the report, Dr. Dublin, states that the examination of food-handlers seems thoroly justified. The exclusion of ten cases of active tuberculosis, 19 cases of syphilis and 6 of gonorrhea, is of value because it lessens appreciably the danger of transmission of these diseases by affected individuals. "Aside from this," he continues, "there were 15 cases of arrested and suspected tuberculosis and 32 cases of suspected syphilis which were put upon probation, a health certificate good for a period of one or two months being given them so as to compel their periodic return to the clinic for re-inspection and instruction."

This subject is one of vital interest to the whole public, as it is, of course, to life insurance, and an active interest should be begun for the enactment of laws in every state placing food-handlers of every description under the jurisdiction and supervision of local boards of health. More important than any other branch of our food supply, the public authorities should exercise a rigorous overlordship of the people who from cow to customer are engaged in furnishing milk and other dairy products to congested populations. The fountain is poisoned at its source when contaminated milk is fed to babies.

# Saving the Money That Slipped Through Their Fingers

## How an Investment of \$2.00 Grew to \$7,000 in Seven Years Without Speculation

BY ARTHUR H. PATTERSON

**M**R. AND MRS. B. live in Connecticut. He is a clerk in the office of a manufacturing plant. They have been married ten years and for the first three years of their married life they not only failed to save but actually went in debt over \$400. They now have two children, own a comfortable cottage home which is appraised at \$3,500 and is clear and free. They have savings-bank accounts of \$1,800 and \$1,700 invested in 7% preferred securities. And every dollar of this money has been saved from salary during the past seven years, an average of \$1,000 per year.

I am going to tell you their story, or rather let Mr. B. tell it as he related it to me. If you are facing the crisis in your affairs which the B.'s faced in those early days of married life, it may help you to meet it and come off victorious.

Listen to what Mr. B. says:

I am now 37 years of age; married and the Daddy of two children. When I was married I had exactly \$750 on hand in cash, inherited from my father's estate. Up to that time I never saved a nickel and if this money hadn't come as a windfall, we could not have been married. I held a good position and was earning \$2,000 a year. That was in 1907. For the next three years Jane and I just let things run along, living comfortably on my salary. The \$750 which I inherited went for furniture and home needs and we did manage to buy—on the spur of early married ambition, perhaps—\$300 more of furniture which we paid for out of my salary. But all the rest of it went for clothing, rent, food, amusement, books, cigars, etc. We spent it as it came and it was always a race between our cash and our bills to see which would be on top at the end of the month. Usually the cash lost. But the bills didn't press or worry me. I ran accounts with tradesmen who knew me and knew I was good for it. But gradually the bills distanced the cash and at the end of three years I was in a hole just \$400; and then the situation grew serious because we had a baby and in order to pay the emergency bills of the occasion, I had to let my other creditors wait and they became restless.

Jane and I had tried time and time again to live within my salary and save a few dollars, but it wasn't any use. We lacked the backbone somehow and didn't have the necessary system to help us see it through. One day I came across a remark made by James Hill, the railroad builder, and it set me thinking. It burned itself into my brain. It was this:

"If you want to know whether you are going to be a success or failure in life, you can easily find out. The test is simple and infallible. Are you able to save money? If not, drop out. You will fail as sure as you live. You may not think so, but you will. The seed of success is not in you."

I went home and that evening Jane and

I had a long heart-to-heart talk. We sat up until one o'clock, studying, planning, debating, wondering how we could change our shiftless, easy-going habits so that we could feel that we were going to be classified with the successful ones and not the failures.

We made up our minds that from that night on not a penny would be spent for other than bare necessities until every debt had been paid. We resolved to live on half my salary, reasoning that if other people whom we knew could live respectably on \$1,000, there was no reason why we shouldn't. Then Jane said: "We ought to keep a cash account and put down just where the money goes. We can't go by guesswork any longer. We've been living that way for three years. We'll begin now to keep a record of our money."

What Jane said brought to my mind an advertisement which I had seen only a few days before, about an Expense Book for family accounts. So I got the magazine and found the ad. It told about the Economy Expense Book for personal and household accounting. The description told me that it was exactly the thing we needed and before going to bed I wrote a letter ordering a copy. In a few days it came, and Jane and I had an interesting session studying it and entering the Cash and Expenditure Items which we had been keeping tab of since the midnight resolution.

That book taught us something about the science of home economics. We learned, for instance, that in a properly arranged budget a man earning the salary I did could save, without stinting, at least 30% of his salary. But we were beating that figure. We had raised the ante to 50%, and that without suffering for a single need. Of course, we had cut out the theatre, the cigars, the expensive lunches and we'd begun to get acquainted with some of our discarded clothes all over again. And I learned that rent consumed in the balanced budget 17½% (which was about our cost); food was 25% and we cut it to 21%; clothes 17% we chopped to 5% that first year, and it never rose over 10% the first four years.

We started on the new system in April, 1910. The following April when we balanced the books for the first year we found this result: Every single bill paid and \$653 in the savings bank! Glorious! We were out of the woods and for the first time in my entire business career I had visions of success on which I could actually stand without breaking through into the quicksands of despair. We celebrated that night in good style with a dinner and the theatre and that's become part of the program ever since—the annual dinner of the board of directors, Jane calls it.

The rest is easy. We were on the right track and once started nothing could turn us back.

We stuck right to the original program for three years, living on half my salary and saving the other half. Then I got a raise of \$250 and that made it quite a bit easier. A year ago I got another raise, bringing my salary up to \$2,700, where it now stands.

I've never had the least trouble, since starting on the first page of my first copy of Woolson's Economy Expense Book, in living within my income and saving money. That book brought us, not only independ-

ence, but it changed me from a worried, half-baked existence into a self-respecting, successful man. I am in a position, as the result of our joint efforts, where I need look to no man for favors; and further than that, my success has brought us into a circle of friends, both business and social, who value us because we are looked upon in our town as "worth while" and "the sort who are getting ahead."

\*\*\*\*\*

Woolson's Economy Expense Book is designed to keep track of the income and expenses of the average family in a systematic manner. Each book is made to contain the records of four consecutive years.

No knowledge of bookkeeping or accounting is necessary to properly keep a Woolson Book. The lifetime experience of an expert accountant is in the book. He devised it for his own household and planned it so his wife could keep it.

Two minutes daily is sufficient to keep it written up to date. At the end of each week and month and year you not only know where every penny went, but you will have an analysis and comparative table of all the various expenditures, showing just what it went for. Every detail of money management is provided for by a simple, easy-system that a 12-year-old child could handle.

This book has proved truly a godsend to thousands because it has taught them a sure way to manage their finances. With it you know every minute just where you are money-wise. It automatically shows every penny of income and outgo; just how much for groceries, dress, rent, medicine, amusement, car-fare, etc.—and all this instantly and plainly. It is not complicated or tiresome. In fact, once you have started keeping a Woolson Book you will find it fascinating as a game and a miser for saving money.

The publishers are desirous while the interest of the American public is fastened on the problem of high-cost-of-living, to distribute several hundred thousand copies of the new greatly improved edition and are doing it in this way:

Merely write to them and ask that a copy be sent you without cost for a five days' examination. If at the end of the time you decide to keep it, you send \$2.00 in payment, or if you wish to return it, you can do so without further obligation. Send no cash. Merely fill in the coupon, supply business reference, mail, and the book will be sent you immediately.

*If you ever wake up to this,  
blame it on someone's inflammable roof*

**I**N THE LAST FEW YEARS thousands of people of Atlanta, Baltimore, Salem and Paris looked helplessly on just such a sight—stood powerless while their homes, workshops and landmarks were eaten alive by the red scourge.

So long as we are human, carelessness, oversight and combustibles will prevail. So will fire. And while a single burned home or gutted factory is a severe loss to the individuals involved, the community fire is a real catastrophe. And it isn't an accident. It is the price charged by ignorance for a lesson in fire safety.

All such fires start small and spread large over the Inflammable Roof Route. Your home's protection from the community fire depends on the material fastened to its rafters. Your factory's chance in a conflagration depends on its roof material.

The modern roof has outgrown its

function as a weather protection—it must be a fire preventative as well—and this is a specification for Johns-Manville Asbestos Roofings, resistant to heat, weather, and time. This modern roof is one of the biggest single contributions to fire-safe construction, and explains why slowly but surely the fire peril is lessened and the day comes nearer when it will flicker out.

Safeguard your property with one of these Johns-Manville Asbestos Roofings—Asbestos Built-Up Roofing, Asbestos Ready Roofing, Corrugated Asbestos Roofing, Colorblende and Transite Asbestos Shingles.

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. THE OCCASION

1. Write a short paragraph in which you summarize President Wilson's previous appearances before Congress. Tell what occasion suggested every appearance. Summarize, in a single sentence, the principal thought of every address.

2. In a single paragraph give the reasons that led to the present address.

3. Write a paragraph of comparison, or contrast, in which you show how the occasion of this address is like or unlike the occasions of other addresses.

SECTION II. THE MAN

1. Write a character sketch of President Wilson, basing all that you say upon evidence to be found in the address.

2. Write an article in which you present President Wilson's conception of democracy.

3. Write an oration in which you show that President Wilson is a noble example of patriotic American.

SECTION III. THE WORDS

1. Give the meaning and the derivation of every one of the following words: parleys, susceptible, vantage, conjecture, domination, imperialistic, Reichstag, candor, frankness, peradventure, to compound, aggrandizement, aggression, covenants, adequate, equitable, autonomous, rectifications, vindication, culminating.

2. Select from the address other words that you think members of your class may not understand. Learn their meanings, and then question your class, giving explanations whenever necessary.

3. Make a list of fifteen words in the address that contribute to dignity.

4. In any single paragraph find the proportion of words of Anglo-Saxon origin, and words of classical origin.

5. Find several sentences composed almost entirely of words of Anglo-Saxon origin. What is the purpose of such sentences?

SECTION IV. THE THOUGHT

1. Write a brief of the address, showing the progress of its thought.

2. What is the "evident principle" that runs thru the address?

3. Condense the thought of the address into one or two paragraphs.

4. Write a paragraph of contrast on "the more liberal statesmen of Germany" and "the military leaders."

5. What does President Wilson mean by the following expressions: fearless frankness; the grim power of Germany; they have refused to compound their ideals; the day of conquest and aggrandizement; open covenants of peace; economic barriers; adequate guarantees; equitable claims; unselfish sympathy; historically established lines; autonomous development; essential rectifications; pacific enterprise; the culminating and final war for human liberty.

6. Compare or contrast President Wilson's program of peace with the programs presented by other persons in authority.

SECTION V. THE LITERARY VALUE

1. Select from the address sentences that seem to you especially melodious in language.

2. Point out ways by which President Wilson has made the use of adjectives contribute strongly to literary effect.

3. Show how President Wilson employed balance and antithesis as means of producing striking effect.

4. Make a list of the striking rhetorical phrases President Wilson has employed in this address.

5. Show in what ways the noble spirit of the address gives it genuine literary value.

LLOYD GEORGE'S SPEECH

1. Give a talk in which you show in what ways Lloyd George's speech is like President Wilson's address, and in what ways it is different.

2. Write a précis of Lloyd George's speech, making the principal thought especially emphatic.

3. Point out, and explain, some of the most effective rhetorical phrases in Lloyd George's speech.

THE PEACE TERMS

1. Give a talk in which you explain the peace programs presented by the various nations, and comment on their respective merits.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

NOTE: We believe that one subject is of overwhelming importance this week. We have therefore confined our Lesson Plan to this one topic.

War Aims and Peace Terms of All Belligerents—"The United States Grows Up," "Peace Terms Compared," "Great Britain's Peace Terms," "The Peace Terms of the United States," "Bolsheviki Peace Terms," "The Austro-German Peace Terms," "The Speech of Lloyd George," "The President's Address," "President Wilson Has Saved Russia."

1. Review the circumstances which led the chief European belligerents to enter the war. What were the declared purposes of each?

2. Review the circumstances which led the United States to enter the war. What were the purposes of the nation as set forth in President Wilson's message of April 2, 1917?

3. Review the German peace proposals of December, 1916, the President's suggestions as set forth in his address to the Senate in January, 1917, and the answer made by the Allies at that time.

4. Review the suggestions made by the Pope in his letter of August 1, 1917, and the answer made by the President, August 27, 1917.

5. How do you account for the fact that thus far France and Italy have made practically no formal statements of their war aims?

6. "When the Bolshevik presented their peace terms . . . the press of England and America generally hooted," etc. (Editorial.) How do you account for this fact?

7. Why did Lloyd George "seize the occasion of a Trade Union Conference to deliver a declaration of the aims of the Allies"?

8. Transcribe from the documents appropriate quotations showing the attitude of (a) the President, (b) Lloyd George, (c) the Bolshevik, toward secret diplomacy.

9. "President Wilson puts second the historic American policy of absolute freedom of navigation," etc. (Editorial.) Quote the President's words. When did America first announce this as her policy? What is England's attitude toward this policy? Germany's?

10. Compare the declarations of Lloyd George and the President upon "the establishment of equal trade conditions." How far have the Allies modified their attitude since the Paris Conference of June 14, 1916?

11. Quote from the declarations of belligerents on both sides to prove that all parties are now agreed "as to the desirability of a reduction of the burdens of armaments."

12. Why does the editorial writer regard the question of the German colonies as a knotty one?

13. How do you account for the difference in the attitude of Lloyd George and the President toward Russian affairs?

14. Quote the portions of the two speeches which prove that Lloyd George and the President "agree on an independent Poland."

15. "As to the western boundary there are indications that the opposing parties are coming nearer together." (Editorial.) Give documentary proof of this statement.

16. "In regard to the subject races of the Austro-Hungarian and Ottoman empires the new terms of the Allies are very much more lenient," etc. (Editorial.) Trace the relation between this fact and (a) the establishment of the Russian Republic, (b) the defeat of the Italians.

17. "All parties have express approval of some sort of international organization," etc. (Editorial.) Quote extracts from the documents to prove that this is so.

18. Arrange the peace terms as summarized on pages 100, 101, with a view to emphasizing the subjects upon which the nations agree. Make a similar arrangement for subjects upon which they differ.

19. What proof does Mr. Levine give that "The President . . . has saved Russia, if not for the Allies, at least from the arms of Germany"?

20. Compare the President's analysis of internal conditions in Germany with that of Lloyd George.

21. Do you find any evidences in the two addresses that the President and Lloyd George were in consultation while they were preparing these addresses?

## Packard's hand is set to help win the war

Enlisted—in this *greatest* of human undertakings—are all the resources of our nation-wide organization.

Determined to do our utmost, there is a speeding up *all along the line*—that personal efficiency may be increased at least fifty per cent.

Every Packard man realizes that *multiplied* responsibility is his in this hour of unequalled stress.

Twelve thousand workers are here united in a *constructive auxiliary* to the forces that drive for victory.

By far the larger part of our factory facilities are today devoted to the production of motor equipment needed *directly* by the government.

More than a thousand of our engineers and skilled workers have already gone into the country's service—many of them at heavy personal sacrifice, to render voluntary aid in vital activities.

All of the pioneer and experimental work which we have done in *aviation motor* building—work to which three strenuous years and hundreds of thousands of dollars were devoted—has been given to the government to help win the war.

And we stand more than willing today to convert *all* our facilities *exclusively* to government work, if

wisdom determines that necessity.

In the meantime—the motor car is itself a *weapon of war*, directly and indirectly.

*Dependable transportation* is now tremendously more important than ever before. And to this *urgent* need Packard cars give substantial and *necessary* assistance.

Today the *automobile* is just as important as the *telephone*, the *passenger train* or the *motor truck*. Eliminate it and the world's transportation facilities would be *hopelessly* crippled.

*The motor car is a necessity!*

And as such we will continue its production so long as *all of our* facilities are not needed for more urgent government work.

One big way in which Packard is contributing to victory is in the production of a motor car of maximum efficiency and reliability—a *car which makes most economical use of gasoline and tires*. The newest type of fighting airplane motors are built on Twin Six principles.

This frank statement is now made that the public may understand—and more clearly appreciate why the *dependable* motor car is an important part of the *necessary* equipment that will help win the war.

## THE UNITED STATES COMES OF AGE

**T**HE United States has come of age. For nearly a century and a half it has been growing up. It passed safely thru the common ailments of childhood. It has suffered the disconcerting mysteries of adolescence. It has been racked by "growing pains." An almost mortal illness, safely weathered, left it stronger than before. It has put on bone and sinew and good solid flesh. It has grown in wisdom and stature.

Now, in God's good time, it has come to its majority. It has stepped out to take its place among its fellows on the earth. It has become a citizen of the world.

This is the deep and stirring significance of the President's address. The United States at a stroke assumes the rôle of a Great Power. It steps out of the Western Hemisphere into the world. It accepts its full share of responsibility for the world's peace and good order. It declares its right and duty and purpose to fight for justice, not only in the New World, but in the Old.

All this was implied in what we have already done. But it needed such a detailed and unequivocal statement to drive it home. Events have moved rapidly for us in the past year. It is no wonder that Europe had not realized how far we had come. It is no wonder that we ourselves were hardly conscious where we had arrived.

We are pledged to fight to the end to readjust the map of Europe. Our terms of peace include a free Poland, a return of Italia Irredenta, the freedom of Turkey's oppressed peoples, the redress of the crime of 1871 in Alsace-Lorraine, autonomy for parts of Austria-Hungary.

A strange undertaking for the American people. An astounding breaking with the past. But in the world we have lived in for three years now it hardly seems strange. The past is more shadowy than it has ever been before. Our eyes are on the future.

The future beckons the American nation to a mighty responsibility. The nation goes forward with a bound.

## WOODROW WILSON

**T**HERE can no longer be any doubt about it. Woodrow Wilson is today the acknowledged leader of the forces of democracy engaged in the overthrow of absolutism, and the great champion of liberalism on earth. This is not so much because he is the spokesman of the most powerful republic of the world. Nor is it because our brave Allies are far spent and in dire need of our support.

Our President stands today as the world's foremost democrat and statesman because he articulates the very conscience of the American people and because the American people are now bending their might solely to the establishment of the great moral principles of liberty and justice for all nations, friend and foe alike.

The moment Germany invaded Belgium the Allies' cause became the just cause, and right heroically have they maintained it from that day to this. Their courage and sacrifice have saved the day for us no less than for themselves. But victory tarried, and when Russia collapsed the Allies might have been forced into an unfavorable peace had not the United States entered the breach. That made the United States the umpire of the destinies of the world. Even then a lesser man might have failed. But the

American "schoolmaster," the college president who was kicked upstairs into politics, was man enough to rise to the greatness of the occasion. It was Woodrow Wilson who first announced that the United States wanted no territories or indemnities. Europe marveled. It was Woodrow Wilson who first detailed the plan for the establishment after the war of a league of free nations to enforce peace. Europe concurred. It was Woodrow Wilson who first drove the wedge in between the Hohenzollerns and the German people. That made democracy one of the aims of the war. And now it is Woodrow Wilson who, hand in hand with Lloyd George, lays down the explicit and inexorable terms of a just and lasting peace. This purges the Allied cause of whatever selfish aims still clung to it. It puts the guilt squarely upon Germany for the further shedding of blood. And, beyond all, it raises the war from a righteous war to a holy war.

No wonder autocracy and privilege curse him. No wonder the common people rally to his banner. Were the career of Woodrow Wilson to end today his fame is imperishable. Our President will rank in the hearts of his fellow countrymen with Washington and Lincoln.

## PEACE TERMS COMPARED

**W**HEN the Bolsheviks presented their peace terms to the world and demanded that the Allies do the same, the press of England and America very generally hooted at the idea as "a German trap," "a pacifist plot," and the like. But at the head of both Governments fortunately there are men of exceptional political sagacity, and what seemed to others an embarrassing

or futile request, they recognized as a great opportunity to make clear the unselfish aims for which the nations are fighting. Premier Lloyd George seized the occasion of a Trade Union conference to deliver a declaration of the aims of the Allies so temperate in its tone, moderate in its demands, concrete in its terms and high in its ideals that it cannot fail to have a good influence in friendly, neutral and

## THE PARTNERSHIP OF PEOPLES

### THIS WAY OUT

Democracy is urging Germania, spellbound by dark autocracy, to follow liberty to peace. Macauley in Charleston "Sunday News"

"Will he see the sign?" asks Kirby in the New York "World." The sign is leading the German people out of the maze of swords

### SAFE FOR DEMOCRACY

The standard-bearer of democracy, President Wilson, sets forth America's terms of peace. Cezare in New York "Evening World"

"The Gorgon's head comes off!" Carter in the New York "Sun" draws a forceful picture of Uncle Sam's triumph over autocracy

enemy countries. Three days later President Wilson called Congress to listen to an address no less eloquent and more remarkable, for it brought the United States as a world power into close alignment with the Allies.

We have, then, for the first time, clear, definite and authoritative statements from all the belligerents and various factions and can compare their terms. Let us consider the questions raised in these peace proposals, following the order of the President's program.

President Wilson puts first the demand for open diplomacy with no secret treaties or *ententes*. This is what the Bolsheviks want, and they are acting on their principle by publishing all the secret treaties they can get their hands on. The British and French radicals demanded it long before the war, and the Union for Democratic Control has been agitating for it during the war. Probably these Governments will accept it, but the rulers of Prussia, having gained their greatest victories in the present war as well as in the past by secret intrigue, will not renounce this weapon until they have to.

President Wilson puts second the historic American policy of absolute freedom of navigation on the high seas in peace and war. The Reichstag resolution of last July makes the same demand. Old Russia stood with the United States and Germany on the principle of "free ships make free goods" for over a hundred years, but the Bolsheviks apparently care nothing for such things. The British Government has recently announced that it will not even discuss or consider the question. Since the Declaration of London, which was the longest step taken in this direction by international agreement, has been abrogated by Great Britain and since Germany has violated this principle with unprecedented brutality, it will be more difficult than ever to secure the concurrence of other nations in such a policy.

The third plank in the President's platform, the establishment of equal trade conditions, is in accordance with the declarations of the Socialist and labor parties of all nations, of the Russian Bolsheviks, of Count Czernin, and of the Reichstag. It is contrary to the agreement of the eight Allied governments at the Paris conference of June, 1916. But it is rumored that even those who promoted the Paris agreement are now willing to drop it. Lloyd George in his speech before the Labor Convention reduced it to a possible preference in obtaining raw materials. An economic boycott after the war is what Germany dreads most, and it may well be used, as the President implies, as a threat to compel her to enter a peace league.

All parties and governments now agree as to the desirability of a reduction of the burden of armaments. Germany before the war opposed any limitations, defeated all such projects in The Hague conferences and refused the invitation of England to a mutual reduction of naval construction. But Germany and Austria-Hungary in their reply to the Pope put disarmament among their chief desires.

The question of the German colonies in Africa and the Pacific, now completely conquered by the Allies, is a knotty one. The Germans demand their restoration, giving the fact that the natives fought for them as evidence of their preference for German rule. But the world will rightly demand better evidence of German benevolence than the acts of a few thousand Askari conscripts. The Bolsheviks would apply their general rule of democratic choice, regardless of the absurdity of appealing to a referendum of African savages. The Australians, New Zealanders and South Africans say they will never give up their conquests, but they have no voice whatever in the government of the Empire, and besides when they were asked at the beginning of the war to take possession of the German colonies it was expressly stipulated that they should not annex them but hold them at the disposal of the London Government. The British Labor Party proposes that all tropical Africa should be put under the control of a League of Nations to secure native rights and equal access. The speeches of the Premier

and the President point the way to a settlement by proposing to leave the question of the colonies to an international conference to determine with special reference to native interests.

In their references to Russia the London and Washington speeches show the most marked contrast. Mr. Lloyd George is quite justified in complaining of Russia for having got France and England into the war for her defense and then deserting the cause; but in saying that Russia has only herself to blame and cannot expect any more help he is not so tactful as Mr. Wilson, who heartily welcomes Russia into the society of free nations and demands the evacuation of her territory by the Germans the same as for Belgium and France. The Germans, while pretending to accept the Bolshevik principle of no annexations, refuse to give up their hold on Poland, Courland and White Russia. The Bolsheviks are willing to leave the question of allegiance or independence to the people of the disputed territory, but only after the German troops have been withdrawn, so the vote may be free. Mr. Wilson and Mr. Lloyd George agree on an independent Poland including the Polish population formerly under Russian, Austrian and Prussian sovereignty. The Austrian and German governments are said to have agreed to an "independent" Poland under an Austrian prince and comprising Russian and Austrian Poland with perhaps some parts of Prussian Poland. The President stipulates for Poland as for Serbia "a free and secure access to the sea." This very important condition of economic independence he has repeatedly insisted upon, tho it is generally ignored in other peace programs. It does not necessarily imply the actual possession of a seaport by every inland nation—a difficult geographical problem—but might be accomplished by special commercial rights.

As to the western boundary there are indications that the opposing parties are coming nearer together. The Pan-Germans demanded the annexation of Belgium and more of northern France than the German armies had ever occupied. On the other hand the French chauvinists demanded not only Alsace-Lorraine but all the German territory west of the Rhine. But both these extremist designs have now been repudiated by their respective Governments. Count Czernin states that the Central Powers have no intention of forcibly annexing the territories seized during the war [*i. e.*, France, Russia, Rumania] or of depriving of political independence those countries that have lost it during the war [*i. e.*, Serbia, Belgium, Albania]. But he refuses to admit of international interference in the case of nationalities who had not political independence [*i. e.*, Alsatians, Bohemians]. The Bolsheviks insist upon the right of all peoples to vote upon what countries they shall belong to. On the other hand the French Government by a unanimous vote of the Chamber of Deputies declares that it will never consent to submit the question of the "reannexation" of Alsace and Lorraine to the people of those provinces, and it refuses in advance to abide by any such plebiscite no matter how taken. It has been rumored that the German Government, if forced to it, might consent to a plebiscite, believing that since eight-ninths of the inhabitants speak German a majority would vote to stay in the German Empire. Mr. Lloyd George and Mr. Wilson denounce the wrong done to France in 1871, the former saying that it should be "reconsidered," the latter that it should be "righted." Both want the question settled so as to secure the future peace of Europe, and such a settlement ought not to be impossible if Germany can be made to reopen the case.

The demand heard on all sides earlier in the war for indemnities to cover the expenses of military operations and to punish the enemy has now dropt out of consideration. The total cost of the war has become too enormous to be recovered from the defeated party under any circumstances and the continuation of the war even for a few weeks over the amount of indemnity would be unprofitable. The Bolsheviks declare against all contributions or indemni-

ties and would have the damages settled by an international fund to which each country shall contribute "on a proportional basis." The Germans want each country to pay its own costs and stand its own losses. The Allies and America insist that the invaders shall so far as possible restore, repair and compensate the invaded territory. Premier Lloyd George, remembering perhaps that the seamen's union upset the decision of the last labor conference to renounce indemnities, puts in a word for the compensation of seamen for the outrages they have suffered.

In regard to the subject races of the Austro-Hungarian and Ottoman empires the new terms of the Allies are very much more lenient than those they held a year ago to be an irreducible minimum. At that time the insistence of the Czar's Government on the possession of Constantinople and of the Italian Government on a considerable area of Slavic territory were causing considerable embarrassment to the Allies.

Now the Bolsheviki have renounced Constantinople and Italy has moderated her demands. The President and the Premier agree that Italy should extend her boundaries to include Italian populations, which would mean the Trentino and perhaps Triest and Zara. They disclaim any intention of breaking up Austria-Hungary, but they wish to see the various races guaranteed self-government and free development of their national life. This, since it stops short of complete independence, will be a disappointment to the Czechs and Slovaks who have hoped for a republic, and the Croats who have longed for reunion with their Serbian brethren, but perhaps it is the most we can do for them under the present circumstances.

Some of us, too, will be disappointed that the Turks are not to be expelled from Europe and Constantinople, and all the oppressed peoples enfranchised, as the Allies declared in their note of December 19, 1916, to President Wilson, but if, as Lloyd George says, Arabia, Armenia, Syria, Palestine, and Mesopotamia are recognized as nationalities, it would matter little if there should be retained a shadow of Turkish sovereignty such as covered Egypt up to the present war. The Turks in their negotiations with the Bolsheviki demand the evacuation and restitution of all the territory they have lost and they also put in a plea for the liberation of Persia from British and Russian control.

All parties have expressed approval of some sort of international organization, world court or league of nations, to maintain peace and settle disputes, altho they doubtless differ in their ideas of what such international control should be.

Such in brief are the views of the various belligerents on the chief issues of the war. Whatever we may think of the prospect of their coming soon to an agreement, it is decidedly encouraging to have their differences exposed and the fundamental questions publicly discussed.

## THE BOLSHEVIKI AND THEIR ISM

**N**OW that President Wilson has said a good word for the Bolsheviki it may be worth while to examine the grounds upon which it is possible to defend the proposition that they are "earnest" and "sincere" men who are acting "wisely" and "justly" in the "true spirit of modern democracy." Only a few Americans, we imagine, would so have described them. Practically the entire American people has shared the anger of our Allies at the amazing conduct of the Petrograd group which put Russia out of the war and entered upon separate peace parleys with the Potsdam highwayman.

But the President, in his profound sympathy with a world-wide democratic movement, evidently quite sincerely believes that essentially the Bolsheviki are true exponents of it.

Is he right in this assumption? We have no informa-

tion on the subject that other men do not possess, and therefore at the outset we must quite frankly admit that we do not know whether Lenine and Trotzky are honest men or crooks, German agents or patriots. Two or three things, however, are reasonably clear. They are democratic radicals of the extreme left wing. Their socialism is on the anarchistic order rather than a program of centralized organization. They believe that the class war is more fundamental and more important than any other war. To them the social revolution is the supreme human interest. They call for the expropriation of lands held by inheritance, and of capital amassed, owned and administered by a class which they describe as exploiters. They believe that the toilers, who hitherto have been wage-earners, are competent to carry on industry and to handle the decentralized governmental activities which may be necessary to correlate the activities of a purely democratic society. These activities, however, they think of as non-coercive. At all costs, men must be free to follow their own consciences and their own judgment. It is unethical to order them to fight. Even while the battle rages officers must consult the ranks. If the enemy is to be charged it must be after a vote is taken.

It would be unintelligent to deny that these ideas are regarded by millions of Russians as ethical in the highest degree, or that they are shared by thousands of educated men, not to be classed as fools, outside of Russia. For a generation they have been winning adherents all over the world. Men and women of pure character and unexceptional conduct see in them a practical realization of New Testament Christianity.

Their strong appeal to the Russian is easily understood by those who know something of Russian character and temperament. The Slav is not aggressive. There is in him none of the Prussian arrogance, nothing of the desire to advance or to aggrandize himself by a ruthless overriding and exploitation of fellow-men. He is friendly and fair-minded. It is hard for him to understand why anybody should be cruel or unjust. Above all things he is peaceful and wants to live in peace, following a simple life and satisfied with little if only he can feel safe and unmolested and free to follow the dictates of his own conscience.

These are admirable qualities, but until they are supplemented by energy and vision they achieve nothing. By these qualities alone no community could advance in civilization. No nation having these qualities highly developed, and these only, could take any considerable part in modern industrial and commercial development. It might contribute to knowledge and to art. Russia has intellectuals not to be despised. Indeed, she has given to the world a relatively large number of men of unquestioned genius. If man could live by bread alone, eked out by thought and kindly sympathy, the "ism" of the Bolsheviki might satisfy the world, once it had been made safe for democracy.

But for the present and probably for generations to come mankind must also possess itself of railroads and machinery, ships and aeroplanes, mills and marts; it must build cities and live in them; it must study efficiency. And these things lay upon society another necessity. It must organize governments that are competent and effective. This society cannot do if it assumes that all men are equally competent to legislate and to administer. The matters that can be handled only by men of great intellectual and moral power, specially trained for their work, are innumerable already, and are multiplying day by day. An apparently hopeless inability to see this truth is the fatal weakness of the "ism" of the Bolsheviki, of the Industrial Workers of the World, and of all the communistic anarchists. If the world is in fact to be made democratic, democracies, as Governor McCall so pertinently said, must be made safe for the world, and that can be accomplished only as we hold fast to the stubborn truth that men are not equally competent to organize and to govern.

# THE STORY OF THE WEEK

## THE GREAT WAR

**January 4**—British and French aviators raid German lines and Italians repel an attack upon Padua.

**January 5**—Slight German gains near Bullecourt. Artillery duels along Italian front.

**January 6**—British retake ground near Bullecourt. Germans make slight gains against French.

**January 7**—Several German attacks repulsed by British and French. British active on Italian front.

**January 8**—Italian batteries repulse a strong Austro-German attack on the Asiago Plateau.

**January 9**—French pierce German lines and take prisoners in the St. Mihiel sector, near Verdun.

**January 10**—French repel German attacks. Heavy snows stop fighting on the Italian front.

## War Issues Defined

The most notable utterances of the week were the statements of the war aims and peace terms of the Allied Powers, which were made by Mr. Lloyd George on January 5 and by President Wilson three days later, and which are given fully elsewhere in these pages. The two were in substantial agreement, and were received with hearty approval thruout the Allied nations. Especially marked was the approval given to Mr. Wilson's statement by Mr. Arthur Henderson and the British Labor party, whose attitude toward the war had previously been somewhat uncertain. Their unreserved adherence to the President's policy of waging the war until Prussian militarism is thoroly defeated and the ends of democracy are attained caused unpleasant surprize in Germany. Measures were taken for the simultaneous publication of the President's address, as soon as it was delivered, in all the friendly capitals of the world, and it is hoped that in some way its substance, at least, will be disseminated thruout Germany.

## On the West Front

Many minor engagements with practically negligible net results make up the story of the week on the quadruplicate western battle front—Belgian, British, French and American. On January 4 the British destroyed eight German aeroplanes and lost five, and French aviators dropt tons of explosives on German railroad stations and supply centers. At dawn the next day the Germans attacked the British east of Bullecourt, and made slight gains, which on the following day were all retaken by the British. The Germans made slight gains against the French on January 6, tho an attack by the Crown Prince was repulsed, and the French disposed of six German aeroplanes. On January 7 German attacks upon both the British and French were repulsed, and substantially the same

record was made again the next day. A vigorous French attack south of Verdun on January 9 resulted in the piercing of the German lines and the taking of many prisoners, tho no ground was permanently held. The next day small German attacks were easily repulsed by the French. Heavy snow made more important actions impracticable.

**Aerial Warfare** In preparation for the great aerial attack upon Germany which is being planned by the Aviation Corps of the army, another large aviation school has been established by the American forces in France. Meantime American aviators are increasingly active on the battle front. It was reported on January 5 that several of them had flown over the German lines and had dropt bombs, in reprisal for the killing of two American woodcutters by German aviators. Documents found upon prisoners indicate that Germany is planning greatly to increase its aerial force, to meet the American attack.

## On the Italian Front

Italian aviators drove off another German raid on Padua on January 4, and the Germans bombarded Bassano, Mestre and Castelfranco instead, doing much harm. The French continued to harass the German lines

and took some prisoners. The next day's operations were confined to artillery duels along the Piave and at Asiago. On January 6 British patrols crost the Piave and disturbed the enemy. The Teutons made a violent attack on the Asiago Plateau on January 8, which was repelled by Italian artillery fire, and for the rest of the week operations were halted by heavy snows. The schools of Venice have been reopened in the belief that danger of German attack upon that city is past.

## The Huns at Work

Flagrant examples of German inhumanity have been reported during the week. At midnight of January 4 the British hospital ship "Rewa" was torpedoed and sunk, despite the fact that she carried all the lights and markings indicative of her character and also of the fact that she had not been within the German submarine "barred zone." Happily, all the wounded aboard were rescued, tho three members of the crew are missing. The torpedo struck the ship directly beneath the huge red cross painted on her side.

Authoritative reports from Belgium are to the effect that the Germans are stripping that country of all machinery, tools and other metal articles, apparently both to supply their own needs

Courtesy of the New York Tribune

## THE SHATTERED DREAM OF "MITTELEUROPA"

President Wilson's proclamation of the Allies' terms of peace destroys effectively Germany's scheme of a Central European Empire by conquest—to extend from the Baltic Sea to the Mediterranean, with a footing in Asia Minor. The shading over the Black on the map above shows what the President's peace terms take away from the German hopes. Notice how the freedom of Rumania and Serbia make a scar run thru the middle of the "Empire." Restoration of conquered territory will be its utter ruin.

© Committee on Public Information, International Film

Bain

## THE RED CROSS AT THE FRONT

Major James H. Perkins (right), former vice-president of the National City Bank of New York, has succeeded Major Grayson Murphy (left) as head of the American Red Cross in Europe. Major Murphy resigned to be transferred to active army duty. Major Perkins has been one of his assistants in the Red Cross work

and to destroy the industries of the conquered country. Innumerable private dwellings are being stripped of doors and windows, as well as of all furniture, so as to render them uninhabitable.

## Ravages of U-Boats

British losses from submarines and mines during the week were eighteen merchant ships of 1600 tons or more, three smaller vessels, and four fishing craft; substantially the same as in the preceding week. The increase in these two weeks over the records of some time before suggests that Germany is putting into commission many newly built U-boats and is resorting to more daring tactics, which incidentally result in heavier losses of submarines as well as of their victims.

## Britain's War Balance Sheet

Official returns state that during 1917 the British forces on all fronts captured 114,544 prisoners and 781 guns, and lost 28,379 prisoners and 166 guns. Nearly all the prisoners and all the guns were lost on the western front, and on the same front considerably more than half the prisoners and guns were taken from the enemy.

## Russian Disintegration

The disintegration of the former Russian Empire continues. It was announced from Petrograd on January 4 that the Russian authorities had decided to negotiate with the Ukrainian government for the recognition of the independence of the Ukrainian republic, provided the latter would agree not to interfere with Bolshevik movements against the Cossacks under General Kaledines. Two days later it was added that a compact to this effect had been made. It was also reported from Paris on January 7 that France would recognize Ukrainian independence.

The independence of the Republic of Finland was recognized, in fact and by right, by France on January 5, and on January 7 it was recognized by Germany after assurances that the Russian Government itself would grant such recognition; as it has now done.

## Bolsheviki and Boche

Negotiations between Russia and Germany have continued, tho their interest has been overshadowed by that of Mr. Lloyd George's and President Wilson's addresses. The German Chancellor strove to vindicate his course to the Reichstag Main Committee, and announced his refusal to let the negotiations be transferred to Stockholm. In consequence of the Russian request for that transfer the negotiations were on January 5 temporarily broken off. The Socialists in the Reichstag meantime strongly condemned the German annexationist policy. On January 9 the negotiations at Brest-Litovsk were renewed. As the Russian Foreign Minister, Mr. Trotzky, went thither, Russian soldiers urged him not to make a dishonorable peace. He replied: "We did not overthrow the Czar to bow to German imperialism."

It was reported that a compact had been made between Germany and Austria-Hungary whereby the latter agreed to support the former in holding on to Alsace-Lorraine, while Germany was to support Austria-Hungary in retaining the Czechs and southern Slavs and in annexing Serbia, Montenegro and Albania.

## Balkans Seek Peace

It has been disclosed that Turkey and Bulgaria strongly and Austria-Hungary mildly opposed the German proposals of peace terms at Brest-Litovsk. On January 5 Turkey made independent peace proposals to

Russia on the general basis of the *status quo ante bellum*, with the free opening of the Bosphorus and Dardanelles to Russian ships. These have not been accepted. Rumania made it clear that she would stand with the Allies to the end. The Bulgarian Prime Minister announced on January 10 that peace had been made between that country and Russia, with the assent of Bulgaria's allies.

## The Woes of Macedonia

The Greek Legation at Washington has reported to the State Department that since the occupation of Greek Macedonia by the Bulgars, between 30,000 and 40,000 Greeks have died there from starvation, largely because of ill-treatment by the conquerors. Appeal is therefore made to the Red Cross for succor for the wretched survivors.

## Feud of Brazil and Argentina

The war has caused some revival of the ancient animosity between Brazil and Argentina, so that there seems to be danger of impairment of the friendly relations which have for some years prevailed between them. Brazil has from the first openly favored the Allies, and followed the United States closely in severing relations with Germany, while the Government of Argentina has maintained neutrality, tho in some respects it has inclined toward being pro-German.

## The Turbulent Peninsula

The Iberian Peninsula is again the scene of political unrest and disorder. On January 5 a revolutionary conspiracy was detected in Spain, on account of which telegraph and telephone communications were suspended, and many non-commissioned officers were removed from the army for participating in "juntas of defense." Four days later mutinous members of the crew of a Portuguese warship bombarded a fortress at Lisbon, but later surrendered and were imprisoned. Apprehension of further trouble prevails in both countries.

## Guatemala Destroyed

Renewed earthquake shocks on January 4 practically destroyed all of Guatemala City that had been left by the disturbances of a few days before, with a larger loss of life than had been occasioned by the first shocks. Relief was promptly dispatched to the survivors from a Gulf port of the United States, and also from the Panama Canal Zone.

## New British Ambassador

The announcement was made on January 7 of the appointment of Lord Reading to be British High Commissioner and Special Ambassador in the United States, to take over the work of the British Embassy at Washington, hitherto conducted by Sir Cecil A. Spring-Rice, and also to have charge of the British War Mission in this country. Lord Reading is Lord Chief Justice of England, and it is understood that he will retain that office while serving as Special Ambassador to this country.

Formerly Mr. Rufus Daniel Isaacs, he is an interesting example of the increasing number of Englishmen who, by force of character and ability, rise from poverty and obscurity to the highest places in the state.

#### The Serbian Mission

The Serbian War Mission, led by Dr. Milenko Vesnitch, visited Washington and on January 5 was received with honors by the Senate; Dr. Vesnitch briefly addressing that body. The next day, accompanied by many representatives of the United States Government, its members visited Mount Vernon and placed a wreath upon the tomb of Washington, as a tribute from "a small and hardly known nation."

#### Enemy Alien Women

Legislation is being prepared by Congress for the extension of restrictions upon enemy aliens to German women as well as to men. It is expected that it will be enacted before February 4, so that the women can be included in the nation-wide registration of unnaturalized Germans which is then to be made.

#### The Suffrage Amendment

The resolution proposing an amendment to the Constitution of the United States extending the electoral franchise to women was reported favorably to the House of Representatives on January 8, by a vote of 8 to 3 of the committee having it in charge. The next day the President declared himself in favor of it and urged its adoption, and on January 10 it was adopted by the House by the vote of 274 to 136, just the necessary two-thirds majority. It now goes to the Senate,

where its passage is confidently anticipated. In its present form it contains no limit of time within which it must be ratified by the states, many lawyers having held that the seven years' limit originally inserted was unconstitutional and would invalidate it. The recently adopted resolution for a prohibition amendment contains, however, such a limitation.

#### Red Cross Progress

The highly successful results of the recent Red Cross membership campaign have given much satisfaction abroad, as an additional proof of American earnestness and devotion in the war. In return, the King of Italy has given the royal palace at Genoa to be the Italian headquarters of the American Red Cross. A fidelity bond for about \$4,500,000, said to be the largest ever written for a benevolent organization, has just been issued to cover the treasurers of the 3300 Red Cross chapters thruout the country. Major Grayson Murphy has resigned as head of the American Red Cross in Europe in order to engage in active army work, and is succeeded by Major James H. Perkins, vice-president of the National City Bank of New York, who is now in France.

#### War Secretary Examined

The Secretary of War, Newton D. Baker, was examined on January 10 by the Military Affairs Committee of the Senate concerning his department's conduct of the war. He testified that he had himself at first regarded it as unnecessary for this country to be directly concerned in a war 3000 miles away, that he had failed to act upon warnings of the American Ambassador to Germany because of German assurances to the contrary, and that there had been some delay in war preparations; but that this country had raised an army of nearly 1,500,000 men more quickly, and was caring for its comfort, health and well-being more thoroughly, than any other nation had ever done. The supply of clothing and rifles was, he said, now adequate. A striking feature of his testimony was that on January 1, 1918, the Aviation Section of the army contained 3900 officers and 82,120 men.

#### The Morals of the Army

A most unpleasant impression was created by the publication on January 7 of an arraignment of the American army in France for drunkenness and immorality, made by the Board of Temperance of the Methodist Episcopal Church, in which it was declared that the conditions described imperiled the safety of the army. Prompt and emphatic denials were made by Government officials and army officers, and a concurrent report of the Protestant and Roman Catholic chaplains attached to the army in France declared that "American soldiers in France are in less moral danger than they would be if in service in the United States. We have found moral conditions most satisfactory. The military authorities are vigilantly remov-

#### A QUEEN INCOGNITO

There is a curious compromise here between the Russian hatred of royalty and the Russian love of art. When the revolution brought its sweeping destruction of all reminders of the former autocratic rule it met one stumbling block in the famous statue at Odessa of Queen Catherine III. It was too royal to be saved, too beautiful to be destroyed, so the people solved the dilemma by covering it up securely—and letting it stand

ing temptations. The men themselves are honestly trying, with the result that we have a clean army."

#### Libraries for Soldiers

"A million dollars for a million books for a million soldiers," the aim of the American Library Association in its campaign last fall, bids fair to be fulfilled. Already more than half a million volumes have been sent to the army, in the training camps and in France, and at every cantonment save one a commodious library building has been erected and a trained librarian has been placed in charge of it.

#### Conscription Constitutional

The Supreme Court of the United States unanimously concurred in a decision, handed down on January 7, affirming the constitutionality of the law under which the selective draft is held. The Constitution gives to Congress power "to raise and support armies," but the opponents of conscription held that that did not imply the power to compel men to serve in the

#### ONE LUMP, OR TWO?

New York has established distribution stations to dole out coal as it comes in, to the long lines of people who find it a difficult problem these days to "keep the home fires burning." Ice in the harbor has slowed up the transportation of coal to the city, but enough is coming in for immediate needs and it is being equally distributed in small quantities

army. The Supreme Court held, however, that a power which depended for its exercise upon the sanction of those upon whom it was to be exerted was no real power at all, and that the power conferred by the Constitution must comprise the raising of armies by compulsion if compulsion is necessary.

**Military Insurance** The Secretary of the Treasury announces that more than three billion dollars' worth of insurance has been taken by American soldiers and sailors. This is in addition to the automatic insurance provided by the Government, which amounts to little more than \$4000 each, payable only to a wife, child or widowed mother, while the purchased insurance may go as high as \$10,000 and is payable to wife, child, grandchild, parent, sister or brother.

**Problems of Coal and Oil** The scarcity of coal, due apparently to lack of transportation facilities and perhaps to injudicious distribution, is causing great distress in New York, New Jersey and New England, and many business and industrial establishments are seriously embarrassed thereby. The Fuel Administrator announces that the coal export policy will this year be changed so as to limit exports strictly to the military needs of this country and its allies. This means that Great Britain will have to supply the domestic needs of France and Italy.

The output of petroleum was larger in 1917 than in any preceding year. The Fuel Administration, however, has now extended its jurisdiction and control over that industry, and will probably require refiners and wholesalers to be licensed.

**Food Crisis Acute** —It is conceded at Washington that the menace of famine is more serious in Great Britain, France and Italy now than it has been at any other time since the beginning of the war. Lord Rhondda, the British Food Controller, cabled to the United States Food Administration on January 6: "I view the situation with extreme anxiety." Compulsory rationing has been established in Great Britain, and in France rations of bread have been reduced to seven

ounces daily. The Allies' food supply will be exhausted by the first of March, and thereafter they will be chiefly dependent upon the United States for sustenance. The question will then

every flour mill in the country for the needs of the army and navy and the Allies. In New York state the authorities are discussing proposals for the utilization of convict labor on farms for the increase of agricultural production.

Paul Thompson

#### TO HELP RUN THE RAILROADS

Director General McAdoo has chosen as his assistant Oscar A. Price, once a country editor in West Virginia and since in the Government service as auditor. He was publicity director of the second Liberty Loan

arise whether shipping enough can be mustered to carry the needed supplies and at the same time to transport the American soldiers who are sorely needed to reinforce the worn and wasted lines of the Allies. If not, preference will probably have to be given to food, since it would be unwise to send more men to a land where there is not sufficient food for those already there.

Meantime the food situation in this country is in an uncertain condition. Prices have fallen a little—they averaged one per cent less in November than in October—and large quantities of sugar are arriving from Cuba. The Government has decided to take not more than thirty per cent of the output of

**First State for Prohibition** Mississippi is the first state to ratify the prohibition amendment to the Constitution of the United States, that action having been taken by the Legislature on January 8, with only eight dissenting votes, fifteen minutes after the receipt of the Governor's message suggesting it. This indicates that this one southern state, at least, is more intent upon prohibition than upon maintaining the doctrine of states rights.

**Resources of the Banks** A high-water mark of national prosperity is indicated in the reports of the national banks, just published, in response to the call of the Controller of the Currency for a statement of their resources on November 20 last. These show total resources of 7656 national banks amounting to \$18,553,000,000. This is by far the largest sum ever reported in the history of American banking, exceeding that of September 11, 1917, by more than two billions and that of November 17, 1916, by more than three billions.

**Government Industries** Immediately following the delivery of the President's address to Congress on January 4, on the Government's assumption of control of all railroads, bills were introduced for the enabling and regulatory legislation which he had requested. These provided the fiscal and other guarantees which the President had suggested, and also for the appropriation of \$500,000,000 for the immediate betterment of the roads. It was provided, too, that governmental control should continue for and during the period of the war "and until Congress shall hereafter order otherwise." This last provision is meeting with opposition and criticism, as tending toward permanent government control and ownership of the roads. Some objection has also arisen to the basing of compensation upon the aver-

age net operation receipts of the preceding three years, as unjust to the roads.

While this legislation was being introduced and discussed, the Director General entered into negotiations with the representatives of the railroad employees' brotherhoods, and it is believed that he succeeded in averting a threatened strike. Many economies were ordered, in the dropping of de luxe and extra fast trains and club cars. There was also a great reduction in the number of passenger trains, so as to make room and provide engines for a greater number of freight trains. On January 6 more than 250 daily trains on the railroads entering New York were thus abolished. In order to induce more speedy emptying of freight cars, the demurrage charges on all cars held for more than two days were considerably increased.

The taking of the Bush Terminal in Brooklyn was followed on January 4 by the similar taking of the Hudson River docks and water front in New York, from Forty-second street to Fifty-eighth street, for the period of the war.

In order to increase the industrial efficiency of the nation in directions needed by the Government, the mobilization of three million workers for agriculture, for shipbuilding and for the manufacture of war supplies, was on January 7 entrusted by the Department of Labor to the United States Employment Service. The latter agency was divorced from the Immigration Bureau and made a separate bureau of

the Labor Department. The purpose is not, at least for the present, to conscript labor, but to recruit it voluntarily, and to arrange its proper distribution thruout the country. By this means it is hoped soon to put 400,000 more men at work in shipbuilding plants.

In spite of this latter expectation, however, Homer L. Ferguson, the head of the great Newport News Shipbuilding Company, testified in the Senate's shipbuilding inquiry that he did not believe that more than 3,000,000 tons of shipping would be produced this year, instead of the 8,000,000 that have been promised. The chief obstacle to greater production, he said, was the lack of housing facilities for shipyard employees. The Shipping Board responded by at once appropriating \$1,200,000 for the construction of houses at Newport News.

In order to expedite the provision of war materials Major General George W. Goethals has been made director of transportation and storage for the whole War Department. His first acts in that capacity were the taking over of the Bush Terminal and the Hudson River docks, already mentioned, in order to increase transportation and storage facilities.

**Loyalty Week**

Another token of the aggressive loyalty of the overwhelming majority of organized labor is given in a proclamation by Samuel Gompers, president of the American Federation of Labor and of

the American Alliance for Labor and Democracy, designating the week containing Lincoln's Birthday, February 10 to 16, as Labor Loyalty Week, in which at least 500 mass meetings will be held thruout the country, to stimulate patriotism and to counteract enemy propaganda.

**Tehuantepec Railroad**

The industrial rehabilitation of Mexico seems to be indicated in the agreement which has just been made for the dissolution of the Tehuantepec National Railway Company, and the transfer of its immensely valuable and important property to the Mexican Government. That route was originally selected by Hernando Cortez, nearly four centuries ago, as one of the three or four available for interoceanic transit, and was repeatedly surveyed since his time with that end in view. Captain Eads, the builder of the St. Louis bridge and the Mississippi jetties, planned a ship railroad, which should carry ocean steamers across that isthmus overland. Finally the great British firm of S. Pearson & Son built an ordinary railroad across the isthmus and constructed a great harbor works at each end; all of which are now to pass from British to Mexican national ownership. The chief importance of the route is in its nearness to the United States and the consequent saving of distance by it between the two coasts of this country. From New Orleans to San Francisco by way of Tehuantepec is 1800 miles less than by Panama.

**A MODERN MIRACLE OF MANNA**

This band of Italian Alpini, holding a mountain position surrounded by the enemy, were cut off from their supplies. But instead of surrendering they signaled and Italian aviators brought food and dropt it to them

# THE P E A C E

## Premier Lloyd George

**W**HEN the Government invites organized labor in this country to assist them to maintain the might of their armies in the field, its representatives are entitled to ask that any misgivings and doubts which any of them may have about the purpose to which this precious strength is to be applied should be definitely cleared. And what is true of organized labor is equally true of all citizens in this country, without regard to grade or avocation.

When men by the million are being called upon to suffer and die, and vast populations are being subjected to sufferings and privations of war on a scale unprecedented in the history of the world, they are entitled to know for what cause or causes they are making the sacrifice.

It is only the clearest, greatest, and justest of causes that can justify the continuance, even for one day, of this unspeakable agony of the nation, and we ought to be able to state clearly and definitely not only the principles for which we are fighting, but also their definite and concrete application to the war map of the world.

We have arrived at the most critical hour in this terrible conflict, and before any government takes a fateful decision as to the conditions under which it ought either to terminate or to continue the struggle, it ought to be satisfied that the conscience of the nation is behind these conditions, for nothing else can sustain the effort which is necessary to achieve a righteous end to this war.

I have, therefore, during the last few days, taken special pains to ascertain the view and attitude of representative

men of all sections of thought and opinion in the country.

Last week I had the privilege not merely of perusing the declared war aims of the Labor Party, but also of discussing in detail with labor leaders the meaning and intention of that declaration.

I have also had opportunity of discussing this same momentous question with Mr. Asquith and Viscount Grey. Had it not been that the Nationalist leaders are in Ireland, engaged in endeavoring to solve the tangled problem of Irish self-government, I should have been happy to exchange views with them, but Mr. Redmond, speaking on their behalf, has, with his usual lucidity and force, in many of his speeches made clear what his ideas are as to the object and purpose of the war. I have also had an opportunity of consulting certain representatives of the great dominions overseas.

I am glad to be able to say, as a result of all these discussions, that, altho the Government are alone responsible for the actual language I propose using, there is a national agreement as to the character and purpose of our war aims and peace conditions and in what I say to you today, and thru you to the world, I can venture to claim that I am speaking not merely the mind of the Government, but of the nation and of the empire as a whole.

We may begin by clearing away some misunderstandings and stating what we are not fighting for.

We are not fighting a war of aggression against the German people. Their leaders have persuaded them that they are fighting a war of self-defense against a league of rival nations, bent

on the destruction of Germany. That is not so. The destruction or disruption of Germany or the German people has never been a war aim with us from the first day of this war to this day.

Most reluctantly, and, indeed, quite unprepared for the dreadful ordeal, we were forced to join in this war, in self-defense of the violated public law of Europe and in vindication of the most solemn treaty obligations, on which the public system of Europe rested and on which Germany had ruthlessly trampled in her invasion of Belgium.

We had to join in the struggle or stand aside and see Europe go under and brute force triumph over public right and international justice.

**I**T was only the realization of that dreadful alternative that forced the British people into the war, and from that original attitude they have never swerved. They have never aimed at a break-up of the German people or the disintegration of their state or country. Germany has occupied a great position in the world. It is not our wish or intention to question or destroy that position for the future, but rather to turn her aside from hopes and schemes of military domination.

Nor did we enter this war merely to alter or destroy the imperial constitution of Germany, much as we consider that military and autocratic constitution a dangerous anachronism in the twentieth century. Our point of view is that the adoption of a really democratic constitution by Germany would be the most convincing evidence that her old spirit of military domination has, indeed, died in this war and would make it much easier for us to conclude a broad, democratic peace with her. But, after all, that is a question for the German people to decide.

We are not fighting to destroy Austria-Hungary or to deprive Turkey of its capital or the rich lands of Asia Minor and Thrace, which are predominantly Turkish.

It is now more than a year since the President of the United States, then neutral, addressed to the belligerents a suggestion that each side should state clearly the aims for which they were fighting.

We and our allies responded by the note of January 10, 1917. To the President's appeal the Central Empires made no reply and in spite of many adjurations, both from their opponents and from neutrals, they have maintained complete silence as to the objects for which they

[Continued on page 101]

# ALLIES' TERMS

## President Wilson

ONCE more, as repeatedly before, the spokesmen of the Central Empires have indicated their desire to discuss the objects of the war and the possible basis of a general peace. Parleys have been in progress at Brest-Litovsk between Russian representatives and representatives of the Central Powers to which the attention of all the belligerents has been invited for the purpose of ascertaining whether it may be possible to extend these parleys into a general conference with regard to terms of peace and settlement. The Russian representatives presented not only a perfectly definite statement of the principles upon which they would be willing to conclude peace, but also an equally definite program of the concrete application of those principles. The representatives of the Central Powers, on their part, presented an outline of settlement which, if much less definite, seemed susceptible of liberal interpretation until their specific program of practical terms was added.

That program proposed no concessions at all, either to sovereignty of Russia, or to the preferences of the population with whose fortunes it dealt, but meant, in a word, that the Central Empires were to keep every foot of territory their armed forces had occupied—every province, every city, every point of vantage—as a permanent addition to their territories and their power. It is a reasonable conjecture that the general principles of settlement which they at first suggested originated with the more liberal statesmen of Germany and Austria, the men who have begun to feel the force of their own people's thought and purpose, while the concrete terms of actual settlement came from the military leaders, who have no thought but to keep what they have got. The negotiations have been broken off. The Russian representatives were sincere and in earnest. They cannot entertain such proposals of conquest and domination.

The whole incident is full of significance. It is also full of perplexity. With whom are the Russian representatives dealing? For whom are the representatives of the Central Empires speaking? Are they speaking for the majorities of their respective parliaments, or for the minority parties, that military and imperialistic minority which has so far dominated their whole policy and controlled the affairs of Turkey and of the Balkan states, which have felt obliged to become their associates in this war? The Russian representatives have insisted, very justly, very wisely, and in the true spirit of modern democracy

that the conferences they have been holding with the Teutonic and Turkish statesmen should be held within open, not closed, doors, and all the world has been audience, as was desired. To whom have we been listening, then? To those who speak the spirit and intention of the resolutions of the German Reichstag of the 19th of July last, the spirit and intention of the liberal leaders and parties of Germany, or to those who resist and defy that spirit and intention and insist upon conquest and subjugations? Or are we listening, in fact, to both, unreconciled and in open and hopeless contradiction? These are very serious and pregnant questions. Upon the answer to them depends the peace of the world.

But whatever the results of the parleys at Brest-Litovsk, whatever the confusions of counsel and of purpose in the utterances of the spokesmen of the Central Empires, they have again attempted to acquaint the world with their objects in the war and have again challenged their adversaries to say what their objects are and what sort of settlement they would deem just and satisfactory. There is no good reason why that challenge should not be responded to, and responded to with the utmost candor. We did not wait for it. Not once, but again and again we have laid our whole thought and purpose before the world, not in general terms only, but each time with sufficient definition to make it clear what sort of definite terms of settlement must necessarily spring out of them.

Within the last week, Mr. Lloyd George has spoken with admirable candor and in admirable spirit for the people and Government of Great Brit-

ain. There is no confusion of counsel among the adversaries of the Central Powers, no uncertainty of principle, no vagueness of detail. The only secrecy of counsel, the only lack of fearless frankness, the only failure to make definite statement of the objects of the war, lies with Germany and her allies. The issues of life and death hang upon these definitions. No statesman who has the least conception of his responsibility ought for a moment to permit himself to continue this tragical and appalling outpouring of blood and treasure unless he is sure beyond a peradventure that the objects of the vital sacrifice are part and parcel of the very life of society and that the people for whom he speaks think them right and imperative, as he does.

THERE is, moreover, a voice calling for these definitions of principle and of purpose which is, it seems to me, more thrilling and more compelling than any of the many moving voices with which the troubled air of the world is filled. It is the voice of the Russian people. They are prostrate and all but helpless, it would seem, before the grim power of Germany, which has hitherto known no relenting and no pity. Their power, apparently, is shattered. And yet their soul is not subservient. They will not yield either in principle or in action. Their conviction of what is right, of what it is humane and honorable for them to accept, has been stated with a frankness, a largeness of view, a generosity of spirit and a universal human sympathy which must challenge the admiration of every friend of mankind, and they have refused to compound their ideals or desert others that they them-

# PRESIDENT WILSON'S TERMS OF WORLD PEACE

selves may be safe. They call to us to say what it is that we desire, in what, if in anything, our purpose and our spirit differ from theirs, and I believe that the people of the United States would wish me to respond with utter simplicity and frankness. Whether their present leaders believe it or not, it is our heartfelt desire and hope that some way may be opened whereby we may be privileged to assist the people of Russia to attain their utmost hope of liberty and ordered peace.

It will be our wish and purpose that the processes of peace, when they are begun, shall be absolutely open, and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement is gone by; so is also the day of secret covenants entered into in the interest of particular governments, and likely at some unlooked-for moment to upset the peace of the world. It is this happy fact, now clear to the view of every public man whose thoughts do not still linger in an age that is dead and gone, which makes it possible for every nation whose purposes are consistent with justice and the peace of the world to avow now or at any other time the objects it has in view. We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secured once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in, and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world, as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us.

THE program of the world's peace, therefore, is our program, and that program, the only possible program, as we see it, is this:

1. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind, but diplomacy shall proceed always frankly and in the public view.

2. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

3. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

4. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

5. A free, open minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

6. The evacuation of all Russian territory and such a settlement of all questions affecting Russia, as will secure the best and freest coöperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy, and assure her of a sincere welcome into the society of free nations under institutions of her own choosing, and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

7. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the gov-

ernment of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

8. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interest of all.

9. A readjustment of the frontiers of Italy should be [Continued on page 119]

## The Austro-German Peace Terms

*Forcible annexation of territories seized during the war does not enter into the intention of the allied powers.*

*It is not the intention of the allies to deprive of political independence those nations which lost it during the war.*

*The question of those nationalities who have not political independence cannot be solved internationally. It must be solved by each government, together with its peoples, in a manner established by the constitution.*

*The protection of the rights of minorities constitutes an essential component part of the constitutional rights of peoples to self-determination.*

*Both sides might renounce not only indemnification for war costs, but also indemnification for war damages. Every belligerent power would have only to make indemnification for expenditures for its nationals who have become prisoners of war, as well as for damage done in its own territory by illegal acts of force committed against civilian nationals belonging to the enemy.*

*The return of colonial territories forcibly seized during the war constitutes an essential part of German demands, which Germany cannot renounce under any circumstances.*

*No economic warfare after peace is concluded. No discrimination against the subjects, merchants, ships or goods of the other parties. The most favored nation clause to be granted for twenty years.*

*No demands for payment of war expenditures, damages or return of requisitions.*

*Germany to evacuate occupied territory as soon as Russian armies are demobilized.*

*Russia to take cognizance of the decisions of the people of Poland, Courland, Lithuania, Esthonia and Livonia for full independence and separation from Russian Empire, to be ratified by plebiscite without military pressure.*

## The Bolsheviki Peace Terms

*No compulsory annexation of territory taken during the war and speedy evacuation of such territory.*

*That political independence shall be restored to all nations deprived of independence by the fortunes of war.*

*That national groups not independent before the war shall decide by a referendum whether they shall become independent or give their allegiance to some power.*

*Where mixed nationalities occupy any territory the rights of the minority shall be defended by a separate law assuring educational freedom and administrative autonomy, if possible.*

*No belligerent country shall be required to pay contributions, and private persons shall be compensated for losses incurred thru the war from a special fund contributed by all the belligerents on a proportional basis. The same principles shall be applicable to colonies as to the parent countries.*

*No commercial boycotts.*

# THE PEACE SPEECH OF PREMIER LLOYD GEORGE

(Continued from page 98)

are fighting. Even on so crucial a matter as their intention with regard to Belgium they have uniformly declined to give any trustworthy indication.

On December 25, last, however, Count Czernin, speaking on behalf of Austria-Hungary and her allies, did make a pronouncement of a kind. It is, indeed, deplorably vague.

We are told that it is not the intention of the Central Powers to appropriate forcibly any occupied territories or to rob of its independence any nation which has lost its political independence during the war.

It is obvious that almost any scheme of conquest and annexation could be perpetrated within the literal interpretation of such a pledge. Does it mean that Belgium, Serbia, Montenegro, and Rumania will be as independent and as free to direct their own destinies as Germany or any other nation? Or does it mean that all manner of interferences and restrictions, political and eco-

nomical, incompatible with the status and dignity of free and self-respecting people, are to be imposed? If this is the intention, then there will be one kind of independence for the great nation and an inferior kind of independence for the small nation.

We must know what is meant, for equality of right among the nations, small as well as great, is one of the fundamental issues this country and her allies are fighting to establish in this war.

Reparation for the wanton damage inflicted on Belgian towns and villages and their inhabitants is emphatically repudiated. The rest of the so-called offer of the Central Powers is almost entirely a refusal of all concessions. All suggestions about the autonomy of subject nationalities are ruled out of the peace terms altogether. The question whether any form of self-government is to be given to the Arabs, Armenians or Syrians is declared to be entirely a matter for the Sublime Porte. A pious wish for the protection of minorities, "in so far as it is practically realizable," is the nearest approach to liberty which the Central statesmen venture to make.

On one point only are they perfectly clear and definite. Under no circumstances will the German demand for the

restoration of the whole of Germany's colonies be departed from. All principles of self-determination, or, as our earlier phrase goes, government by the consent of the governed, here vanish into thin air.

It is impossible to believe that any edifice of permanent peace could be erected on such a foundation as this. Mere lip-service to the formula of no annexations and no indemnities or the right of self-determination is useless. Before any negotiations can even be begun the Central Powers must realize the essential facts of the situation.

The days of the treaty of Vienna are long past. We can no longer submit the future of European civilization to the arbitrary decisions of a few negotiators, trying to secure by chicanery or persuasion the interests of this or that dynasty or nation.

**T**HE settlement of the new Europe must be based on such grounds of reason and justice as will give some promise of stability. Therefore it is that we feel that government with the consent of the governed must be the basis of any territorial settlement in this war. For that reason also, unless treaties be upheld, unless every nation is prepared at whatever sacrifices to honor the national signature, it is obvious that no treaty of peace can be worth the paper on which it is written.

The first requirement, therefore, always put forward by the British Government and their allies, has been the complete restoration, political, territorial, and economic, of independence of Belgium and such reparation as can be made for the devastation of its towns and provinces.

This is no demand for a war indemnity, such as that imposed on France by Germany in 1871. It is not an attempt to shift the cost of warlike operations from one belligerent to another, which may or may not be defensible. It is no more and no less than an insistence that before there can be any hope for stable peace, this great breach of the public law of Europe must be repudiated and so far as possible repaired.

Preparation means recognition. Unless international right is recognized by insistence on payment for injury, done in defiance of its canons, it can never be a reality.

Next comes the restoration of Serbia, Montenegro, and the occupied parts of France, Italy, and Rumania. The complete withdrawal of the allied (Teutonic) armies, and the reparation for injustice done is a fundamental condition of permanent peace.

We mean to stand by the French democracy to the death in the demand they make for a reconsideration of the great wrong of 1871, when, without any regard to the wishes of the population, two French provinces were torn from the side of

## The Peace Terms of the United States

*Open covenants of peace, no private international understandings. Absolute freedom of the seas in peace or war except as closed by international action.*

*Removal of all economic barriers and establishment of equal trade conditions among associated nations.*

*Reduction of armaments to lowest point consistent with domestic safety.*

*Impartial adjustment of colonial claims. Interests of the populations to have equal weight with claims of sovereignty.*

*Evacuation of all Russian territory. Coöperation and sympathy with Russians in their free development.*

*Evacuation and restoration of Belgium.*

*All French territory freed and restored. The matter of Alsace-Lorraine should be righted.*

*Readjustment of Italian frontiers along clearly recognizable lines of nationality.*

*Autonomy for Austro-Hungarian peoples.*

*Evacuation and restoration of Rumania, Serbia and Montenegro. Serbia to have access to sea. International guarantee of independence of Balkan states.*

*Turkish portions of Ottoman Empire. Autonomy for other nationalities. Free Dardanelles.*

*Independent Polish state including territories of indisputably Polish population, with access to sea.*

*Association of nations guaranteeing political independence and territorial integrity to great and small states alike.*

## Great Britain's Peace Terms

*Countries having control of raw materials will desire to help themselves and their friends first.*

*Limitation of the burden of armaments.*

*German colonies held at disposal of a conference to be placed under administration acceptable to natives. Restoration and reparation for Belgium.*

*Restoration of French territory. Reconsideration of the wrong of 1871 and restoration of healthy conditions.*

*Union of Italians with those of their own race and tongue.*

*Autonomy for Austro-Hungarian peoples.*

*Evacuation, restoration and reparation for wrong done to all invaded countries.*

*Turkish race to retain homelands including Constantinople and Thrace. Arabia, Armenia, Syria, Palestine, Mesopotamia entitled to recognition as separate nationalities. Free Dardanelles.*

*Independent Poland, comprising all genuinely Polish elements who desire to form part of it.*

*International organization to limit the burden of armaments and diminish the probability of war.*

*Reparation for injuries done in violation of international law, especially outrages on seamen.*

# PRESIDENT WILSON HAS SAVED RUSSIA

BY ISAAC DON LEVINE

AUTHOR OF "THE RUSSIAN REVOLUTION"

THE President, thru his momentous declaration to Congress last week, has saved Russia, if not for the Allies, at least from the arms of Germany. A separate peace between Russia and the Central Powers is now hardly conceivable. While a reunion of Russia and the Allies is yet remote, Woodrow Wilson has made the union which the Russians all along felt was morally in existence between the New Russia and America an accomplished fact. The United States has stretched to the agonized Russian democracy a hand of brotherhood and relief that spells salvation for the dying liberty of the great Slavic nation.

The practical achievements of the President's statement as regard Russia are twofold. First, it creates a Russian-American alliance. Second, it paves the way for a restoration of the alliance between Russia and the western European democracies. As regards the first, it should be borne in mind that never has any Russian party or faction favored a separate peace. Even the Bolsheviks, forced by the exhausted masses and army to initiate peace parleys, made every effort to secure a general peace conference. The moderate Russians have been urging the Allies in the last two months to heed the appeals of the Bolshevik government and at least answer its frequent invitations to participate in the armistice and peace negotiations by a reasoned and clear statement of their war aims. Up to the break in the Russo-Teuton peace conversations the Allies persisted in ignoring the pleas for such a statement, thus driving Russia into the arms of Germany. The cold and vindictive attitude of the Allies embittered the weary Russian people more than the cynical attitude of the German peace delegates. The latter, the Russians knew, were the agents of hated Prussianism. But in the former they had still retained a vestige of confidence. Deplorable as their situation was, the Russians at Brest-Litovsk still made an effort to safeguard the western front during the armistice and peace negotiations. But they were still considered by the Allies as traitors and German spies.

IF anything was calculated to complete Russia's march to suicide it was Lloyd George's recent utterances, in the course of which he plainly washed his hands of Russia, serving thereby notice on Germany that she can do whatever she chooses with the prostrate Russian democracy. Perhaps the American and even the English people will fail to see anything wrong in Lloyd George's stand. But to Russia it was an immense disaster, especially to those who clung to the last to the Allies and their cause. To Russia it meant that she was deserted by all, left alone in a world of imperialistic and selfish nations, a ready prey for Europe's hungry

beasts. Had Russia been powerful, she would probably have declared war against all western Europe. As it was, a heavy cloud of despair settled on her.

IT was at the height of this desperate moment that the friendly voice of America was heard. Its effect will be enormous. Just as Trotzky, the Foreign Minister, was proceeding to Brest-Litovsk to endeavor to persuade the Teutons to discuss on neutral soil the Russian terms, which were so generally vilified, President Wilson proclaimed that the "Russian representatives were sincere and in earnest" and that they "have insisted very justly, very wisely, and in the true spirit of modern democracy" that the peace parleys should be held in the open. This declaration of the President is equivalent to the sending of an American delegate along with the Russians, and his demand that all Russian territory be evacuated and Russia's political development be safeguarded by the general peace treaty is practically the creation of a Russian-American alliance.

There may be some extremists in Russia who will distort the President's words. But the Russian people will appreciate their full import. The Russian people always have had unbounded faith in America. Their confidence will now have been justified. The American peace terms will be incorporated in the Russian. And the Russian delegation at Brest-Litovsk will henceforth speak not only in the name of the Russian people but also in the name of the great American democracy. A separate Russian peace is therefore out of the question. The next consideration is the restoration of Russo-Allied unity.

From a certain Russian viewpoint the Allied cause won its greatest possible triumph when the Great War gave birth to a free Russia last March. Prussianism would have been doomed forever had even a general peace been concluded soon after the Russian revolution, for Kaiserism could not have existed long surrounded by a solid wall of democracies. Never was the Russian hatred for Prussianism greater than after the overthrow of Czarism. Never was the moment more opportune for the creation of an eternal union between the Russian and Allied democracies.

But the hatred of the Russian democracy for Prussianism was soon neutralized by a rising tide of resentment against the Allies in the ranks of revolutionary Russia. The latter was aglow with idealism, believing she had a world mission to perform. She met, however, with an icy reception at the hands of the Allies. The first question put to the New Russia by Great Britain and France was to what extent she was still capable of fighting. Her spiritual aspirations were ignored, derided, misinterpreted and vilified. Her message to the belligerent world, embodied in

the formula of "no annexations and no indemnities," struck no responsive chord in the Allied camp.

"To Russian revolutionists we always seemed the promised land of liberty," wrote the *Liberal Manchester Guardian* soon after the fall of Kerensky. "It was to this country that leading exiles resorted, and here that much of their propaganda work was done. But to the Revolution when accomplished England as a whole appeared deaf and blind. The official attitude was cold and repellent. No effort was made to maintain a common understanding about war aims or to assist the revolutionary Government in its dealings with extremists and pro-Germans. No sympathy was extended to them in their trials, their experiments, and their failures."

To an even greater extent was the attitude of republican France toward free Russia cold and critical. For six months now those Russians who have the cause of the Allies deep at their heart have been watching with ever-increasing alarm the growing chasm between Russia and the Allies. The negative attitude of the latter and the positive efforts of Prussia unwittingly but effectively cooperated in driving a wedge between the Russian and Allied democracies. It was naturally in the interests of autocratic Germany to divide the Allied camp, and they knew what to do, or rather what not to do, in order to achieve such a division. Similarly it was in the interests of the Allied democracies to create a new and living union between the New Russia and themselves, but they failed. If not for the United States, it is probable that a crisis in the Russo-Allied relations would have occurred months ago.

PRESIDENT WILSON has now indicated the way for a resumption of Russian-Allied friendship. There is talk of a joint Allied war aims conference. Balfour recently stated in the House of Commons that such a conference would be held. Were this conference to adopt President Wilson's sentiments and language, Russia might yet be restored to the Allied camp. Were England and France to change their diplomatic relations with free Russia, they might create yet a live union with her. Arthur Henderson as British ambassador and Albert Thomas as French ambassador to revolutionary Russia would alter the course of events at this turning-point in the history of humanity. It is a serious situation, but by no means hopeless. With the tremendous fortunes at stake, there is no reason why the Allied democracies should not radically change their attitude toward the New Russia. Indeed there is every reason for the immediate adoption by the Allies of a new foreign policy. Russia's suicidal march can and must be stopped.

New York City

# READING AT THE FRONT

BY EVELINE W. BRAINERD

"**H**E has a hard job," said the man in the steamer chair as he looked sympathetically down the deck after a fellow passenger. "He is going over to see to books for our soldiers. Soldiers don't want books. They won't read."

A bit skeptical, the listener appealed to the Major.

"Light stuff. Something exciting. Won't read anything else," was the instant decisive answer.

With these prophecies in mind we joined the work of the Book Department at the Paris headquarters of the Y. M. C. A. Books were few. Difficulties of transportation from England as well as America were in part the cause, for in war time there are things money cannot buy. But much of the situation was caused by an unavoidable ignorance of what books would be most wanted, how quickly and in what great numbers. But if the supply was short the demands from the field were plenty and it was at once plain that soldiers fail to read only when there is nothing they can read, and that was a state of affairs only too frequent. The Major proved a bit nearer the mark than the passenger, for light literature was certainly popular. Sentimental novels and books with deathbed endings were not in demand, but Oppenheim and Lincoln may feel they have not lived in vain.

However, when the fourth letter from the same camp came pleading for a life of Gordon, Tennyson's poems, a work on elementary law, one on electrical engineering, we began to think that majors, even United States majors, may not live on terms of complete intimacy with their men. Paris was scraped for English dictionaries, French-English dictionaries, for atlases, for travel, for Kipling and Seeger and Service and Wells, for "everything on the Battle of the Marne" and on international relations. Secretaries fresh from their huts and full of determination came into the Book Department, and the Book Department, popularly supposed to be slumbering under a cosy coverlet of red tape, would have wept, if it had the time, over the disappointments in store for the hopeful workers and the men back in the dull camps.

We, soldiers of the card file and the order sheet are still grateful to the gentleman who went promptly away, not stopping to watch the effect of his words. He had smiled at us genially from the door. "Just wanted to remind you, twenty-four books, twenty thousand men." That man had humor and sympathy even for headquarters. So had the gentleman who was taking care

*Miss Brainerd, who was formerly on the editorial staff of The Independent, sailed for France this fall to work with the Y. M. C. A. in Paris and behind the lines. Books for distribution to the soldiers in France or at the training camps in this country will be promptly forwarded to them if they are left at any public library in the United States. THE EDITOR*

of men in two huts with "very few books, and those about to perish of old age," but it was hard for headquarters, even, to view as droll the visitor, on his way back to fifteen hundred soldiers, who was thankful for a single armful of volumes from our closet.

Every man who came to the door asked for high school and college textbooks, from English grammar to the Greek testament.

Among the special requests comes often the call for "a whole Bible." Now an English Bible in Paris is both scarce and dear. When by happy chance some friend sends one along with odds and ends of novels, it is pounced on and tucked carefully away for the boy who is sure to turn up within a few days. And hymn-books with music! One of the American churches in Paris sent in a few well-worn copies of Hymns Ancient and Modern, and they are doled out to the hut leaders more carefully than the pension keepers dole out sugar, for we have two lumps each of that. "Song books with the old rollicking airs and college songs would be more use than two tons of American tobacco," explains one man, as tho the reasonableness of his contention would make it more possible to grant. From Algeria some understanding donor has sent his old librettos of Gilbert and Sullivan

operas, to the joy of the huts, and from the States have come a few precious packages of piano and band music. One worker in the Foyer du Soldat was found carefully picking out the stalest of the vaudeville songs, and when questioned on such an altruistic choice he explained "Our boys won't care for these, but my Frenchmen are delighted with any American music." What those same Frenchmen want, also, are pictures of the United States, to let them see what sort of a land these extraordinary new allies hail from.

In the American huts, on the contrary, the most popular wall decorations are the maps of France. Always so long as there is light enough to see there are groups around these. The region in which the camp is situated is worn white by earnest tracings, while Paris is literally nothing but a hole. Her new friends are more destructive to her than the enemy. The hope of every Sammy is to come to Paris. Every picture, railroad folder, postcard, photograph that can be found for the hut table is studied, and the call is constant for books on France, the history, the land, the people, but above all on the great city itself. "In our libraries please put at least twenty histories of France, and send us word how many more French histories you can supply," wrote one hopeful secretary. Before such requests the lack of such books as these on this side the water is tragic.

**SCANT** as the libraries at the front have been and still are, little as they hold of recent publications, they are yet circulating thousands of books and do fine service all of the daytime. But night falls early and lights are not plenty and then comes the need for something lively, and new to all. It is half-past five of a cloudy afternoon such as come so often in this damp land. Some four hundred men are packed close as they can crowd within a hut. Here and there a candle held by some willing hand picks out the darkness and before this eager audience stands the secretary, reading Empey's "Over the Top." Two soldiers hold pocket electric lamps to light the page, and comrades relieve each other now and then. The book is borrowed, the only copy probably in all the line of huts that, scattered miles apart, serve thousands of men. It must be sent on so soon as may be to the next secretary, and so along the line, until in every hut has been repeated this scene of the intent men sitting and standing in the shadows, the only brightness in the room that falling on the reader's hands.

# C'EST LA GUERRE

BY IRVING BACHELLER

I spent three days at a base hospital back of the British lines. It was one of the big hospitals—a little temporary city of tents and long low-built wooden huts—and some of the best British surgeons are on duty there, in operating theaters as completely equipt as any in London. The British take good care of the wounded and their visiting friends. If your son has been injured you receive a letter to this effect:

"Your son is dangerously wounded. If you wish to visit him apply at once to the Foreign Office for your passport and tickets. If you need money for the journey it will be supplied on application to your nearest police station."

When the friends of the wounded arrive in France a motor car meets them at the boat and conveys them to the hospital, where they are provided with food and shelter. At the big hospital where I was quartered there were numbers of mothers and fathers sitting by the bedsides of young men indoors and out, for the weather was warm and sunny. If the cases are not critical they read aloud to them or sit holding their hands and visiting.

I went there the day after the big drive near Ypres. That night the wounded were coming in, but I heard very little groaning or crying out. That stage has passed at the first aid hospital close to the battle line.

A physician said to me: "A screaming man is sometimes hard to manage, but there is always hope for him. I think it may be said that he generally gets better. It's a hopeful sign when one can feel his pain and has the strength to express it. When the shock has deadened his nerves and so weakened him that he cannot make a noise he is likely to be in great danger."

They brought in a young flying captain that night who had fallen at Ypres the evening before. His skull had been fractured and his face terribly clawed by shrapnel and both his legs had been broken by his fall. Next morning he was calmly sitting up in bed and smoking a cigaret. His forehead looked as if it had been raked by the claws of a tiger.

*Mr. Bacheller has just come back to this country from the battlefield in France, where he went as a guest of the British Government, and was given unusual facilities for observing and writing on every phase of the war, both in the trenches and behind the lines. Mr. Bacheller is the author of "Eben Holden," "Dri and I," "The Hand Made Gentleman" and "Keeping Up With Lizzie."—THE EDITOR*

He was a young Irishman. Toward night his nerves began to weaken and he was a bit inclined to hysteria, but thru it all one could see that he was trying to control himself. Generally he calmly sat up in bed without a murmur. They are game to the core—these soldier boys. In hospital they find the gentle, sympathetic ministry of the woman's hand. It is very grateful to these sturdy fellows who come in from the battlefields. Not many would find as tender care in their own homes, it is probable.

Women do most of the work in this little city of the stricken. There are one hundred and sixty of them who run the ambulances which convey the wounded from the trains to the hospital—good looking English girls of well to do families. I saw one handsome, blond-haired miss driving a hack. They are mostly girls who have lost their sweethearts or young husbands in the war. They keep their cars in order, change tires and do all but the heaviest repairing—these girls who but for the war would not be doing hard work.

I found one of them working with a monkey wrench under her car.

"How do you like this kind of work?" I asked.

"Well, you know, I'd rather be taking care of babies," she answered, "but *c'est la guerre!*"

Titled women sell candy and tobacco in the canteen. Among them are the Duchess of Albany and Lady Cholmondeley. They have a long hut in which concerts and variety shows are given for the entertainment of the workers and the convalescing.

They were very kind to me at the hospital. It was good will for America, I suppose. There was not an hour of the day in which some nurse or physician did not come to my door to make sure of my comfort. In the middle of a cold night some one came and spread an extra blanket on my bed.

The French women—even the richest of them—are at work. Of course there are many Lizzies in Paris who are too busy for work, but one sees hundreds of handsome young women who have taken the places of men on the railroads and in the workshops of the French metropolis. They have many women carpenters in France these days.

I went to Compiègne the other day and visited the hospital where soldiers who have been burned by liquid fire or powder explosions are treated. A French physician has discovered a remedy for burns which instantly relieves the pain they cause and hastens the process of healing. It is called ambrine. The wonderful thing about it is this: where the tissues are burned away, leaving the sinews bare, the skin and flesh return under this treatment true to type. By this I mean that if the tissues of a cheek and ear were destroyed, they would come back in exact match of the same features on the other side of the head.

I saw a very good-looking nurse dressing a man's head which had been seared in a powder explosion. She chatted in good English as she prepared the wound for another application of the remedy. I did not know until later that she was the Baroness de Rothschild, herself the founder of the hospital. When I dined at her château that evening she told me that she worked with the wounded every day from seven a. m. until one, when she went home to luncheon; that she returned to her task at four and quit at seven in the evening. It gave me a new sensation to hear this beautiful woman in evening dress and jewels, whose wealth it would be difficult to estimate, telling how she had become one of the working women of France. It was odd by the old standards, but *c'est la guerre*.

## WINTER APPLES

BY JOE CONE

I would sing of winter apples,  
Now the trees are bare and cold,  
Now Jack Frost has stripped the forest  
Of its raiment red and gold.  
Lonesome now the orchard monarchs,  
Bending to the wintry blast;  
Moaning for their swaying apples  
Which are gathered in at last.

I would sing of winter apples,  
In the cellars warm and snug;  
Apples poured in dusty barrels,  
Or, mayhap, the old stone jug!  
Apples stacked in bins or barrels,  
Apples crimson, green and gold,  
For the party, or the "parin"  
When the nights are long and cold.

I would sing of winter apples  
As the treasure of the farm;  
Sing of nights around the fireplace,  
Of the "wishing's" mystic charm.  
Apples russet, apples yellow,  
Apples blushing as a bride;  
I would sing of winter apples,  
Jewels of the countryside!

THE BRITISH HIGH COMMISSIONER TO AMERICA

Earl Reading, Lord Chief Justice of Great Britain, has been appointed special ambassador to the United States. His position is of unique importance since he will combine under his control both the diplomatic service and all questions of justice and law for the States.

## IN THE WESTERN FRONT

French gains in the Somme fighting are shown, which resulted early last spring in the evacuation by Hindenburg's forces of the positions covering Bapaume and Peronne and the occupation of those two important towns and many others, together with much surrounding territory, by the Allies. The ground wrested from the Germans by General Haig's

victorious operations about Arras and later in Flanders is also shown, and local variations elsewhere. American troops in small numbers, have seen active service on two sectors. Infantry and artillery have been in the front line facing the Lorraine border southeast of Nancy. Engineers saw fighting with the British west of Cambrai several weeks ago.

### GETTING OUT THE COAL

Our production of coal—last year several million tons in excess of the total output in 1916—must be increased in even greater proportion in 1918 to meet our war demands. For tho the present “coal famine” is chiefly due to freight congestion there is also an actual shortage of 38,000,000 tons needed to fill the normal supply. And “the worst is yet to come,” announces Fuel Administrator Garfield. “Relief from the present fuel famine within sixty days is impossible. Every one must conserve and curtail the use of coal”

### FOUR VIEWS OF A MODERN MINE

The burro and pick that symbolize for most of us the workings of a coal mine are still used, but they matter little nowadays in comparison with the remarkable mechanical development that has brought efficiency to the modern mine and safety to its workers. The train of “empties” above, going into the mine, can bring out more coal in a day than the burros and lifts used to haul out in a week. The coal cutting machine at the left is making a face cut 6½ feet deep at the rate of 18 inches a minute

# NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

## PROFESSIONS ON A BUSINESS BASIS

**E**VERY business should be in motive a profession; and every profession should be in method a business.

The national recognition and adoption of these twin-truths would give America twice her present power as a nation.

Every business should be in motive a profession. The lofty standards of honor, duty, science and service that the professional man follows by temperament and tradition should lead the way in all commercial enterprise.

But, equally, every profession should be in method a business. The union of system, specialization, profit and promotion that the great merchant or manufacturer daily and hourly embodies should serve as a standing lesson in all humanitarian work.

The business man must learn subjective ideals from the professional man. But, even more, the professional man must learn objective measures from the business man. As a specialist in personal efficiency, I have learned twice as much from doctors, preachers and psychologists as I have from other efficiency engineers. But as a writer, I have learned ten times as much from business men as I have from other writers. The most valuable things any man knows were learned outside the beaten track of his trade. Whoever prides himself on merely knowing his job ought to ponder this statement.

**D**URING the past few years we have been consulted on efficiency problems by more than 3000 professional men—teachers, doctors, lawyers, ministers, writers, bankers, musicians, photographers, welfare workers and others. A broad survey of the professional field, based on a thorough study of individual problems, leads to general conclusions affecting the great body of professional men, and applying to them all, no matter what their particular work may be. Every teacher, doctor or preacher ought to be a good business man; if he is not, he cripples needlessly his powers, and cramps wrongfully his opportunities for genuine service on a practical, permanent basis. The object of this article is to emphasize the importance of business knowledge for the professional class.

I do not know of a single profession that has been standardized, modernized, maximized, on the efficiency principle and procedure that have made American stores, factories and corporations the leaders of the world. If a man of science and a man of business get the same salary, year after year, the man of science should probably receive twenty to fifty per cent more than the man of business. He earns it. Why should the man who serves be the man who starves? Faulty method is to blame—with faulty custom and opinion back of it.

The professional man today is handicapped by incomplete business training; by devitalized food; by wrong conception of the meaning and use of money; by vocational uncertainty and unfitness; by waste

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

of motion, time, energy; by neglect of commercial system; by ignorance of operating costs; by lack of suitable advertising; by tradition hide-bound and rut-embedded; by class prejudice; by the narrow mental horizon that marks industrial isolation; by absence of the incentive that rises in the friction of close competition; by unwillingness to learn from anybody outside the profession.

The time of a competent efficiency engineer is worth \$25 to \$100 a day. He is paid that by large corporations. But he could not earn \$25 a month if he looked to professional men as clients, with no other class of fees. Business men are glad to pay for expert criticism and vocational reform. Professional men are not. Here we have a condition that must be remedied not by efficiency experts, but by doctors, teachers and preachers with a broader, saner, clearer view of their own work and life. On this point let me quote a few examples of professional obtuseness and pigheadedness, revealed in the case records of certain efficiency counselors whom I know personally.

A remarkably fine teacher in a school that was running down had read efficiency books with a view to building up the school. He outlined a plan, which he submitted to a faculty meeting. Whereupon a great hubbub ensued. The "cultural" members of the faculty proclaimed efficiency petty and sordid; the "practical" members voted efficiency faddish and theoretical; none of the belligerents knew enough about efficiency to pass judgment on it, but all supposed that, being college professors, they were qualified to pass judgment on anything. The one real teacher of them, glad to escape with his life and his job, took his plan away, and buried it on his darkest shelf, along with the dust of his other great ideas.

A national association of a certain school of physicians had a president who knew how much the doctors needed businesslike methods. At his own expense, he retained a business counselor, to serve the members of the association. The expert diagnosed conditions, and prescribed certain remedies—financial, mechanical, psychological. How did the president's noble effort result? There weren't enough doctors in the whole association who valued business methods to warrant having the prescription made up for these financial invalids. And the overwhelming objection was, that the efficiency engineer, not being a doctor, must be incapable of advising doctors in any subject whatsoever!

A church organization had trouble raising money, keeping up attendance, and getting the members to work. An efficiency man, besought by a prominent church official on a friendly basis, prepared a technical report giving the right instructions,

and charged nothing for it. The good people were listening somewhat favorably, when, alas, a doubtful brother mentioned

mournfully that the business adviser was not a member of "our church," and was even suspected of being unorthodox, theologically. Immediately, everything was off! How could a man with a touch of heresy be a proper guide in efficiency?

A professional union of more than 10,000 photographers wanted an efficiency program, for reduction of costs, increase of business, improvement of the profession. A leading business analyst was consulted. He spent \$50 worth of time in going over the situation, believing the union was financially responsible; then he offered to construct a \$300 business plan for \$75, in view of a belated poverty plea by the union. This plan, if carried out, should have added \$100 a year or more to the income of each of the 10,000 photographers. But the union said they really couldn't afford to spend all of \$75 on efficiency; wherefore, they hired a cheap near-expert for only \$25; and thus, in saving \$50, they lost a possible yearly gain of \$1,000,000.

**T**HESE examples of childish professional folly are but a few that have come to my direct notice. Efficiency annals are full of them. We waste no time on protest or criticism. But we do wonder why the majority of professional men are dull-headed, slow-pursed and sour-hearted, when viewing their own best interests. Would it be unprofessional to be unprejudiced?

Last year a certain corporation put \$5,000,000 into the treasury by employing outsiders to tell the company how to run its own business! These outsiders were efficiency engineers. They knew little of the technical details of the industry, but were postgraduates in human nature, practical psychology, publicity, finance, economy, hygiene, employment and equipment. You won't begin to realize the possibilities in your trade or profession till you hire a general business expert to teach you the general business principles now applying equally to all trades and professions. All good work interleaves and overlaps with all other good work; and the best corporation president or the best master mechanic would be qualified to teach the average professional man a hundred points in the man's own profession!

You want clients—the business man wants customers. Well, what's the difference? The appeal to human nature that fills the aisles of a department store would fill the pews of a church, the halls of a college, the alcoves of a library, the seats of an auditorium, or the beds of a sanitarium. Progress demands publicity. Every great leader is a great advertiser. And it takes a better knowledge of the laws of advertising to sell sermons or prescriptions than to sell shoes or pianos.

Your day is long and tiresome, you lack energy, you need more help, more freedom.

more time for self-improvement. Why not utilize in your vacation the short cuts and easy ways of scientific management? Are you familiar with time and motion study, have you laid out your work on the quickest route, is your equipment and supply department mechanically perfect?

You find it hard to make collections, you often lose on bad debts. Business men formerly had the same trouble; they have developed means, however, to bring almost any bill-dodging creditor to book, and without offending or alienating him. Why should the slow-pay and no-pay customers be forced to be honest with their butcher and clothier but allowed to put off indefinitely their minister and doctor? A professional man is a benefactor treated like a beggar when his bill arrives. He must learn financial methods from the business man. If as many as ten per cent of your creditors pay behind-time or never, you should particularly study modern collection devices.

You are perhaps the occasional victim of brain fog, nerve exhaustion, irritability, poor sleep, low vitality, or other signs of approaching breakdown. Then your diet must be analyzed. The brain worker whose profession demands not only keen thought but nerve strain and moral responsibility cannot eat as the ordinary man does if he is going to reach the top and stay there. He must learn to reduce the heavy proteins and carbohydrates, but increase the pure albumins, phosphates and mineral salts; to regulate his meal hours according to his working day; to banish thoughts of work while he eats; to masticate and rest properly; to enjoy his food to the uttermost; to create and perpetuate real hunger by daily exercise; to solve, in short, the personal equation of the science of nutrition.

You may be handicapped by excess of competition. The average town or city of the United States has, by the reckoning of business ratio, from two to five times as many doctors, ministers, lawyers, bankers,

other professional men, as the local population requires. The law of demand and supply that keeps a level-headed grocer, druggist or haberdasher from opening a store in the same block with another store of the same kind should warn the professional man to avoid the similar blunder of settling where, already, competition is too keen. Perhaps, now or later, you should move to another field; or should outrun competition by the modern help of commercial psychology and vocational efficiency, united. How, exactly, would you do either of these things most effectively?

You are probably suffering enormous waste of personal resources by overproduction and underdistribution. A business man who produced as much comparatively, and sold as little, as you do, would go bankrupt in six months. The most valuable commercial substance is brain fiber. The great engineers, inventors, promoters, corporation presidents are paid \$50,000 or more a year for *thinking* so as to benefit large groups of people in a vital way. No matter how well or how much you think for a handful of clients, you are wasting nerve and brain force tremendously. Your problem is how to command retainers from large institutions; or how to resell, over and over, the original product or service that you now sell but once. An example of huge professional waste occurs in the pulpit. A preacher who serves a church twenty years has composed 2000 sermons or more—and buried each in his "barrel," upon delivering once. Why this utter loss? Two thousand pairs of high-grade shoes are worth at least \$10,000; if a clergyman should wear all these shoes only once and then discard them, what sort of names would he be called? Are his sermons of less value than his shoes?

You are subject, daily and hourly, to the annoyance and hindrance of poor help. Only the clerks and stenographers who have been trained to equal their maximum

output, of quality or quantity, by *some large company* even know what their maximum is. Four times out of five, the employee in a private office is a chronic slacker. Do you follow the methods of corporation heads in choosing, handling, equipping, educating, rewarding and promoting employees?

THE whole situation boils down to this: whatever you do, or should do, in your profession that a good business man also does, he most likely does better; so you should find a way to learn from him. A profession that is not fundamentally a business merely hides in classic verbiage the road to failure. Thousands of young lawyers, doctors, writers, teachers and preachers half starve, while the young business men who were their college mates prosper and grow fat. Why? Because the first thing a young business man has to do is learn the rules of the *business game*.

Billy Sunday made a hundred thousand penitent New Yorkers "hit the trail" not because he was a good preacher—there are plenty of earnest preachers, but because he was a master of business psychology. Edison, Bell, Burbank, Schwab, Hammond, the Wright Brothers, the Mayo Brothers, are a few examples out of hundreds where the height of professional skill joined to the breadth of business knowledge and the depth of business detail, produced national figures of achievement, service and renown. There is no professional work that would not be improved or enlarged by some business addition or affiliation.

How can you put business efficiency in your profession? We may note seven steps to take, as follows:

- 1. Prepare a list of everything you do, or may have to do, in your daily work. Check each item that a subordinate could not handle, or learn to handle, thus relieving you of all responsibility save that of the highest
- [Continued on page 124]

# PROFESSIONAL MAN'S EFFICIENCY TEST

FOR STANDARDIZING HIS WORK, LOCATING POSSIBLE ERRORS,  
AND INDICATING PROPER BUSINESS METHOD AND EQUIPMENT

DIRECTIONS. First read Mr. Purinton's article "Efficiency in the Professions." Then answer the following questions. Where answer is Yes, write numeral 4 in space opposite. Where answer is No, leave space blank. Where answer is indeterminate, write numeral under 4 that seems honest. Add numerals for approximate grade in correlations and application of business principles to your profession. Please limit queries and problems to those having a direct bearing on your efficiency in war duty, as patriotic service no less than personal advancement must now be the aim of all Americans. Mail your questions to Mr. Purinton, care Independent Efficiency Service, 119 West 40th Street, New York.

- 1. Do you believe that every profession should be in *method* a business? .....
- 2. Are you studying efficiency from an expert outside your profession? .....
- 3. Have you standardized every mechanical and clerical operation in your work? .....
- 4. Does innovation appeal to you more than tradition? .....
- 5. Did you read, and apply to yourself, Mr. Purinton's Independent efficiency articles, February to August, 1917? .....
- 6. Has your national professional organization retained a business or efficiency counsel? .....
- 7. Do your rivals or competitors imitate your way of doing things? .....
- 8. Are you advertising your services regularly, scientifically, modestly but effectively? .....
- 9. Can you perform as much in eight hours as you formerly did in twelve? .....
- 10. Do at least eighty per cent of your debtors pay within thirty days? .....
- 11. Have you made a special study of modern business collection systems? .....
- 12. Are your eating habits regulated to suit your work, health, age, temperament? .....
- 13. Is your location sufficiently free of competition to afford real opportunity? .....
- 14. Have you escaped the chronic professional danger of overproduction and underdistribution? .....
- 15. Are all your brain products utilized fully by some large re-sale plan? .....
- 16. If you doubled your fees, do you think you could keep 80 per cent of your clients or patrons? .....
- 17. Are your employees chosen, trained, manager, promoted, by modern scientific principles? .....
- 18. Do you know the approved maximum day's work for every employee? .....
- 19. Is each employee following some line of professional or industrial education? .....
- 20. Have you consulted the Plan and Purchase Department of The Independent Efficiency Service? .....
- 21. Do you subscribe for at least two general business or efficiency magazines? .....
- 22. Are you a member of a national professional association, and of a national efficiency organization? .....
- 23. Have you a business library, in regular use by all employees? .....
- 24. Do you expect to be, in ten years, financially independent? .....
- 25. Are you following a detailed plan to reach the very top of your profession? .....

Total gives your approximate efficiency grade in your profession.

# Is Your Study Up to Date?

An especially useful lamp for the professional man. Its long shade and eye protector assure good light on the desk

This postal scale weighs your letters and packages—up to 2 lbs.—and tells the postage required, at 2 or 3 cent rate

A telephone can be very much in the way on a desk. This device will help you to keep "the voice with a smile" on a busy morning when your desk is piled with work

An efficient chair is important—it should be the right high and depth, fit the back acceptably, swing easily and noiselessly. This one was built for the President. \$15 up

Here is a binder clip that does away with the nuisance of loose papers. Easily attachable and firm. You can use it to hang up the sheaf of papers

Memoranda sheets right at hand, with daily record of coming events, make this neat tray a real convenience

Do you know now where you can find string, mullage, tags, fasteners, labels, key tags? This handy box holds a good assortment of the very things you want. \$2 to \$5

This radium dial watch can stand on the desk during the day and by the bed at night. It has an alarm. \$14 to \$20

The glass desk-pad provides a safe place for memoranda frequently used. Always in sight, never crumpled or soiled. It costs \$4 to \$10

A set of neat wooden trays to hold letters and papers before final filing. It's an excellent remedy for a cluttered up desk

A handy numbering machine for bank checks, documents and various uses. Numbers from 1 to 999,999

At the left a dignified, expansible case for books or documents. It is made of oak or mahogany. \$30 up

Bright little brass fasteners to hold related papers together. Easily put on, they have a very good grip

Almost every kind of business papers can be filed in these boxes or envelopes

# WHO GETS THE SURPLUS?

BY MALCOLM KEIR

ASSISTANT PROFESSOR OF INDUSTRY AT THE UNIVERSITY OF PENNSYLVANIA

At the noon hour I stood with a crowd of skilled mechanics listening to the passionate appeals of a union leader. "Who gave you the eight-hour day," he shouted. "Was it the capitalists? Who got decent working conditions for you? Was it the bosses? No, it was the union. The union fought for your good clothes and your half holidays. The union protects your wife and feeds your children. Have the capitalists ever done anything for you? Haven't they always waged war against every step you have made upward? Could you have gotten where you are without the union? Then stick by it now! The capitalists have a new trick up their sleeves. They call it 'Scientific Management.' They offer you high wages, higher even than the union rate. Men, don't be fooled! High wages are a dodge. The bosses pay them in order to get you to work harder. They intend to speed you up to the limit, to make machines out of you, and to smash the union. When the union is gone wages will be cut. Then where will you be—drudges working like slaves for a pitiful hand out. Scientific Management is capitalistic greed in a new camouflage. I tell you—"

But the noon whistle interrupted the speaker and his crowd melted away in the direction of the time clock. I passed on to the factory office where I had an engagement for an interview with the man who was installing scientific management in the plant. I told him about the speech I had just heard, and asked him what he thought about it. He smiled tolerantly and said: "Oh, the unions don't worry us much. They are 'has-beens.' There was a time when they were necessary. When factories were split into two hostile camps the employers on the one side, and the men on the other, the only way either side could get any concessions was by force. But we have done away with all that. We substitute harmony for conflict. What have the unions fought for? Wasn't it higher wages, shorter hours and better conditions? Well we pay from thirty per cent to a hundred per cent higher wages than the unions demand. We put in an eight-hour day in the whole plant, not just the machine shop where the union is strong, and we have standardized working conditions. You see there isn't much left for the union to contest. We have nothing against the unions. They can continue if they want to, taking care of educational and welfare work. But the collective bargain must go. There isn't any place for it and it is fundamentally wrong anyhow. Men ought to be treated and rewarded as individuals, not as members of a group. The only efficient way to pay a man is for what he does, not because he belongs to a union."

THESE two views—the labor leader's and the scientific manager's—are typical of their groups. Yet they are both wrong. They infer that there can be no common ground concerning vital issues where the unions and scientific management may meet. The most vital issue between employers and employees is wages. Scientific management has not solved the wage problem, and consequently there is a basis for bargain between workmen and employers.

The wage question has been summed up in the phrase, "A fair day's work for a fair day's pay." That was a glittering oratorical generality that meant nothing because no man knew what constituted a fair day's work, and much less was he informed

as to what was a fair day's pay. Since both sides of the equation were doubtful quantities, the only just way to arrive at a conclusion was by collective bargain.

Then came Scientific Management, which claimed to solve the difficulty accurately and mathematically. The new managers first tried to discover scientifically what was a fair day's work. By motion study, time study, and fatigue study they accomplished their desire. They have found out with astonishing accuracy what a fair day's work really is. But what about the other side of the equation—a fair day's pay?

The followers of F. W. Taylor, the founder of Scientific Management, point with pride to Taylor's experiments with wages. Taylor learned by the trial and error method that work may be divided into four classes, as follows:

1. That requiring little brain and small brawn.
2. That requiring brawn but little brain.
3. That requiring brain but little brawn.
4. That requiring both brain and brawn.

Also by the method of trial and error Taylor found that men in each class could be induced to work at their best pace for the following increases in pay:

Class 1—	30-50%
" 2—	50-70%
" 3—	70-80%
" 4—	85-100%

Since these percentages were obtained by experiment the disciples of Taylor claim that they are scientific and accurate. Thus they say: "We have now a scientific determination of a day's work and also a scientific wage rate." Are they right?

THE wage under scientific management is made up of two parts, a base rate plus a bonus. The base rate is always taken as the regular rate of wages in the community where the plant operates. For example, if day labor is paid \$1.75 per day ordinarily in that town, scientific management accepts this as a starting point for rewarding the day labor performed for them. In other words, scientific management makes no effort to ascertain a scientific base rate, but accepts the current one. This average rate may be set by a variety of causes such as mere subsistence, custom, supply and demand of labor, and union agreements.

Inasmuch as the current wage is not scientific and since scientific management does not try to find a more scientific substitute for it, it is a fair question for debate as to what this base rate shall be. In normal times employers have an advantage over individual workmen in all disputes in regard to wages. Hence, a fair base rate cannot be set by agreement between an individual worker and the firm that hires him. Therefore there is room for labor unions even under scientific management. The unions and managers can come together and by collective bargain ascertain what the base rate shall be. Because it cannot be set by any accurate method now known it should be established by the co-operation of both parties to it.

The base rate, however, is not the essential feature of scientific management's wage system; its distinguishing mark is the bonus that is paid in addition to the base. What is the source of this bonus?

The success of scientific management rests upon the difference in amount of work that a good man can turn out when exerting himself at his best, and the amount produced by the average employee. The average, say, turns out ten pieces as a day's task, while the good man at his best pace

may reach as high as thirty pieces. Under present conditions the first-class man never attains this high mark because he fears a cut in rates if he does. So the factory jogs along with a product of ten pieces per day per man. When scientific management gets in control it guarantees never to cut rates as long as the job remains unchanged, and in addition it promises to pay in proportion to output. This offers a strong inducement for the worker to make thirty pieces instead of ten. The cost per unit is therefore much reduced.

Meanwhile the selling price continues where it was, because it is fixed by the cost of production in the average plant rather than that in the factory run by the new kind of management. There is a gap between cost of production and selling price that is wider in a business under scientific management than in any of its competitors. That is to say, the scientifically managed plants earn the largest profits.

INCREASED production as a result means a surplus profit. The question arises, how shall the surplus be divided? The consumer may get his share in a selling price slightly lower than the average, but there still exists a goodly sum to be divided between employer and employee.

The workmen say that the whole surplus is due to their increased activity. They have increased output 300 per cent; therefore they deserve a 300 per cent raise in wages. The employer replies that it is impossible for the workman alone to enhance the output. The management has made expensive, extensive, studies of motions, times and fatigue; it has standardized machines, tools and appliances; it has improved working conditions and relieved the worker of all tasks not directly related to his job. Therefore the managers justly assert that the worker is not entitled to all the surplus profit. Furthermore, merely from the standpoint of expediency the management must get a generous share of the profit, for otherwise it will now go to the trouble of installing and maintaining the new system by which the laborers get more money. On the other hand the management knows that it cannot take all the surplus because if it did the workers would refuse to increase production. Here is the dilemma.

There is no way of measuring just how much the workers and managers each contribute toward the greater production that makes a surplus possible. The employers by their strategic position could, if they were unchecked, lay down the apportionment of the surplus without consulting the laborers.

This is the opportunity for unions. The workmen ought to have some voice in deciding how the gains of scientific management shall be distributed. Inasmuch as no individual worker can hope to make his voice heard, then it is only by coördinate effort that the end may be accomplished. Since the union organization is already in existence for just this purpose, it ought to be retained.

Therefore there are two fields for the work of collective bargaining. By joint agreement between unions and managers a basic wage can be set up. When this is established, then again by coöperative action and division of the surplus arising from the greater production under scientific management may be made the matter of arbitration between labor as a group and the managers.

Philadelphia

# TOUCHSTONE—MR. GOMPERS

## A Master of Efficiency

BY DONALD WILHELM

**T**HEY used to test the fineness of gold by the color of the mark it left on a touchstone," averred a new Congressman in a speech in Gus Buckholtz's restaurant in Washington.

And then he referred to that "leader of the American Socialists, Mr. Gompers."

Now, Mr. Jasper, as one might call this Congressman, tho scratching the surface of things very lightly, and remembering advisedly that Touchstone is the witty clown in "As You Like It," caused two colleagues to look upon him with frowns.

One inquired, "Who's wrong on facts now?"

The other pointed out that of course the leader of the two million skilled and disciplined members of the American Federation of Labor is not a Socialist, no matter what one take that much-confounded word to mean.

And then all three fell to discussing Mr. Gompers, and it was discernible that they represented three distinctive points of view, each illuminative of a large class of Americans.

One point of view was demonstrated by Mr. Jasper, who had seen Mr. Gompers in the news photos of papers and of movies but never had been measured personally against him. Mr. Gompers wasn't built for the movies—he is too short, too heavy, his back is too stiff. He wasn't built for bowing and inviting; rather for force, relentlessness, patience, strategy. Nevertheless Congressman Jasper had decided notions about this little general and much-misunderstood man. And millions of others have similar opinions formulated in a similar way. Audiences laugh at Touchstone Gompers and by that act one may judge them no less than the little man with the ponderous heavy face, heavy under the eyes, and the short, heavy body as startling in its bulk as Dr. Steinmetz's, and his air of bustling and insistent determination reflected even in his determined jerky stride.

And there is another class of Americans—a second class—who watch the strokes rather than the appearance of this epochal man. They know him as a hard-fisted relentless and incorruptible leader, the master strategist and tuning fork extraordinary for that chain of many links strung round the earth, Labor.

This second class, in short, is made up of employers.

And there is a third class—the vast caravansary of organized workers, raw material, as it were, in every manufacturing plant in America—who love this Don Quixote, as others sometimes have called him—who really love him! And ask permission to erect statues of him and hear his kindly, characteristic "Go-go-go-go!"

After all, thus, we see that, in fair measure, we can judge a neighbor by his judgment of Touchstone Gompers—our industrial problem is that big and the leader of the American Federation army has a part that important in it. But, in justice to neighbors such as Mr. Jasper who know nothing about the labor situation in America and little about Mr. Gompers therefore, and less about the question of all questions, the industrial question, let us add that any neighbor discovering much of personal beauty in this strong-hearted oak of a man suffers, surely, from that insomnia called an excess of enthusiasm over judgment.

But in a man personal beauty is casual after all. Lincoln wasn't beautiful—even

across all the distance and change of half a century. And those of the public who know anything about Mr. Gompers and see him otherwise than in news movies, and historians and employers, are not concerned much about the personal appearance of the man. The public, and historians and employers, measure him about as the whole world comes more and more to measure every one—as great only in measure that his achievement and its influence are extensive and operative in the betterment of human kind. And how could the influence of a labor leader be much greater when it is he who has, with the devotion of a votary, brought American labor up out of the helplessness that he looked upon long back, a boy on London's East Side, when he saw in Spittelsfield, the silk district, thousands of weavers thrown out of trades that were traditional and handed down like heirlooms from father to son, marching in thousands, bearing signs, "We are starving." Machinery and the industrial revolution had come! It was little understood then, and less understood by these helpless workers. That spectacle was the A B C of his schooling. He started with that—started on that long march of his, with those short legs of his and determined, dogged head, and all his struggle and devotion taught him things undiscoverable by others, brought him to America to give his full life to the building of an edifice which he refers to as "a bulwark of democracy"—an edifice in which he has been the center pillar for many years

and the builder, too, an edifice impossible until he had demonstrated it.

Then war came and he—a pacifist—was discovered suddenly to be—we must alter the figure!—a little man with the stars and stripes wrapt about him, making a speech for Uncle Sam. He "warmed up" in the course of that speech and said in an interview a little later, "We have heard the claim that democracy is not and cannot be efficient." And then he averred that labor would help America show herself to be efficient in war as in peace. And, in fact, he was already helping, and he since has helped so efficaciously that it is literally no exaggeration to say that his office has been more referred to, more influential, more important vastly in the conduct of the war than the office of the Secretary of Labor—a literal striking truth! The only governmental agency for dealing with labor disputes in war time production was the Department of Labor. In the ensuing months quite new machinery for dealing with them was devised, and Mr. Gompers was the touchstone on which this machinery for the War and Navy Departments and the Shipping Board operated. He is a member of the Cabinet in all but name. It is no wonder the President went to Buffalo in order to make a speech and extol "his patriotic courage, his large vision, his statesmanlike sense and mind that knows how to pull—in harness . . . more reasonable in a larger number of cases than the capitalists."

**M**R. GOMPERS was a pacifist. Labor, rather generally, in America and in Europe, was averse to war—a fact that may have great promise in the days of Reconstruction. Now he is the patriot of all patriots in the Capitol. He was less a pacifist, perhaps, than he might have been if, in London, a boy of barely ten years working at a cigar-maker's bench, he had not listened and felt the back currents of our Civil War against masters; and more a pacifist, perhaps, because his fine Jewish idealism shrinks at thought of any expenditure of blood. It was not ever that he was weak-kneed in his resolutions.

He is a fighter, the scarred and wilful old "vet" of literally hundreds of industrial wars, master strategist of them all; yet when he went to a summer camp a few summers ago "for rest and sport"—comforts he has seldom indulged—and had a gun, a dog, an opportunity to kill a bird, he couldn't muster the courage. "I'll read and smoke instead," he said.

Then he took out one of his excellent cigars and rolled it between his heavy hands. One of the others watched and smiled. He rolled it along the edge of a porch railing; and again the others smiled.

"Mr. Gompers, you must have been a cigar maker!" some one said.

Mr. Gompers nodded, smiling.

It is easy to tell, in other ways, that he came from that trade of students and thinkers.

He was a very efficient cigar maker. It is said, even when a boy the son of thirty Hollanders. Certainly he brought a knack for efficiency to America's East Side with him when he came here, the eldest son and thirteen, for it was not very long afterward that he became No. 1, the first charter member—a fact he is proud of, and the chief in proof of which he carries to this day—of his cigar maker's. Mr. Gompers (at the right) talking with Secretary at Labor Wilson

# AUTOMOBILES, COAL AND EFFICIENCY

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR EFFICIENCY SERVICE

**H**AVE you enjoyed a certain deficit in your coal cellar this winter? Unless you are one upon whom the gods habitually smile, it is probable that you have. It is probable, also, that, in the course of your search for the precious commodity and your inquiries into the reasons for its unpleasant scarcity, you have discovered the chief root of the evil to be—transportation trouble.

The transportation problem just now is the cynosure of all cynics. Conversation, in office and dining room, is centered on the railroads. In a few short weeks freight congestion and mail train vagaries have become a sort of national excuse for individual delinquencies. If my answer to your letter does not arrive I shift responsibility in the case on to the railroads, even if my answer is as yet unwritten. And so it goes.

I mention this because it is true that for anything to become a household word it must be either very frivolous or very serious. And I want to emphasize the seriousness of the transportation problem because, when you analyze it, you can at once see how much more serious it would be without the passenger automobile.

For the following interesting survey I am indebted to an article in the *New York American*, by F. E. Moskovics, of the Nordyke and Marmon Company:

"Few, even of those most closely identified with the motor car industry, comprehend how miraculously the passenger car has conserved vast mountains of coal for America in this year of her first fuel famine.

"Without our cars and the useful work they have done, this coal would have been consumed in transportation work by steam roads and by electrically driven trolley and interurban cars thruout the land. Facing the peril of international coal famine, the work of the motor car in saving coal thru consumption of gasoline for transportation work has been of stupendous value to humanity.

"There are now more than four million passenger cars in America, to say nothing of half a million trucks. Each one of these cars we know will average 4000 miles a year—most of them will run 6000 to 8000 miles, but let's use the conservative 4000 mile figure. On a conservative estimate the average car carries three passengers for practically every mile it travels.

"This means that our passenger motor vehicles have transported twelve million passengers—sixteen billion miles this last year. All the coal the steam roads, the city trolley cars and the interurban cars would have consumed in transporting these passengers has been saved for America and our allies and friends overseas.

"Take it another way. Suppose those twelve million passengers which were carried by motor car had ridden entirely by railroad train—fifty passengers to a car. It would mean 240,000 loaded steam passenger cars going clear across the continent with twelve million passengers.

"Such a colossal and stupendous emigration of a city nearly three times as large as New York has never occurred in the world's history. Think of the coal it would take to haul 240,000 railroad cars from New York to San Francisco. A railroad official tells us it would require at least 100,000,000 tons."

The Independent has already stated, thru this department, a fact which it would be

well for every one to remember and cherish, namely: that the total annual traffic carried by passenger automobiles far exceeds the total annual passenger traffic carried by all our railroads combined. With this fact in mind, imagine, for a moment, what our condition would be if all the passenger automobiles in America were to be wiped out overnight. The railroads are congested now. Passenger trains are being removed from schedules because the coal they consume and the crews they require and the engines that draw them are needed urgently for the transportation of freight. Figure the chaos which would result from banishing our motor cars and suddenly dumping their twelve million passengers upon the railroads.

Yet there are some people who believe that the use of passenger automobiles should be curtailed if not prohibited for the duration of the war.

Why not look at it like this: Since the passenger automobiles now in use take a burden off the railroads and save enormous quantities of much needed coal, should we not increase and encourage the use of passenger automobiles so as to relieve the railroads still further and save still greater quantities of coal?

**T**HERE are people who urge the discontinuance of all industry and business which is not directly related to the production of foodstuffs and military supplies. They would not make any motor cars not actually needed by the Government. In this connection I submit three paragraphs from Rabson's:

"Giving to the cause impoverishes our business and hence impoverishes the nation. An impoverished nation can't win wars.

"Earning for the cause, by increasing production and reducing costs, strengthens our business and hence strengthens the nation.

"Nations whose business men first get this point of view, and put it into practise, will be the real winners in the present conflict."

I am going to quote another automobile manufacturer on this subject. And lest you should be inclined to discount his remarks as biased, I want to remind you of the whole-hearted way in which the entire motor industry has coöperated with the Government from the very beginning. John N. Willys says:

"Is it not wisest for us to follow the policy of filling the Government contracts with the utmost speed and keep the rest of our productivity going in accord with public demand, so that the vast army of American people at home are in a position to support the Government with a spirit of optimism, and also with enough money to help market the bond issues which are coming up from time to time?"

*Ask the Director anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.*

"I refer now to the broad interests of all American industry. The automobile industry is so firmly entrenched as a part of the great transportation system of this country that those who know the part it plays consider it one of the fundamental essentials of this country today. But there are other industries which have been classed by unthinking people as non-essentials. I believe such classifications are pernicious and dangerous.

"What is essential to me may not be to you. As a matter of fact you may say that even the clothes you have on your back and the boots you wear are non-essential, because the North American Indians lived here in the same climate for thousands of years without them. Similar comment might be made concerning many industries.

"I believe the public is capable of deciding what is essential to them and we should, after war needs are properly supported, let the people alone to make their own choice of their requirements.

"To illustrate how impossible it is for any man to determine his neighbor's requirements, I was talking the other day to a man who was inclined to refer to motor cars as a non-essential, while he regarded the railroad as a necessity.

"That man did not know that several of his neighbors were saving dollars every year by traveling to town in their cars instead of by railroad.

"He did not know that the motor car is taking an even greater part in the pioneer development of the country than is the railroad. Nor did he know that the seating capacity of automobiles in this country is greater than that of the railroads. He had not been informed that the pleasure driving of automobiles is less than 15 per cent—probably less than the pleasure riding on trains and trolleys.

"He had not considered that every automobile parked down town in our cities represents a man or woman on some time saving business event, or that the 2,700,000 automobiles in rural communities are transporting millions of pounds of produce daily, bringing farms nearer to town and saving millions of hours for productive time to farmers who formerly had to use horses.

"He did not know that salesmen today are saving 10 to 50 per cent of their time with the automobile—leaving that much extra power for Uncle Sam.

"He did not even know that Paris was saved in the battle of the Marne with taxicabs; that nearly half a million automobiles made possible the sale of the last Liberty Loan to 900,000 people.

"I asked him how we would have progressed with the Red Cross campaign, with the war camp campaign, with the building of our cantonments if we had eliminated the motor cars? I asked him how we could go back to the old methods even if we could accept again the slow horse transportation used by our fathers—with the supply of horses now so greatly reduced.

"I asked him if he knew how much foodstuff would be required to feed the horses that would be required to do the work now being done by the automobile. He did not know.

"I point out these things about my business just to show you how mistaken a man may be in his opinion about the necessity of any industry. Above all times, this is a good time for every man to weigh his remarks and stick to those things he knows."

# Why You Are Not Paying 30 Cents for Sugar

In April 1917 the cables told of a plan proposed by Herbert C. Hoover, then in London, which he described as "a plan by which the Allies can consolidate under one head the whole purchasing of food staples from our market, and not only will competitive bidding be abolished, but by co-operative buying on our side we can arrange the proper balance between the rights of producers and consumers."

This plan was favorably received by the sugar refining industry which has been on a war basis almost from the beginning of the European War.

The war had brought the Allies into the Cuban market, resulting in severe domestic and international competition with no increased supplies. Naturally, prices of refined sugar, both to the American public and to the Allies rose under this forced draft.

Domestic sugar refiners, since the outbreak of the European War not only have safeguarded the United States supply but have maintained the lowest sugar prices in the world. This brilliant record is due largely to the fact that sugar refining is in the hands of large business units, with an excess of refining capacity sufficient to supply all domestic needs, and so far all demands of foreign countries.

In the spring of 1917 there was a serious attempt at the disorganization of the sugar refining industry, following a long series of attempts at destruction of sugar ships.

Accompanying these incidents were widely circulated sensational reports predicting a sugar famine and sugar shortage, causing widespread apprehension. At that time, even with the assurance of ample supplies on hand, retail sugar prices rose in some sections to 20 and 25 cents a pound.

The efforts of the American Sugar Refining Company to allay public alarm, to check hoarding, to accept a price less than that which it could easily have secured, and to distribute its product fairly and evenly among the trade, were of real public service.

While there were great supplies of sugar in far-away Java which ordinarily would have gone to Europe, yet the necessity for saving ships became so great that Europe turned to Cuba for even larger supplies than previously.

It takes a cargo ship 150 days to make a round trip between England and Java, while a round trip between England and Cuba can be made in 50 days. Under these

circumstances and seemingly to avoid paying proposed United States war taxes on refined sugar the European Allies purchased in Cuba the sugar which ordinarily would have come to the United States in the fall months.

These conditions and especially the necessity of saving ships, led the United States and the Allied Nations to urge upon the sugar industry the adoption by voluntary agreement of the original Hoover plan, under the authority of the Food Control Act passed August 10, 1917.

The cane sugar refiners and the beet sugar producers unanimously agreed to the Hoover plan as a patriotic act in the interest of the American people as an aid to the Allies.

This is the significance of the appointment by the United

States Food Administration of the International Sugar Committee to which the Allies send representatives for England, France, Italy and Canada, and to which the United States contributes three members.

Upon the success of the operation of the International Sugar Committee under the direction of the Allied Governments, acting for practically half the civilized world, will depend the readjustment of the world's sugar

markets. This plan is full of promise to all the nations party to the convention. It is an assurance that sugar, although comparatively cheap in view of war conditions, will not by reason either of competitive or speculative activity be increased in wholesale price.

Sugars will become stabilized in price with sufficient profit to producers, refiners and merchants to maintain and stimulate production and to cover the cost of refining and of distribution.

The marketing of Domino Cane Sugars in cartons and small cotton bags by this Company has helped amazingly during the pinch of the fall months, in giving a wide distribution among the retailers of the reduced sugar supply.

It will be necessary for grocers and consumers to watch carefully their distribution and purchases during the approaching period of readjustment. The refineries are now starting up and supplies of raw sugar coming forward but it will take weeks, and possibly months, for the return of normal conditions.

Housewives can aid in conserving the sugar supply by buying these package sugars.

In war times and at all times it is our aim to safeguard the interests of the public we serve.

## THE PEACE SPEECH OF PREMIER LLOYD GEORGE

(Continued from page 101)

France and incorporated in the German Empire.

This sore has poisoned the peace of Europe for half a century, and, until it is cured, healthy conditions will not have been restored. There can be no better illustration of the folly and wickedness of using a transient military success to violate national right.

I will not attempt to deal with the question of the Russian territories, now in German occupation. The Russian policy since the revolution has passed so rapidly through so many phases that it is difficult to speak without some suspension of judgment as to what the situation will be when the final terms of European peace come to be discussed.

Russia accepted war with all its horrors because, true to her traditional guardianship of the weaker communities of her race, she stepped in to protect Serbia from a plot against her independence. It is this honorable sacrifice which not merely brought Russia into the war, but France as well.

France, true to the conditions of her treaty with Russia, stood by her ally in a quarrel which was not her own. Her chivalrous respect for her treaty led to the wanton invasion of Belgium and the treaty obligations of Great Britain to that little land brought us into the war.

The present rulers of Russia are now engaged, without any reference to the countries whom Russia brought into the war, in separate negotiations with their common enemy. I am indulging in no reproaches. I am merely stating the facts with a view to making it clear why Great Britain cannot be held accountable for decisions, taken in her absence, and concerning which she has not been consulted or her aid invoked.

No one who knows Prussia and her designs upon Russia can for a moment doubt her ultimate intention. Whatever phrases she may use to delude Russia, she does not mean to surrender one of the fair provinces or cities of Russia now occupied by her forces. Under one name or another (and the name hardly matters) those Russian provinces will henceforth be in reality a part of the dominions of Prussia. They will be ruled by the Prussian sword in the interests of the Prussian autocracy, and the rest of the people of Russia will be partly enticed by specious phrases and partly bullied by the threat of continued war against an impotent army into a condition of complete economic and ultimate political enslavement to Germany.

We all deplore the prospect. The democracy of this country means to stand to the last by the democracies of France and Italy and all our other allies. We shall be proud to stand side by side by the new democracy of Russia. So will America and so will France and Italy. But if the present rulers of Russia take action, which is independent of their allies, we have no means of intervening to arrest the catastrophe which is assuredly befalling their country. Russia can only be saved by her own people.

We believe, however, that an independent Poland, comprising all those genuinely Polish elements who desire to form a part of it, is an urgent necessity for the stability of Western Europe.

Similarly, tho we agree with President Wilson that a break-up of Austria-Hungary is no part of our war aims, we feel that unless genuine self-government on true democratic principles is granted to those Austro-Hungarian nationalities who have

## How to Use the Countryside Shop

I.—Write for our free Requisition Chart. Read the list of interesting items it brings you.

II.—Check the items you expect to buy and about which you want information.

III.—Write on the blank pages all details and questions. Mail to us.

IV.—As promptly as possible, we will make reply, drawing upon our files of information and the experience of our Expert Counsellors to give you helpful suggestions.

WRITE FOR BOOK OF DESIGNS

long desired it, it is impossible to hope for a removal of those causes of unrest in that part of Europe which have so long threatened the general peace.

On the same grounds we regard as vital the satisfaction of the legitimate claims of the Italians for union with those of their own race and tongue. We also mean to press that justice be done to the men of Rumanian blood and speech in their legitimate aspirations. If these conditions are fulfilled, Austria-Hungary would become a power whose strength would conduce to the permanent peace and freedom of Europe instead of being merely an instrument to the pernicious military autocracy of Prussia that uses the resources of its allies for the furtherance of its own sinister purposes.

Outside of Europe we believe that the same principles should be applied. While we do not challenge the maintenance of the Turkish Empire in the homelands of the Turkish race with its capital at Constantinople, the passage between the Mediterranean and the Black Sea being internationalized and neutralized, Arabia, Armenia, Mesopotamia, Syria, and Palestine are, in our judgment, entitled to a recognition of their separate national conditions.

What the exact form of that recognition in each particular case should be need not here be discussed beyond stating that it would be impossible to restore to their former sovereignty the territories to which I have already referred.

Much has been said about the arrangements we have entered into with our allies on this and other subjects. I can only say that as the new circumstances, like the Russian collapse and the separate negotiations, have changed the conditions under which those arrangements were made, we are, and always have been, perfectly ready to discuss them with our allies.

With regard to the German colonies, I have repeatedly declared that they are held at the disposal of a conference whose decision must have primary regard to the wishes and interests of the native inhabitants of such colonies. None of those territories are inhabited by Europeans. The governing consideration, therefore, must be that the inhabitants should be placed under the control of an administration acceptable to themselves, one of whose main purposes will be to prevent their exploitation for the benefit of European capitalists or Governments.

The natives live in their various tribal organizations under chiefs and councils who are competent to consult and speak for their tribes and members and thus to represent their wishes and interests in regard to their disposal. The general principle of national self-determination is, therefore, as applicable in their cases as in those of the occupied European territories.

The German declaration that the natives of the German colonies have thru their military fidelity in war shown their attachment and resolve under all circumstances to remain with Germany is applicable, not to the German colonies generally, but only to one of them, and in that case, German East Africa, the German authorities secured the attachment, not of the native population as a whole, which is and remains profoundly anti-German, but only of a small warlike class, from whom their askaris, or soldiers, were selected. These they attached to themselves by conferring on them a highly privileged position as against the bulk of the native population, which enabled these askaris to assume a lordly and oppressive superiority over the rest of the natives.

By this and other means they secured the attachments of a very small and insignificant minority, whose interests were

## Meat Costs 8 Times as Much As Luscious Quaker Oats

Meats, chicken, fish and eggs average eight times the cost of Quaker Oats per unit of nutrition. So every dollar's worth used in displacing meat saves an average of \$7.

One reason lies in oats' unique food value. Quaker Oats yield 1810 calories of energy per pound.

Eggs Yield, 720	Potatoes, 385
Round Steak, 875	Bread, 1205
(All in calories per pound)	

Another reason is the low oat cost. While other foods are scarce and high, oats are plentiful and cheap.

Yet oats are Nature's master food. Among all grain foods oats stand first in flavor and nutrition. As a vim-food and a food for growth they have an age-old fame.

You can serve five dishes for the cost of a single egg. Or the cost of two ounces of meat.

Make Quaker Oats your entire breakfast, not a mere side dainty. It supplies every needed element.

Mix Quaker Oats in your flour foods. They add delightful flavor. And the wheat you save means more bread for our allies.

# Quaker Oats

## Flaked from Queen Grains Only

In Quaker Oats we use only the rich, plump, flavorful grains. All little grains, starved and insipid, are discarded from this brand.

We get for you a pound of Quaker Oats from a barrel. The result is a flour which has won the world. Yet you get it for the asking. It costs no extra price.

12c and 30c per package in United States and Canada, except in Far West and South where high freights may prohibit

# Speedy Building

## With Stock Sizes of UNITED STEEL SASH

You not only can secure the best sash on the market but you can get them on short notice—by specifying stock units of **United Steel Sash**. Thus you will save days in building and economize in construction cost. These stock sash are carried in many sizes so as to meet practically all requirements of window openings.

Stock units have all the high quality features of **United Steel Sash**—superiority in design, material and workmanship; extra weight and exceptional strength; rigid ventilators with double contact weathering; improved method of glazing; special hardware of our own manufacture.

**United Steel Sash** are also furnished in semi-stock and to-order units, and include everything in pivoted and sliding sash, continuous sash, partitions, doors, casements, etc.

If you intend to build, look into **United Steel Sash**. We can meet your requirements fully, economically and promptly. Write for Sash Book.

directly opposed to those of the rest of the population and for whom they have no right to speak. The German treatment of the native populations in their colonies has been such as amply to justify their fear of submitting the future of those colonies to the wishes of the natives themselves.

Finally, there must be reparation for the injuries done in violation of international law. The peace conference must not forget our seamen and the services they have rendered to and the outrages they have suffered for the common cause of freedom.

One omission we notice in the proposal of the Central Powers which seems to us especially regrettable. It is desirable and essential that the settlement after this war shall be one which does not in itself bear the seed of future war. But that is not enough. However wisely and well we may make territorial and other arrangements, there will still be many subjects of international controversy. Some, indeed, are inevitable.

Economic conditions at the end of the war will be in the highest degree difficult owing to the diversion of human effort to warlike pursuits. There must follow a world shortage of raw materials, which will increase the longer the war lasts, and it is inevitable that those countries which have control of raw materials will desire to help themselves and their friends first. Apart from this, whatever settlement is made will be suitable only to the circumstances under which it is made, and as those circumstances change, changes in the settlement will be called for.

So long as the possibility of a dispute between nations continues—that is to say, so long as men and women are dominated by impassioned ambition and war is the only means of settling a dispute—all nations must live under a burden, not only of having from time to time to engage in it, but of being compelled to prepare for its possible outbreak.

The crushing weight of modern armaments, the increasing evil of compulsory military service, the vast waste of wealth and effort involved in warlike preparation—these are blots on our civilization, of which every thinking individual must be ashamed. For these and other similar reasons we are confident that a great attempt must be made to establish, by some international organization, an alternative to war as a means of settling international disputes.

After all, war is a relic of barbarism, and, just as law has succeeded violence as a means of settling disputes between individuals, so we believe that it is destined ultimately to take the place of war in the settlement of controversies between nations.

If, then, we are asked what we are fighting for, we reply, as we have often replied, We are fighting for a just and a lasting peace, and we believe that before permanent peace can be hoped for three conditions must be fulfilled: First, the sanctity of treaties must be reestablished; secondly, a territorial settlement must be secured, based on the right of self-determination or the consent of the governed; and, lastly, we must seek, by the creation of some international organization, to limit the burden of armaments and diminish the probability of war. On these conditions its peoples are prepared to make even greater sacrifices than those they have yet endured.

#### A REASONABLE REQUEST

At the railway station a father and an eight-year-old were purchasing some fruit. "Father," said the youngster, persuasively, "if I were twins, would you buy the other boy an orange, too?"

"Certainly, my son."

"Well, father, you surely are not going to cheat me out of another orange just because I am all in one piece!"—*Harper's*.

## PRESIDENT WILSON'S TERMS OF WORLD PEACE

(Continued from page 100)

effected along clearly recognizable lines of nationality.

10. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

11. Rumania, Serbia and Montenegro should be evacuated, occupied territories restored, Serbia accorded free and secure access to the sea, and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality, and international guarantee of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

12. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

13. An independent Polish state should be erected, which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

14. A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right, we feel ourselves to be intimate partners of all the Governments and peoples associated together against the imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved, but only because we wish the right to prevail, and desire a just and stable peace, such as can be secured only by removing the chief provocations to war, which this program does remove. We have no jealousy of German greatness, and there is nothing in this program that impairs it. We grudge her no achievement or distinction or learning or of pacific enterprise, such as have made her record very bright and very enviable. We do not wish to injure her, or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade, if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world—the new world in which we now live—instead of a place of mastery.

Neither do we presume to suggest to her any alteration or modification of her institutions. But it is necessary, we must frankly say, and necessary as a preliminary to any intelligent dealings with her on our part, that we should know whom her spokesmen speak for when they speak to us, whether for the Reichstag majority or for the military party, and the men whose creed is imperial domination.

We have spoken now, surely in terms too concrete to admit of any further doubt

or question. An evident principle runs thru the whole program I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Unless this principle be made its foundation, no part of the structure of international justice can stand. The peoples of the United States could act upon no other principle, and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess.

The moral climax of this, the culminating and final war for human liberty, has come, and they are ready to put their own strength, their own highest purpose, their own integrity and devotion to the test.

## Words of the Week

**HELGOLAND**—The fortified island off the northwestern coast of Germany which guards the North Sea ports of the Empire from attack. Helgoland (also spelled Heligoland) was at one time British but was ceded to Germany in exchange for advantages in Africa.

**POILU**—A French nick-name for the private soldier in the regular army. The name means "hairy" and may refer either to the difficulties of getting shaved when on active service or to the shaggy headgear which at one time were worn by certain French regiments. If you translate the word "rough neck" you come close to the underlying idea.

**SABOTAGE**—A French word, supposed to be derived from "sabot" or wooden shoe, perhaps from the fact that striking workmen would sometimes smash machinery with their heavy wooden shoes. Sabotage is now used for any destruction of machinery or manufacturing equipment or for any injury to the goods produced by manufacture with the purpose of bringing loss upon the employer.

**NORTHCLIFFE**—Lord Northcliffe, who has just returned to England from a special war mission to the United States, was not born a member of the nobility. His "real" name is Alfred Harmsworth, but the British Government conferred on him his present title of Baron Northcliffe. He owns a string of popular newspapers of which the most important are *The Times* and the *Daily Mail*. By means of these newspapers Lord Northcliffe has made himself one of the most influential leaders in British politics. Altho he belongs to the Conservative party, he has always taken an independent position on current issues and he has played a part in making and wrecking cabinets similar to that of Premier Clémenceau in France.

**SINN FEIN**—Gaelic for "Ourselves Alone," pronounced Shin Fane, is the name of the organization now agitating for an independent Irish republic. An attempt to throw off British rule was made at Easter, 1916, but the German ship conveying munitions to the rebels was sunk, Sir Roger Casement, who had been brought to Ireland to lead the movement, was captured and the outbreak in Dublin was put down in a few days after 300 of the Irish and 521 of the British soldiers had been killed. Fifteen of the Sinn Fein leaders were tried by court-martial and shot. But this stimulated rather than discouraged the Sinn Fein movement and the Nationalists who want merely Home Rule have been beaten in recent elections by Sinn Fein candidates who, however, all refuse to sit in Parliament.

## QUIT!

Pills, laxatives, saline waters and purgatives will not cure that constipated habit—you ought to know it by this time. Be sensible—you have been whipping your bowels shamelessly into action, and weakening their natural functioning more and more. Now you are full of ailments, your system is upset, your blood is poisoned—you are sluggish and dull witted—your food will not digest well—you lack stamina—you are nervous, listless, lack ambition, have no energy, no vitality—you are failing in manhood—it's all your own fault—you can

## Food Will Win the War

Lessons in America's Part in the World's Food Problem, Prepared By the United States Food Administration for The Independent

**W**E began our discussion of what the Allies are doing for food conservation by studying last week the measures that have been taken in Belgium and Italy. In this lesson we will go on and see what the situation is in Great Britain and in France.

### GREAT BRITAIN

Up to July, 1916, Great Britain had enough food to provide about 5 per cent more than the lowest level demanded for growth and energy. But conservation was necessary, for "the right little, tight little island" is dependent on foreign countries for most of her food supply. With U-boats active it is unwise to count on normal imports. England, therefore, began trying three ways of saving food: 1, by eating less; 2, by eliminating waste; 3, by using food to the best advantage. As examples of this last they undertook to get more flour out of the milling; to limit the use of grain for brewing; to remove much foodstuff from cattle feed and industry to direct human use.

At the same time the public was told how and why to save. Domestic science lessons were given in the press, in leaflets, and in lectures. The Food Ministry itself started a model kitchen on May 31, 1917, and showed right there how to prepare and cook food, and how by coöperation many can be well fed for comparatively little.

There are fifteen divisional food commissioners in Great Britain, and there are local food controllers and local boards. If more than four traders in foodstuffs, or if no woman or no labor representative is appointed to a local board, the matter is taken up with the divisional commissioner and changes are made. Regulations can be enforced by the police, by local authorities, inspectors of weights and measures and by the Food Ministry's own inspectors. A great deal, however, is left to the people. They are asked to coöperate. It is different in tone from Germany, where the people are told what to do. In England the people are "appealed" to, and "exhorted."

Grain is controlled by the Wheat Commission. This body looks after all the imports and sees that they are distributed thru trade channels at a fixed rate of commission. On the second of last May the King issued a proclamation exhorting the people to save grain. Wheat flour must be mixed with 20 per cent of some other cereal. The bread ration is from 3½ to 8 pounds a week, according to the kind of labor performed by each person. At the rate of 3½ pounds a week, the consumption of flour would be cut to less than half the normal amount.

Oils and fats are controlled so that there may be enough for glycerine, soap, margarine, and cattle feed. Butter is very scarce, and every attempt is made to substitute margarine until butter can be obtained from Australia and Argentina.

Sugar has also become a rare commodity. Before the war over half of the sugar was brought from countries now enemies. It now has to be doled out in rations, and consumers must register with some one retailer. Only one-half pound a week is allowed to each person.

# One Rotospeed will do the work of 50 Typists

If you use form letters, from 20 to 1,000 copies at a time—if you use office forms, ruled factory forms, price lists, bulletins, notices or similar printed matter in quantities of 20 or more—then a Rotospeed Stencil Duplicator will pay you an enormous profit on your investment. Through the use of this machine retailers are increasing their sales and collecting their past due accounts. Many have doubled and trebled their profits. It is the ideal method of printing sales letters and store papers. Manufacturers are saving 92% on form letter work and hundreds of printing bills. The use of one Rotospeed has saved one manufacturer more than \$1,000 in one year.

Price  
\$35  
Complete

## Perfect Form Letters—20c per Thousand

Better form letters than you ever thought possible—letters with the clean-cut appearance of neatly typed originals that *exactly* duplicate the typewriter type, can be printed at the rate of 75 per minute on the Rotospeed.

written so that a completely typewritten, illustrated and signed letter will be printed at one operation.

### Only One Model— Price \$35 Complete

This one machine does everything that a stencil duplicator can do. There are no accessories or higher priced models. The price includes full equipment and sufficient supplies for printing a thousand copies each of twenty-five different forms. The saving on this much work will pay the entire cost of the Rotospeed.

### Free Trial at Our Risk

We offer to place the Rotospeed in your office on trial. We do not employ salesmen. The machine must sell itself. Write for our proposition and the Rotospeed booklet. Let us show you how others in your line of business are increasing their profits and saving expense the Rotospeed way. Just sign and mail the coupon, or pin it to your letterhead.

## Free Trial Coupon

THE ROTOSPEED CO.  
589 W. 5th St., Dayton, Ohio

Gentlemen: Please send full information about the Rotospeed, samples of work and your free trial offer.

## No Type, Trouble or Muss

The Rotospeed stencil is prepared quickly and easily. No type is set. Typewrite your letters on a sheet of stencil paper. Attach the stencil paper to the Rotospeed and turn the handle. That's all. A child can do it. The Rotospeed has a semi-automatic feed—self-adjusting impression roll, an unlimited head-spacing device and improved receiving tray—all these exclusive advantages—yet it's the simplest stencil duplicator in the world.

## Ruled Forms Easily Printed

Ruled forms of all sizes from 3 x 5 inch cards to 8½ x 16 inch sheets are printed on the Rotospeed just as easily as form letters and at a cost of a few cents per thousand.

### Illustrations and Signatures Quickly Reproduced

Sketches can be copied or traced on the stencil paper and the signature

**INDEPENDENT EFFICIENCY SERVICE**

Plan and Purchase Department 119 W. 40th St., New York City

There is no compulsory rationing of the public, but there is a voluntary weekly ration as follows:

Bread	3 1/2 lbs. to 8 lbs.
(according to class of worker)	
Other cereals	12 oz.
Meat	2 lbs.
Fats	10 oz.
Sugar	8 oz.

### FRANCE

Germans worship government; Frenchmen are rather suspicious of it. In France it has not been easy to fix taxes, prices, and rations.

A sugar card has been issued. The allowance is 13 pounds per person a year. Our consumption is from 85 to 90 pounds a year. A striking difference!

The meat shortage is serious. To make up for lack of other foods the people have eaten more beef, mutton and pork. Moreover, in the beginning of the war the French had to feed millions of French and Belgian refugees. Herds were also seized by the Germans. From almost 15,000,000 cattle at the beginning of the war the herd had been reduced to less than 12,500,000 by July, 1917. Hogs were reduced from 7,000,000 to 4,200,000; and sheep from 16,000,000 to 10,500,000. The Government now limits meat to one meal a day. In order to meet the shortage they have had to cut down the soldier's ration. You do not need to be told how serious that is.

France used to consume 9,400,000 tons of wheat. It is estimated that she is facing a deficit of 5,000,000 tons over the period from September 1, 1917, to September 1, 1918. America must send wheat! Bread is the staple food in France, the keystone of her arch of nutrition. There is no national bread card, but in some communities there are local regulations. The law requires that 30 per cent of some other grain than wheat be mixt with the flour. The wheat flour is milled so that 85 per cent of the grain is extracted. To extract up to 77 per cent is considered as far as one can go and keep the best food value. If more is extracted it means keeping in chaff and particles which have no food value, and which are often harmful to health. The bread ration is now one-half pound a day.

As matters stand now the monthly consumption of food for each person is:

Wheat	20.5 lbs.
Meat	8.5 "
Fats	3.1 "
Sugar	1.1 "

Perhaps this table summing up the amount of food consumed per person by four different countries will make it more vivid to us that we still have an abundance out of which it is our duty and honor to save for democracy's sake. Here are the number of pounds consumed per person each month in four countries:

	U. S.	England	France	Germany
Wheat	25.7	28.7	20.5*	18.97*
Meat	12.5	10.5	8.5	2.2 *
Fat	3.4	2.2	3.1	1.4 *
Sugar	7.1	4.6	1.1*	.77*

\*Present rations.

Is not our lesson clear? We must send wheat, meat, fats and sugar to our comrades in the war lest liberty perish.

Next week we shall see what America is doing for the cause of conservation.

### IGNORANCE IS BLISS

She was a very newly fledged baroness or duchess, or something like that, and somehow or other she was invited to come to the observatory to see the eclipse.

She arrived about two hours late. "I've come to see the eclipse," she told the professor's assistant.

"I'm sorry, but the whole thing was over an hour ago," said the assistant, contritely. "Then," said the dignified dame, "I will wait for the next."—Exchange.

## Remarkable Remarks

EMPEROR WILLIAM—Bear everything.

INA CLAIRE—I haven't one domestic inclination.

GLEN BUCK—There is too much bunk in advertising.

SECRETARY MCADOO—What do we care about waste.

MARIAN WEINSTEIN—American men are love slackers.

MAXIMILLIAN HARDEN—Only a miracle can bring peace.

RUTH RICHARDS—One \* must powder one's nose or be silly.

IRVIN S. COBB—You never need an alarm clock if you keep chickens.

JOHN BURROUGHS—The Turk is a gentleman beside the German.

JOHN D. ROCKEFELLER, JR.—There is never a break in God's love.

NOEL BUXTON, M.D.—In God's name let America take charge of the war.

GENERAL PERSHING—Tell everybody you meet of our determination to win.

GENERAL BELL, JR.—I will judge every officer on his ability to handle men.

VICE-PRESIDENT MARSHALL—This is no time for pacifists to be running loose.

REV. W. T. McELWEEN—New York is the hottest salient in the United States.

THE POPE—It is a good thing that Jerusalem fell into the hands of the British.

DR. FRANK CRANE—My favorite paper was The Independent before they improved it.

CARL HERMAN TORGES—Good morals are only what the upper classes of society approve.

FRANK A. VANDERLIP—War Saving Stamps are a security everybody can invest in.

JOHN J. DILLON—There is not a single representative farmer on the food commissions.

PROF. T. J. LAWRENCE—If civilization cannot destroy war, war will destroy civilization.

SECRETARY BAKER—I have often asked myself, "What does this war mean to women?"

ED HOWE—I care nothing for Anna Shaw, Jane Addams, Sarah Bernhardt or Joan of Arc.

GABRIELLE D'ANNUNZIO—The stars of the American Republic are our constellation of hope.

EMPEROR CHARLES—The glorious successes of our victorious army fill us with patriotic pride.

ADMIRAL VON TIRPITZ—I regret that we did not remain firm in the face of President Wilson's threats.

DON MARQUIS—The Hohenzollerns are not playing the "Holy City" on their violas these days.

G. K. CHESTERTON—Even good government was not good enough to know God among the thieves.

EX-AMBASSADOR GERARD—The Germans are wonderful judges of wine, and at any formal dinner use as many as eight varieties.

COL. E. M. HOUSE—Ever since our Government was founded there has been a bond of interest and sympathy between France and America.

POETESS LOUISE E. CANN—I feel at each moment that my life is just beginning, tho paradoxically and by the same exercise I feel that it began before time.

LADY DUFF-GORDON—The sartorial artist no less than the sculptor, the painter and musician dreams of creations that will awaken a response in the soul of the world.

GEN. J. C. SMUTS—I shall not be surprised to see the time when our royal princes instead of getting their consorts among the princelings of Central Europe will go to the dominions of the outlying portions of the British Empire.

Illustration shows Efficiency Desks (equipped with complete special systems for the user), Desk Trays, and row of No. 800 line Sectional Cabinets in Super-Wood—for correspondence, bills, storage, card records, and documents. Styles and designs are made for everything that is filed.

## The Desk That Helps One Man Do The Work of Two

It seems as though "Y and E" Efficiency Desks must have been designed to help American business men cope with war-time conditions.

HERE is a desk that both helps and serves. It is a complete business system in itself, built like a desk, used as a desk, called a desk, but in reality a filing cabinet containing the records and simplified filing systems essential to each user.

In a "Y and E" Efficiency Desk you get a high-grade desk and filing cabinet combined, at the price of a desk alone—with adjustable filing drawers for all standard-size records.

The man who installs a "Y and E" Efficiency Desk now will find that he can

do his work easier and in less time. He will be in a better position to help out on the work of men who have gone to the war.

Conditions being what they are, you must expect to make certain vital readjustments. New methods and good systems are necessary now as never before. For this reason, and without accepting fees, we maintain a representative in every territorial district, engaged upon *System Service*.

We invite everybody to use this service, all the time; whether it be for laying out a set of systems for an Efficiency Desk or the complete renovating of cost, purchase, accounting or filing systems, or ask at the "Y and E" store in your city. Check coupon and mail for complete information.

## Why Some Foods Explode!

The combinations of food that most people eat three times a day inflict nothing less than a crime against their health and are the direct cause of 90 per cent of all sickness.

According to Eugene Christian, the great food specialist, we eat without any thought of the relation which one food has to another when eaten at the same time. The result is that often we combine two foods each of great value in itself, but which when combined in the stomach literally explode, liberating toxins which are absorbed by the blood and form the root of nearly all sickness, the first indications of which are acidity, fermentation, gas, constipation and many sympathetic ills.

All of this can be avoided if we would only pay a little attention to the selection of our daily menu instead of eating without regard for the consequences.

This does not mean that it is necessary to eat foods we don't like; instead Christian prescribes meals which are twice as delicious as those to which we are accustomed and the results which have been accomplished through diet alone are literally amazing.

## Eat Yourself Well

Men and women who had traveled all over the world seeking relief from stomach and intestinal disorders without result—others who had actually been given up to die—not just a few but hundreds—have recovered their full health and strength by following this great food specialist's advice and without the use of medicines, drugs or strenuous exercises—merely through learning what to eat and what not to eat.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a course of little lessons which tell you exactly what to eat for health, strength and efficiency. Over 100,000 sets of these lessons have already been sold.

These lessons, there are twenty-four of them, contain actual menus for breakfast, luncheon and dinner, covering every condition of health and sickness from infancy to old age and for all occupations, climates and seasons.

## Send No Money

To examine these twenty-four Little Lessons in Corrective Eating, it is not necessary to enclose any money. Merely clip the coupon or write a letter and the lessons will be sent prepaid. Quick action is necessary, however, as the price of the lessons is to be advanced shortly. Mail the coupon now or write a letter to

## PROFESSIONS ON A BUSINESS BASIS

(Continued from page 110)

professional skill. Have each employee prepare a similar list of his or her daily duties, with all those checked that might be performed by a less expensive worker. On some list, every operation should appear.

2. Subscribe for at least two of the best magazines on business method or general efficiency. (Obtain sample copies first, from your newsdealer or bookseller.)

3. Let every employee, work list in hand, go thru each magazine as received, both editorial and advertising sections, for plans, ideas, methods or devices aiming to increase output, decrease cost, or improve character of his or her special group of activities. Let the employee answer advertisements that appeal, but spend no money save postage without consulting you. Appoint a monthly or weekly conference, to look over the descriptive matter thus obtained, authorize expenditures, discuss reports from each department, receive suggestions, map out improvements, award merit marks, bonuses or prizes. If an employee wants a book or mail course that should result in mutual advantage, pay a third or a half the cost.

4. Make your special study that of delegating your work to employees. The average professional man could train subordinates to carry 30 or 40 per cent of his routine duties. He must do this, before he can reach a high place in his profession.

5. Compile a catalog of equipment, noting each tool, implement, machine, material or supply that your work demands. Then write for the Check List of Office Equipment furnished by the Plan and Purchase Department of the Independent Efficiency Service, 119 West Fortieth Street, New York. See how you measure up, on each item. Investigate new possibilities, to aid economy, speed, accuracy, publicity, emulation, satisfaction.

6. Found a business library, and work it to the limit. You are proud of owning a professional library; but a professional library without a business library is like a letter without a stamp—it doesn't carry far, no matter how good it may be. You should know, or have an employee who knows, the business principles of production, distribution, conservation, organization, coöperation, promotion, publicity, advertising and selling, finance, correspondence, filing systems, office machines, employees' education, welfare work, health, sanitation, psychology, personal efficiency, home surroundings, optimism and incentive.

7. Join at least two of the great national efficiency organizations, to keep in touch with new developments. Among the best known are the National Institute of Efficiency, Union Trust Building, Washington, D. C.; The Efficiency Society, 119 West Fortieth Street, New York; the United States Chamber of Commerce, Washington, D. C.; the Rotary Clubs (find local branch in directory of large city nearest you); the National Association of Corporation Schools, Irving Place, New York; The National Civic Federation, Metropolitan Tower, New York.

You can be master of ideals only when you are master of details. The broader your business base, the higher may be your professional attainment. The finer your system, the fuller your service. You must save yourself that you may give more to the world. You must have money that you may be free of worry. You must learn to handle men that they may learn to help your work for humanity. You must gain leadership by letting go all that is less than leadership.

## CHAMBERLIN METAL WEATHER STRIP

## METAL AGAINST WOOD—NO WEAR

13 years ago metal-against-metal strip proved itself short-lived. Warping or shrinking sash also affected it.

Time has shown that only wood-against-metal, with metal tongue shaped as above, and metal bearing rails, is proof against wear, sticking or binding. Likewise it alone insures a weather-proof fit always. That is why you should

## THE INDEPENDENT

119 West 40th St., New York

## ONE MOMENT!!!

**WHY REMAIN AN AVERAGE MAN ???  
AVERAGE MEN ARE AVERAGE WAGE  
EARNERS—NO MORE. LISTEN!!!**

Provided we can lay before you a plan that will increase your salary or your earnings, perhaps to double or treble what you now make, will you pay us 10% only on your increased salary or earnings, *after* you have received this increase—not before?

**We train you for a higher salary—for reliable 365 day per year health—for stern business power.**

Every one who is ambitious enough to train for a Big and Substantial Increase in their Salary or Earnings, **MUST** be possessed of three things, that is:

### ENERGY

That uplifting mental and physical Energy that pulsates living fire through the person's being—Energy Abounding.

### HEALTH

That Reliable Health, Overflowing, and Buoyant, that swings life's pendulum pleasantly and successfully.

### BUSINESS POWER

That overwhelming Business Power that is Limitless because it operates according to the hidden laws of Mind-Science and attracts business people to you.

These three Pillars form the fundamental basis upon which our Course of Instruction is Built.

## YOU, YOU NEED THIS COURSE

You will readily understand that in offering our \$100 year's course of training on such terms as stated above, we have a very large number of applications to select from, so that it is necessary to enroll at once to save disappointment.

Our guidance in personal and in business affairs, is, to a large degree, based upon the student's own particular private needs and business necessities, as told to us by himself and as expressed in the "SELF ANALYSIS CHART," which he must completely fill in before we accept him as a student. In every instance a "SELF ANALYSIS CHART" is mailed free.

This advertisement clearly tells you what the Course is capable of doing for you, that it is a 12 months training sold at \$100, *but* that if you enroll now and get your textbook from the publishers as explained upon the attached Enrollment, we will take you right through the training, supply the 26 lessons, References, Chart; 18 Sections of Body, Brain and Energy Lessons, as clearly outlined below, for 10% only of your increased earnings for twelve months commencing three months after Enrollment. You may retain this advertisement as our undertaking with you. Nothing can be fairer.

Have you reached that period in your life when you begin to feel impatient about your future prospects. **SUCCESS** has not yet crowned your efforts—the fact is, you have reached a **VERY IMPORTANT MOMENT OF YOUR LIFE**. Let us show you how to step to the road of **SAFETY, HEALTH** and **PROSPERITY**. Why attract negative things which lead to poverty and failure—let **THIS OPPORTUNITY** be the **DAWN OF YOUR SUCCESS** by adopting psychological laws that lead you there.

There is a separate Service for Students wishing to take up special branches of study on their own account, or those who are backward, or wish to study with the object of changing their vocation; particulars sent upon request.

The Health and Body-Building Section is most thorough and complete, it is well to keep in mind that as costly as doctors' bills are, a weakly, sickly body hampers progress, and is far more costly even than doctors' fees.

Address  
American Institute of Business  
Psychology,

175 Fifth Avenue  
New York City

**TO SAVE DELAY**  
**THIS "COUPON-ENROLLMENT" entitles you to IMMEDIATE Enrollment (without obligation)**

### WHAT WE DO IF YOU ARE DRAFTED

If after enrolling you should be drafted into active service, upon furnishing us with proof of draft, we will complete the training and cancel our 10% reimbursement, thus you get our service free.

As explained above, other than the 10% of your **INCREASED EARNINGS** which you pay us **AFTER** you have **RECEIVED THAT INCREASE**, there is no cost whatever for the year's training. For housewives and women where opportunities arise for increased **SAVINGS** through economy and creative thought, it is **INCREASED SAVINGS** instead of **EARNINGS**.

If the words "ENROLL ME" are not filled in below we cannot accept this coupon as an enrollment and will treat it simply as an application for our Booklet and Analysis Chart.

Name .....

Address .....

### NOTICE

This advertisement tells the **FULL STORY** how you can rise from the mediocre rut to Wealth, Success, Health and Happiness and you only pay us 10% on your **INCREASED EARNINGS** for one year for the full Course and service we render you. **IF YOU WISH TO ENROLL AT ONCE SO AS TO SAVE DELAY PUT THE WORDS "ENROLL ME" THERE**, on that line.

Address, **AMERICAN INSTITUTE OF BUSINESS PSYCHOLOGY,**

Learn what your Character, Abilities, Talents and Powers are. This **SELF ANALYSIS** sent **FREE**.

### DIRECTIONS FOR ENROLLMENT

To avoid delay I wish you to enroll me at once for your one year's Course of Training as sold at \$100, which includes 26 Mental, Business, Health and Energy Lessons, 18 Individual Monthly Lecture References, 18 Sections of Six Lessons on Body, Brain and Energy Building—Self Analysis Chart, Review letters and Progress Reports. For this full and complete year's training I am to pay you **ONLY 10%** on my **INCREASED SALARY** or **EARNINGS** for one year, commencing three months after the training starts. I will retain my Encyclopedia Text Book, sent from the publisher and arrange to pay them \$1.00 and to monthly immediately upon receipt of your bill, giving me three dollars.

## Every Day is Cleaning Day

The use  
of a Bissell's  
Vacuum Sweeper  
prevents dust and dirt  
from accumulating in your  
rugs. It cleans so much  
better than any other method  
that every day is actually clean-  
ing day—minus the heavy, back-  
breaking work. You would be sur-  
prised to see how much dirt a

### BISSELL'S Vacuum Sweeper

will take out of a rug even after it  
has been carefully swept by the old  
broom method.

Even though hand operated, the  
Bissell Vacuum Sweeper creates  
sufficient suction to remove the fine  
dust which the broom simply forces  
deeper into the carpet—or at best  
only stirs up.

And the Bissell Vacuum Sweeper  
is so easy to operate. After it is  
once in use, the drudgery which it  
takes out of housekeeping is just as  
noticeable as the extra amount of  
dirt that it takes out of carpets  
and rugs.

Priced at \$6.00 to \$12.50; Cyco  
Ball-Bearing Carpet Sweepers, \$3.25  
to \$6.25 depending on style and lo-  
cality. At dealers' everywhere.

Booklet on request. (343)

### DIVIDENDS

#### WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY

A dividend of one and three-quarters per cent.  
(87½ cents per share) on the COMMON stock of  
this Company for the quarter ending Dec. 31,  
1917, will be paid Jan. 31, 1918, to stockholders  
of record as of Dec. 31, 1917.

H. F. BAETZ, Treasurer.  
New York, December 21, 1917.

#### American Telephone and Telegraph Company

A dividend of Two Dollars per share  
will be paid on Tuesday, January 15, 1918,  
to stockholders of record at the close of  
business on Monday, December 31, 1917.

G. D. MILNE, Treasurer.

#### DIVIDEND NOTICE OF THE AMERICAN LIGHT & TRACTION COMPANY

The Board of Directors of the above Company,  
at a meeting held January 2nd, 1918, declared a  
CASH dividend of 1½ Per Cent. on the Preferred  
Stock, a CASH dividend of 2½ Per Cent. on the  
Common Stock, and a dividend at the rate  
of 2½ shares of Common Stock on every one  
hundred (100) shares of Common Stock outstand-  
ing, all payable February 1st, 1918.

The Transfer Books will close at 3:00 o'clock  
P. M. January 10th, 1918, and will reopen at  
10:00 o'clock A. M. on January 28th, 1918.

C. N. JELLIFFE, Secretary.

## TOUCHSTONE MR. GOMPERS

(Continued from page 113)

union. And there is something significant,  
too, in the habit he had of reading, even in  
those early days when he was a boy hidden  
away deep in a vast and populated plain of  
tenements; and in his habit of setting up  
on the clear space on his work-bench some-  
thing to read, whenever his finished work  
was out of the way. "I used to forget  
whether I had eaten my lunch," he told me.

He got his powers of concentration, he  
got his rare knowledge of the masters of  
literature in three languages other than  
English, by reading. It seems that of all  
our major Americans he is, thus, most  
strictly self-made; for there was no mere  
opportunity he needed to prepare for, no  
chance, no favoritism, for the American  
Federation of Labor was an impossibility  
until he conceived and developed it, and  
now, without doubt, it is the most power-  
ful single force in the affairs of the United  
States.

Sometimes he is to be found working  
shortly after dawn; sometimes, in the stress  
of conventions or his work in Washington,  
he is "at it" before dawn; he is ready to  
work before dawn, in fact, almost any day  
in the year, except the 27th of January.

The 27th of January is his birthday—the  
day of all days for him and his family and  
their friends.

Hardly any description of his home and  
of the large family of sons and daughters  
grown there could be quite adequate, for it  
is the spirit, not the tint and texture and  
vesture, that are important there. It is not  
a rich home. Mr. Gompers received, as  
president of the American Federation of  
Labor, nothing; not an office even, in the  
first four years of his work, then for five  
years only \$1200, then for five more  
only \$1500; and tho that salary has been  
increased to \$7000, still the increase  
simply reminds this hard-fisted pro-  
tagonist that what he has, other union men  
have an equal right to. In other words he  
gives away a great deal of money. It has  
been said that there has never been a union  
man refused aid by him, if really in want;  
and it is also said by individuals who have  
known him and his family for years that  
in days gone he has actually caused his  
family privation by giving freely while un-  
derestimating his own family needs. Some-  
times they were very poor; sometimes his  
generosity made them unexpectedly poorer;  
but they were all in love with a central  
loyalty. That central loyalty was organized  
labor, the chain whose links constitute  
much of our modern industrial civilization.  
Before he was made president of the  
American Federation, while still in New  
York, Governor Hill offered to lessen his  
poverty by making him Commissioner of  
Arbitration at \$3000 a year, tho he was  
earning hardly \$20 a week. He "talked it  
over with his wife" and refused. The Demo-  
crats and Republicans got together and  
nominated him for the New York Senate.  
He went home and talked it over—and re-  
fused! Then a nomination to Congress was  
offered him. He refused. President McKin-  
ley offered him a place on the Industrial  
Commission. He refused. And then, one  
day, rather surreptitiously but straight  
across table, "the other side"—i. e. one of  
the manufacturing associations, as its rec-  
ords later displayed—offered him \$45,000  
in cash and life tenure of a sinecure—  
and he refused. "Life is just struggle and  
burden-bearing," he said, turning, glad, to  
his central loyalty again.

"Life is struggle," he has said over and

## What's Coming?

Babson's investment bulletin,  
which will be off the press about  
January 1, will carefully analyze

**"The Outlook for 1918"**

It will discuss the extraordinary  
conditions of the stock and bond  
market here and abroad.

This bulletin is of vital interest to  
investors and bankers, to whom  
it will be sent free.

Write at once to insure getting a copy.

### CLOSE OF TRANSFER BOOKS

**LIGGETT & MYERS TOBACCO COMPANY**  
St. Louis, Mo., JANUARY 2nd, 1918.

The Transfer Books of the Registered 5% bonds  
of LIGGETT & MYERS TOBACCO COMPANY  
will close at 3 o'clock P. M., January 15th, 1918,  
for the payment of interest on said bonds, due  
February 1st, 1918, and will re-open at 10 o'clock  
A. M. February 2nd, 1918.

T. T. ANDERSON, Treasurer.

## INSURANCE Service of The Independent

A constantly increasing number of read-  
ers are securing valuable information  
through the Insurance Service Department  
conducted by W. E. Underwood, Director.

over. And one day he cautioned a convention: "Life is a struggle, but remember, impatience to win all, loses all!"

His philosophy is that of struggle. "Always a little more, always a little more," he has urged; but never "All." He is willing to strike in peace for better hours, wages, working conditions, but he never strikes in order to bring about a revolution or a reversal in conditions. The I. W. W. are confident that there is class relationship in America and that one class must be disestablished to give place to the other, but Mr. Gompers is quite willing that there shall be "the two sides" so long as his workers have "good wages, hours and working conditions." . . . "There would not have to be labor unions," he said, "if all employers were like Henry Ford." He thinks of democracy as the condition in which there are no bonds laid on the happiness of any class, and his faith is that labor organizations thwarts such bonds. That is why he told me, there in his office, behind his flat desk, "Labor organization is the bulwark of democracy." That is his faith.

He looks with satisfaction on the fulfillment of the promise of organization, of course. But he looks far beyond the far limits of his old time dreams now. All the satisfactions he has won—international honors and representations, this perfection in the use of the English language, this rare ability as a pamphleteer, this knack of lecturing and being called "professor" at such erudite places as Harvard, Cornell, Michigan, Wisconsin, and this honor of having the busy President of the United States take a week-end to immortalize him—all these honors are gratifying and satisfying, of course. But they have not made him much the more ready to talk about himself, save in the intimate warmth of that hospitable home of his. He is satisfied. His smile says so. But alert, too.

For the President's speech has demonstrated him to be a strategist of a high order in the industrial warfare that continues in America despite the bonds of war—a strategist and a statesman, too. "I realize that the millenium is far off," he said, some time before the Buffalo convention—the most significant of all conventions in the long thirty-one years of his reign. And he adds: "I am looking ahead to tomorrow and tomorrow's morrow. I want to see every workingman have his own house, his own little plot of ground!" Then he smiles. He knows that is anticlimactic. He knows that in the depths of that powerful brain of his are plans far greater and more comprehensive than any discerned so far.

"Labor represents no sectionalism, no creed, or title," he says. "It represents one of the very bulwarks of democracy therefore." And he remembers that for the first time in the history of the world the days of Reconstruction will suffer a universal shortage of able-bodied men—"a thing that may reverse the relative positions of employer and employee," Dr. Frederick P. Howe has said.

"Labor has had a rough road," this little mighty man, this Titan in the affairs of his nation, told me. "But its struggle has only made it the more worthy."

He has lived a long life. As if but to crown it, as if but to reward him historically, the war, the last struggle against the bondsmen, has come. He, like the true leaders, was ready for it.

And now the day of his fullest work is at hand.

Washington, D. C.

*IN other seasons, perhaps, you could waste some money experimenting on your house, your garden. Not now! This year you must get every penny of value from every dollar you spend. Save yourself money; insure yourself against costly mistakes, by consulting the experts of House & Garden.*

*Illustration from House & Garden. Such charming house fittings as these are shown in every issue, and, if you wish, may actually be bought for your own home.*

# House & Garden

What Vogue has done for women of taste and discernment in matters of dress and accessories, House & Garden will do for you in matters of interior decoration, architecture, and the planning of your garden and grounds in a decorative yet thoroughly practical way.

Everything that goes into a garden is in House & Garden; its Spring Gardening, Spring Furnishing, and Garden Furnishing

Numbers start the summer's work for you.

Everything that goes into the gracious and charming home is also in House & Garden; its New Furniture, House Building, and Interior Decoration Numbers show you just what to do, how to do it, and—best of all, perhaps—just how it looks in other charming homes where it has been done.

**H**OUSE & GARDEN is a practical help to the home maker, a scientific economist on house expenditures, a final authority on the thousand and one problems of house building, furnishing, gardening, sanitation and the like, which at one time or another puzzle the owner of every house.

**\$2 Invested in House & Garden**  
A tiny fraction of your loss on a single ill-chosen chair  
**Will Save You \$200**

House mistakes are often very costly. You need the advice of experts in every important house expenditure. Hundreds of dollars—often thousands—may depend on a single decision and expert advice will be invaluable. May we, therefore, suggest that you take advantage of our special offer and plan your home expenditure this year with the help of House & Garden.

**Special Offer—Nine Issues for \$2**  
*Ten if you respond promptly*

If you care to make your own house smart, distinguished, and representative of your personal tastes, you will want to take advantage of our special offer of nine issues of House & Garden for \$2—ten, if you mail the coupon now. Send no money now unless you wish to—just mail the coupon today.

**HOUSE & GARDEN, 19 West 44th St., New York City**  
Send me NINE numbers of House & Garden, beginning with the current issue, at the underlined price. I will send you promptly, you will send an additional number, making TEN in all. I enclose \$2 herewith. (Or I will remit \$2 on receipt of bill. (Canadian \$2.50))

# THE NEW BOOKS

## Chestertonian History

GILBERT K. CHESTERTON has rarely done a better piece of work than *A Short History of England*, decidedly his most important book in the field of history or political theory, but the reader must prepare to be disappointed if he does not make allowance in advance for three facts. In the first place the book is not a history at all, in the sense of a sustained chronicle of dates and events, but a running commentary on English history and a personal interpretation of facts with which the reader is understood to be familiar. In the second place it is essentially a history of medieval England; the few chapters devoted to the last three centuries are of inferior workmanship to the remarkable descriptions of the rise of the yeoman class and the craftsman's guilds in the days of the Plantagenets and the ruin of both under the Tudors. Finally, Chesterton is unable to make his book wholly impartial; it is a partisan history; as bitter against the aristocracy as Macaulay was against the Stuarts and as pro-Catholic as Froude was anti-Catholic. Chesterton makes a partial admission of this disproportion when he says: "There are paradoxes permissible for the redressing of a bad balance in criticism, and which may safely even be emphasized so long as they are not isolated."

Chesterton is at his best as a historian when he sums up for us the general "atmosphere" of an age or an institution; as in the sound and subtle distinctions he draws between the cynical lust for plunder which destroyed the monasteries in the name of reform under Henry VIII and the sincere Protestant fanaticism which broke church ornaments during the Commonwealth: "It was the story of a father and a son, dragging down the same golden image, but the younger really from hatred of idolatry, and the older solely from love of gold." How exactly he places his finger on the difference between medieval and modern local government, and between the gild "master" and the modern "employer":

Modern local government always comes from above; it is at best granted; it is more often merely imposed. The modern English oligarchy, the modern German Empire, are necessarily more efficient in making municipalities upon a plan, or rather a pattern. The medievals not only had self-government but their self-government was self-made. They did, indeed, as the central powers of the national monarchies grew stronger, seek and procure the stamp of state approval; but it was approval of a popular fact already in existence. Men banded together in gilds and parishes long before Local Government Acts were dreamed of. Like charity, which was worked in the same way, their Home Rule began at home.

A gild was, very broadly speaking, a trades union in which every man was his own employer. That is, a man could not work at any trade unless he would join the league and accept the laws of that trade; but he worked in his own shop with his own tools, and the whole profit went to himself. But the word "employer" marks a modern deficiency which makes the modern use of the word "master" quite inexact. A master meant something quite other and greater than a "boss." It meant a master of the work, where it now means only a master of the workmen.

To Chesterton the turning point of English history was Wat Tyler's rebellion: "It very nearly succeeded; and I need not conceal the conviction that it would have been the best possible thing for all of us if it had entirely succeeded." The liberties enjoyed in that age by the yeomen in the country and the gildsmen in the towns

were, according to Mr. Chesterton, greater than the liberties of the laboring man in modern England, but they lacked sufficient recognition by the law, the peasant rebellion to obtain this recognition was crushed and reaction set in. This reaction reached its worst in Tudor times when:

Lawyers and lackeys and money-lenders, the meanest of lucky men, looted the art and economics of the Middle Ages like thieves robbing a church. Their names (when they did not change them) became the names of the great dukes and marquises of our own day.

Since that evil time the British aristocracy has become more humane and public spirited but it has not ceased to rule the destinies of England; the day of democracy is yet to come.

A few more of Chesterton's snapshots of the fleeting ages will show the reader something of the character of the book, whether he will agree with the author and wish to buy his book or disagree with him (and wish to buy it!).

### The Wars of the Roses:

The spell of an undethronable thing seated out of reach was broken, and for three unhappy generations adventurers strove and stumbled on a stairway slippery with blood, above which was something new in the medieval imagination, an empty throne.

### Joan of Arc:

She was in her own living loneliness a French Revolution.

Religious differences accentuating nationalism:

The English would cry in battle on St. George and the French on St. Denis; but they did not seriously believe that St. George hated St. Denis or even those who cried upon St. Denis. Now with the religious schism a deeper and more inhuman division appeared. . . . There entered with the religious wars the idea which modern science applies to racial wars; the idea of natural wars not arising from a special quarrel but from the nature of the people quarreling.

### The American Revolution:

Roughly and frankly speaking we may say that America forced the quarrel. She wished to be separate, which was to her but another phrase for wishing to be free. She was not thinking of her wrongs as a colony, but already of her rights as a republic. . . . The real case for the colonists is that they felt they could be something, which they also felt, and justly, that England would never help them to be. England would probably have allowed the colonists all sorts of concessions and constitutional privileges; but England could not allow the colonists equality: I do not mean equality with her, but even with each other.

### The French Revolution:

The French Revolution was a riot that broke up the very formal funeral of Christianity; and was followed by various other complications, including the corpse coming to life.

*A Short History of England*, by Gilbert K. Chesterton. New York: John Lane Company. \$1.50.

## War Stories

STILL, as time passes and the Great War does not end, personal narratives of life at the front are written and published. And still the stay-at-homes read them to find out what is happening "over there." Two new books that have to do with the experiences of our neighbors, the Canadians, are *Private Peat*, written by Harold R. Peat, and *The First Canadians in France*, by F. McKelvey Bell. Both of these books describe the life of Canadians in camp and in the trenches in the early days of the war, days when discipline was a new and strange thing to these loyal and independently sturdy allies from the western country whose love for Mother England took them to France: days, too, when

ammunition was scarce in England and in France and plentiful in Germany. Both books are cheerfully written and give many interesting bits of information about the life of the Tommy, the life of the *poulu*. "Private Peat" pays the English Tommy and the Indian Ghurka lavish compliments. Another war book is *All in It*, by Major Ian Hay Beith, whose first book, "The First Hundred Thousand," achieved an unusual popularity in this country. Major Beith continues in the new book his narrative of the exploits of K1. Those who love "broad Scots" will naturally enjoy this book most. In quite another vein is *Bottled Up in Belgium*, by Arthur B. Maurice, formerly editor of *The Bookman*. In it Mr. Maurice tells the story of the adventures of the members of the Commission for the Relief of Belgium, and of their escape from Belgium after our declaration of war with Germany. One particularly amusing chapter in Mr. Maurice's book is written in praise of slang—this from the editor of *The Bookman*! It seems that at one time a rumor reached one member of the commission to the effect that a German in the United States had attempted the life of our President. He thought it necessary to communicate this fact to another member of the commission and was obliged to speak in front of German officers or not at all—and casually. This is what he said:

Nix on any of these spangled Delicatessens getting wise, but if there were any wully entrees in this burg, they'd be scare heading about a Heinie who has just tried to put over a Czolgos on the Main Squeeze.

Slang has its uses after all!

*Private Peat*, by Harold R. Peat. Bobbs-Merrill. *The First Canadians in France*, by F. McKelvey Bell. George H. Doran. \$1.35. *All in It*, by Major Ian Hay Beith. Houghton Mifflin. \$1.50. *Bottled Up in Belgium*, by Arthur B. Maurice, Moffat, Yard & Co. \$1.25.

## A Boy of Antwerp

THE NEW CARTHAGE, by Georges Eekhoud, translated into English by Lloyd R. Morris, is a novel that has to do with the civilization and culture of the city of Antwerp and with the problem of capital and labor as it is presented there. In outline it is the story of the tragic life of a young boy sent to live with well-to-do but crudely ungracious relatives when the death of his father deprives him of a home. How life conspired with these disagreeable relatives to cheat him of the ways of expression and happiness which his nature demanded and to repress in a very sensitive nature the normal interests and affections that make life worth while—that is the personal side of the story, told with a robust emotionalism that staid persons will find a bit intense and overpowering. But the following paragraph tells what Georges Eekhoud tried to do:

To paint Antwerp its life, its harbor, its river, its sailors, its dockers, its luxuriant women, its rosy and chubby children whom Rubens, in other days, had thought sufficiently plastic and appetizing to populate his heavens and Olympuses; to paint this human mob in its own ways, its costume and surroundings, with the most cherishing care for its special customs and morals, without neglecting the correlations which accentuate and characterize it; to interpret the very soul of the city of Rubens with a sympathy bordering upon assimilation—what a program and what an objective!

This novel has been crowned by the Belgian Academy.

*The New Carthage*, by George Eekhoud. Duffield & Co.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION		HISTORY, CIVICS AND ECONOMICS	
BY FREDERICK HOUK LAW, PH.D.		BY ARTHUR M. WOLFSON, PH.D.	
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY		PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY	
SECTION I. COMPOSITION.			
The Story of the Week.			
1. Give a short talk in which you summarize the war news of the week. Use a map, or draw hasty blackboard sketches to illustrate your talk.			
2. From all the articles in "The Story of the Week" draw material for a talk on "How the United States Government Is Aiding and Protecting Its People."			
3. Give a talk on the most important matters of interest in foreign lands, not directly connected with the war.			
4. Which article in "The Story of the Week" most awakens your interest? Write a full report of the matter, telling why you are interested, and giving your own opinion on the subject.			
Editorial Articles.			
1. Write a paragraph in which you show that the spirit of the leading editorial article is entirely patriotic.			
2. Find in some daily paper of last week an editorial article on the Fuel Administrator's orders. Show in what ways The Independent's article on the same subject is superior or inferior. What are the characteristics of a good editorial article? How important are editorial articles? How should the type of editorial article in a paper affect your reading?			
3. Point out and explain the various bits of satire in "If We Were Germany." What is the advantage of satire? What celebrated English authors used satire with great effect?			
4. Read "A Revolution in Traffic." Write an advertisement for a manufacturer of motor trucks.			
5. Give a patriotic talk in which you uphold the American view of government as presented in "Demos or Proletariat."			
6. Memorize "That Means You," and give it, with proper spirit and emphasis, in the assembly of your school.			
The United Nations.			
1. Write a graduating oration in which you show that "The United Nations" suggests a great step toward lasting world peace.			
2. You wish the suggestions in "The United Nations" to go into effect. Make a speech to the voters of your district explaining the proposals, and urging support for them.			
3. Apply the suggestions to the situation at the beginning of the Great War. How would they have affected events?			
The Merry Jest of the Airman. By Irving Bacheller.			
1. What is the advantage of telling the story in the first person instead of in the third person? Show that the story has characterization, suspense, and climax.			
Bill Shows His Folks 'Round Camp. By Lieut. Paul Adams.			
1. By what means does the author of the article show the advantages of life at a training camp?			
2. By what means does he show how the Government cares for the health of the soldiers?			
3. Write a somewhat similar article concerning school life.			
Why Our Town Went Dry. By Charles E. Hesselgrave.			
1. Write a brief that will show the methods employed in working for prohibition.			
SECTION II. LITERATURE.			
E Pluribus Unum. By John Kendrick Bangs.			
1. What is the principal thought of the poem? Explain the following expressions: wounding gibes and jeers, futile sneers, trustful Brotherhood, the frowning Beast, an Ogre's feast, this grim hour, our High Cause, Righteous Peace.			
The Sleeper Wakes. By Harold Howland.			
1. What entitles this article to be classed under the head of "literature"?			
2. Whom does the principal character represent? What is the advantage of personification?			
3. Prove that the article rises to a powerful climax.			
4. Show how the article clears our own thought and helps to increase our admiration of the United States.			
SECTION III. WORD STUDY.			
1. Select any page of The Independent. Make certain that you understand the meaning of every word. Challenge your class to puzzle you concerning the meaning of any word on the page.			
1. The Fuel Crisis—"The Amazing Order," "The Crisis in Industry."			
1. Trace the history of the coal crisis which led to the promulgation of Dr. Garfield's order of January 16. Give instances of the effect of the coal shortage which have come under your own observation.			
2. "We must judge such an act not in terms of what it does to capital . . . but in terms of what it does to the war." Assuming that this is true, was the order of the Coal Administrator wise?			
3. What have been the chief objections, political and economic, that have been urged against the promulgation of the order?			
4. Have you seen any other course of action suggested that in your judgment would have accomplished the desired results in a better way?			
5. "The American people will do whatever is necessary to win the war. . . . But they must not be asked to do it blindfold." What led the editorial writer to make this statement? Have the facts revealed since January 16 justified Dr. Garfield's action of that date?			
II. The Movement for International Peace—"The United Nations."			
1. Look up the history of the events which led to the holding of the two Hague Conferences. Summarize the accomplishments of the two meetings.			
2. Who were the men who took part in the Philadelphia Conference in June, 1915? What were their purposes and their plans?			
3. Under the headings indicated in the draft constitution, outline the proposed organization, functions and powers of the League of Nations which these men had in mind.			
4. Do you discover in the proposed constitution any similarities to the Constitution of the United States? Any similarities to the constitution of any other nation?			
5. What legislative and executive functions, if any, are proposed for the League of Nations?			
III. The New International Policy of the United States—"The Sleeper Wakes."			
1. What purpose had the author in mind when he wrote this article? What purpose was he trying to serve in the first two paragraphs?			
2. Why are the two phrases "splendid isolation" and "entangling alliances" in the second column put in quotation marks?			
3. Why did the phrases quoted in the paragraph beginning, "His eyes moved down the column," cause Mr. Knickerbocker amazement?			
4. What are the things that finally reconciled him to the new internationalism enunciated in the President's message?			
IV. The Training of American Soldiers—"Bill Shows His Folks 'Round Camp."			
1. What, according to this article, is the result of army life upon the personal appearance and the personal habits of the men? Can you give any information based upon your own observation which justifies the statements of the author?			
2. Have you any additional information to add concerning the barrack life of the soldiers in the new National Army?			
3. Justify Bill's statement: "The Government takes better care of my health than it does of yours."			
4. "The idea is to give us all the clean, vigorous outdoor exercise possible." What has this exercise to do with the training of a soldier?			
V. The German Social and Political System—"If We Were Germany."			
1. This editorial is an ironic satire. Give one or more sentences from the editorial which prove that this is so.			
2. Rewrite the second paragraph of the editorial, substituting the actual facts for those which are assumed to be true.			
VI. Production, Distribution and Consumption of Food—"Further Conservation of Food," "America and Conservation."			
1. What new things have been done to increase the conservation of food during the period of the war?			
2. What things have interfered with an increase in the production of food during the period of the war?			
3. "Agriculture, the world over, is deteriorating in efficiency." Was this true before the beginning of the war?			
4. What remedies are suggested by the Food Administration to improve the present state of the food market?

## THE AMAZING ORDER

**T**HE order of the Fuel Administrator shutting down all industry east of the Mississippi River for five days, with recurrent shutdowns once a week for nine weeks, was a bold stroke. But whether it was the boldness of reckless desperation or the boldness of inspired genius remains to be proved. It could not be justified except as the only way to avoid a great calamity. The order means that during two months and a quarter the producing time of the industries of much more than one-half of the United States is to be reduced more than one-fifth. It is difficult to characterize the severity of such an act in reasonable language. The verdict as to its wisdom is involved not in the answer to the question, What will it do to us? but in the answer to the question, What would have happened to us without it?

We must judge such an act not in terms of what it does to capital, or what it does to labor, or what it does to human comfort and well-being, but in terms of what it does to the war. The American nation has one absorbing necessity before it. It must win the war. Unless it does that neither capital nor labor nor human comfort and welfare will be worth talking about.

Will the order of the Fuel Administrator help to win the war and to win it more quickly? That is the one, the vital question.

The explanation of Fuel Administrator Garfield before the Senate committee throws not light but obscurity upon the matter. Everybody knew that the country was short of coal for all purposes—that the people were suffering, industries working at low speed or not at all, freight piling up that ought to be speeding to its destination, ships lying in harbor that should be sailing the seas.

The need was matter of common knowledge. But the wisdom of the remedy proposed demands better explanation than Mr. Garfield has given. He has decreed that industries which have coal on hand shall be compelled to stand idle because other industries have none. His defense of the decree is that by permitting any factories that can continue to keep going "you enable the factories that have stocked themselves fully with coal to keep on operating whereas their competitors by action of the Government are thrown out of competition because they cannot get the coal. By action of the Government you produce an unequal competition." Does he mean to say that the interest of the owners of and the workers in certain factories that cannot get coal are to be rated as of more importance than the uninterrupted production of goods to help win the war?

Mr. Garfield has evolved a new version of the parable of the wise and the foolish virgins. The marriage feast was ready. The virgins whose ceremonial presence was essential to the occasion were at the door. But only half of them, more fortunate or more far sighted than their sisters, had fuel for their lamps. So the marriage was postponed, lest

the less fortunate virgins should consider themselves ill treated.

He further declares that production must be suspended because the goods cannot be transported from the producing point. His words are, "To aid effectually in stopping this congestion, we want to stop putting more produce on the tracks and in the cars during this period." He asserts that we must stop "this piling up at the seaboard of those things essential to go abroad in ships." Does he seriously propose to stop the production of things that are needed on the firing line in France and by the armies and peoples of our allies and compel producing plants with coal in their bins to stand idle just because the ships that must carry them across the seas have empty bunkers?

The explanation is puerile.

Assuming that the order is to be carried out as given—and the American people will carry it out loyally while it stands—the President has two great obligations to perform.

He must tell the people frankly and fully just why the order was necessary. He must without delay explain in practical detail exactly what are the conditions which have made such a sacrifice of producing power unavoidable.

The President must take the people into his confidence. He must spread the facts before them. No matter if the facts would delight the enemy. The seeds of defeat will not be in the enemy's knowledge of our extremity, but in the extremity itself. The wild surmises now current as to the reason of this mysterious order are more likely to afford a false encouragement to Germany than a frank exposure of the difficulties of the situation. No matter if the facts would dismay ourselves. We are not children to be saved from panic by being led blindfold past terrors. We are men and women, able to look the truth in the face and to steel our resolution to meet the crisis.

The American people will do whatever is necessary to win the war, no matter what the cost to themselves. But they must not be asked to do it blindfold.

He must explain without reserve, why this plan was believed to be the best that could be devised. The final responsibility is his. Mr. Garfield is responsible to the President; but the President is responsible to the people. When they are asked to make such a tremendous sacrifice as this, they must not be expected to be satisfied with an explanation from a subordinate. The President himself must speak.

He must also cause to be made a vigorous investigation of the administrative acts and omissions which have failed to solve the problem without resort to this drastic remedy. He must do so not in order to condemn, or to punish, but, in order, if fault of commission or omission there was, to put the administration of the fuel situation into other hands.

One reason advanced by Mr. Garfield for his revolutionary order is that there has been a deficit in the year's production of bituminous coal of 50,000,000 tons, and half the

country must stop using coal for fourteen days in order to catch up. The cause of three-quarters of this deficiency in production, according to Mr. Garfield, is "car shortage." We do not understand the explanation. Cars carry coal, they do not mine it. Have the miners ceased mining and the hoisting engines ceased lifting it out of the mines simply because there were no cars to carry it away? What was the Fuel Administrator thinking of to permit such a deficiency in production to exist? What was he doing to prevent it? The President must find out. He must have a Fuel Administrator who will not permit such a thing to happen again. To make a mistake is human, to make the same mistake twice is criminal.

## THAT MEANS YOU

IT is variously asserted, with vigor and emphasis, that the war will be won by ships, by munitions, by food, by money, by soldiers. Some say one thing, some another. None of them is wrong—but no one of them is right.

The war will be won by the spirit, by vision and courage and sacrifice. In proportion as the peoples united against German barbarism see clearly, act fearlessly and give themselves generously, will the victory for humanity and the world come quickly.

Ships and munitions and food and money and men are indispensable. But unless the spirit of devotion and sacrifice infuse itself thru every part of the nations that must provide them all their providing will be of no avail.

The peoples of our Allies have learned this truth in bitterness and travail. It has been burned into their souls with the searing iron of frightfulness. We Americans are the quick ones, the ready ones, the "hustling" ones. We have gone rapidly along the appointed road that leads against the enemy's lines once we set our foot upon it. But this vital truth we have not yet learned in fullness and "by heart." It is thus that we must learn it. It must come to glow with a quenchless fire in a hundred million hearts if the nation that is theirs is to take its full part in the salvation of the world for the ideals that are theirs.

The war, so far as we are concerned in it, will not be won by ships or troops or guns or supplies or dollars, tho it might be lost for the want of them. It will be won by the man in the street and the woman in the home. It will be won by you and your like, by yourself and your family, your friends, your neighbors, your associates, your fellow-workers.

Is this your war? Do you feel it yours, believe it yours, know it yours? Have you done something to make it yours—something definite, something real, something that hurts?

This is democracy's war. It is waged for democracy; it must be won by democracy.

Democracy—that means you.

## A REVOLUTION IN TRAFFIC

MOTOR trucking is making so much progress in the movement of local freight in connection with railway congestion as to constitute an entirely new factor in the evolution of commerce. As a substitute for railroads the motor truck proved its capacity behind the lines in Belgium and France early in the European war. The new army truck, whose standardization was triumphantly proclaimed only a month ago, will no doubt figure in the traffic demands of peace. At any rate, there is no end of evidence that commercial centers are resorting increasingly to these agencies to get goods delivered. Not only is this so in the case of the hundreds of lines between such centers as New York and the numerous suburban communities; it is the case between the large centers themselves lying within a hundred or more miles of each other, that they are evolving systematic motor lines running more regularly than the railroads themselves.

Here are some thought-provoking instances. A Philadelphia contractor is operating a delivery of haberdashery from a Quaker City factory to a New York firm three times a week. Both the manufacturer and the motorist are making money thereby, to say nothing of merchandise which the latter brings back from New York on every trip. This return trip traffic is making long distance shipments of household goods a not infrequent reality within a radius of hundreds of miles. Similar arrangements are developing on broader and more secure lines every week. Of still longer distance is the operation of a fleet of motor trucks between Akron, Ohio, and Boston, by one of the leading rubber tire makers of Ohio. More recent is the plan of the Council of National Defense to run 10,000 army trucks loaded, from the Middle West to the Atlantic seaboard for shipment to France, using the highways for the inland end of the trip in trains of 27 trucks each. The invitation of the Postmaster General for bids to carry mails between Hartford and New York by automotive vehicles affords another phase of a development that is truly revolutionary in its effect on our ideas of what may be impending in the field of transportation.

What are some of the possibilities? Several of the railroads are already using trucks for short-haul delivery of freight, thus keeping thousands of freight cars out of the pocketing terminals. For want of some such adjustment most roads are losing thousands of dollars daily by idle crews and choked up lines on the Jersey meadows, waiting to get into their Hudson River yards. Pennsylvania is one of the best supplied railroad states, yet the Superintendent of Highways reported last month that more than two hundred motor cars a day were being brought into that state from other states. They are serving industry and trade to overcome congestion. Not a few of these were hauling coal from mine to consumer at a handsome profit. Atlantic City has been breaking a milk monopoly by the resort to motor routes of supply, connecting farmer and consumer by daily service without middleman. Will the auto truck halt the steam railroad at the gates of the city, taking the burden of terminal distribution upon its young shoulders? And, suppose the city itself should step in and say, "We'll do the trucking between the roads' terminal and the public markets"—what would then happen to prices, etc.? We may be experiencing, right around us, an actual revolution in our mode of handling traffic.

## HUN NEWS

TUSKEGEE INSTITUTE, which keeps tab on the lynchings in the United States, informs us that during 1917 there were thirty-eight persons lynched in our southern and western states, of whom thirty-six were negroes and two were whites. Thirty-seven were males and one a female. Georgia and Texas lead the roll of dishonor with six lynchings each, Louisiana has five, Alabama and Arkansas four, Tennessee three, Kentucky two, and Arizona, Florida, Mississippi, Montana, Oklahoma, South Carolina, Virginia and Wyoming one each.

German papers will please not copy.

## DEMOS OR PROLETARIAT?

THERE are two views of democracy, confused in practice but opposite in principle. One, the traditional American view, conceives democracy to mean rule by representatives of the "demos"; that is, of the whole community. This is what Lincoln meant by "government of the people, by the people and for the people." The opposite view is based on the class struggle theory formulated by Karl Marx; that democracy means the rule of other social classes by the proletariat. Thus we find the Bolsheviki in Russia boasting of the purity of their democracy on the ground that the government which they have established in Petrograd "contains no bourgeois elements"; or, in other words, that a large proportion of the community is wholly

unrepresented. To say that the majority has the right to rule is evidently not at all the same thing as to declare that it has the right to transform itself into a permanent ruling caste and disfranchise the minority. The very idea of democracy, in the sense of community self-government, demands a certain patriotism and common public spirit underlying all parties and classes; the minority must accept the decision of the majority and the majority must not attempt to outlaw the minority.

## IF WE WERE GERMANY

**N**EARLY three and a half years have passed since Kaiser Woodrow flung his sword on the table of the council chamber and said to his assembled military lords: "If you will have it so; then war!" How bold and confident the spirit of America in those glorious days! From the Amerikanischer Kaiser in the White Palace to the humblest peasant woman of Dakota, plowing the fields in double harness with her faithful dog, a thrill of patriotic exultation ran thru the nation. Amerika über Alles! While the learned professors of Harvard and Cornell were drawing up their manifestoes of hate, while the cannon factories of Pittsburg were turning out their giant siege guns, while His Imperial Highness Crown Prince McAdoo, King Badenhause Johann of Illinois and Archduke Anheuser Busch of St. Louis were riding thru the cheering streets, the American Death's Head Rough Riders crost the frontiers of Canada and Mexico and war was upon the world. Onward with God!

Alas, how different the picture today! On the surface all has been victory. Have we not built an impregnable line of trenches on the hostile soil of Canada, removed machinery from Toronto factories to our industrial centers, levied ruinous fines on the merchants of Vancouver, shot as hostages hundreds of town officials in Ontario and village priests in Quebec? Have we not deported laborers—yes, and young girls too—from Canada to starve and slave by the thousands in Massachusetts mills and Montana mines? Have we not made Cuba a desert with a scientific ruthlessness unequaled by the old Spanish conquistadors? Is not Mexico now an American province? The Philippines, it is true, have been sacrificed to our failure to gain command of the sea; but how small a loss this is to balance with these mighty gains. On the map we have won the war. But with true American candor we must confess that the war is still going on. Our necessary policy of sinking "without leaving a trace" every neutral or belligerent merchant vessel that dared to enter the Atlantic has multiplied enemies against us. We have no friends; and the only neutral states are the tiny republics of Central America that lie under our very guns.

How nobly we have striven by every means to redress this unfavorable balance of power which jeopardizes our hopes of victory! The famous "shock troops" of General Theodor von Rosenfeldt have left desolation in their wake like an army of locusts. Edison and Steinmetz, and others of our greatest scientists have excelled themselves in compounding new poisonous gases and in making germ cultures to infect the cattle of Argentina. Such cultured diplomats as Brandt Whitlock and von Dyke have carried bombs to every neutral that dared to trade with our enemies, caused incendiary fires in munitions factories, subsidized pacifist newspapers and bought up venal politicians. Orville Wright and von Curtiss have bombed enemy capitals and attained exceptional skill in slaying school children. But all in vain. The iron ring that encloses us by land and sea is still unbroken.

But we can still fight our foes beyond the border. Within America lies the peril. Victories cannot forever make sweet a diet of potato-bread and we have had bread riots in New York and mutinies among the naval crews blockaded in Hampton Roads by the cruisers of the enemy. Doubtless these are but the murmurings of a very distant storm; the

famous American discipline which trains the very mind and soul to goose step has prevented any general revolution or any serious breakdown of the military machine. But the structure of our glorious constitution, which so exalts the high-well-born and so abases the common swine, makes us fear that when revolution does come it will shatter the very structure of our institutions. The image of national sovereignty is, of course, our noble Kaiser Woodrow, whose magniloquent speeches about "rule by divine right" and "the mailed fist" are known to every schoolboy and whose advice to the army to act like "the Huns of Attila" is the watchword of every West Point graduate. All officers of the Government are his personal appointees and subject to dismissal at his imperial whim. The Senate represents the various hereditary princes, from the powerful King Heinrich Kabot of Massachusetts down to Duchess Rankin of the Free City of Missoula. The House of Representatives is elective, and about a third of it Socialist, but, after all, it can do little but approve the measures submitted to it by the Crown. Meyer Berlin, the Socialist leader in the House, is at present serving a term in the Federal Prison of Atlanta for daring to criticize the policies of the Kaiser.

Our state constitutions are even more to be admired than the Federal Government, since they contain so little of the poison of democracy. In New York, for example, the votes of a hundred thousand citizens on the East Side are outweighed by those of four wealthy magnates in Wall Street: Theodor Schontz, Elbert von Gary, Cornelius von der Bilt and August Schönberg. Yet the rich do not really govern in the highest matters of state; these are determined by military men of noble family, such as Theodor von Rosenfeldt, Field Marshal Schwarzjack von Persching (in whose honor our artists erected a huge wooden statue into which his admirers could drive silver nails), and Admiral Schrecklichkeit von Daniels, the great advocate of unrestricted submarine warfare. The power of the nobility rests largely upon their vast landed estates. The Graf von Rockenfeller owns two-thirds of Oklahoma and the Archduke Morgan von Geldhaber is overlord of the rice fields of Texas and all the forests of Idaho.

Of course, we have no use for personal liberty inconsistent with the strictest social discipline. A civilian who refuses to step into the gutter when an army officer approaches is properly liable to have his head sliced open by a saber. To walk on the grass in the parks or get off from the wrong end of a trolley car is a matter of two years' imprisonment. To speak any language but English is, in many parts of the country, a highly punishable offense and many private associations exist for rooting out of the language all words of French or Latin origin.

Yet life in America—at least in times of peace—has compensations even for the common man. He can find in our symphony concerts, in social etiquette, in beer, in books, in domestic happiness and in dreams of national greatness enough fulness of life to persuade him that participation in the tasks of government is a right that he can afford to do without. Certain scholars may chafe at the stifling of civic freedom, but, on the other hand, in no country is the Herr Professor more greatly honored. At court President Nicholas Murray Butler and Professor G. J. McKeen Cattell walk in together ahead of the richest merchants and only just behind the most imbecile nobles. Salaries are low, but the university professor who attains any standing in his science can always reckon on getting at least the Golden Triple Eagle of Delaware or the Pink Ribbon of Missouri. The learned author of "First Principles of the Foundations of America's World Destiny from the Ethno-psychohistorico-sociological Standpoint Expounded" was rewarded by being made Bürgermeister of Detroit in succession to Heinrich Ford, the munitions magnate. After all is said, there is nothing in the world equal to our American Kultur and it should be no matter of amazement that other nations are consumed with envy and leagued against us.

# THE STORY OF THE WEEK

## The Crisis in Industry

An unexampled industrial and commercial crisis has been brought upon the country by the inability of the transportation system, under Government control, to keep the cities of the Eastern states supplied with fuel and to handle the volume of freight passing from the West to the Atlantic coast ports. These conditions were much aggravated by the severity of the weather, which increased the demand for fuel and at the same time blocked the railroads with snow and the rivers and harbors with ice. The spectacle was witnessed of New York City suffering severely for lack of the fuel necessary for household warmth and for the conduct of business and operation of industries, and perhaps a million tons of urgently-needed shipping lying idle for the same cause, while within sight, or at most within a few miles, on the New Jersey side, were abundant supplies of coal awaiting transportation across the ice-locked waters of the harbor. Many industries in many Eastern cities were seriously crippled, and hundreds of establishments were compelled to stop work. Vast quantities of valuable freight, including munitions and costly machinery for use in the war, unable to secure prompt shipment, were dumped in the open air at the terminals, to be damaged or ruined by exposure to the elements, while scores of thousands of carloads more were struggling eastward over the congested and snow-blocked railroads.

In such circumstances various expedients for relief were discussed, culminating on January 17 in the sudden issuance by the Fuel Administrator, with the approval of the President, of the most extraordinary decree ever known in this country, and the most extreme order of the kind issued in any country during the present war. This was an order that, beginning with January 18, in all states east of the Mississippi River, including all of Minnesota and Louisiana, there should be a complete cessation of industries, save for a few specified exceptions, for the period of five days, and that thereafter, until and including March 25, there should be a similar compulsory suspension of industry on every Monday. The exceptions, which might continue to use fuel, were such establishments as from their nature must be continuously operated to avoid serious injury to the plant or its contents, manufacturers of perishable food and to some extent of other foods, and newspaper and other periodical publishers to a limited extent. On the specified Mondays all business and professional offices except those of Government functionaries, transportation companies, banks and trust companies, and physicians and dentists; all wholesale stores, except those of food and drugs; and all thea-

ters and other places of amusement, and rooms or buildings in which liquor is sold, were to be denied the use of fuel; and local transportation lines were to be restricted to Sunday schedules. At all times preference was to be given, in selling fuel, to railroads, domestic consumers, hospitals and asylums, army cantonments, public utilities, ships, Governmental purposes, and manufacturers of food for immediate consumption; and no other customers were to be served until all these had been supplied.

The unexpected issuance of this drastic order, at only thirty-six hours' notice, caused great surprise and innumerable protests and demands for its recall. It was pointed out that it would affect twenty-seven states, with a population of nearly 65,000,000; that it would affect the employment of more than 21,000,000 working people, and would inflict upon them a daily loss in wages of more than \$48,000,000, or an aggregate loss of more than \$730,000,000 in the fifteen days of enforced idleness. There was no inclination to demur at any sacrifice that might be necessary for the welfare of the nation, but there was widespread doubt of the necessity of so extraordinary a measure.

As soon as practicable after the intention to issue this order became known, in the afternoon of January 17, a sub-committee of the Senate called the Fuel Administrator, Dr. Garfield, before it and for more than an hour sub-

jected him to a searching examination as to the reasons for the order and the ends which he expected to gain by it. The Administrator did not succeed in convincing all members of the committee of the necessity or wisdom of his course, but he spoke plainly, unhesitatingly and lucidly in defense of his course. The three basic reasons for the order were: To alleviate human suffering from lack of coal; to enable waiting ships to receive bunker coal and go their way to carry supplies to the Allies; and to relieve the congested condition of the railroads and terminals and to move fuel and food to points where they were urgently needed. In amplification of these reasons and purposes, he issued a detailed statement, describing the congestion of traffic and paralysis of industry and arguing the need of an immediate clearance of lines and terminals and release of harbor-bound shipping. A few hours later the same day the Senate, after a prolonged and somewhat acrimonious debate, by a vote of 50 to 19 adopted a resolution requesting a suspension of the order for five days, for reconsideration; but before this action was taken Dr. Garfield had signed the order.

## Further Food Conservation

The National Food Administration announced on January 11 a drastic enforcement of the law which prescribes for the crime of hoarding food a penalty of \$5000 fine or two years' imprisonment, or both. "Hoarding" is defined as meaning the holding of or contracting for necessities of life in quantities in excess of reasonable requirements for a reasonable time. By "reasonable time" Mr. Hoover means thirty days, and by "reasonable requirements" the average amount used in such a period last year. The law applies to wholesale and retail dealers, and also to consumers; so that a householder who should purchase or possess at one time food supplies exceeding the quantity which a year ago was sufficient for the needs of his family for thirty days would be liable to the penalty named. At the same time the administration promised that there should not be exported more food than the quantity actually saved by the people of the United States; tho it was compelled to add that unless the quantity thus saved and exported were increased materially over the average of the last six months, there would be so serious a deficiency abroad that the Allies would have to reduce the amount of food apportioned under their present rationing rules. In the last five months less than 50,000,000 bushels of wheat have been saved, but it is the hope of the administration that in the next five months that amount will be nearly doubled.

As a further measure of conserva-

## THE BUSIEST MAN IN THE SENATE

Senator James A. Reed is a member of four of the Senate's investigating committees: military, naval, fuel and sugar. Of course he's from Missouri! Senator Reed is chairman of the investigating sub-committee on manufacturing which called Fuel Administrator Garfield to account for his drastic orders of January 17, shutting down industries to save coal.

tion, the President by proclamation on January 14 extended the licensing system of the food administration to importers, manufacturers and distributors of various foodstuffs, including fish, malt, canned vegetables and fish, grain products, and cattle fodder. Meantime food cards are being prepared for universal use in London, to go into effect probably early next month, while the State Department at Washington is in receipt of credible assurances that, largely because of the smuggling in of supplies from Russia, the scarcity of food in Germany is not nearly so serious as some reports have stated.

**The Fate of the Railroads** Seventy railroad presidents, representing 90 per cent of the mileage in the United States, have united in an urgent request that Congress will make a definite declaration concerning the length of time after the ending of the war that the roads will be retained under Government control. This, they insist, is justly due to the railroad companies and to the owners of their securities. The pending bill, it will be remembered, provides for Government control "for and during the period of the war and until Congress shall hereafter order otherwise." That would permit the Government to return the roads to their owners the day after the making of peace, or to hold them under its control forever. Conservative members of Congress are in favor of amending the bill so as to provide for the restoration of the roads within six months or at most a year after the end of the war, while radical members oppose any change, hoping thus to keep the way open to permanent Government control and actual ownership.

Meantime it has been observed that the Government has not taken control of a number of short railroads which serve as links between trunk lines but are of little or no importance in the Government's transportation service, and inquiry at Washington has elicited the information that the Government does not mean to take them or to regard them as subject to the provisions of the law and proclamation which were supposed to cover all railroads in the United States. It is urged in behalf of these roads that exclusion of them from the general system of Government control and Government compensation is likely to be ruinous to them, since they are generally dependent upon the trunk lines for most of their business and for a large part of their rolling stock.

**Shipbuilding Progress** America's production of merchant shipping last year was 901,223 gross tons. That was nearly double that of the year before, was equal to nearly half of the whole world's output in 1916, and was probably more than that of any other country and more than one-third the output of all the Allied and neutral countries in 1917, the latter total being estimated at about 2,500,000 tons. At the same time, sink-

ings by submarines and mines in 1917 are estimated at no less than 5,000,000 tons, so that destruction exceeded construction by 100 per cent; a circumstance which re-emphasized the need of expediting shipbuilding in this country to the utmost degree.

In response to this need it is announced that forty-one requisitioned ships, with a tonnage of 327,152, will be completed and put into use by March 1; that thirty large steamers from the Great Lakes will be transferred to the Atlantic Ocean, by the expedient of cutting them into two, bringing them thru the Welland Canal, and reuniting them at tidewater; and that a nationwide campaign will begin this month

#### THE NEW RAINBOW COMMANDER

The picked force of National Guard troops now in France is under the command of Major General Charles T. Menoher, who succeeds Major General Mann. This detachment of the former National Guard was nicknamed the Rainbow Division because it was made up of troops from every state, especially chosen as ready for immediate service overseas. It was sent to France last fall.

for recruiting an army of 250,000 skilled workmen for the shipyards, in which 145,000 are now employed. The requisitioning of all large American sailing vessels for Government use is also being considered, and it is reported that 175 such vessels with a cargo capacity of 125,000 tons are now within reach in home waters, while there are nearly 500 of more than 1000 tons each under the American flag. The purpose of the Shipping Board is to add to the American marine in the Atlantic this year a greater tonnage than was destroyed last year; which also means a greater tonnage than is likely to be destroyed this year, since the increased naval activity of the Allies is diminishing the destructiveness of the German U-boats.

**Agricultural Conscription** In an increasing number of states, New York and New Jersey being among the leaders in the movement, legislation is being prepared which will provide for the conscription of labor for agricultural purposes. This will presumably have to be done as a military measure, authorizing the Governor to make such a draft of men not otherwise employed whenever, because of the existence of a state of war, he regards such action to be necessary for the protection and welfare of the state and the nation. It is hoped that thus there will be effected some abatement of the anomaly which has been presented, of the nation suffering from scarcity of food while extensive areas of fertile land adjacent to markets lie unimproved and thousands of able-bodied men are in idleness.

**The Anti-Draft Convictions** The decision of the United States Supreme Court confirming the constitutionality of the conscription law has of course been followed by confirmation of the convictions of the persons charged with conspiring to defeat the operation of that law, and they will now be compelled to undergo the penalties which were imposed upon them. Seven persons were involved in the original suits, the most conspicuous of whom were the well-known agitators, Emma Goldman and Alexander Berkman. They had been convicted in New York and sentenced each to pay a fine of \$10,000 and be imprisoned for two years. On learning that the highest tribunal had sustained their sentences, Miss Goldman expressed resignation to her fate. This decree of the Supreme Court is expected to have a noticeably good effect upon the conduct of the second conscription, now about to begin.

**Investigating Army Health** The death of Major Augustus P. Gardner at Camp Wheeler on January 14 gave rise to an imperative demand for investigation into the sanitary condition of the training camps, particularly with respect to the prevalence of pneumonia. Major Gardner had been for many years a Representative in Congress, and had been foremost, since the beginning of the war, in urg-

ing efficient military preparation. He left Congress in order to enter the army, and had his own rank reduced from colonel to major in order to get into active service at the front. Just after he had called attention to the need of better protection for the men from inclement winter weather, he contracted pneumonia and died. Official reports show that of the 235 deaths of soldiers in the camps during the week ending January 11, no fewer than 149, or more than sixty-three per cent, were caused by pneumonia; and it is widely believed that this state of affairs is due to the failure of the Quartermaster's Department to provide proper clothing and housing for the men.

**American Dyes** The prospective organization of a national association of manufacturers of dyestuffs calls attention to the gratifying development of a formerly much neglected industry. During the first two years of the war the impossibility of procuring dyes from Germany caused much disturbance to American fabric manufactures, and the country was rudely reminded of the fact that while it was one of the chief producers of the raw materials for dyes, it was almost entirely dependent upon a foreign country for the finished product. This stimulated inventive ingenuity and industrial enterprise to so good effect that America is said now to be producing dyes just as good as those of Germany; and whereas before the war this country was purchasing yearly \$10,000,000 worth of aniline dyes alone, during the first ten months of last year it exported to twenty-one foreign countries no less than \$12,500,000 worth of dyes, Great Britain taking about one-fourth of them.

**The U-Boat Record** The agreeable announcement is made that in the last week only six British ships of 1600 tons or more and two smaller ones and two fishing boats were sunk by submarines or mines. This is with a single exception the lowest week's record since the unrestricted campaign of the U-boats began, nearly a year ago. The decrease is attributed partly to the severity of the weather, which may restrain U-boat activities, but still more to the increasing efficiency of the Allies' defensive methods.

**Raids in Sea and Air** Another German raid, probably by a large submarine boat, was made upon the British coast on the night of January 13, when the town of Yarmouth was bombarded with about twenty shells. Three persons were killed and ten injured, but little damage to property was done. The next day, in open daylight, British aviators made a most successful raid upon the railway station and munitions factories at Karlsruhe, the capital of Baden. A ton and a quarter of explosives were dropped and much damage was done. All the airships returned in safety. Another successful bombing raid was made at Roulers.

THE GREAT WAR

- January 11—French raids at Courcy and British raids at Loos. Italian gains between Brenta and Piave Rivers.
- January 12—Successful operations by British and Italian aviators against Teutons in Italy.
- January 13—Canadians raid German trenches at Lens. German U-boat bombards Yarmouth.
- January 14—British air raid upon Karlsruhe. Italians make gains at three points.
- January 15—Germans check further Italian assaults. British air raid upon Roulers.
- January 16—Successful British raid near St. Quentin. Italians repulse Germans at Capo Sile.
- January 17—French successfully raid German trenches in Sparges sector and take prisoners.

German newspapers confess that the use of many depth bombs by American destroyers is militating seriously against the submarines.

**On the West Front** Numerous minor activities, generally favorable to the Allies, have marked the week in France and Flanders. The French made several successful raids for observation purposes on January 11, and the British were similarly successful near Loos. Some considerable bodies of Russians joined the French forces. Two days later Canadian troops raided trenches and took many prisoners without loss to themselves, at Lens, while the French in Champagne maintained a vigorous artillery fire. The Germans were reported again to be sending troops to this front from the east, but there were no further indications of the long-

threatened "drive." On January 16 and 17 the British made a successful raid north of St. Quentin, and the French did the same in the Eparges sector. The British Chancellor of the Exchequer on January 15 announced in the House of Commons the result of the inquiry into the British reverse at Cambrai on November 20, to the effect that there had been no "surprise" by the Germans, that no precautions against attack had been neglected, and that the commander was not culpable for what had occurred. There was no foundation for the rumor that Sir Douglas Haig, Field Marshal, was to be relieved of his command.

**On the Italian Front** Fighting in Italy has been more violent than elsewhere, both on the ground and in the air. Vigorous attacks by the Italians on January 11 drove back the Teutons for some distance between the Piave and Brenta rivers, and British aviators destroyed seven hostile aircraft. The next day Italian aviators did much damage to the enemy's works, exploding several magazines. Material gains were made by the Italians on the lower Piave on January 13, and these were followed on January 14 with further gains at three points—at Monte Asolone, at Monte Grappa, and in the Piave Delta. These attacks were renewed the next day with less success, the Teutons having strengthened their lines sufficiently to hold the Italians in check and even to repulse them with heavy loss. The Italians, in return, repelled German attacks at Capo Sile.

**Negotiations for Peace** Many vicissitudes mark the progress of the Bolsheviki - Teutonic peace negotiations at Brest-Litovsk. The Central Powers on January 11 declared that they had withdrawn their offers of peace to the Allies, because of their failure to accept them, and would thereafter seek only a separate peace with Russia. They refused the request of the Russians, that the negotiations be transferred to Stockholm or some other neutral place, and Leon Trotzky, the Bolsheviki Foreign Minister, after at first demurring, assented to remaining at Brest-Litovsk and the parley was consequently renewed at that place. The Russians have complained that the Germans grossly garble and pervert reports of the conferences, for publication in Germany; and when the Germans proposed to draft a treaty beginning with the declaration that the signatories had resolved thereafter to live in peace and friendship, Mr. Trotzky refused to accept it, saying that that was a "decorative phrase" which did not describe the relations which in future would exist between the two peoples. Finally on January 14 the Germans declared that the Russian proposals were quite unacceptable. Withdrawal of German and Austrian forces from occupied territories was, they said, impossible while the war lasted. It was conceded that the people

## SCHOOLBOYS FROM THE GERMAN TRENCHES

This line of prisoners captured by the French seems to bear out the surmise that German man power is running low. These boys average sixteen or seventeen years old—the youngest class in military service

of disputed territories ought theoretically to be permitted to vote on the question of their disposition; but in the present cases a referendum seemed impracticable and a vote by the governing body seemed sufficient. "The Central Powers," they added, "can go no further." This left little hope of any profitable renewal of the conferences.

## Dissensions in Germany

The peace negotiations at Brest-Litovsk had a disturbing effect upon German domestic politics, which for a time threatened a Chancellorship crisis. The Fatherland Party, led by Admiral von Tirpitz, organized a fierce campaign against the Foreign Minister Dr. von Kuehlmann, for his professed acquiescence in the Russian policy of "no annexations," which extended thruout the press of the Empire, with the apparent purpose of forcing the Minister to resign. It was also intimated that the Chancellor also was likely to resign "on account of his health," and to be succeeded by Prince von Buelow. On the other hand, Dr. Dernburg, formerly Secretary of State for the Colonies, strongly supported Dr. von Kuehlmann's policy, and organized Socialists at various places broke up meetings of the Fatherland Party. By January 16, however, these dissensions largely subsided and the understanding prevailed that a *modus vivendi* had been established between the factions whereby the Chancellor was to be free to apply the "no annexation" policy on the eastern front, while Field Marshal von Hindenburg was to have an equally

free hand in the west to annex whatever French or Belgian territory might be in his power at the end of the war.

## The Bolsheviki Abroad

The French Government purposes altogether to ignore the negotiations of the Bolsheviki at Brest-Litovsk, no matter in what they may result, and there is no assurance that any of the Allies will regard them seriously. The British Government has, however, decided to establish tentative and informal relations with the Bolsheviki Ambassador at London, Maxim Litvinoff.

The Bolsheviki have issued a formal decree recognizing and supporting the right of the Armenians, in both Russian and Turkish territory, to complete independence and the determination of their own destiny. The acceptance of this principle by Turkey is one of the conditions on which the Bolsheviki are willing to conclude peace with that power.

In another direction the Bolsheviki seem to be seeking not peace but war. Some time ago the Rumanian Government arrested and disarmed some Russian soldiers who had entered that country as emissaries of the Bolsheviki. In retaliation the Bolsheviki on January 14 arrested and imprisoned the Rumanian Minister at Petrograd and his staff. The next day, on the protest of the other foreign envoys, including the American, against such violation of diplomatic usage, the Bolsheviki released these prisoners, but at the same time sent an ultimatum to the Ru-

manian Government, demanding within twenty-four hours, under penalty of war, punishment of the officials who had disarmed the Russian soldiers. Upon the expiration of the time set, the demand not having been complied with, the Bolsheviki ordered the arrest and imprisonment of the King of Rumania, tho with little prospect that the order could be executed.

## The Troubles of Russia

Grave disturbances continue in Russia, with evil omens for the future. Rioting, organized battles, and general looting are reported from Kharkov and various other places, while the Cossacks under General Kale-dine maintain their active opposition to the Bolsheviki. Nor does the meeting of the Constituent Assembly, set for January 18, offer promise of better things. Of 520 delegates elected to that body 267 are Social Revolutionists and only 161 favor the Bolsheviki. A caucus of the Social Revolutionist delegates has denounced the Bolsheviki as "usurpers of power who have precipitated the country into an abyss of civil war and anarchy," while the Bolsheviki purpose to compel the Assembly to proclaim a Socialist Republic with the expropriation of all land and property, under penalty of the Assembly itself being forcibly dissolved and replaced with a body of the Bolsheviki's own appointment.

## Will Russia Repudiate?

Repeated rumors of the intention of the Bolsheviki government at Petrograd to repudiate all foreign loans contracted by former governments of Russia have caused a considerable decline in the market value of Russian securities. On January 11 Russian 6½ per cent bonds, which the day before had sold for 57, fell to 48, while 5½ per cent bonds went to 43. A more hopeful view of the case is that the Bolsheviki may not after all commit repudiation, in the face of the pressure which will be brought to bear against such a course; and that if they should do so, their act would probably be reversed by the permanent government which is expected soon to succeed them. The partial recognition of them by Great Britain as a government *de facto* if not *de jure* is expected to help to impress upon them the facts that even a temporary revolutionary government should observe the laws of nations, and that when a new government succeeds to the powers and revenues of an old, it also incurs its duties and its pecuniary obligations. The direct interest of the United States Government in the matter is measured by the fact that American loans to Russia in this war aggregate \$300,000,000.

## Belgium's Army

Despite the German possession and oppression of nearly all the territory of Belgium, that nation is still a military force to be reckoned with seriously. Its army is now more than three times as strong as it was when it emerged from the battle of the Yser, in November, 1914. On the twenty-mile front which it is holding against the Germans it has

constructed hundreds of miles of trenches, of roads and of railroads, and thousands of miles of telegraph and telephone lines; has built more than 525,000 cubic yards of concrete redoubts, shelters and fighting posts, and barracks for 100,000 men and 15,000 horses; and now has in its transport service more than 5000 automobile trucks. In the last three months its aviators have made nearly 2000 flights, more than half of which have been for fighting. In proportion to its numbers it is probably not surpassed in efficiency by any other army in the war.

That "Contemptible Little Army" Great Britain's "contemptible little army," as the German Emperor called it at the beginning of the war, is about to be increased by the recruiting of nearly half a million more men, chiefly the younger of those who hitherto have been exempted because of their employment in industries essential to the military service. Their places will be filled largely by women, and by returned soldiers whose wounds unfit them for further fighting but not for industrial labors. This reinforcement will, it is hoped by the British Government, enable the British army to hold the Germans in check until an effective American force can be placed upon the fighting line. Sir Auckland Geddes, the Minister of National Service, reports that during the war the total enrollment of the Empire in the armed forces, army and navy, has been 7,500,000, of whom England has contributed 4,530,000, Scotland 620,000, Wales 280,000, Ireland 170,000, the oversea dominions and colonies 900,000, and India, Africa and other dependencies 1,000,000, composed of native soldiers, laborers, carriers, etc. Reckoning the population of England at the outbreak of the war at 37,000,000, her military enrollment amounts to 12.24 per cent of the whole. If the United States were to do the same, we should have 12,250,000 men in the service.

Chaplains of Many Faiths An interesting by-product of the vast expansion of our army, suggestive of the polyglot and cosmopolitan character of the nation as well as of its traditional "freedom to worship God," is found in the appointments of chaplains at large for the army, which are now being made. Hitherto army chaplains have been clergymen of some of the chief Protestant churches or of the Roman Catholic Church. Now, however, they are being drawn from among the Jews, the Greek Church, the Christian Scientists, the Salvation Army and the Mormons. These chaplains at large are not attached to any special regiments, but visit all the camps and cantonments, to minister to soldiers of their faiths wherever they may be found.

War Costs and Loans Estimates of the cost of the war to the various belligerents, down to the close of 1917, are expressed in figures which remind us of those which meas-

ure the interstellar spaces and which are beyond the power of the average mind to comprehend. The expenses of the Allies, excepting Japan and minor states, have been:

United States .....	\$6,000,000,000
Great Britain .....	31,250,000,000
France .....	20,500,000,000
Russia .....	16,500,000,000
Italy .....	5,900,000,000
Belgium, Serbia, Rumania and Portugal .....	5,500,000,000

Total for the Allies.....\$85,650,000,000

The expenditures of the Central Powers, for obvious reasons, have been much less; in fact, little more than half as much:

Germany .....	\$28,600,000,000
Austria-Hungary, Turkey and Bulgaria .....	16,300,000,000

Total for the enemy.....\$44,900,000,000

Here, then, is a grand total of \$130,550,000,000 spent on war in the course of forty-one months, or more than \$3,184,000,000 a month. It is not to be wondered at that our allies have felt the need of borrowing from us, tho their loans, large as they seem in themselves, are insignificant by the side of the expenses which they have incurred. The loans, from the beginning of the war down to the end of 1917, have been:

Great Britain .....	\$2,045,000,000
France .....	1,285,000,000
Italy .....	500,000,000
Russia .....	325,000,000
Belgium .....	77,400,000
Serbia .....	4,000,000

Total ..... \$4,236,400,000

Of this amount \$3,528,629,750 has actually been paid in cash or credits, and the remainder is available on demand.

To Boycott Militarism The United States Chamber of Commerce is taking a referendum of business men's organizations thruout the nation on the matter of notifying the business men of Germany that trade relations will not be reestablished with them after the war unless the German Government is made responsible to the people of that country. This is applying to commercial relations the same principle which the President has prescribed for diplomatic relations. It does not indicate any purpose of revenge or retribution, or any desire for an economic war or for the commercial oppression of Germany or restriction of her legitimate activities, but simply that the business men of America will not again supply German militarism with the raw materials for armaments with which to menace and disturb the peace of the world. It foreshadows a boycotting not of Germany, but of German militarism. The United States Chamber of Commerce expects to have this declaration of purpose overwhelmingly adopted by American business men, and then made known to the business men of Germany in the hope that thus a powerful influence will be aroused in favor of such a basis of peace as that which the President has declared to be indispensable.

German Spies A supposed German spy, named Walter Sporrman, was arrested at Norfolk, Va., on January 12, in the alleged act of firing a bomb for the blowing up of an army magazine. He was believed to have been concerned in the plots of the notorious Captain Boy-Ed and other

#### JUGO-SLAV VOLUNTEERS

Serbia is asking for 50,000 native sons who will leave America to go back to Europe and fight for the freedom of the southern Slavs. Slovenes, Croats, Serbians and Austro-Serbians are all enlisted under the Jugo-Slav banner and the recruits are called not only from the United States but from South America, Canada, Australia and New Zealand as well. Only unnaturalized citizens, of course, are asked to volunteer.

German outrages in this country. Several other arrests, of supposed accomplices, were made a little later. Following this, on January 16, a powerful German bomb was discovered in a dry dock on the Atlantic coast in which one of the best United States battle-ships was being repaired. Had it exploded, it is said, it would probably have damaged both the ship and the dock very seriously. Reports of other attempted outrages at other points indicate the need of the strictest possible surveillance of enemy aliens.

**The Intrigues of M. Caillaux** A great sensation was produced in France on January 14 by the arrest of Joseph Caillaux, a former Prime Minister, on a charge of aiding the enemies of the Republic, and this sensation was increased and extended to the United States two days later, when it was made known that his arrest had been ordered because of disclosures which the American State Department had made concerning his relations with Count von Bernstorff and the Wilhelmstrasse, particularly at the time of his visit to Argentina in 1915. There were published at Wash-

ington some intercepted communications between Bernstorff and the Foreign Office at Berlin, referring to Caillaux's communications with German agents in Argentina, warning German newspapers to refrain from speaking of him in such a way as to excite suspicion, and urging that while a ship on which he was to go from Argentina to France should be captured by submarines because of the important papers which it would carry, Caillaux himself should not be harmed, but should be treated with every courtesy. The course of the United States Government in giving this information to France and thus intervening in what is nominally a matter of domestic French politics, is quite unprecedented, and is interpreted as a striking indication of the solidarity of the Entente Allies. M. Loustalot, a member of the Chamber of Deputies, and Paul Comby, a lawyer, were also arrested in connection with the case. The Chamber voted to approve the course of the Government in making the arrest of Caillaux, by a vote of 379 to 105. While this was an overwhelming vote of confidence, the fact that 105 Deputies, chiefly if not entirely Socialists, opposed the Govern-

ment, was significant. It indicated, no doubt, in part a desire to detach France from her allies, as Caillaux had striven to do, and in part also personal hatred of the Prime Minister, Dr. Clemenceau, who is the chief prosecutor of Caillaux, and between whom and the latter a bitter feud has long existed.

#### Reforms in China

The Chinese Government at the beginning of the year published thruout that country a proclamation exposing and denouncing some of the social wrongs which the nation has long suffered, and calling for their abatement. Four evils are specially mentioned. The first is that of too early marriages, for the correction of which the example of Occidental countries and the old rule in China under which the marriageable age was fixed at thirty for men and twenty for women, are cited. The second evil is the neglect of funeral rites and mourning for deceased parents. The third is the binding of women's feet, which is indeed now forbidden by law, but which is still widely practised, especially in secluded and remote rural regions. The fourth is gambling.

#### THE SERBIAN MISSION IS HERE

The ablest diplomat in the Serbian politics, a leader of the young democratic party in Serbia, Dr. Vesnitch, is head of the Serbian mission to the United States. He has been the representative of Serbia at the war councils of the Allies in Paris, where his knowledge of every move on the European chessboard for a quarter of a century past gives his opinions a weight possessed by few European statesmen. On either side of Dr. Vesnitch in the photographs above are his colleagues in the Serbian commission. Dr. Lozanitch, at the left, was like Dr. Vesnitch a professor at the University of Belgrade. He is now president of the commission on Serbian reconstruction. At the right is General Rashitch, who commanded the Serbian army against Austria in the so-called retreat, when 250,000 men held 700,000 in check for three months. He is now in charge of the enrollment of the Jugo-Slav volunteers.

# THE UNITED NATIONS

On June 17, 1915, there assembled in Independence Hall, Philadelphia—the very spot where the United States of America was born—a little group of men who had the temerity to proclaim to the world that the time had come “to devise and to create a working union of sovereign nations to establish peace among themselves and to guarantee it by all known and available sanctions.” Before this assembly adjourned the American organization known as the League to Enforce Peace was born. This League is based on the four proposals published below. So ripe was the time and so successful has since been propaganda of this organization that the idea of a League of Nations has spread to the four corners of the earth, and today the establishment of a League is the chief purpose for which the Great War is being waged. Manifestly before these four proposals or similar ones can be carried into effect they will have to be amplified in a thousand and one details by a constitutional convention of even more importance than the constitutional convention of 1787 which produced the Constitution of the United States. As a beginning of the study of this problem a private group of a score of American statesmen, international lawyers, economists and publicists have been meeting from time to time discussing the implications of the program of the League to Enforce Peace. The following tentative Draft Convention for a League of Nations by this private study group—not a committee of the League to Enforce Peace, tho composed of some of its ablest members—is revised up to December 15, 1917. The Independent is greatly honored to be the medium of its dissemination. The chairman of the group, Theodore Marburg, Baltimore, U. S. A., is inviting criticism of the Draft Convention at the hands of statesmen and publicists.—THE EDITOR

## ARTICLE I COVENANT

**SECTION 1.** The high contracting parties, being the undersigned States and the States becoming parties to this Convention, hereinafter called the States of the League, agree that all disputes between them of every nature whatsoever, which diplomacy or existing and future treaties and institutions for mediation, inquiry or arbitration other than those of the League shall have failed to adjust, shall be submitted to the International Court, to be constituted in the manner prescribed in Article III of this Convention, for decision, if the question is justiciable in nature, or to the Council of Conciliation, to be constituted in the manner prescribed in Article II of this Convention, for recommendation, if the question is non-justiciable in nature.

**Sec. 2.** The high contracting parties agree not to declare war or begin hostilities against another State of the League until any question in dispute has been submitted for inquiry and hearing and until the decision of the Court or the recommendation of the Council shall have been made, or until the time for making such decision or recommendation as provided in this Convention shall have elapsed, or if the decision of the Court or the recommendation of the Council, as the case may be, shall have been made within said time, then until six months shall have elapsed after the making of such decision or recommendation.

**Sec. 3.** The high contracting parties agree to use their economic and military forces against any State of the League that declares war or begins hostilities in violation of this Convention.

**Sec. 4.** The high contracting parties agree to cooperate in the promotion of friendly relations between States and, with this object in view, to call,

at least once in every five years, International Conferences to formulate and develop international law.

## ARTICLE II INTERNATIONAL COUNCIL

**Sec. 5.** The International Council shall be constituted of members, chosen by each State of the League in such manner as each State shall determine, to hold office during the pleasure of the appointing State, provided that each of the States now known as the Great Powers, viz., Austria-Hungary, British Empire, France, Germany, Italy, Japan, Russia and the United States, which shall become a State of the League, shall be entitled to three members and each of the other States of the League shall be entitled to one member.

**Sec. 6.** The International Council shall always be complete and in being. When a vacancy occurs in the representation of any State of the League such State shall take the necessary steps to cause the vacancy to be filled.

**Sec. 7.** The International Council shall be the judge of the right of any member to take his seat in the International Council.

**Sec. 8.** The International Council shall

choose from its members a president and other officers.

**Sec. 9.** A majority of the members of the International Council shall constitute a quorum to do business, but a smaller number may adjourn from day to day and may compel the attendance of absent members in such manner and under such penalties as the International Council may prescribe.

**Sec. 10.** The International Council may determine the rules of its proceedings.

**Sec. 11.** Members of the International Council shall each receive an annual salary, to be determined by the International Council, of not less than twenty-five thousand dollars, excepting that the members of the Ministry and the members designated for conciliation shall receive such additional sum as the International Council may determine.

**Sec. 12.** The first meeting of the International Council shall be held at The Hague at noon on the first Monday of the sixth month after nine States, of which at least four shall be Great Powers, have ratified this Convention and the International Council shall assemble annually thereafter on the first Monday in October, unless it shall appoint a different day.

**Sec. 13.** Resolutions of the International Council shall be passed only upon the concurrence of an absolute majority of all the members of the International Council.

**Sec. 14.** The International Council shall keep a record of the proceedings and debates and, from time to time, shall publish the same in an Official Journal, excepting such parts as may in its discretion require secrecy, and the ayes and nays of the members on any question shall, at the desire of one-fifth of those present, be entered on the Journal.

**Sec. 15.** The International Council shall institute a Secretarial Bureau and (Continued on page 152)

## The Four Proposals of the League to Enforce Peace

*We believe it to be desirable for the United States to join a league of nations binding the signatories to the following:*

*First: All justiciable questions arising between the signatory powers, not settled by negotiation, shall, subject to the limitations of treaties, be submitted to a judicial tribunal for hearing and judgment, both upon the merits and upon any issue as to its jurisdiction of the question.*

*Second: All other questions arising between the signatories and not settled by negotiation, shall be submitted to a council of conciliation for hearing, consideration and recommendation.*

*Third: The signatory powers shall jointly use forthwith both their economic and military forces against any one of their number that goes to war, or commits acts of hostility, against another of the signatories before any question arising shall be submitted as provided in the foregoing.*

*Fourth: Conferences between the signatory powers shall be held from time to time to formulate and codify rules of international law, which, unless some signatory shall signify its dissent within a stated period, shall thereafter govern in the decisions of the judicial tribunal mentioned in Article One.*

# THE SLEEPER WAKES

BY HAROLD HOWLAND

WHEN Mr. Jefferson Knickerbocker awoke on the morning of the ninth of January, he was not quite sure that it was himself that was lying there. There was something a little mysterious about his feelings, and he was not accustomed to mystery in connection with himself. Good American, and sound, substantial citizen of America's greatest city, with a wholesome indifference to the things beyond his own social and business horizon, to him life was real, life was earnest, and above all life was regular. Now an eerie feeling was deuced irregular, and he would be hanged if he quite liked it. It was as tho he had just come back from a long journey—and did not know where he had been. This would never do. He must get back to reality and the regular thing. Let us see. This was the 17th of May, 1916. Yes; he remembered it by the date on the paper he had been reading after dinner last night. Curious how one's memory worked; he always remembered the date that way. Today he had a directors' meeting, and a luncheon to talk about the opportunities for trade extension in South America opened up by the preoccupation of England and Germany with that war of theirs. He must remember to impress on his associates at luncheon the truth of what the President was saying yesterday. Some of them were a little too much interested in that war over there. There was one man at least—he had never quite trusted his judgment anyway—who was inclined to think we ought to get into it. But the President was right. He had precisely expressed the serious conviction of the American people. "Since the rest of the world is mad, why should we not simply refuse to have anything to do with the rest of the world in the ordinary channels of action?"

That was the stuff. What do we care about "abroad," except when it interferes with our business, or sinks our ships?—he had been lucky; he had lost only one little shipment in the war zone. Well, a practical man had to take some chances like that. It was well insured, anyway, and with prices where the war had driven them, he could afford to take his losses without a whimper. What rot to talk about our getting into the war! We could thank our lucky stars we were out of it—unless of course Germany should go too far and hit our profits too hard a crack. But then England had not been any too considerate of us; that shipment of his to Sweden had been lying on the ship at Kirkwall, where the British had held her up, until it had well nigh rotted in the hold. By heavens, the President was right.

Mr. Knickerbocker swung himself out of bed. He was curiously stiff and a little light-headed. But a cup of coffee and a good, substantial breakfast would fix all that.

It took the better part of the morning to convince Mr. Knickerbocker, first,

that he had been for twenty months in a cataleptic sleep, and second, that the United States had been at war with the Imperial German Government for three-quarters of a year. The first was almost easier than the second. His doctor explained it learnedly and fluently. It was a most unusual case, but not unique. It need not worry him. It was almost certain that it would never happen again. The other cases—there were several well authenticated ones which had been minutely studied by the best men in the profession—had suffered no bad after effects. It would be quite all right; he was sure of it. Mr. Knickerbocker shook his mind like a spaniel after a swim, and set his foot upon the accustomed round of life again.

BUT that other thing. His country at war—in Europe! It was impossible, grotesque. What became of our "splendid isolation," then? How about "entangling alliances"? It was confoundedly irregular. It might be earnest, but, by George, it could not be real.

He was still reverberating over it at lunch time. Then at last they let him have the morning paper. He glanced at the date line. January 9, 1918. Curious habit. He always remembered dates that way. Then at the headlines. "Wilson Gives War Aims and Peace Terms." Ah, that was good. The world ought to know just what we were fighting for—our right to go along our own appointed way, unmolested by the quarrels of Europe, free from interference by belligerent highwaymen out to sandbag their weaker neighbors. The right of American ships to sail the seas "on their lawful occasions"; of American business men to "carry on" regardless of wars and rumors of war. Wilson was just the man to make all that clear as crystal.

His eye moved down the column. What was this? He skimmed the lines in haste and amazement. "A free, open-minded and absolutely impartial adjustment of all colonial claims"; "the evacuation of all Russian territory"; "Belgium, the whole world will agree, must be . . . restored"; "the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine . . . should be righted"; "readjustment of the frontiers of Italy"; "peoples of Austria-Hungary accorded the freest opportunity of autonomous development"; "other nationalities under Turkish rule should be assured an absolutely unmolested opportunity of autonomous development"; "an independent Polish state whose political and economic independence and territorial integrity should be guaranteed"; "Serbia accorded free and secure access to the sea"; "the Dardanelles opened as a free passage to the ships and commerce of all nations."

It stunned him. His country standing for this? If he had awakened from his long sleep to find his family walking comfortably about on their heads, the

North River running up hill, the sun rising over the Palisades, he could have taken it more easily.

THE afternoon of Mr. Knickerbocker passed in puzzlement and searching of heart. It wouldn't do, you know. America couldn't take a hand in remaking the map of Europe. "America for Americans" must in all fairness mean "Europe for Europeans" too. This kind of meddling wasn't the thing.

It—it—wasn't American.

But wasn't it? Alsace-Lorraine, now. He had always hated Germany for that brutal rape. He had always loved France for her devotion to that cause.

But look what it would do to American business; a war like that might drag on for years. Yes, but Armenia. The Turkish massacres there had again and again turned him sick with loathing. And Poland. Little time as he had had for history, the sorrows of Poland had stood to him for a crime that must some day be redressed even at the cost of blood and treasure.

But his own boy; he would come of age in a few months; the draft would be sure to get him. How could he spare his son in so alien a cause? And yet, think of Belgium. No, sir, he would be proud to have his son give his life for Belgium as the Belgians had cheerfully given theirs for honor and faith and right.

But think of the cost? Think of his country safe and secure across three thousand miles of sea choosing to pay that cost as England and France and Belgium and Italy were paying it! Still, there was Russia. The thought of the Russian people throwing off the hideous bondage of Czarism and Siberian exile and the brutal bureaucracy filled him with a fierce joy. He read for the fifth time a section of the President's Address, "Such a settlement of all questions affecting Russia as will assure her of a sincere welcome into the society of free nations under institutions of her own choosing." That did stir the blood, didn't it?

But—but—but—

And yet—and yet—

AT dinner he was strangely silent. The family knew him too well to break in. The soup passed and the roast. Then the explosion came. His fist smote the table.

*The President was right!*

He dragged from his pocket the clipping, tattered by hours of nervous handling. His voice boomed out:

"We feel ourselves to be intimate partners of all the governments and peoples associated together against the imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end. For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved."

The sleeper had awakened.

"I side-slipped a thousand feet and turned two somersaults and spun down a thousand feet more. I came within an ace of getting mine"

# THE MERRY JEST OF THE AIRMAN

## Another Story from the Battlefront

BY IRVING BACHELLER

ONE beautiful thing in the spirit of the armies of France and Britain is as evident as the mud and thunder of the battlefields. It is the will to make light of the whole tragic business and turn it into play. The boys bullyrag. They invent nicknames for each other—names as vile as the muck they tramp in, but full of good nature. They are tokens of affection. Flea-face, horse's neck, bull-beef, mud-foot, are some of them. Anything goes that will raise a laugh. Even under fire the jests may fall faster than the shells. It is a way they have of throwing off fear and the thought of death. It is the only way to live and keep the brain cool in an atmosphere of tragedy.

As their pals fall the spirit of play darkens into anger. Then no hell can stop them as long as they can stand up and go on.

But these are only forewords, for I have set out to tell of the merry jest of the little flying captain.

While I was in a big hospital back of the lines I used to hear now and then an outburst of merry, boyish laughter in the ward near my room. I found that it came from the lips of a young flying captain who for weeks had been lying in bed with a broken thigh. The nurse was rubbing his back with a cloth soaked in witch hazel. The cloth tickled him; that's why he was laughing.

It was a merry, gentle face—that of the young captain—and how youthful! Yet he was one of the most daring flyers in the swift growing armies of the air. For more than a year he had been one of the defenders of London, going up at night after the raiders into dark and lofty battlefields of the sky swept with far-reaching beams of light and raked with flying shrapnel.

At last a shell had burst his tank and he had come down afire back of his own battle line at Ypres. With his clothes burning he had jumped—forty feet from the ground—and come down with a thump that shattered the bones in his thigh, but clear of his plane. He had had strength and sense enough to roll and extinguish the fire, which

*Mr. Bacheller is now lecturing in this country after a visit of several months on the western front as the guest of the British Government. He is widely known as the author of "Eben Holden," "Dri and I," "Keeping Up with Lizzie," "The Hand-Made Gentleman" and other popular novels.—THE EDITOR*

would soon have baked him. The nurse told me that when they brought him to the hospital he had neither hair nor eyebrows.

The young captain was now quite comfortable with his leg in a sling. He loved to have me sit at his bedside and chat and smoke with him.

"YOU know I never supposed that I could learn to fly," he began as he lighted a cigaret. "A great hight made me dizzy. When I began with the rumpity my instructor went up with me and showed me all about the joy stick. I tried it. Nearly scared myself to death. The steering is delicate, you know, and a beginner is apt to put on too much and get to wallowing or spinning. The instructor was disgusted. When we got back he said:

"'What ever put it in your head that you could learn to fly?'

"But I did better next time. We went up every day and he didn't jump on me again, but he always looked as if he was fed up with me and couldn't stand it much longer. One day he said to me:

"'Well, boy, you might as well kill yourself first as last. You can try it alone today.'

"I went up. Just missed a tree and the roof of the shed. Seemed as if I did everything wrong. Almost scared my dinner up. Slid a thousand feet or so and then got to spinning toward the earth. I knew that the thing to do was to let go of everything. It's hard to do that. You feel as if you must do something. Fortunately I was up ten thousand feet. I let go of everything. The spin stopped. Then I brought her into

a nose dive and stretched her flat two thousand feet above the ground and began to climb again. No more trouble except when I tried to land. It was dusk and I was ground shy. I wondered why I didn't touch the field. My word! It was like stepping into water that looks only knee deep and down you go over your head and no bottom. Well, you know, I was a thousand feet above the ground; circled two or three times before I got down low enough.

"You see, I had confidence after that and began to try all the tricks and to get away with them. I came out here to fight in a big bus armed with a Lewis and a machine gun and egg droppers. I could manage the guns well enough, but I had to learn how to lay eggs after I got here. It's quite an art to put them where you want to. I have had a hundred and eighty-two hits on my machine after one trip. No, that isn't the record. One of our men had two hundred and forty-seven.

"I must tell you of a joke I played on a boche photographer. It was very funny. You see, four of us had chased a boche machine away over their lines. I generally had a man with me, but was out alone that day, as I had learned the art of doing a number of things at once and my gunner had gone with a man not quite so well schooled in the game. Suddenly I got engine trouble. The thing sputtered along for a minute or two and quit. I couldn't get back, so I had to go down. Landed all right in a smooth meadow near a main road. I knew that, for me, the war was over.

"There was a big boche camp not a stone's throw from me. They came out like a swarm of bees. It seemed as if a thousand men were running toward me.

"THEY marched me up to headquarters, where a boche colonel began to pump me in good English. I have an idea that he had spent a good many years in America. There was a group around us and a good deal of jabbering in German. The things they didn't learn from me [Continued on page 153]

# WHY OUR TOWN WENT DRY

BY CHARLES E. HESSELGRAVE

PASTOR OF THE CENTER CONGREGATIONAL CHURCH, SOUTH MANCHESTER, CONNECTICUT

OUR town went dry because of an educational campaign in which our people were instructed upon the facts, and because of an energetic campaign to get the convinced no-license voters to the polls. Our slogan was "Let the people know the facts and urge them to act accordingly." Our cause triumphed through publicity. A year before our town went dry, when the brewers put a full page advertisement in the local paper our no-license people counter-attacked with another full page advertisement and sent out more than half an extra edition of the paper to our townspeople at our expense. We believed in letting both sides speak freely to the public, and then trusting to the good sense and judgment of the people for the right result.

A full year was spent in preparatory work before the whirlwind campaign which carried the town for no-license. First of all, we organized a local Anti-Liquor League with a strong executive committee composed of business and professional men. The aim of the league was to fight the liquor traffic in all ways possible, but especially to rid our town of the festering sores of the open saloons. This league immediately launched an educational campaign to be extended into the future as far as conditions called for.

The plan comprized the use of speakers in various churches and public meetings, the use of advertisements and articles in the local papers, and the placarding of billboards with instructive and educational matter regarding the effects of alcohol on the individual and society, and the most notable abuses in the traffic itself. Every week advertisements of ten or twenty inches space were used in the local paper of largest circulation, and now and then a half page advertisement appeared. Convenient bulletin boards were established in various parts of the town and the posters of the Scientific Temperance Federation were used, each poster being replaced weekly by a different one. By special arrangements these posters were also placed in several of the mills, where the working people saw them day after day.

During the year facts about the local saloons and their business were collected to be used in the special campaign at election time. A number of private printed letters, written with the local

situation in view, were sent out toward the end of the year to twelve or fifteen hundred voters whose position was either unknown or of such a character that there was a chance of influencing them in favor of no-license. At the proper time the petitions calling for the election were pushed and a much larger number than that required was secured. The various clergy of the town were brought into the plan of campaign and promised their help for two Sundays preceding the election.

TWO weeks before election day the campaign was launched by local speakers, and a campaign manager was appointed with committees on speakers, advertising, finance, transportation, and most important of all, canvassing. During the second week before the election the town, which had been divided up into more than fifty districts in accordance with the military census, was canvassed by workers, who went from house to house and secured the names of no-license voters and recorded them. In every case the voter was asked if he desired to be carried to the polls, and if so, where and at what time he could be secured and to what place he wished to be returned. This information was recorded on specially prepared blanks, which were turned in several days before the election in order that the central committee might work over and arrange the check lists and means of transportation. During the week immediately preceding the election, which

came on Monday, the newspaper advertisements were largely increased and speakers were secured for the mill centers at noon, on the streets at five o'clock, and again in the evening.

Each night during the week a stereopticon was used to throw pictures on a screen across the street in the business section most frequented. While these pictures were being shown, some on war, some on American history, and a large number on the effects of alcohol, the evils of the liquor traffic, and the facts about the local saloons and town matters, a speaker in the street explained and commented upon them. A goodly number of the speakers used during the week were local business and professional men, and those from outside represented the Connecticut Temperance Union, the Anti-Saloon League, and men otherwise interested in the suppression of the liquor traffic. A good band was secured to attract the people to street-speaking centers.

Before election day arrived headquarters with a special telephone connection were established in a building near the polls, and arrangements were completed under the management of one of the business men for getting out the vote. Some twenty or twenty-five automobiles were secured, checking lists were ready, and when the casting of the votes began complete lists were kept of those voting and these were checked from the legal voting lists. Those who had previously asked to be carried were sent for at the appointed time, and those who had promised to vote at any particular time without being carried to the polls were traced and looked up immediately after the time at which they should have appeared. In fact, all of the usual methods for getting out the vote were employed, with the result that the vote was the largest ever cast at a town meeting.

More than 125 workers contributed to the various efforts of the campaign and it was only natural that when a substantial majority for no-license was declared the band, which had assisted in the campaign, was called out and a "dry" parade celebrated the victory.

Our town is a typical Connecticut manufacturing community of about 18,000 population. What has been done here can be done elsewhere. The temperance cause is intrinsically so strong that all that is needed is a campaign of education.

## E PLURIBUS UNUM

BY JOHN KENDRICK BANGS

This is no time for wounding gibes and jeers,  
Suspicion and mistrust, and futile sneers,  
But rather for that meed of armored good  
That lies in true and trustful Brotherhood.  
Together must we stand, and sternly face,  
Firm fixt on some unalterable base  
Of Unified Intent, the frowning Beast  
That of Free Men would make an Ogre's Feast.

The call is clear, the purpose of it high.  
Our banners float unfurled athwart the sky,  
And none that hear the summons to the Cause  
For private grudge or interest should pause,  
But seeing eye to eye, resolved, erect,  
Instilled with Faith and Mutual Respect,  
Advance in an impenetrable might  
To battle as *one spirit* for the Right.

All difference of Party, Sect, or Pride,  
For larger purpose must be set aside,  
And every thought of Self in this grim hour  
That serves to place in jeopardy our power,  
Or by one atom lessens it, must be  
Cut from our very souls, relentlessly,  
That our High Cause may triumph and restore  
A Hun-struck world to Righteous Peace once more.

# BILL SHOWS HIS FOLKS 'ROUND CAMP

BY LIEUTENANT PAUL ADAMS, U. S. N. A.

**“W**ILL you tell us where to find Bill?” they asked in one voice.

“Bill—?” I began; then checked myself quickly upon seeing who they were. He was tall, straight as an arrow and somewhat elderly, his face revealing that frank, penetrating expression of the lifelong Westerner. She was a little, round, smiling woman, eyes twinkling like a young girl's.

“There must be many Bills in the National Army besides ours, honey,” he reminded, glancing down gently to her. Then to me, “We meant Bill Stacy of Waxahachie, Texas.”

“I believe he's been transferred to a new company,” I lied promptly. “If you can wait here a moment I'll look in the Personnel Office and find out.”

Ten minutes later, in a clean, comfortable two-storied building that smelled freshly of soap and hot water, I despatched an orderly to find Private Bill, whom I had never seen. Shortly afterward there was a rush on the steps without, and a robust young man, his face belathered, a towel flying from one hand and a shaving brush clutched in the other, fairly burst at us. The little woman was caught in a hug that swept her off her feet. The elderly Mr. Stacy's hand was wrung till it ached, his hair pulled, his ribs punched and his cheeks slapped by his jovial son.

“Hello, Bill,” I greeted, putting out my hand, and he saluted and took it without batting an eye.

“My, how strong you look, son!” rejoiced his mother. “He never was a frail boy,” she boasted, turning proudly to me, “because he always worked hard on the farm when he was out of school. But his shoulders were always a little bowed, and his finger nails were dirty, and he wouldn't shave often enough. Goodness, I hardly know my boy. You're straight as a ramrod, son. I don't believe your father ever had such big, hard muscles. Your cheeks are red as a cherry, aren't they? They must give you mighty good food here. The

“We're only kids, after all”

work isn't so hard, is it? And don't you get plenty of sleep?”

Bill laughed heartily. “I'll answer all those questions later, mother. Now, I want to show you folks around. I'll go get permission from the captain.”

A moment later he returned, whistling. “Come into the squad room,” he invited gaily. “We'll begin with it. There's no one here this afternoon but me.”

We entered a low ceilinged, well lighted, well ventilated room, containing between fifty and seventy-five black steel cots, known as bunks. There were no chairs. At the opposite end stood a large coal furnace.

“The soldier's partnership bedroom, living room, parlor and study,” announced Bill with gusto. “Clean as a whistle, eh? It's swept several times a day and scrubbed frequently. If a man drops a piece of paper or a bit of trash on the floor, it's a crime. Here's my bunk. Sit down over there on my bunkie's cot.”

“See these blankets? The captain himself taught us how to handle them. You double one first, next fold it three times from the side; then, after you've finished with the others, you place the three at the head of the bunk in a neat stack, the folded edges to the right. This nail in the wall is for my wash-

pan, this one for my towel, this one for my blouse and this one for my hat. The little shelf is for books and toilet articles. My rifle fits in here. Poncho and mosquito bar (tho there aren't any mosquitoes now) belong under the mattress at the head of the cot. We use them for a pillow. My extra shoes stand under the edge of the bunk, toes outward on a straight line. My suitcase and locker are there at the foot of the bunk. They must be closed and locked at all times. We mustn't allow dust to settle on any of these things.”

“I never in my life saw anything so clean and orderly,” exulted Mrs. Stacy. “How in the world do you do it, Billy? At home you keep your room in a fright.”

“I'm in the army now,” he quoted, laughing; then adding with as much pride as vigor, “when they tell you to do something here, they mean it. If you don't follow orders, you may get kitchen police, forfeiture of pay or the guardhouse. And none of those things for Bill! I try to be a mighty good boy, mother.”

“Look at this little trick—a housewife, we call it. Needles, pins, scissors, three kinds of thread, buttons, a thimble and extra shoelaces. I'll bet you never guessed that I would learn to sew sometime. Well, I have. Here's a button I tacked on the other day. How's that?”

“Oh, Billy!” laughed Mrs. Stacy.

**“L**ET'S have a look at the mess hall and kitchen,” Bill suggested blithely. “They will open your eyes. Some folks have an idea we aren't fed very well.”

We crost the hall to a room similar to the one we had left except that long tables and benches took the place of the black steel cots. The windows were carefully screened. Not a fly or a spot of dust or filth was to be found. The floor had just been scrubbed.

“There is plenty of milk, butter, fresh meat and fresh fruit every day,” began Bill. “For breakfast we usually

have buttered rolls, sausage, fried potatoes, coffee and a cereal—toasted corn flakes or oatmeal with honest-to-goodness milk of the sort you get on the farm. The bread here, mother, is sure-enough bread, the kind you make. We pay less than five cents for a loaf which is larger (and a whole lot better) than that which the civilian bakers sell for a dime.

"Listen to the bill of fare for last Sunday's dinner: Mashed potatoes, green peas, celery, baked chicken, chicken gravy, sage dressing, cranberry sauce, fresh fruit, bread and butter, lemonade, ice cream and cake. Rotten, wasn't it? That's a fair sample of our Sabbath dinners, and the meals thruout the week are almost as good.

"There's nothing fancy about the service, but it must be just so. You've got to have table manners here, all right. We must wash our hands and clean our finger nails before each meal. We aren't allowed to serve ourselves with our own knives, forks or spoons—that's another crime. And we mustn't take more food on our plates than we can eat, altho we are allowed all we want."

We traversed the mess hall and passed around the end of the long serving counter into the company kitchen.

"I defy you to find a speck of dirt or trash here, mother," challenged Bill. "I'll help you look. See under these table legs; those little spots have been scrubbed as carefully as the rest of the floor. Run your hand along the top of this dandy towel rack. Not a grain of dust, is there? Look in the tiny crack of this carving knife handle. Find any grease? I guess not!

"A cook (a drafted man, too) from one of the biggest hotels in the South has charge of this kitchen. But when he came here, mind you, he wasn't good enough! The army

had to teach him a few things about preparing food for Uncle Sam's fighting men. Now he's a peach of a cook.

"This kitchen is inspected four times by a sergeant, first class, and once by a commissioned officer, a sanitary expert, every day. The floors are scrubbed twice and mopped once. Even the cans and boxes on the pantry shelves are taken down and wiped with damp cloths daily. The inside of the big ice-box is cleansed every morning with soap and hot water. Once a week a special detail of workers goes over every inch of the walls and ceiling with brooms and scrubbing-brushes.

"Could you guess how many times our food is examined before it reaches us? Between three and five inspections are made of every store of provisions for soldiers. The Government keeps food experts in every packing house in the country from which it buys meat. In some cases the Army has refused to do business with unhealthy packing plants which sell freely to civilians. And we're just as squeamish about the milk, too. If it isn't the best, we won't have it. Military inspectors have examined every dairy and creamery within twenty miles of the camp, and if the dealers don't live up to the regulations their places are closed at once.

"So now you have an idea of how I live. The Government takes better care of my health than it does of yours. You folks at home shouldn't worry. When we go after Kaiser William's goat, we intend to be mighty fit."

Bill glanced at his dollar watch. It was nearly three o'clock.

"Come on!" he exclaimed, catching his wondering parents by their arms. "We're missing a heap of fun. This is our play day—Wednesday. Nothing to do this afternoon but chase around like kids. I'm in a 220-yard dash down on the divisional parade grounds. I've got to win. Today the whole regiment is counting on son Bill, folks. Let's go."

HE fairly dragged the old couple out of the barracks and along the gravelled path to Avenue D while I followed. His arm came up and swept a wide circle, including thousands of khaki-clad figures running, tussling, romping, shouting, laughing over the various drill grounds—for all the world like schoolboys at recess.

"See over there," he pointed, "where those fellows are pulling each other around with that big rope. They're two battalions in a tug-of-war contest—must be nearly fifteen hundred men in that one little game alone. Last Wednesday we were champions of our brigade.

"Over yonder two regiments are fighting out a football match. Did you folks hear about that big Thanksgiving game? A team of Texas drafted men played a bunch of Kelly field aviators, eastern stars, nearly every one of them. I never watched a tighter scrap. Ten minutes before the final whistle Kelly was ahead, but Texas shot a long forward pass and ran thirty yards to a touchdown, making the score twelve

to seven in our favor. We won, of course. I nearly went wild. I'm hoarse yet."

"Why, some of these games were popular when I was a boy!" exclaimed Mr. Stacy. "I haven't seen them in forty years."

"Righto!" agreed Bill. "We play 'em all here, from drop-the-handkerchief to crack-the-whip. The idea is [Continued on page 157]

"We play mighty hard, don't we? Well, we work the same way—American style"

"The idea is to give us all the clean, vigorous, outdoor exercise possible." This squad is practicing at Sutter Barrage

# THE NEW BOOKS

## Philosophy in the Making

TO look into the mind of a thinker, to watch the mysterious process of creative activity, that is what draws us to study the lives or seek the acquaintance of authors and artists. But when we meet them we get no nearer to them and biographers usually shunt us off on trivialities and externalities. Even autobiography is misleading, unless like Pepys the writer uses a cipher, for a man is as self-conscious in posing before an autobiography as he is before a camera.

That is why *The Journal of Leo Tolstoi*, now appearing in the Borzoi translations from the Russian, has a distinctive, almost a unique value. Tolstoi was very sensitive about any one's looking at the volumes and well he might be, for he jotted down from day to day just what he thought about everybody and everything. It might serve as a case-book in the psychology of literary construction. We can here trace the origin and painful growth of those thoughts that in their final form seem so clear and convincing. We can in these pages follow the ebb and flow of inspiration. What strikes him one day as the revelation of a great truth may later seem false or incomprehensible. For instance, take these two entries:

December 7. I made a note "Violence frees" and it was something very clear and important and now I don't remember what it was at all.

December 23. I have remembered Violence is a temptation because it frees us from the strain of attention, from the work of reasoning: one must labor to undo a knot; to cut it, is shorter.

Tolstoi was a type of true mystic as James pointed out in his "Varieties of Religious Experience." Wells might have used him as a model for his "Soul of a Bishop." Tolstoi's visions of the infinite came to him in flashes with long intervals of doubt and depression between. For instance:

Not long ago, in the summer, I felt God clearly for the first time; that He existed and that I existed in Him; and that the only thing that existed was I in Him: in Him, like a limited thing in an unlimited thing, in Him also like a limited being in which He existed.

(Horribly bad, unclear. But I felt it clearly and especially keenly for the first time in my life.)

Like every mystic, and every person who

has a vital religion is in some degree a mystic, Tolstoi felt himself to be an instrument in the hands of God.

Man is a tool of God. At first I thought that it was a tool with which man himself was called to work; now I have understood that it is not man who works, but God. The business of man is only to keep himself in order.

I am a self-moving saw or a living spade and its life consists in this, to keep its edge clean and sharp. And it will work well enough, and its work will be useful. To keep it sharp, and to sharpen and sharpen it all the time, that is to make oneself always kinder and kinder.

During the period covered by this volume, 1896-9, Tolstoi was suffering from dyspepsia and weakness. Altho he lived for more than ten years after, he was then in daily expectation of death. In closing a day's record he writes after the date to come the initials of the words "If I live." But this expectation was rather hope than fear of death for he was soul-weary and body-weary and was longing for that other life which he saw at times so plainly:

Man dying little by little (growing old) experiences that which a sprouting seed ought to experience which has not yet transferred its consciousness from the seed to the plant. He feels that he grows less, but he is not conscious of himself there where he increases; in another life. I am beginning to experience this.

Death is a change of consciousness, a change of that which I can recognize as myself. And therefore fear of death is a horrible superstition. Death is a joyous event standing at the end of each life. Suffering is sent to people to hold them back from death. Otherwise every one understanding life and death, would struggle towards death. But now it is impossible to go towards death unless thru suffering.

But Tolstoi allowed neither lassitude nor illness to stop his reading, thinking and working for others. He was constantly writing letters to people all over the world who wished to follow his teachings, but did not know how to go about it and, worse still, he had to receive the succession of such disciples who made the pilgrimage to Yasnaya Polyana. He was busy writing not for fame or pleasure, but to raise money for the famine sufferers and the Dukhobors, the conscientious objectors who thru his aid found a refuge in Canada—where, alas, they did not escape militarism, for they are now again liable to conscription. The books that were incubating in his mind were chiefly his last great novel, "Resurrection," and his drastic criticism of modern art, "What Is Art?" The themes and thoughts of these are mingled with details of his health and family life, records of visits and letters, metaphysical discussions, social criticisms, meditations and prayers. It is a volume that will be valued by the lovers of fragmentary thought as they value the "Pensees" of Pascal, the "Journal intime" of Amiel and the "Encheiridion" of Epictetus. There are quotable passages like these on every page:

I have often wanted to suffer, wanted persecution. That means that I was lazy and didn't want to work, so that others should work for me, torturing me and I should only suffer.

Church Christians do not want to serve God, but want God to serve them.

My body is nothing else than that piece of everything existing which I am able to govern.

There is no "woman question." There is the question of equality for all human beings. The "woman question" is only quarrel hunting.

Prayer is directed to a personal God, not because God is personal (I even know as a matter of fact that He is not personal, because the personal is finite and God is infinite), but because I am a personal being. I have a little green glass in my eye and I see everything green. I cannot help but see the world green, altho I know that it is not like that.

Even if that which Marx predicted should happen, then the only thing that will happen, is that despotism will be passed on. Now the capi-

talists rule, but then the directors of the working people will rule.

There is nothing that softens the heart so much as the consciousness of one's guilt, and nothing hardens it so much as the consciousness of one's right.

The voluminous notes by Chertkov form a veritable encyclopedia of contemporary biography and literature, for they explain every proper name mentioned in the journal.

*The Journal of Leo Tolstoi, 1895-1899*, trans. by Rose Strunsky. Alfred A. Knopf. \$2.

## Russian Fiction

RUSSIAN contemporary literature has been for several years increasingly familiar to American readers. Our interest in the Russian people, and our desire to understand them, have been renewed and tremendously intensified during these months of watching day by day and almost in the dark for the outcome of the vast upheaval of the whole Russian national organization.

Chekhov, in *The Party and Other Stories*, shows himself again a master of the art of character drawing. He searches out the souls of his subjects with an observation at once profound and keen, and analyses them in his usual manner of impersonal and unprejudiced detachment. With all its power, however, the book, like so much of Chekhov's work, is depressing and gloomy. Its keynote is human feebleness, human futility. There is not one instance in it of a man or woman fighting against and overcoming adverse circumstances by force of will.

Dostoevsky, unlike Chekhov, is not a skilful writer of short stories. *The Eternal Husband* and *The Double* are over long, and loosely constructed. They are both excellent studies of the abnormal, as is usual Dostoevsky; but they possess one quality which is not at all usual with him, or indeed with any other Russian novelist—the quality of humor. An ironic and rather sneering humor, to be sure, but still undoubtedly humor. "A Gentle Spirit," the third and last story in the book, is more solidly put together than the other two. It is a subtle and moving analysis of the life of a married couple, especially inter-

IVAN TURGENIEV

FEODOR DOSTOEVSKY

esting in that while it is written from the point of view of the man, who fails entirely to understand his wife, her mind and personality are no less intricately and clearly visible to the reader than his.

*The Bracelet of Garnets* contains several stories which Kuprin himself endorses as being among his best. The selection made by the translator, Leo Pasvolsky, is a very happy one, omitting the coarser aspects of Kuprin's work and yet presenting a wide variety of subject and manner, ranging from the delicate fantasy of *The Garden of the Holy Virgin* and the gentle kindness of *The Laestrygonians* to the harsh realism of *The Horse Thieves*. The title story is an exposition of what is supposedly an ideal love, but is really a sickly sentimentality. This false conception of love—a confusion of it with animal passion on the one hand and abject slavishness on the other—is a characteristic of the Russian novel, and one of its great faults. The book as a whole, however, while no less searching in its psychology and no less unsparing in its truth, than *The Party* and *The Eternal Husband*, has an atmosphere of normality and restraint which make a stronger appeal to Anglo-Saxon minds.

The attractive Modern Library has added editions of two volumes of important Russian literature in Turgenev's *Fathers and Sons* and Chekhov's *Rothchild's Fiddle*. Turgenev's superb creation, Bazarov, who occupies a place among the greatest characters in fiction, is the central figure in *Fathers and Sons*. *Rothchild's Fiddle* is a collection of fourteen striking short stories by Anton Chekhov, who is perhaps the greatest of recent short story writers.

*The Party and Other Stories*, by Anton Chekhov. Translated by Constance Garnett. Macmillan. \$1.50. *The Eternal Husband*, by Fyodor Dostoevsky. Translated by Constance Garnett. Macmillan. \$1.50. *The Bracelet of Garnets and Other Stories*, by Alexander Kuprin. Translated by Leo Pasvolsky. Scribner. \$1.35. *Fathers and Sons*, by Ivan Turgenev. *Rothchild's Fiddle*, by Anton Chekhov. The Modern Library, Boni and Liveright. 60 cents each.

## Revolutionists and People

*The Gambler*, by Dostoevsky, is the picture of the life of wealthy Russians at a fashionable gambling resort. The humble tutor in the family is seized by the passion for play and describes the sensations, the temptations, the struggles, the creeping will-paralysis of the doomed gambler. A flash of fun in the character of the old Russian granny relieves the gloom of the tale.

William Lyon Phelps, in his *Essays on Russian Novelists*, says of "Poor People," the second story in the book:

Probably no man ever lived who had a bigger or warmer heart than Dostoevsky and out of the abundance of the heart the mouth speaketh. All the great qualities of the mature man are in *Poor People*, the wideness of his mercy, the great depths of his pity, the boundlessness of his sympathy and his amazing spiritual force. If ever there was a person who would forgive any human being seventy times seven that individual was Dostoevsky.

The language of *Poor People* is so simple that a child could understand every word, but the secrets of the human heart are laid bare. No one can read a story like this without being better for it and without loving its author.

To Constance Garnett, the translator of the whole of Turgenev's novels, we are indebted for the works of Dostoevsky translated in English. (Macmillan, \$1.50.)

*The Fall of the Romanoffs*, by the author of "Russian Court Memoirs," tells entertainingly the story of how the ex-Empress and Rasputin caused the Russian revolution. (E. P. Dutton & Co., \$5.)

*Inside the Russian Revolution*, by Rheta Childe Dorr, is an important book of the Russian situation and events leading to it. The author points out the aims of the Maximalists and Bolsheviks. (Macmillan, \$1.50.)

## How the Pullman Company Handles the Peak Load —

**WERE** every one of the one hundred and thirty-seven railroads served by the Pullman Company to attempt to furnish the same service for itself, the burden of expense would be found insupportable.

The needs of these railroads vary greatly at different times; a road may use many cars in winter and few in summer, or vice versa; and excursions, conventions and fairs make heavy demands for short periods.

Each road would have a heavy investment in extra cars which would be idle perhaps eleven months in the year; and it would be forced at certain times to man all these cars with green crews—to the great dis-

comfort, inconvenience and anxiety of the public.

The Pullman Company mobilizes its seventy-four hundred cars—each as perfectly appointed in its way as a modern hotel—with the keenest strategy. It knows at every hour of the day the location of each one of them on the map; it notes the least threat of congestion here, or shortage there, and is on the alert to supply maximum service wherever needed, without unnecessary hauling.

Pullman service is a national economy; it gives to our passenger traffic facilities a stability and a mobility without which the railroads and the public would face a problem almost impossible of solution.

**THE PULLMAN COMPANY**  
Chicago

# THE UNITED NATIONS

(Continued from page 141)

shall appoint a Secretary thereof, who shall be known as the Secretary of the League, and also shall institute such other Departments and appoint such other officers and assistants as may be necessary to conduct the business of the League and shall fix their salaries. (a).

Sec. 16. A question in dispute shall be deemed submitted when a written complaint shall have been filed with the Secretarial Bureau; a decision or recommendation shall be deemed to have been made when the same shall have been filed with the Secretarial Bureau.

Sec. 17. The International Council shall examine social, economic, political, and other conditions affecting international relations and shall make an annual report thereon, together with its recommendations, to the States of the League, and, from time to time, it shall also make such other reports and recommendations as it shall deem necessary and expedient.

Sec. 18. The International Council shall make rules for the functioning of the League.

Sec. 19. The International Council shall have power to propose measures which shall be the law as between the States of the League, and to recommend amendment of this Convention, upon the concurrence of two-thirds of all the members of the International Council, provided that such measures and amendments shall become effective one year from the date thereof unless a State of the League signifies its dissent within said period.

Sec. 20. The International Council shall have power to determine that a State of the League has declared war, or begun hostilities, or committed other acts in violation of this Convention, and it shall forthwith notify this condition to the States of the League, which shall thereupon, each for itself, declare war upon the recalcitrant member, or in the case of a minor instance supply its military quota to the International Force.

Sec. 21. The International Council shall have the power to call periodic and special International Conferences to formulate and codify rules of international law, and shall furnish such Conferences such information and recommend for their consideration such measures as it shall deem necessary and expedient.

Sec. 22. The International Council shall have power to appoint or elect an Executive Committee, to be known as the Ministry, and other committees of its own members, and also special committees which may or may not be composed exclusively of its own members.

## MINISTRY

Sec. 23. The Ministry shall be constituted of five members of the International Council appointed or elected in such manner as the International Council may determine, provided that not more than one member shall be appointed or elected from any one State of the League.

Sec. 24. The Ministry shall choose its own presiding officer.

Sec. 25. The Ministry shall be in permanent session.

Sec. 26. The Ministry shall be responsible to and removable by the International Council.

Sec. 27. The executive powers of the In-

ternational Council shall be vested in the Ministry.

Sec. 28. The Ministry shall possess all the powers of the International Council when the International Council is not in session, except the powers vested in the International Council in Sec. 19 of this Convention.

Sec. 29. The Ministry shall have power to entertain complaints or to initiate investigations, to hold preliminary hearings upon any question in dispute whether formally brought before it or not, to adjust the same if possible, and, on its own initiative, to file a complaint with the International Court, or with the Council of Conciliation, or with existing institutions at The Hague; provided that parties to a dispute may by agreement designate the tribunal to which a question may be referred, and provided further, that if either party to a dispute files a claim that a question in dispute is justiciable said question shall be transmitted to the International Court.

Sec. 30. The Ministry, when in its opinion a situation has arisen likely to endanger peaceful relations between States, whether or not members of the League, shall report immediately to the International Council, or, if the International Council be not in session, shall report to the States of the League and call the International Council in special session.

Sec. 31. The Ministry, when the use of military force shall have been determined by affirmative action on the part of the States of the League known as Great Powers, shall take such measures, including the appointment of a War Council, as may be necessary and expedient for carrying into execution the provisions of this Convention.

Sec. 32. The Ministry may apply to the International Court for an injunction to restrain a State of the League from committing objectionable acts pending a hearing and decision or recommendation upon a question in dispute before any international tribunal.

Sec. 33. The expenses of action taken pursuant to Sec. 3 of this Convention shall be borne by the States of the League in proportion to their respective social incomes, as determined by the International Council.

## COUNCIL OF CONCILIATION

Sec. 34. The Council of Conciliation shall be constituted of one member of the International Council from each State of the League designated by the appointing State as the Member for Conciliation.

Sec. 35. The Council of Conciliation shall elect its own presiding officer.

Sec. 36. The Council of Conciliation shall have power to hear and make recommendations on non-justiciable questions, and upon such justiciable questions as may be referred to it by the Court, arising between States, whether or not States of the League or between a corporation or an individual on the one side and a State on the other, or between corporations or individuals; but if there be not at least one State on each side, there must be a certificate from the Foreign Office of the State of such corporation or individual to the effect that the question is of international consequence, with the exception, however, that no such certificate shall be required regarding a question arising in consequence of decisions of national courts involving foreigners.

Sec. 37. The Council of Conciliation may apply to the International Court for an injunction to restrain a State of the League from committing objectionable acts pending a hearing and recommendation upon a question in dispute before it.

Sec. 38. The Council of Conciliation may institute Sections of its members and may refer any question that it is authorized to hear to a Section for hearing and recommendation.

Sec. 39. The recommendation of a Section shall be the recommendation of the Council of Conciliation unless a litigant dissents, whereupon the question shall be heard and recommendation made by the Council of Conciliation.

Sec. 40. The recommendation upon questions heard by the entire Council of Conciliation shall be made by an absolute majority of all the members and, in the event of an equal division, the recommendation shall be reached by omitting the member from the State last adhering to this Convention.

Sec. 41. The recommendation upon questions heard by a section of the Council of Conciliation shall be made by an absolute majority of the members hearing the question.

Sec. 42. The Council of Conciliation shall, in each case submitted, make and file a recommendation together with an opinion giving a statement of the case and the reasoning upon which the recommendation is based.

## ARTICLE III

### INTERNATIONAL COURT

Sec. 43. The International Court shall consist of fifteen judges.

Sec. 44. Not more than two of the judges shall be connected with any one country either by birth, or as citizen or subject; but with that exception the judges may be taken from any State whether or not a State of the League.

Sec. 45. The judges shall reside at the permanent seat of the Court.

Sec. 46. Each judge shall be appointed for life, save that on arriving at the age of seventy any judge may retire from active service with a pension as hereinafter provided, and save also that any judge, as hereinafter provided, may be displaced for cause stated and shown and further provided that the pension shall not apply unless the judge has served for a period of ten years.

Sec. 47. The judges of the International Court shall be chosen by an assembly of judicial electors, provided, however, that no judicial elector, while in service, shall be chosen as a judge.

Sec. 48. The judicial electors shall be appointed by the States of the League respectively in such way as each State may determine.

Sec. 49. Each of the States of the League is entitled to three judicial electors.

Sec. 50. The original judicial electors shall be appointed for terms respectively of three, six, and nine years; and electors appointed to fill vacancies shall be appointed for a term of nine years.

Sec. 51. The judicial electors shall meet at The Hague at noon on the first Monday of the fourth month after nine Powers have ratified this Convention.

Sec. 52. The judicial electors shall elect the original judges of the Court from among candidates nominated by any State of the League or by any judicial elector acting upon his own initiative.

(a) See "Amplification of the Covenant," Notes I and II in the Appendix.

# The 1918 Edition of The American Year Book

*Will be ready for delivery early in February*

**A Record of Events and Progress During the Greatest Year  
in History—1917**

**THE AMERICAN YEAR BOOK** is made for busy men, editors, contributors, professional men, teachers, scientific workers and everyone who wishes to verify or confirm questions that arise in his mind. It is a short cut to accurate knowledge of current events and the progress of the world. Here you will find everything worth knowing that has happened during 1917—the Greatest Year In History. It covers every department of learning and human affairs. Yet with all its comprehensiveness, **THE AMERICAN YEAR BOOK** is far from being a mere collection of dry facts and statistics. It is neither an almanac nor an encyclopedia. *It is absolutely unique.* You need The American Year Book as a supplement to your encyclopedia.

**NOT ONLY A REFERENCE BOOK BUT A FASCINATING STORY OF THE PROGRESS OF CIVILIZATION.** The American Year Book is a wonderfully interesting, inspiring narrative, written by more than one hundred of the most eminent men in America—men who know—men who do. Each of these men is

a specialist in some important subject, in many cases the greatest living authority in his field.

One by one these men take up all the great departments of learning and human activity—history, politics, government, legislation, industry, science, the arts, the professions, the trades, foreign relations, literature, education and many others. In each sphere they show just what has been accomplished during 1917. It is more interesting, more thrilling and more inspiring than any novel you ever read. How can the creation of one man's imagination approach in intensity of interest the facts of human achievement during the past year?

**EVERY BUSY MAN AND WOMAN NEEDS THE AMERICAN YEAR BOOK.**

From no other source can you get the information you ought to have, with no waste of time and effort, as from The American Year Book. In order to get the information that is packed into this handy volume of 900 pages you would have to read hundreds of books, magazines and newspapers. Think of the time this book will save you. No other book in your library contains this information. You need The American Year Book. The analytical index containing 6000 subjects will enable you to find easily just the subject on which you wish to be posted.

## The Independent's Remarkable Offer

By special arrangement with the publishers, Messrs. D. Appleton and Company, we are able to supply our readers with this valuable work at practically the manufacturing cost in combination with a renewal of their subscription to The Independent.

### SEVEN DOLLARS FOR FIVE DOLLARS

The American Year Book can be obtained from no other source for less than the regular price of Three Dollars. The yearly subscription price of The Independent is Four Dollars. However, while our supply lasts, we shall renew your subscription to The Independent for one year (provided you reside in the United States) from present date of expiration and deliver to your address charges prepaid a copy of the 1918 edition of The American Year Book for only Five Dollars. The Independent may be sent to one address and the Year Book to another address (both must be in the United States) in case you wish to use either as a gift to a friend. This offer also applies to new subscriptions.

**THIS COUPON IS WORTH TWO DOLLARS**

THE INDEPENDENT, 119 West 40th Street, New York

Please renew my subscription one year from present date and send charges prepaid the 1918 American Year Book. Enclosed find Five Dollars.

Address .....

# Warning!

## This year YOU must pay an Income Tax

Don't feel that the new income tax does not apply to you—you may be pretty sure it does.

Single persons with incomes of \$83.33 or more a month (\$1000.00 or more a year) and married persons with incomes of \$166.66 or more a month (\$2000.00 or more a year) must file a statement of this income with the Government. It is only the income above \$1000 and \$2000 which is taxed.

This statement must be filed on a form which the Internal Revenue Representative in your community has. To locate him, ask your employer, the Postmaster, or any Banker.

Get the necessary form at once. Your statement must be filed before March first and you must not neglect it—for two reasons:

First: it is your patriotic duty in helping to win the war.

Second: there are severe penalties to be visited upon you if you do.

*This announcement is published by The INDEPENDENT to help the Government collect these taxes—and thus aid in winning the war.*

Sec. 53. In balloting for judges, one judgeship shall be filled at a time.

Sec. 54. Before entering upon his duties each member of the assembly of judicial electors shall aver upon his honor that the ballot he may cast is dictated by no personal interest and by no consideration for or against any person or country and by no agreement, however informal, with any person or country, but wholly by the elector's own earnest desire to select a learned and just judge.

Sec. 55. Each elector is entitled to one vote, but the assembly may establish a system of preferential voting whereby each elector may indicate his first, second and third choices, and whereby greater weight shall attach to a first choice than to a second and greater weight to a second than to a third.

Sec. 56. Unless a preferential system of voting is adopted, no candidate shall be declared elected unless he receives an absolute majority of the votes cast for the persons who have been nominated in accordance with the provisions contained in this Convention, and for this purpose blank ballots shall be wholly disregarded.

Sec. 57. The assembly of judicial electors shall remain in session until the membership of the Court has been completed by the election of a sufficient number of judges and by the acceptance of election.

Sec. 58. When the original Court has been completed the assembly of judicial electors shall adjourn, subject to call in such manner as it may provide.

Sec. 59. Whenever there is a vacancy in the Court it shall be filled by the judicial electors in such manner as they may determine.

Sec. 60. For cause stated and shown the assembly of judicial electors, by vote of an absolute majority of those present and voting, may displace any judge of the Court.

Sec. 61. An absolute majority of the judicial electors appointed shall constitute a quorum for all purposes, and a smaller number may adjourn from day to day.

Sec. 62. The Court shall be competent to decide not only disputes of a justiciable nature arising between States of the League, but also disputes of a justiciable nature arising between States, whether or not States of the League, or between a corporation or an individual on the one side and a State on the other, or between corporations or individuals; but if there be not at least one State on each side, there must be a certificate from the Foreign Office of a State to the effect that the dispute is of international consequence, with the exception, however, that no such certificate shall be required regarding a dispute arising in consequence of decisions of national courts involving foreigners.

Sec. 63. The Court shall determine for itself whether a dispute is justiciable.

Sec. 64. Except as provided in this Convention, the Court shall make its own rules regarding pleading and procedure.

Sec. 65. Unless by agreement of the parties, no judge shall sit in any case in which he has a personal interest or with which he has dealt as counsel or as judge, or in which a State whereof he is a native or citizen or subject is a litigant, or in which a native or citizen or subject or corporation of such State is a litigant, or in which a litigant is a State at war with a State whereof he is a native or citizen or subject, or in which a litigant is a native or citizen or subject or corporation of a State at war with a State whereof he is a native or citizen or subject.

Sec. 66. In every case as many judges

MR. C. E. BROOKS

as possible shall sit, and the number of judges sitting shall never be less than nine, except when there is agreement of the Court and the parties to the contrary, and except when judges are disqualified as hereinbefore provided.

Sec. 67. The doctrines of law recognized and applied by the International Court shall be those which in or under future conventions may be provided by the States of the League or those which may be agreed upon by the very litigants; and in the absence of such general provision or special agreement the Court shall follow its own theory of justice except insofar as doctrines have been established by general international law or have been embodied in The Hague Conventions of 1907.

Sec. 68. The ultimate decision shall be made by an absolute majority of the judges sitting in the case, but when these judges divide equally the decision shall be reached by omitting the judge last elected.

Sec. 69. The ultimate decision shall be promulgated in a written decree, and the decision shall be accompanied by a written opinion giving a statement of the case and also the reasoning upon which the decision is based.

Sec. 70. The opinion shall bear the name of the judge by whom it is written.

Sec. 71. The opinion shall state what judges agree with it, what judges concur in the decree on other grounds, and what judges dissent from the decree.

Sec. 72. The salaries of the judges of the International Court shall be equal and shall not be less than fifty thousand dollars each.

Sec. 73. Upon retirement for age, as hereinbefore provided, a judge shall receive an annual pension equal to three-fifths of his salary.

Sec. 74. The Court shall appoint its own clerks and other officials and fix their salaries.

Sec. 75. The Court shall have power to enjoin a State of the League from committing objectionable acts pending a decision upon any question in dispute before it; injunction may also be issued by the Court on application of the Council of Conciliation or the Ministry. The injunction shall be supported by the economic or military forces, or both, of the States of the League.

#### ARTICLE IV

##### GENERAL PROVISIONS

Sec. 76. The permanent seat of the International Council and of the International Court shall be at The Hague.

Sec. 77. Members of the International Council and members of the International Court shall enjoy diplomatic privileges so long as they remain in active service.

Sec. 78. Before assuming office each member of the International Council and each member of the International Court shall make oath or affirmation to obey and support this Convention and to perform the duties of his office without fear or favor.

Sec. 79. Members of the International Council and members of the International Court shall not hold any other office, or engage in any other business, or receive any compensation other than their salaries so long as they remain in active service.

Sec. 80. The International Council, its committees and sections, and the International Court, shall have power to make requisition upon States of the League for information and to call upon them to secure the attendance of witnesses.

Sec. 81. The Council of Conciliation and the International Court shall have power to summon a State of the League to appear and answer any complaint which has been filed.

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

Sec. 82. The recommendation of the Council of Conciliation and the decision of the International Court shall be made within one year from the time of the submission of the question in dispute, unless, by stipulation of the parties, the time be extended.

Sec. 83. There shall be no costs, recording or other fees, levied against a litigant before the Council of Conciliation or before the International Court.

Sec. 84. The expenses of maintaining the International Council and the International Court shall be borne by the States of the League in proportion to their respective social incomes, as determined by the International Council.

#### ARTICLE V

##### INTERNATIONAL CONFERENCES

Sec. 85. There shall be International Conferences constituted of representatives from the States which were invited to the Second Hague Conference, and the duties of the Conferences shall be to codify and develop international law.

Sec. 86. The International Council shall call and dissolve the Conferences.

Sec. 87. The basis of representation in the Conferences shall be units of population and commerce, and such other elements as the Conferences may determine.

Sec. 88. The acts of the Conferences shall be binding on each participant unless rejected by it within the period of one year

after the adjournment of the Conference.

#### AMPLIFICATION OF THE COVENANT

Note I. Subject to regulations made by the International Council, the Secretarial Bureau shall take charge of and be responsible for the funds belonging to or in the custody of the International Council, the collection of all receipts due to the Council, and the making of all authorized payments; further, the Secretarial Bureau shall take charge of and be responsible for all complaints and other papers, books and other documents, belonging to or in the custody of the International Council; transmit all requisitions for information, summons, subpoenas, injunctions, recommendations and all other necessary communications on behalf of the International Council to States or individuals; keep an accurate record of the proceedings of the International Council and publish the Official Journal, all recommendations and opinions, and such other documents as the International Council may from time to time direct; make record of all papers filed and issued; make translations of the record of the proceedings of the International Council or a synopsis thereof, recommendations, opinions and such other documents as the International Council may direct, and communicate them to the States of the League.

Note II. All formal complaints shall be filed with the Secretarial Bureau.

## THE MERRY JEST OF THE AIRMAN

(Continued from page 143)

were many. Soon somebody got a brilliant idea. At first I couldn't make out just what it was. A loud burst of laughter and a few thumps on the table greeted the arrival of this idea. I feared that they were going to give me the hot iron treatment. Yes, I knew some German, but I missed a link here and there, you see. One of them left us in a hurry. I sat still and dejected while the colonel and four other officers were looking at some maps and marking them. Suddenly I got on. They were going to send my machine over the lines with a photographer. In came a short, stout officer—I think he was a sergeant—and saluted and announced that there wasn't an aviator to be had. All up fighting. I knew they were short on airmen. We had used them up fast since our offensive began.

"Then nothing doing for a few minutes. The officers went out and left me alone with a guard at the door. By and by the latter beckoned to me. I went out. The short, young sergeant stood with the guard.

He spoke to me in boche-cut English that made a sound like a sausage and said that he and I were going over the line to take some photographs. He showed me a big revolver and said I would have to take his orders.

"All right," I answered.

"It was a pretty clever scheme to go over the British lines in a British plane where we could fly fifty meters high, in perfect safety, and put the batteries on a film so they would show up as plainly as a necktie in a cabinet photograph. They had got the engine going and set their cameras. We got in. Up went the old bus. I deftly clamped the dog collars tight above my knees. It was all I needed. He didn't have a strap on him. You would have thought that he was going out for a ride with his grandmother on a mill pond in a flat bottomed boat. Well he didn't know me—poor duffer! Any one who knows the game as I do could see what was going to happen to him. In his hurry he had pulled a bone. That boche

colonel ought to have warned him. Men on either side are always ready for a big gamble to win the prizes of war, but he might as well have tried to beat the shell game. I could see myself sitting there, like a man in a spring wagon, and that fat duffer holding a revolver to my ear and telling me what to do. It was like trying to bluff the goose that lays the golden egg.

"She rose like a bird. He had told me to go up two thousand feet and keep on that level. Soon more signs of trouble with their intelligence department, for we hadn't gone a mile when there was a burst of shrapnel just ahead and a few pieces of junk rattled against my left wing. That was lucky. It gave me an excuse for good elevation and that was what I wanted.

"We must go up or get our heads blown off," I said as I began zuming. He must have agreed with me, for in a second there came another burst of shrapnel just below.

"Three boche planes passed us. My companion waved his handkerchief and that's all that happened. Anyhow they know about us. We were near our lines and up eight thousand feet. He held a sheet of paper before me on which he had scribbled the words: 'High enough, Begin to go down.'

"Say, maybe we didn't. I side-slipped a thousand feet and turned two somersaults and spun down a thousand feet more so quick the old bus groaned and creaked like a ship in a gale. It nearly broke her back. Say, I came within an ace of getting mine."

"Did he shoot?"

"Shoot? I should say he did, but not me—didn't have time. He shot out of the fusillage on her second turn over like a bullet and struck a gravel bank head first near the Ypres Comines Canal. I think he is the only man I ever knew who killed and buried himself and erected his own tomb stone. Everybody in the line has been to look at that one boot sticking out of the gravel."

"It was the best joke of the summer."

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

## BILL SHOWS HIS FOLKS 'ROUND CAMP

(Continued from page 149)

to give us all the clean, vigorous outdoor exercise possible. And the Government knows that we're only kids, after all. We haven't forgotten how to play and cut up yet, you see. This fun gives us greater appetites, puts muscle on our bones and helps us to enjoy our work."

We had reached the divisional parade grounds, where Bill was to sprint. Several thousand cheering, hilarious youths were gathered around an immense rectangle. In a farther corner were the busy officials—referees, starters and timers, all young officers, whose manner plainly betrayed that they were enjoying the fun as much as the non-commissioned participants.

"Little pep there, Bill; you're late," shouted several excited comrades. "The two-twenty is next. Double time, boy; double time!"

Bill stripped off his canvas leggings and heavy footgear, slipping on a pair of light tennis shoes. Then he trotted smoothly across the black parade grounds to the little group of officers.

"They're on the line," cried a tow-headed youth near us a little later. "There goes the pistol. Zowie! Oh, what a start. Watch 'em tear. Go to it, Bill! Go to it! Go to it! Oh, boy. Don't let him gain on you. He's coming, tho. Just a little more to go. Bill—*Bi-ill!* Oh-ooo!-ooo!-ooo! Holy Jerusalem! Yeee! Yeee! Yeee! Oh, you little baby Bill, you little baby Bill."

The hat of the tow-headed youth was hurled suddenly fifteen feet upward, while, as proper proof of his joy, he began pounding a comrade to pulp. Bill had breasted the tape ahead of his rivals. The prize belonged to his company. With mingled pleasure and amazement the old couple stared at the bedlam around them.

"Enjoy the race?" asked Bill, joining us, his face beaming his pride. "It's the last one. Say, it's been a great day, hasn't it? A soldier's life is mighty sad and lonesome, don't you think? I've never had so much fun. And listen: We play mighty hard, don't we? Well, we work the same way—that's the American style of doing things.

"It's nearly time for retreat, and I've got to leave you now. I'll get a pass and take supper with you at the hotel tonight at seven. Bye-bye till then."

San Antonio, Texas

### Capitol Copy

The greatest need of the civil branch of the Government at this time is stenographers.

Nearly 25,000 children in France are receiving aid from the American Red Cross at the present time.

The President has just fixed the maximum prices upon all ore, coke, pig iron, steel and steel products.

The contemplated model housing program of the Government will require the expenditure of about \$35,000,000.

The thirteenth American Red Cross canteen has been opened in France. It has a capacity to serve 7000 men per day.

The statistics of the selective draft show that country boys of America are not physically superior to the city boys.

Secretary Houston is asking Congress for \$6,000,000 to enable the Department of Agriculture to buy and sell seeds to the farmer.

Be sure to put your name and address on your thrift card, so that if you lose it the finder can drop it into any post office box without postage and it may be returned to you.

# FOOD WILL WIN THE WAR

LESSONS IN AMERICA'S PART IN THE WORLD'S FOOD PROBLEM, PREPARED  
BY THE UNITED STATES FOOD ADMINISTRATION FOR THE INDEPENDENT

## America and Conservation

IN preceding lessons we have seen something of food conservation in foreign countries. This week we turn to America to see what is being done here.

There was a good world crop in 1915, but since that time food supplies have been steadily diminishing. By the time we entered the war it was apparent that we had a stupendous task ahead of us in keeping ourselves and other nations supplied with food. President Wilson requested Mr. Hoover to come from Europe to help us handle this problem, and on May 19, 1917, the President made a statement in which he explained the scope and purpose of the proposed Food Administration.

### AN EMERGENCY PROBLEM

The first thing the President pointed out was a distinction between the work of the Department of Agriculture and that of the Food Administration. The chief functions of the Department of Agriculture concern the production and conservation of food products on the farm, and better marketing of farm products from an educational standpoint. The chief function of the Food Administration is the control and regulation of food distribution and consumption dealing with production and marketing largely from the commercial aspect. That is, up to the time products reach the market the Department of Agriculture is involved; as soon as commercial distribution begins with a view to ultimate consumption the Food Administration takes hold with suggestion, direction, and regulation. The problem has some phases common to both, and the two bodies cooperate in carrying out these functions harmoniously. But the great distinction is that the one is for normal times, a firmly established peaceful project; the other is a war organization to meet war conditions. It is intended only to meet a manifest emergency and to continue only while the war lasts."

### U. S. FOOD ADMINISTRATION

On the 19th of June, 1917, Mr. Hoover appeared before the Committee on Agriculture and Forestry of the U. S. Senate, and spoke of the need for food control on account of the world food shortage. But it was not until August 10, 1917, that the Food Administration of the United States was created by executive order and took on the status of a Government department.

When Mr. Hoover spoke before the Senate committee on June 19th, he said there were four great branches of food administration:

1. The control of exports.
2. The doing away with speculation.
3. The mobilization of every man and woman in a voluntary conservation army.
4. The establishment of state food control administrations.

Or, to put those four in technical words, we might say the problems were "control," "regulation," "conservation," "decentralization." Of these four we are at present interested in the third—conservation.

When a house is on fire we send in an alarm to the city fire department, but in the meantime we organize as best we can

our own resources to fight the fire. So it was in this case. Government machinery moves slowly. Two months before the Food Administration came into official existence President Wilson wrote to Mr. Hoover urging and authorizing him to take immediate steps to save food and eliminate waste thru voluntary organization.

The last paragraph of the letter reads: "I trust, therefore, that the women of the country will not only respond to your appeal and accept the pledge to the Food Administration which you are proposing, but that all men also who are engaged in the personal distribution of foods will cooperate with the same earnestness and in the same spirit. I give you full authority to undertake any steps necessary for the proper organization and stimulation of their efforts."

A statement was at once given to the press, urging every one to sign the following pledge: "I am glad to join you in the service of food conservation in our United States and I hereby accept membership in the United States Food Administration, pledging myself to carry out the directions and advice of the Food Administrator in the conduct of my household in so far as my circumstances permit." Instructions and food cards were sent to those signing and sending in the pledge. In this same press statement Mr. Hoover announced that the six general principles of instruction would be:

1. To save the wheat.
2. To save the meat.
3. To save the fats.
4. To use substitute foods.
5. To save transportation.
6. To preach and practise the "gospel of the clean plate."

### CONSERVATION CAMPAIGNS

Two lines of work were taken up in the conservation campaigns, started early in the summer: work with the expert and work with the layman. Experts in the Department of Agriculture cooperated with experts in the Food Administration to write ten lessons in food conservation designed for teachers. Over 400,000 of these lessons went into colleges, universities, summer schools, and teachers' institutes.

But it was evident that the layman, the person who does not know much about food values, needed simple, direct instructions on how and what to save. To meet that need, bulletins and pamphlets were prepared, and the services of the women's magazines enlisted for special articles.

In the fall a pledge campaign was started with the object of enlisting over 12,000,000 in the army of conservation. Up to November 30, 1917, the returns were:

Estimated total No. of families	Goal set	Cards signed
23,452,727	12,569,265	11,024,329

Forty per cent of all the families in the United States had signed, and the percentage of the goal attained was 88.

The purpose of this campaign was to enlist American families to attain saving, use substitute foods, and eliminate waste.

FIRST PREFERRED DIVIDEND NO. 14.  
ORIGINAL PREFERRED DIVIDEND NO. 48  
The Board of Directors will meet on January 31, 1918, and declare the regular quarterly dividends to that date of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the Company, payable by checks mailed February 15, 1918, to stockholders of record at 3:30 o'clock P. M., January 31, 1918. The transfer books will not close.

D. H. FOOTE, Secretary.  
San Francisco, California, January 10, 1918.

Remarkable Remarks

EMPEROR WILLIAM—I do not boast.

ED HOWE—It seems to me I smell brimstone.

CONRAD AIKEN—My soul is green with cold sea slime.

LINCOLN STEFFENS—Our worst trait is our philanthropy.

GEORGE BERNARD SHAW—The Sinn Feiners are idiots.

LADY CHETWYND—In a European home you cannot be happy.

RUTH RICHARDS—Why does it take a girl so long to dress?

COL. GEORGE HARVEY—We are in the honeymoon of the war.

WILLIAM C. WILLIAMS—Amy Lowell is the spirit of Whitman.

MARIE CORELLI—There will be a revolution in less than a week.

REV. JOHN HAYNES HOLMES—I hate orthodoxy as I hate Hell.

POETESS LOUISE CANN—I still know myself as Devil and God.

W. J. BRYAN—For money some men have been willing to steal.

STEPHEN LEACOCK—If at first you won't succeed, quit, quit at once.

DR. HARVEY M. WILEY—A soft toothpick at times is doubtless beneficial.

THE POPE—We recently invited the people of the earth to return to God.

ELSIE M. SEARS—If only a foreman could know what his girls think as they work.

EX-AMBASSADOR GERARD—No healthy German can remain long separated from food.

RYUTEI RIJO—There is nothing more ugly on earth than to see a drunken woman asleep.

COL. F. M. HOUSE—In England and France the influence of the United States is paramount.

LT. GEN. J. C. SMUTS—You cannot make a republic of the British commonwealth of nations.

GLEN BUCK—Have you declared the semi-annual dividend on your New Year's resolutions yet?

N. O. NELSON—Socialism with approximate equality of income is likely to be the outcome of this war.

WILLIAM H. TAFT—The only way we can win is by hitting the German people on the head with a club.

ROBERT DECAMP LELAND—How can we expect our poets to be passionate when they haven't any passion.

THEODORE ROOSEVELT—I would give anything if "Billy" Loeb were at this moment President of the United States.

JOHN D. ROCKEFELLER, JR.—One could argue with me until Doom's Day without convincing me that prayers are vain.

CHOLLY KNICKERBOCKER—Mrs. Vanderbilt's charming daughter, Gladys, by the way, will make her bow next season.

VISCOUNT NORTHCLIFFE—I happen to have a large fortune, but I don't believe large fortunes are good for countries.

MAGNUS SWENSON—If all the garbage in the state of Wisconsin were fed to hogs ten million pounds of pork would result.

COUNT ILYA TOLSTOY—It is a shame to blame the unhappy misguided Russian people when one considers the life they lead.

GENERAL PERSHING—All ranks of the American Expeditionary Force unite in heartfelt thanks to the women of America for their love.

CHARLES W. MEARS—I do not know a single business house that employs a single person whose sole duty it is to think out business problems.

BRITISH UNDER SECRETARY OF WAR MACPHERSON—So far as we in this country are concerned there can be no discussion of the freedom of the seas.

THE pioneer American fire insurance company to recognize and provide for the needs of both large and small insurers throughout the country, by establishing numerous, well selected and widely distributed local agencies, and by conservatively and steadily enlarging its underwriting capacity to meet the needs of all.

# A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

In an article on the aniline dyes in *The Independent* of November 10, I referred to the curious way by which Professor Kekulé was led to the discovery of the ring formula for benzene. Some of my readers who are interested in the psychological side of this experience may like to see what Kekulé himself said about it. The twenty-fifth anniversary of this discovery was celebrated in Germany and on that occasion Kekulé told how he came to conceive the idea of atomic linkages which has served as a guide to research ever since. It was during his *Wanderjahr* when he was living in London, at the age of twenty-two. He was in the habit of discussing chemistry with a friend living on the opposite side of the city and this often kept him up late. He says:

One fine summer evening I was returning by the last omnibus, outside as usual, thru the deserted streets of the metropolis which are at other times so full of life. I fell into a reverie (*Träumerei*) and, lo, the atoms were dancing before my eyes! Whenever, hitherto, these diminutive creatures had appeared to me, they had always been in motion, but up to that time I had never been able to discern the nature of their motion. Now, however, I saw how, frequently, two smaller atoms united to form a pair; how a larger one embraced two smaller ones; how still larger ones kept hold of three or even four of the smaller; whilst the whole kept whirling in a giddy dance. I saw how the larger ones formed a chain, dragging the smaller ones after them but only at the ends of the chain. I saw what our Past Master, Kopp, my highly honored teacher and friend, has depicted with such charm in his *Molecular-Welt*; but I saw it long before him. The cry of the conductor "Clapham Road," awakened me from my dreaming, but I spent a part of the night in putting on paper at least sketches of these dream forms. This was the origin of the structure theory.

This gave him the conception of the chain formula for the ordinary hydrocarbons of the paraffin series, but benzene known to have the composition of  $C_6H_6$  could not be so pictured and this whole field of the aromatic hydrocarbons was an impenetrable mystery. Here again the imps of his subconscious or what Socrates called his demon, came to his aid when he was professor at Ghent:

I was sitting, writing at my text-book, but the work did not progress. My thoughts were elsewhere. I turned my chair to the fire and dozed. Again the atoms were gambolling before my eyes. This time the smaller groups kept modestly in the background. My mental eye, rendered more acute by repeated visions of this kind, could now distinguish larger structures of manifold conformation, long rows, sometimes closely fitted together, all twining and twisting in snake-like motion. But, look! What was that? One of the snakes had seized hold of its own tail and the form whirled mockingly before my eyes. As if by a flash of lightning I awoke and this time also I spent the rest of the night in working out the consequences of the hypothesis.

And Kekulé concludes with this bit of advice and warning:

Let us learn to dream, gentlemen, then perhaps we shall find the truth. . . . But let us beware of publishing our dreams before they have been put to the proof by the waking understanding.

Kekulé was certainly excusable in indulging a bit in day dreaming for he did not have much time to sleep. No eight hour day for him and he never charged for overtime. He says in this autobiographical talk:

During many years I managed to do with four and even three hours' sleep. A single night spent over my books did not count. It was only when two or three came in succession that I thought I had done anything meritorious.

In pursuing this hard course of life he was following the advice of his great teacher, Liebig, who said to him:

If you want to be a chemist, you will have to

ruin your health. No one who does not ruin his health with study will ever do anything in chemistry nowadays.

If that was true of chemistry in the forties how many hours a day would a man have to put in nowadays to master the science? But Kekulé managed to live to the age of sixty-seven and Liebig to the age of seventy while their French contemporary, Chevreul, died at one hundred and three, so chemistry need not be classed among the extra-hazardous occupations in spite of long hours, poisonous fumes and occasional explosions.

When Tyndall, in 1870, delivered his famous address on "The Scientific Use of the Imagination," unscientific people did not take him seriously for they were accustomed to think of the imagination as the inventor of fiction not as the guide to truth. They regarded it as a faculty for the manufacture of the mythology in which they delighted, and they resented its employment for the advancement of the science which they despised. But the creative faculty is essentially the same whether it serves the purpose of the poet, the painter, the historian, the statesman or the scientist. To cite another instance let me quote from Henri Poincaré, one of the greatest of modern mathematicians and cousin of the President of France. When he was trying to work out the Fuchsian functions of the hypergeometric series—whatever they are—he tells us in his "Science and Method":

Naturally, I proposed to form all these functions. I laid siege to them systematically and captured all the outworks one after the other. There was one, however, which still held out, whose fall would carry with it that of the central fortress. But all my efforts were of no avail at first, except to make me better understand the difficulty, which was already something. All this work was perfectly conscious. Thereupon I left for Mont-Valérien, where I had to serve my time in the army, and so my mind was preoccupied with very different matters. One day, as I was crossing the street, the solution of the difficulty which had brought me to a standstill came to me all at once. I did not try to fathom it immediately, and it was only after my service was finished that I returned to the question. I had all the elements, and had only to assemble and arrange them. Accordingly I composed my definitive treatise at a sitting and without any difficulty.

To show how close this is to the use of the subconscious imagination in literary art we need only refer to what Stevenson, in his well known "Chapter on Dreams," says of

My Brownies. God bless them! who do one-half my work for me while I am asleep and in all human likelihood do the rest for me as well, when I am wide awake and fondly supposing I do it myself.

It seems that he was particularly indebted to their aid in the theme of his most gruesome stories, "Dr. Jekyll and Mr. Hyde" and "Olalla." Of the former he says:

I had long been trying to write a story on this subject, to find a body, a vehicle, for that strong sense of a man's double being which must at times come in upon and overwhelm the mind of every thinking creature. . . . Then came one of those financial fluctuations to which (with an elegant modesty) I have hitherto referred in the third person. For two days I went about racking my brains for a plot of any sort; and on the second night I dreamed the scene at the window, and a scene afterwards split in two in which Hyde, pursued for some crime, took the powder and underwent the change in the presence of his pursuers. All the rest I made awake, and consciously, altho I think I can trace in much of it the manner of my Brownies. . . . The business of the powders, which so many have censured is, I am relieved to say, not mine at all but the Brownies'. Of another tale, in case the reader should have glanced at it, I may say

a word; the not very defensible story of "Olalla." Here the court, the mother, the meetings on the stair, the broken window, the ugly scene of the bite, were all given me in bulk and detail as I have tried to write them; to this I have added only the external scenery (for in my dream I was never beyond the court), the portrait, the characters of Felipe and the priest, the moral, such as it is, and the last pages, such as, alas! they are.

It will be noticed that in all these cases as in many others that might be cited the revelation succeeds a period of intense and anxious thought on the problem to be solved. Then, when the strain of conscious attention has been relaxed, the solution comes spontaneously and seemingly from an external source. The idea may pop into one's mind as in the case of Poincaré when he is busy about something else or as in the case of Stevenson when he is asleep or as in the case of Kekulé when he is in a reverie. This last, sometimes called the hypnoidal state, seems to be peculiarly favorable to the evocation of fancies, whether factual or fictional, from the depths of the unconscious mind.

\*\*

It is alleged in the East that the West does not yet realize that America is at war with Germany, but the following incident seems to show that the reverse is the case. Ten years ago, when Prof. Carl Arnold, of the University of Breslau, was visiting his brother, C. P. Arnold, at Laramie, Wyoming, he took out an insurance policy in a New York company. This policy has just matured, and under its terms the German professor has half a dozen options as to what he wants to do with it. Accordingly the New York company sent to C. P. Arnold, the brother of the professor, the necessary papers for the insured to sign and gave thirty days' time for him to get them signed and back to New York again. Mr. Arnold wrote back saying that the Arnold family was doing the very best it could to get into communication with its German relatives. In fact, he has one boy who is first lieutenant in the field artillery, already off for Germany, and another boy, who is second lieutenant of infantry, who would leave for Germany a little later, but from what information he had he hardly hoped that either of them would be able to arrive at Breslau, East Prussia, within the thirty-day limit fixed by the home office. He asked for ninety days' additional time.

\*\*

I have received letters from a number of kind but critical correspondents who imply—in more or less plain language—that I came a cropper in the issue of October 7 when on this page I said: "Blizzard is just as sensible a word for crop as gizzard if people only thought so." One man goes so far as to assert that I have never seen the inside of either a chicken or a dictionary. I admit that it has been some years since I have dissected a chicken *au naturel*, and I may not be able to pass an examination on its anatomy without previous cramming. The next time I find a chicken on Broadway—a feathered biped I mean—I will look into it and see if it has a blizzard or a gizzard or a crop or all three or any of them. If I find that I am wrong I will repent in ashcloth and sashes. In the meantime I want to know what's wrong with my statement. Is it not true, as I said, that it is no more nonsensical to call a crop a blizzard than a gizzard? If it be true then whom have I offended?

# Every American Now a World Citizen

"The remarkable events that are being enacted in our day have brought every man, woman, and child of the United States into close touch with all other peoples and countries. What is going on in Great Britain, France, Russia, Italy, Canada, Germany, South America can never be a matter of indifference to us again. The Great War has made us Citizens of the World. For this reason I am glad to have association with NELSON'S Great Enterprise which is helping people to world citizenship."—Dr. John H. Finley, N. Y. Commissioner of Education.

## NELSON'S PERPETUAL LOOSE-LEAF ENCYCLOPÆDIA & Research Service Bureau

gives you all the information contained in other Encyclopædias, and thousands of new subjects that are not to be found in any other Reference Work.

*Born in America—Made in America  
By Americans—For Americans—And  
It Covers the Whole World*

### "When All Others Fail, Look It Up in Nelson's"

**ALWAYS NEW**—Every six months all subscribers to NELSON'S receive their Renewal Pages—250 pages or more—between 500 and 700 pages each year. These include over 2,000 changes, and keep NELSON'S perpetually accurate and up to date.

**NELSON'S NOW CONTAINS** such new and vital subjects as a Complete Chronological Record of the War with New War Maps to date.

New War Revenue Act, War Income Tax, Excess Profits Tax—War Risk Insurance.

New Shipping and Shipbuilding Programmes—Embargo and Trading with the Enemy Acts.

Food and Fuel Control—U. S. Control of Railways—Conscription in the U. S.—U. S. Army Camps.

Trench Warfare—Artillery and Aviation in the War—Submarines—Bolsheviki, Camouflage, and Tanks.

Biographies of Kerensky, Petain, Nivelle, Pershing, Hoover and Other Great Leaders.

**EXCHANGE** Send for price list giving amounts allowed for old encyclopædias to apply as part payment on a new Nelson's Perpetual Loose-Leaf Encyclopædia.

THE LONDON TIMES says: "Nelson's large Editorial Staff is at the disposal of their customers, and they are, as the most extensive Encyclopædia publishers in the world, able to put a vast body of information at the service of those who desire it."

**Nelson's Research Service Bureau** FOR SCIENTIFIC REPORTS AND SPECIAL INFORMATION AND CORRESPONDENCE, every purchaser of Nelson's is entitled to free membership in this Bureau. If at any time you are in doubt on any subject old or new, write to this Bureau with the positive assurance that you will promptly receive the latest obtainable and most dependable information.

## The Glory of the Bathroom

**H**ERE is a tub which gives you "solid porcelain" advantages at a cost heretofore thought impossible. In fact, the cost of this *Mott light weight solid porcelain bath* is scarcely more than first grade enameled iron.

The *snowy beauty* of solid porcelain glorifies your bathroom—its permanent *wearing qualities* add permanent value to your entire home investment.

Its brilliant white surface is kept immaculate by a light going-over with damp cloth or sponge.

The fact that its smooth surfaces are fashioned by hand appeals to those who care for the looks of hand workmanship.

For full descriptions of this and other new bathroom and plumbing equipment, see our "Bathroom Book," which also shows 22 model bathrooms with floor plans. It is literally a handbook of bathroom planning. Sent for 4c postage.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.  
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY  
SECTION I. ORAL AND WRITTEN LESSON PLAN.

##### The Story of the Week.

1. Discuss the German Chancellor's reply to President Wilson's message on peace, taking up each point separately.
2. Explain exactly what is meant by "Industrial Mediation," and give statistics concerning it.
3. Give a forceful talk for or against the proposed Constitutional amendment.
4. Write a letter in which you make an appeal for contributions for the relief of Asia Minor.
5. Your father says: "What is the Irish crisis?" Give him a clear explanation of the matter.
6. You hear a man say impatiently: "Is there any one who understands the situation in Russia?" Give him a clear account of recent events in Russia.
7. Read "Fuel and Freight." Write a letter to a friend telling about the fuel conditions that have come to your attention. Make some reference to the facts given in the article.

##### Editorial Articles.

1. Read "The Surer Way." Explain why the type of punishment suggested is thoroughly effective. Tell the story of "The Man Without a Country." When was that story written? For what purpose? Why is it a good story for present-day reading?
2. Sum up, and present, with appropriate explanations, the arguments in favor of "No Free Transportation."
3. Make an oral summary of the points presented in "The War Cabinet Proposal." What spirit does the article show?

##### When New York Stopped Living. By Mary Heaton Vorse.

1. What is the spirit of the article? How does the article affect the reader? How does the article differ from a news article?
2. Tell what you may gain from this article that will help you in writing your school compositions? Consider subject matter, picturesqueness, figurative language, originality of expression, humor, development, climax, and serious thought.
3. Point out examples of the following figures of speech: simile, metaphor, personification, synecdoche, metonymy, hyperbole.
4. Point out examples of originality in phrasing.
5. Write a somewhat similar article on an everyday subject.

##### Three War Horizons. By Albert Bushnell Hart.

1. Prove that the article is founded upon comparison. Point out the various comparisons that have been made. What gives the article its peculiar emphasis?
2. Give a spirited patriotic talk based upon this article.

##### Remarkable Remarks.

1. Give clear oral explanations of the remarks made by the following: Dr. Dickey, Mr. Hoover, C. S. Ward, John Wanamaker, President Lowell, Theodore Roosevelt.

##### The Dogs of War. By Lewis Edwin Theiss.

1. Imagine that you have before you about thirty people who have thrown stones at dogs, or who have in some way abused dogs. Give them a talk, based upon the article, that will lead them to respect "the dogs of war."
2. Show how the author has used specific instance as a means of increasing effect.

##### Making Over Men. By Milton Howell Bailey.

1. Imagine that you heard this article presented as a lecture. Make a short report of the lecture, using the third person singular.

##### Our Director of Steel. By Donald Wilhelm.

1. Summarize the principal facts presented in the article. Tell how these facts have been made unusually interesting. How may you apply the methods employed in writing this article to your own work in composition writing.

##### A Farmhouse Made Over.

1. Write a picturesque description based upon the pictures here presented.

#### SECTION II. LITERATURE.

##### The New Books.

1. Explain the following expressions: close student, hero-worship, sentimental statesman, romantic world, poetic justice, pedantic, preliminary chapter, edifying introduction, judgments pronounced, insight, complete survey, heavy reading.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.  
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. Three Crises in American History—"Three War Horizons."

1. Summarize this article under the first sentence as a heading.
2. Explain the significance of each of these statements: (a) "On the morning of April 19, 1775, the American colonies were an integral part of the British Empire," etc. (second paragraph); (b) "On that day [April 12, 1861] a new Union was born," (third paragraph); (c) "The change in the relation of the people of America to the rest of mankind," etc. (end of fourth paragraph).
3. "In all three critical years there was the same division of feeling," etc. "... but when the battle was joined, the ranks closed up," etc. What are the facts which justify these statements?
4. Follow thru the comparison made by Professor Hart as to material and military preparations in 1775, 1861 and 1917.
5. What, according to his judgment, are the distinguishing characteristics of the three leaders in these years of crisis?

##### II. The Constitutional Amendments—"The Mathematics of It." "Constitutional Amendments."

1. Look up Article V of the Constitution. What steps are still necessary if the proposed amendment is to become part of the Constitution?
2. In view of the President's declaration in favor of the suffrage amendment, how do you account for the comparatively large Democratic vote against it?
3. What is the present status of woman's suffrage in your state? What effect would the adoption of the amendment have in your state?
4. What is the situation now in regard to the prohibition amendment?

##### III. Peace Terms—"The Progress of the Peace Parley," "Germany on our Peace Terms."

1. Make an outline of the peace terms proposed by President Wilson and show Germany's attitude toward each one as indicated in the German Chancellor's speech of January 24.

##### IV. The Irish Question—"An Irish Crisis."

1. Describe the condition of Irish affairs in the spring and summer of 1914. What relation had these conditions to the outbreak of the war?
2. Discuss the causes and result of the Irish Revolt of April, 1916.
3. "The resignation of Sir Edward Carson ... was regarded as significant of an impending crisis in Irish affairs." Why?
4. Why is a settlement of the Irish question especially desirable just now?

##### V. The Russian Revolution—"A Russian Crisis," "Parleying at Brest-Litovsk."

1. What were the circumstances which led to the calling of the Constituent Assembly? Compare these circumstances with those which led to the calling of the French Legislative Assembly in 1791.
2. What were the plans and purposes of the leaders of the Russian Constituent Assembly? Why was it forcibly dissolved?
3. What steps will the Bolshevik leaders probably take in the present crisis to bring about the reorganization of government?
4. Give an account of the negotiations at Brest-Litovsk between the Bolsheviks and representatives of the Central Powers.

##### VI. China in Revolution—"The Ulysses of China," "About Modern China."

1. Supplement your study of this topic by reference to some of the Year Books of recent dates.
2. Explain the significance of the characterization of Li Hung Chang as a "one-eyed leader of the blind."

##### VII. Transportation Problems in the United States—"The Motor Hour Is Here," "Fuel and Freight," "Transportation Control."

1. Trace the history of transportation in the United States from 1800 to the present.
2. Do you find any similarity between the early history of railroad transportation and the present development of motor trucking?
3. Summarize the evidence which proves that the motor truck is a valuable adjunct to the business of the country, and, finally, the motor truck and the motor bus. Discuss the possibilities of its use by the government.
4. Show how the present fuel shortage is due to the operation of transportation.

## FINE SILVERWARE

WEALTH is not the only road to the beautiful.  
Appreciation comes first.

You may not be able to afford a Raphael or a Corot  
but you can begin to collect fine silverware, and if it is

### Gorham Sterling Silverware

it need not be costly to be beautiful, for The Gorham  
Company excels in creating artistic silverware whether  
the cost be little or much.

Moreover, you can assemble

### Gorham Sterling Silverware

a piece at a time even in the most inexpensive de-  
signs, enriching your home permanently, and stimula-  
ting your artistic faculties to further acquisitions of  
companion pieces.

### Gorham Sterling Silverware

is sold by leading jewelers everywhere  
and bears this trade-mark

## THE PROGRESS OF THE PEACE PARLEY

IT is no longer a question of when peace negotiations shall begin. They have been carried on for many months and in the way such negotiations should be carried on, openly and democratically. It is much better to have the chancellors shouting at each other from their respective capitals than to have them whispering with each other around a green table. Every class, clique and clan, every racial and religious group, every commercial and financial interest, has been actively engaged in proclaiming to the world its own particular peace terms. The peace conference of the past month on the eastern front was not between Russia and Germany; it was not between the delegations meeting at Brest-Litovsk; it was between Russians and Germans, all along the thousand-mile strip of No Man's Land between the opposing trenches. The Brest-Litovsk conference was a failure. The trench conferences have changed the aspect of affairs. In the world-wide, loud-voiced peace conference that has been going on between and inside of the belligerent nations the plenipotentiaries are the people, whose credentials are given of God, and whose will is the supreme law.

President Wilson's first stipulation is for "open covenants, openly arrived at," and this unprecedented procedure is actually being adopted. The German Chancellor, in his reply to the President a year ago, expressed his willingness to enter a peace conference, meaning by that of course the old-fashioned sort of a conference, where a dozen elderly and aristocratic diplomats meet in secret and after a period of feasting and oratory and intrigue attach their signatures to an engrossed parchment and shake hands. Such a peace conference was not acceptable, but now the German Chancellor has entered a peace conference on the American plan. He has published his terms and thereby brought them before the committee of the whole world for discussion.

President Wilson's fair, firm and conciliatory address has undeniably produced an effect even upon hard-hearted Germany. Count von Hertling is evidently anxious to agree or seem to agree with as many of the President's demands

as possible. Taking the terms at their face value the opposing parties are not farther apart than they have been at the beginning of many a successful peace conference. But doubtless when it comes to putting these principles into concrete form it will be found, as it was at Brest-Litovsk, that what Germany means is very different from what the outside world means by such language. For instance, Germany expresses concurrence with the American doctrine of the freedom of the seas, but when the Chancellor elucidates his idea we see that he means that England shall surrender all her strategic points and coaling places. He does not say anything about Heligoland, which England turned over to Germany with intent to propitiate her and which Germany is now using as a naval base against England.

One feature of the German proposals must be repudiated at once, that is the Chancellor's manifest determination to split up the coalition against Germany by negotiating with each power separately. His attitude is the same as that of the employer who refuses to recognize the union and insists upon dealing with the workmen as individuals. The question of Poland, he says, will be settled with Russia. Alsace-Lorraine concerns only France and Germany. That is not true. Thru Germany's action all these questions have become the concern of the whole world and, as the President says, "We feel ourselves to be intimate partners of all the governments and peoples associated together against the Imperialists." It is to our interest that such questions as Alsace-Lorraine, Africa, the Balkans and Poland should be settled in accordance with the wishes of the peoples most concerned and in such a way as to insure a permanent peace.

So while we cannot accept the German peace terms as they stand, we can consider them as a report of progress. They are much more moderate than those formerly held at Berlin, and on the other hand the British, French and Italian claims have been considerably reduced. In every country the peace movement is in full swing and the lines are converging.

## THE WAR CABINET PROPOSAL

THE proposal to establish a War Cabinet, composed of "three distinguished citizens of demonstrated ability," has met an insurmountable obstacle. The President does not want it. Even if the bill could pass Congress, and on receiving the President's veto be repassed by the necessary two-thirds vote in each house, it would all be useless. Nothing could make the President use the Cabinet, or depute to it any of his Constitutional and statutory power. This fact is clearly recognized in the bill itself, which provides that the President "may" exercise any of his war powers thru the War Cabinet. The President's authority is not a matter that can be circumscribed

or transferred to other hands by Congress. No War Cabinet established by statute could wield any executive powers properly belonging to the President without his consent. Such a body could not act, save on his initiative.

If the War Cabinet were to be established against the President's will, no member of the present Cabinet, no official of the Executive Departments, no officer of the Army or Navy, could have anything to do with it except with the permission and on the direction of the President.

The opposition of the President settles the matter of the War Cabinet before it is begun.

There is, however, another aspect to the move for the

# CARTOON COMMENT

## OLD KING COAL

ONE WAY OUT  
 "The fuel problem has  
 been solved  
 And no two ways  
 about it.  
 No heavy thinking was  
 involved,  
 Solution: Do without  
 it!"  
 Nelson Harding is the  
 author of the verse as  
 well as the cartoon be-  
 low, published in the  
 Brooklyn "Daily Eagle"

### SHADOWED!

"Just about one false move and—"  
 Uncle Sam, backed by shivering Coal  
 Famine, leaves the threat unfinished, but  
 its conclusion is evident in his grim  
 scrutiny of The Coal Business, walking  
 warily ahead and being very careful.  
 Darling in the New York "Tribune"

### TIMES HAVE CHANGED

"Old King Coal was a merry old soul"  
 is the caption of Cesare's cartoon for the  
 New York "Evening Post," as he points  
 out the shift in emphasis nowadays in the  
 good old song. The jester's head is hidden  
 in the coal scuttle and gloom reigns in  
 the shovel-sceptered monarch's realm

### WASTE

Water power makes the most of its chance to point a stern and  
 forceful moral to the factories which had shut down for the  
 lack of coal. Drawn by Gregg in the "Atlanta Constitution"

### OVER THERE

The Brooklynite gazes sadly at the shining shores of Jersey, where  
 the inaccessible piles of coal mock at his empty coal scuttles.  
 Drawn by Nelson Harding for the Brooklyn "Daily Eagle"

creation of a War Cabinet. It is the war-head of a torpedo of criticism directed against the Administration's conduct of the war. As such it is salutary and to be welcomed. There is a growing mass of conviction that our conduct of the war is not all that it should be. It has been brought to a head by the drastic order of the Fuel Administrator, and by the charges made by Senator Chamberlain. The man in the street, in steadily growing numbers, is coming to the belief that there are men in positions of tremendous responsibility who are not equal to the occasion. There is a steadily increasing demand for changes in personnel.

This criticism of the conduct of the war must be made articulate. It must be presented, buttressed by chapter and verse, with facts and arguments based on facts. It must be brought home not only to the President but to the people of the nation. For this is their war. It is being won by them. It will be won by them. A war to make the world safe for democracy must be waged as democracy would have it waged.

Without criticism, articulate, specific, and vigorous, there is great danger in a system of government with so powerful—and so irremovable—an executive as is provided by the American Constitution. Criticism is not only a privilege and a right, it is a duty.

The President himself should welcome such criticism. He can have but one desire—to win the war, thoroly and swiftly. If the criticism is sound, he should welcome it as aiding him to improve his Administration's conduct of the war to that great end. If it is unjust, he should welcome the opportunity it gives him to demonstrate to the people, whose war it is his great privilege to direct, the effectiveness with which their work is being done.

He cannot afford to resent this criticism. It must be met. It can only be met by refutation or by reformation.

Only facts will refute it.

Only acts will reform the conditions, if such exist, that brought it forth.

## THE SURER WAY

IT makes the blood beat hot in the temples to read of the naturalized American citizen in New Haven who wrote at the top of his draft questionnaire the insolent words, "Deutschland Uber Alles." His reported declaration that he had "an overwhelming desire to see Germany victorious in this war" must erect an impassable barrier between him and every true American heart.

Is there no process of law by which his treacherous tongue can be stilled or his renegade person deprived of its liberty? Perhaps not. Old father antic the law has many curious limitations, self imposed.

But that offers no justification for the imposition upon him of lynch law—even in the absurdly inadequate form of making him sing "The Star Spangled Banner," punctuated by the blows of righteous, indignant fists. Masked vigilante committees are a cowardly means of administering "wild justice." American citizens, loyal as well to American ideals as to the American flag, have no business to descend to the German level of brutality in dealing even with the most outrageous of enemy sympathizers.

Have the men of New Haven no imagination? Could they discover no more decent and effective way of dealing with this "paper American" than to "beat him up" anonymously? Such a pseudo-American citizen had forfeited all rights of intercourse with his fellow-men in an American community. Let that intercourse cease forthwith. It is matter of regret that the physical pillory of our forefathers no longer stands ready to hold him helpless before the scorn of his neighbors and the world. But a spiritual pillory, more poignant in its penalties, might easily be devised.

Why not take a hint from the court that judged Philip Nolan in "The Man Without a Country"? Von Hoegan has

said, "It is a doubtful honor to be a citizen of the United States." Let his neighbors take him at his word and see to it that he no longer enjoys the benefits of being a citizen among citizens. Let the butcher, the baker, the dairyman, the grocer, refuse to sell him food. Let no man have traffic with him. Let him go his accustomed ways a marked man, shunned in business, avoided on the public ways, deprived of all human intercourse. Let him go unharmed in body but stabbed to the heart by the averted faces of his neighbors, the silent voices of his erstwhile friends, the withdrawn confidence of his former clients, a community's contempt and scorn and loathing.

He would surely be brought to say with Cain, "My punishment is greater than I can bear."

## NO FREE TRANSPORTATION

THE President has proposed to Congress that two guarantees shall be given by the nation to the railroads: First that the railway properties shall be maintained during the period of Federal control in as good repair and as complete equipment as when taken over by the Government, and, second, that the roads shall receive a net operating income equal in each case to the average net income of the three years prior to last July. These guarantees are demanded by considerations of simple justice; but, in these times of constantly mounting prices of materials and labor, to make them good will require planning and management of a high order.

It may be that a part of these guarantees must be made good not out of the operating income of the railroads but out of the Treasury of the United States. That is to say, out of taxation. If it proves to be necessary, let it be so. The general welfare, as vitally concerned in the winning of the war, has required the taking over of the railroads. If rates and expenses cannot, in wisdom and practicality, be so adjusted as to provide the necessary income to keep the railroad properties in good condition and to protect the security holders in their rightful returns upon their money, the deficiency will be a proper charge upon the general funds of the country. The guarantees must be maintained, the rates must not be raised too high—the difference, if there prove to be one, must be made up out of Federal revenues.

But there is one thing that must not be done. Government owned goods must not be carried free of charge. England may have done it and without too serious results, but that need not influence us. The principle is unsound, the practise would in the long run be disastrous. It is always bad business to have things other than they seem. It is unsound accounting to permit a charge to lie against one department of a business which is actually an expense of running another department. The cost of carrying a trainload of soldiers from a camp "somewhere in the United States" to "an Atlantic port" is properly chargeable to the War Department and not to the department under the Director General of Railroads. We already have in one branch of the Federal Government a flagrant example of this bad practise. The Post Office Department carries not only for other departments but for Congress and for individual members of Congress great quantities of mail matter under official franks. The cost of this service is charged not to the branch of the Government that benefits from it, but to the long-suffering Post Office Department. The result is that no intelligent statement of the actual operating cost of the postal service can be made, while the other departments and Congress, because of this benevolent contribution of the Post Office Department, fail to show in their accounts their actual operating costs. It is bad accounting, bad management, bad government. This vicious example must not be followed in the case of the railroad.

There should be no free carriage of goods of any kind

whatever, no free passes even for Government servants. If the President of the United States is to travel by railroad, let his transportation be paid for out of the proper appropriations and not imposed upon the railroads because they are now under Government control. Every soldier, every Government official, every public servant should be carried by railroad only when the cost of his transportation is actually paid for out of the appropriate funds. Every pound of Government freight should pay its own way.

## THE MATHEMATICS OF IT

THE woman suffrage amendment to the Federal Constitution passed the House without a vote to spare. Precisely two-thirds of the representatives present voted for it. The determining factor in the result was evidently the President's last-minute declaration in its favor. It must have influenced at least one Democratic congressman to step across the line.

The amendment is now before the Senate. It is presumably destined to have a hard fight there. The result it would be dangerous to predict. But some light may perhaps be thrown on the subject by a study of the results in the House.

In that body exactly two more than one-half of the Democrats voted for the amendment, five-sixths of the Republicans, and five-sixths of the independents. There are in the Senate 52 Democrats and 42 Republicans; with no independents. If precisely the same ratios within each party are recorded as in the House the amendment will receive 35 Republican votes and 28 Democratic votes. This would make 63 affirmative votes—one-third of a vote more than the necessary two-thirds. This is just what happened in the House. The amendment received one-third of a vote more than was needed to carry. The parallel is startling.

But perhaps the result will not be so close. Possibly by the time the thing comes to a vote, the leaven of political expediency which unquestionably had its influence in the House will have worked to even better result in the Senate.

## HIGHER PRICES AND LARGER CROPS

ONE of the most common of fallacies is that which, under all conditions, expects higher prices for farm products to be immediately followed by the production of larger crops. But all human principles are true only within limits. When conditions and factors change, the results are different. Then the ordinary connection between prices and production fails. And why? Because the human factor, which is the vital link in the causal chain, loses much of its functioning capacity. War cripples the ordinary producing power to an extent not yet fully appreciated. Instead, therefore, of looking forward to a progressively increasing output of cotton and foodstuffs and animal products of the farm as the prices for these staples climb, may it not be that, under given conditions of producing and marketing methods, we may find it harder and harder for the nations, from this time on, to make ends meet?

It has always been a pet illusion among us that America is an exception to the rule. But are we not already running behind, in some essential respects? This season's cotton yield will be the smallest in three years, altho prices have been advancing in this period beyond anything since the Civil War. The cause is no secret. A bid for fiber by the outside world is also a bid for the labor and capital available for cotton growing. Rise of expenses of producing implements and fertilizers and of farm labor results in reducing the quantity of each, and consequently reduced yields under old condition of production. The same is true of cereals and live stock. The Government's winter wheat condition of December 1, at ten points below the ten-year average, discloses a reduced prospect in the face of the highest prices in fifty years. Instead of the 47,000,000 acres needed in the

fall, as was expected, we have only 42,170,000 acres. A dry autumn had no doubt something to do with this shortage; but even more than that has been the persistent combing of the agricultural sections of the country for the labor supply to maintain railroads, to build ships, to operate steel mills, to run lumber camps and to raise armies.

The effect of war on agriculture is not only confined to one element of production. It affects everything, whether human, animal or mechanical power to produce. Our country population in 1910 was 53.7 of the total. Does any one believe that, after these seven years of rising wages in non-farming work, the ratio is as great today? The Department of Agriculture will shortly report the animal resources on farms as of January 1. In nearly every case, excepting hogs and calves possibly, the probability is in favor of a decrease rather than the contrary. Certainly, during the past three years we have exported an average of 414,000 head of horses and mules a year. Can we deduct so much farm-power in so short a time and not feel it in reduced producing power? Possibly, if we can substitute mechanical power for man and the mule. But here the limits are more or less rigid. No agricultural system can bid indefinitely against the British, the French and the Allied treasuries' war needs for draft animals to plow and cultivate the soil. And it takes good man-power to operate farm machinery. Without that improved machinery is a waste of farm capital. Each successive harvest and seed-time proves that we are already occupying a larger acreage than we can harvest, thresh and properly take care of, under existing conditions of supply of labor and capital.

Nor are we in America alone in this situation. Agriculture, the world over, is deteriorating in efficiency, not only from the effect of war, but from the policy of our municipal authorities to make indolence inviting and easy for any human unit that may wish to float from the country into its good graces. This permanent premium on extracting farm and village labor from rural regions has some sure effects—it reduces production, increases consumption, and as sure as fate raises prices. The result, unfortunately, is not only decline in quantity, but also in quality, of farm life. The war has drained almost all countries alike in this respect. Russia, with her capacity before the war to grow a billion bushels of wheat, with less than ten millions in the field of battle, finds her leading districts starving. Argentina and Brazil are much crippled for want of man-power.

If the countries of the world are really facing reduced capacity to raise the means of subsistence, under the existing systems of competitive production and speculative distribution, what is the remedy? There are several. Eliminate once for all the worst methods of distribution—methods that have done more to discourage sound agriculture in the past two decades than all the crop failures of a half century. If labor organizations and agricultural associations ever put their heads together in dead earnest, as Gifford Pinchot is urging them to do, some of these hoary iniquities of the speculative system of marketing crops by playing off producers against consumers, to the perpetuation of a criminally exploiting commercial element, will become things of the past. But for the immediate present, the whole system of food production must be organized so that the surplus, and relatively idle population of cities, towns and villages may be more readily available for the urgencies of agriculture. Will it come to food-producing conscription? There are worse things, because there are millions of men and women, young and old, who know enough of the work of the farm to serve effectively. A registration of such for the coming spring and summer campaigns in agriculture would be a move in the right direction. The high-school youths did noble service on farms last summer. Why not call out others of maturer age into a fully organized volunteer service? If food is to really figure in the war's being won, something of the kind may have to be done.

# THE STORY OF THE WEEK

## Germany on Our Peace Terms

The German Imperial Chancellor on January 24 delivered

his long-awaited speech in the Reichstag, in which he made formal reply to the peace terms prescribed by President Wilson in his address to Congress on January 8. He said that while the terms in question "contained certain acceptable principles," yet "concretely the outlines were unsatisfactory," and he demanded that the "enemy leaders" make new proposals. On the first four items an agreement might, he said, easily be reached; to wit: No secret treaties, freedom of the seas, trade equality, and reduction of armaments. On the fifth, adjustment of colonial claims, there would be difficulty. The sixth, German evacuation of Russia, concerned only Germany and Russia. The seventh, evacuation and restoration of Belgium, could only be settled in peace negotiations, "but Germany has never demanded the incorporation of Belgian territory by violence."

The eighth, evacuation of French territory and relinquishment of Alsace-Lorraine, is a question to be settled between Germany and France alone; "however," said the Chancellor, "we cannot talk of the cession of Alsace-Lorraine." On the ninth and tenth points, the restoration of "Italia Irredenta" to Italy and autonomous development for the peoples of Austria-Hungary, "Germany remains solidly with Austria-Hungary." On the evacuation and restoration of the Balkan States, the disposition of the Turkish Empire, and the rehabilitation of Poland, Germany was not able to accept unreservedly the American proposals; while as for the League of Nations to enforce specific covenants, Germany would be willing to discuss that when everything else had been settled.

## The Conduct of the War

A controversy of exceptional bitterness has arisen at Wash-

ington over the conduct of the war, and particularly over the administration of the War Department. Some time ago the creation of a special War Cabinet was proposed, and a bill to that effect was prepared by Senator Chamberlain, a Democrat, of Oregon, who had from the beginning been a conspicuous advocate of vigorous military measures. It was at once made known from the White House that this scheme was obnoxious to the President, and it was openly condemned by the Secretary of War.

Senator Chamberlain continued to persist in his advocacy of it, however, and in an address before the National Security League in New York on January 19, urging the necessity of such a measure, declared that "the military establishment of the country had

broken down and had almost stopped functioning, because of inefficiency in every bureau and every department of the Government." Therefore he purposed to introduce on the following Monday a bill for the creation of a War Cabinet or committee, to be composed of "three distinguished citizens of demonstrated ability" to be named by the President and confirmed by the Senate. Having ascertained that Sen-

### THE STORM CENTER

Senator George E. Chamberlain, of Oregon, the chairman of the Senate Committee on Military Affairs, started a tremendous controversy of criticism and defense when he appeared in a three-hour speech before the Senate on January 24 his assertion that "the military establishment of America has fallen down because of inefficiency in every department of the Government"

ator Chamberlain had been correctly reported, the President in a formally issued statement said:

Senator Chamberlain's statement as to the present inaction and ineffectiveness of the Government is an astonishing and absolutely unjustifiable distortion of the truth. As a matter of fact, the War Department has performed a task of unparalleled magnitude and difficulty with extraordinary promptness and efficiency. . . . My association and constant conference with the Secretary of War have taught me to regard him as one of the ablest public officials I have ever known. . . . To add, as Senator Chamberlain did, that there is inefficiency in every department and bureau of the Government, is to show such ignorance of actual conditions as to make it impossible to attach any importance to his statement.

In the same statement, referring to the investigations of army affairs which Congress had been conducting, and to the proposed legislation for a War Cabinet, the President said:

Nothing helpful or likely to speed or facilitate the war tasks of the Government has come out of such criticism and investigation. I understand that reorganizations by legislation are proposed (I have not been consulted about them and have learned of them only at second hand), but their proposal came after effective measures of reorganization had been thoughtfully and maturely perfected. . . . The legislative proposals I have heard of would involve long additional delays and turn our experience into mere lost motion.

This statement was issued on the evening of January 21. Earlier in that day Senator Stone, a Democrat, who early in the war had been a conspicuous opponent of the President's war policy and had been condemned by the President as one of the "wilful twelve" who stood in his way, made an elaborate address in the Senate in defense of the Administration, attacking the Republican critics of the President for unpatriotic partizanship, and especially inveighing against ex-President Roosevelt. An equally vigorous reply was made by Senator Lodge, Republican, who maintained that the Republicans had supported the President during the war more loyally than many of his own party. Then on January 24 Senator Chamberlain, having introduced his bill for a War Cabinet, made reply to the President's strictures upon him. He declared that the President himself was ignorant of the real condition of affairs, and he cited testimony of prominent army officers and others in substantiation of his charge that the deaths of hundreds of men in cauterments and camps were due to the failure of the War Department to provide suitable equipment, and that "all epidemics could have been prevented if the War Department had been effective." He recalled the testimony of the Secretary of War himself, as well as of various army officers, concerning the lack of rifles and machine guns for the troops, and the necessity of our depending upon France for supplies, and

concerning the lack of overcoats for the men, and quoted the testimony of Surgeon-General Gorgas as to the responsibility of the War Department, thru its inefficiency, for most of the epidemics which had scourged the camps.

Senator Chamberlain's bill for the creation of a War Cabinet was referred to the Military Committee, of which he himself is chairman, and also to the Naval Committee.

#### On the West Front

The long anticipated "great drive" on the West front has not yet occurred, tho still expected and tho German troop trains are credibly reported to have been busy for some time carrying soldiers thither from the East. Indeed, some of the best informed and most judicious military authorities express conviction that an unprecedented massing of German troops has been made, and that at what they deem an opportune moment a blow will be delivered, in hope of breaking the Allied line before it can be reinforced with Americans. Meantime, minor operations abound. Two small German raids in the Champagne on January 18 were easily repulsed by the French, and a third west of the Oise met the same fate. The next day artillery duels prevailed at many points, and the number of large guns used by the Germans seemed to be increasing. The British naval forces bombarded the German submarine base at Ostend. There was an accession of activity on the Belgian front, with heavy artillery firing between Nieuport and Dixmude. Six German aeroplanes were destroyed by the French. Sunday, January 20, was a day of comparative quiet, with nothing but artillery firing. On January 21 British patrols took a few prisoners, and the Germans did the same. The Germans

claimed to have brought down eleven Allied aeroplanes and one balloon in two days. A much more important action occurred on January 23, when the former German activity on the Belgian front was resumed, and a raid in great force was made a little east of Nieuport, apparently with the purpose of breaking thru in the direction of Calais. The Germans succeeded in capturing some of the front line trenches, but were quickly driven out by the French. At the same time a strong attack was made by the French upon the German lines near Avocourt, which was repulsed. Spirited fighting, but without material result, occurred between the British and Germans in the St. Quentin and La Bassée regions. A French raid east of Auberive on January 24 netted a few prisoners, and the Germans captured half a dozen machine guns near Poelcapelle.

#### On the Italian Front

A possibly significant change of Austrian commanders on the Italian front was announced on January 21, General Szetozar Boroevic replacing the Archduke Eugene in supreme command. The new commander has been noted for his purely defensive tactics, and it has therefore been assumed that the aggressive will no longer be taken by the Austrians. Nevertheless General von Hoetzendorf, the most aggressive of all the Austrian leaders, who planned the invasion of Italy, remains in local command in the mountain region, which is the point of greatest menace and peril to the Italians. Operations on January 18 consisted chiefly of artillery firing at various points, in which the British batteries made themselves conspicuous. An attack on the bridgehead at Capo Sile was repulsed by the Italians. The next day some slight gains were made by the

Italians on the Asiago Plateau. There followed on January 20 artillery firing, especially by the British batteries, and several patrol engagements, in which the Italians captured a number of prisoners. On January 21 artillery fire became still more violent between the Brenta and Piave rivers; the Italians took some prisoners in a small surprise action west of Osteria il Lepres, and a couple of German patrol raids were repulsed. On the following day there were great artillery and infantry activity in the Trentino region, but the repeated attacks of the Austrians and Germans were all defeated. Several minor raids by the Italians on January 23 were successful in capturing prisoners and guns, and on January 24 the Italians drove back a Teutonic attack at Capo Sile, and captured some guns. The Teutons retired some distance on the Monte Tomba front, apparently abandoning their attempt there to break thru to the Venetian plains, the recent French victory in that region having rendered their position untenable.

#### The War in the East

There has been some revival of belligerence in the Balkans. Artillery duels occurred in the vicinity of Monastir and at the bend of the Cerna, and British aviators on January 18 bombarded several points on the Doiran railway and in the region of Pitric and Ceres. The next day the Germans reported that their position northeast of Paralovo had been subjected all day to artillery and mine firing.

An action occurred on January 20 between British and Turkish squadrons at the entrance to the Dardanelles, as a result of which the Turkish cruiser "Midullu," formerly the German cruiser "Breslau," was sunk, and the "Sultan Yawuz Selim," formerly the German "Goeben," was damaged, driven

## HERE'S THE WAY TO ROLL BANDAGES

In the United States we are still making surgical dressings mostly by the amateur method—valuable, of course, since it employs labor that but recently belonged to the leisure class. But these photographs from a British factory point out the next step—volunteer work aided by machine efficiency. The gauze for bandages is rolled by the piece and cut into the right widths and tied without the waste and slowness of the old-fashioned hand method

ashore, and afterward bombarded by aeroplanes. The British lost two small monitors. The two Turkish vessels were those which Germany sold to Turkey at the beginning of the war to avoid their capture or destruction by the Allies, and which escaped from the Mediterranean to Constantinople by means of a forged wireless telegraphic dispatch. During the war they have made many daring exploits in the Black Sea.

General Allenby, of the British army, on January 19 reported a considerable further advance northward in Palestine and the capture of some prisoners. The Turks were contenting themselves with merely obstructive tactics. He has also reported that of the 300,000 men of the reorganized Turkish army under the German General Falkenhayn, which set out to retake Jerusalem, 160,000, or more than one-half, deserted during the progress from Constantinople toward Palestine, in consequence of which General Falkenhayn returned to Constantinople and abandoned the enterprise in disgust.

Japanese naval forces having gone to Vladivostok without consent of the Russian authorities, to protect the interests of the Allies there, the local government of that place has protested against the act, as "impairing Russia's sovereignty as well as the friendship between Russia and Japan."

**Convulsions in Austria-Hungary** Grave social and political convulsions are occurring in Austria-Hungary, imperiling the integrity of that realm. They are due to dissatisfaction with the peace negotiations at Brest-Litovsk, the non-success of which is charged against Germany; to the reduced bread rations, under which the people suffer semi-starvation; to police interference with workingmen's meetings; and to an unwillingness to make further sacrifices in a war to enable Germany to retain Alsace-Lorraine and to seize additional territories. On January 18 serious strikes and rioting occurred at Vienna and nearly all other large cities, particularly at the

## THE GREAT WAR

*January 18*—Three German raids repulsed by French and one by Italians. British aviators active in Macedonia.

*January 19*—British bombard German base at Ostend. Italians make gains on Asiago Plateau.

*January 20*—Two Turkish cruisers, formerly German "Breslau" and "Goeben," respectively sunk and driven ashore by British at entrance to Dardanelles.

*January 21*—Change in supreme Austrian command on Italian front. Slight British and Italian gains.

*January 22*—Repeated attacks by Teutons in the Trentino repulsed by Italians.

*January 23*—Germans make strong attack near Nieuport and make some gains, but are at once driven back.

*January 24*—Italians repel attack at Capo Sile, and Teutons fall back at Monte Tomba because of French advance.

munitions factories, which were compelled to stop operations. These demonstrations were avowedly anti-German and in favor of a separate peace. Despite all attempts of the police at suppression, the disturbances extended until practically all of both Austria and Hungary were involved, and some hundreds of thousands of men were on strike. A crisis occurred in the Austrian Ministry, the Prime Minister, Dr. von Seydler, being furiously attacked by the Czechs and South Slavs because of his German proclivities, by the Germans because of his weak and half-hearted championship of their supremacy, and by the Socialists because of his support of the German war policy. In these desperate circumstances he resigned, and his Minister of the Interior, Count von Toggenburg, was asked by the Emperor to form a new Cabinet. This did not by any means appease the Czechs and South Slavs.

The Bolsheviki at Petrograd on January 24 announced that a revolution had occurred at Vienna, and that a provisional government had been

formed. This was not confirmed, but the absence of news from the Austrian capital gave ground for the assumption that the situation there was increasingly serious.

**Parleying at Brest-Litovsk** Peace negotiations between the Bolsheviki and the representatives of the Central Powers were resumed at Brest-Litovsk on January 18, but were quickly interrupted again. Leon Trotzky, the Russian Foreign Minister, asked whether the people of Poland, Courland and Lithuania would vote on the determination of their political future before or after the evacuation of their territories by the Germans. After trying to evade a direct reply Dr. von Kuehlmann, the German Foreign Minister, finally said that he could make no promises of German withdrawal. Thereupon the conference was suspended and Mr. Trotzky returned to Petrograd, saying that he was going thither to report to and confer with the Congress of Workmen's and Soldiers' Delegates. It was understood that the negotiations would be resumed on January 29, but a day or two later it was made clear that there was little real expectation or prospect of this being done. Mr. Trotzky, indeed, in his official report upon the proceedings at Brest-Litovsk made clear the irreconcilable differences between the Russian and German positions, saying:

The revolution cannot live in an atmosphere of deceit and falsehood. At this given moment the revolution may not be in a position to repudiate annexationists, but it will not humiliate itself by calling black white; it will not cover up brutal annexationist pretensions with the fig-leaves of democracy.

The Brest-Litovsk pourparlers make it clear that nothing more can be demanded from the Germans.

The Germans make no secret of their desire to seize Poland, Lithuania and Courland and to cut off Riga from the Moon Islands; to make the latter a Baltic Gibraltar strangling Russia economically and politically.

The Bolsheviki press generally commented upon the conference in a similar tone, declaring that nothing had

been gained but the unmasking of Germany's real designs and her "treacherous dual policy," and that nothing more could be expected from the discussions.

Finally, on January 24 it was announced that at the last session at Brest-Litovsk the Germans had unequivocally demanded that Russia should relinquish to Germany all of Courland and the Baltic provinces, and should surrender to Ukrania all the territory south of Brest-Litovsk. This must be agreed to by Russia before January 29, or the Germans would within a week occupy Reval and renew their invasion of Russia. The Russian delegates unanimously decided not to assent to these demands. That same day, however, the German Chancellor in an address to the Reichstag, the terms of which had been approved in advance by the Emperor and General von Hindenburg, expressed hope that a satisfactory result would soon be reached at Brest-Litovsk.

#### A Russian Crisis

A crisis of great significance in Russian domestic affairs was reached on January 20, in the forcible dissolution of the Constituent Assembly. That body had been summoned last fall by the Kerensky government, before the seizure of power by the Bolsheviks, and the election of delegates to it was effected by the Russian people of all parts of the empire, by universal, free and secret ballot. While the elections were proceeding the Bolshevik leaders gave warning that if the Assembly as chosen contained a majority opposed to them, it would not be permitted to meet or to transact business. The people, however, persisted in voting as they pleased, and the result was the election of a body containing a strong anti-Bolshevik majority. After several postponements the Assembly met in the Tauride Palace at Petrograd on January 18, and on the first test vote the Bolsheviks were overwhelmingly defeated by the Social Revolutionists; Mr. Tchernoff, formerly Minister of Agriculture in the Kerensky government, being elected chairman over the Bolshevik candidate, Maria Spiridonova, by a vote of 244 to 151. Following this, the Bolsheviks and some other extremists, led by Nicolai Lenine, withdrew from the Assembly, and there were some riotous disturbances in the streets. The All-Russian Railway Men's Congress passed by a vote of 273 to 61 a resolution supporting the Assembly, and Mr. Tchernoff expressed confidence that the Bolsheviks would not interfere with the sittings. But on January 19 Mr. Lenine, the Bolshevik Prime Minister, sent a detachment of armed sailors to disperse the Assembly, and later published a decree ordering its dissolution. To this arbitrary action the Assembly helplessly submitted. There was some talk of attempting to reassemble at some other place, but this was not done. The Bolshevik government announced that it would replace the Assembly with another body, of its own selection.

Mr. Lenine explained that the Constituent Assembly had "killed itself by

#### THE FIRST BOLSHEVIK AMBASSADOR

Altho Great Britain has not as yet granted official recognition to the Bolshevik government, the Bolsheviks have appointed Maxim Litvinov as diplomatic representative to the British capital and Great Britain has tacitly accepted him, by granting him the privilege of representing his government *ex-officio*

opposing the wishes of the laboring masses represented by the Bolshevik members." It had been called into existence, he continued, by the "bourgeois" revolution which had overthrown Czarism, but the "bourgeois" régime, in which the Constitutional Democrats had succeeded, had in turn been overthrown by the Bolsheviks, and therefore all its works were to be repudiated. An effort was also made, especially in America, to make it appear that the Constituent Assembly had been subject to German influences, and would have made peace on German terms. This, however, was contradicted by Mr. Tchernoff, who declared that the policy

#### THE AMBASSADOR'S WIFE

Even in democratic America it's a little difficult to reconcile our customary notions of social appearance with this photograph of Madame Litvinov and her son, taken in their backyard in London. But it is convincing illustration of the Bolshevik insistence on government by "the people"

of himself and the majority of the Assembly was to call a conference of all the Allied Powers to consider the aims of the war and to harmonize them if possible with the principles of the Russian revolution.

Many persons were killed and wounded in street fighting at Petrograd and elsewhere, the "Red Guard" of the Bolsheviks firing ruthlessly upon all gatherings which did not disperse at their command.

#### Labor on War and Peace

The annual conference of the British Labor Party at Nottingham, England, beginning on January 23, had been looked forward to with intense interest to see what attitude it would assume toward the prosecution of the war and the terms of peace. Pacifists and German agents had been insidiously endeavoring to turn its members toward an immediate peace thru compromise, largely on German terms; while on the other hand the recent very explicit and vigorous speeches of Mr. Lloyd George were reasonably supposed to have been intended to make plain to it in advance the policy and the purposes of the Government and thus to secure for them its support. Representatives of the workingmen of France and Belgium attended the conference, together with Mr. Litvinov, the envoy of the Russian Bolshevik Government to Great Britain.

It quickly became evident that the conference was disposed to support the British Government and its allies in the inexorable prosecution of the war until peace on satisfactory terms could be secured. At the opening of the sessions the president of the conference, Frank Purdy, said that if Germany would not accept the terms which President Wilson, Mr. Lloyd George, and the Labor Party had practically agreed and united in prescribing, there would be no recourse but to "fight on." There were as yet, he said, no signs that Germany would accept those terms. "Peace," he continued, "when it comes must be a general peace, a just peace, a lasting peace that will secure liberty and freedom for all nations, great and small; a peace based on the will of the people." He demanded that Germany should agree to evacuate Belgium and northern France and the other territories over which she held sway, in advance of any negotiations of terms of peace, and then proceed to the making of a peace which would leave behind no germs of future wars. These utterances were heartily applauded and obviously expressed the sentiments of the vast majority of the conference. Much approval was also manifested of the declaration of the fraternal delegate of the French Socialists, when he said that President Wilson had declared, on behalf of the common people of the whole world, the terms which the common people want. "This statement," he added, "has now been agreed to by every Allied government, including the Russian Bolsheviks. In the face of this unanimity of opinion the Central governments are silent, but their people

#### THE BOLSHEVIK CABINET, NOW IN CONTROL OF RUSSIA

This is the first photograph to reach this country of the present rulers of revolutionary Russia, the Bolsheviks, whose government of communistic anarchy, tho by no means stable, is managing to stay in power. In accordance with the Bolshevik doctrine these Cabinet officers have been promoted from obscurity to the chief control. We do not even know as yet the names of all of them; from left to right in this photograph are Ministers Zlotowsky; Michailov; Lynochaisky; Trotzky, the leader of the Bolsheviks; Murawev and Nogin. The woman is Mlle. Colontai. The others are not identified

are restless and disturbed, and before long they, too, must come into agreement."

The conference has before it an interesting and important program of proposed resolutions, which will be debated at length. These comprize demands for the abolition of conscription immediately after the war, state ownership of public utilities and natural resources, educational reform, abolition of the House of Lords, and—perhaps most significant of all—Home Rule for India. This last topic is now put forward for the first time in so formal and serious a manner, and there is a widespread feeling that the incident is symptomatic of some considerable further step in that reorganization of the Indian Government which has been in quiet progress for a number of years.

#### An Irish Crisis

The resignation of Sir Edward Carson from the British Cabinet, in which he had been a Minister without a portfolio, was announced on January 21, and was regarded as significant of an impending crisis in Irish affairs. The official correspondence published showed that it had nothing to do with the conduct of the war, but related entirely to Ireland. The deliberations of the Irish National Convention were nearing their close, and while they had been conducted in private and their precise purport was not publicly known, it was generally assumed that their outcome would be a radical recommendation if not a demand for the prompt adoption and application of a Home Rule régime. Now Sir Edward has long been the leader of the most uncompromising opposition to Home Rule, or at least to the inclusion of Ulster therein, and was just before the beginning of the Great War the chief organizer of the Ulster Volunteers who were to resist to the extent of civil war the placing of Ulster under a Dublin Parliament. It would therefore obviously be embarrassing for him to sit in a Cabinet to which was submitted a Home Rule

measure, especially with the majority of the other members strongly inclined to accept and adopt it. It was accordingly assumed by many that he resigned from the Cabinet in advance of its receipt of the conclusions of the Irish Convention, in order to avoid the necessity of a disagreement with his colleagues which would probably be so marked as practically to require his resignation at that time, in circumstances less pleasant than the present. Others interpreted his action as meaning that he wished to be free to lead, from outside the Cabinet, an irreconcilable opposition to the expected measure. The weight of Irish opinion was to the effect that his retirement augured well for an amicable and satisfactory disposition of the Home Rule problem. The Prime Minister, Mr. Lloyd George, on January 24 invited the Irish Convention to send the leading members of its different sections to meet him and his colleagues for a conference, and the convention decided so to do at the earliest possible date.

#### Fuel and Freight

The five days' industrial recess ordered by the National Fuel Administration was generally observed thruout the region prescribed, and in all states east of the Mississippi River, including all of Louisiana and Minnesota, from January 18 to 22 inclusive, there was a suspension of all industries save those specifically exempted by Government order. On Monday, January 21, moreover, complete holiday conditions were observed. The results of this unprecedented action were variously estimated. The Fuel Administrator profest a large degree of satisfaction with the saving of fuel and with the movements of freight and clearance of congested railroads and terminals which were effected, while others declared that the little which had been gained in some directions was not comparable with the cost to the country of such suspension of business. The facts above dispute appear to be that there was a gratifying increase in the

coaling of steamships for carrying urgently needed supplies abroad, and that much progress was made in moving freight at the chief terminals, 2400 cars having been cleared out at New York alone. On the other hand there was a failure to replenish the coal supply of New York City, the greatest center of population and industry and the place where suffering from lack of fuel was most intense, so that at the end of the five days the plight of the metropolis was worse than at the beginning. This condition was aggravated by another heavy fall of snow on January 21, which impeded traffic and rendered distribution of fuel difficult.

In this emergency, tacitly conceding that the five days' recess had not been fully effective, the Fuel Administrator appealed to the Director General of Railways to establish an embargo, on eastern railroads, on all freight but food and fuel, "for a few days." To this proposal Mr. McAdoo at first demurred, but on January 23 he complied and issued an order, immediately effective, establishing until further notice, an embargo on all freight except food, fuel and munitions, on three great eastern railroad systems, namely, the Pennsylvania lines east of Pittsburgh, the Baltimore & Ohio east of the Ohio River, and the Philadelphia & Reading. This it was hoped would enable the coal supplies of New York and New England to be satisfactorily replenished. The problem of getting the coal from the New Jersey terminals across the ice-bound harbor to New York was, however, untouched, and the condition remained of hundreds of thousands of tons of coal being accumulated a mile outside the city, while only 15,000 tons a day got into the city, and hundreds of great industries were compelled to cease for lack of fuel. This state of affairs emphasized the need of a bridge over the Hudson River, or of a tunnel under it which could be utilized for traffic in coal and general freight supplies for the city.

International Film

TAKING CHANCES

This photograph of an Italian transport deserves a place in the gallery of narrow escapes. Making top speed on a steep grade the driver lost control and the car, saved from overturning by sheer good luck, was stopped by an obstruction just on the edge of a cliff, where it would have dropt several hundred feet

The gratifying announcement was made that at all times the army transport service had been fully supplied with coal, so that there had been no interference with the shipping of troops and their supplies. Complaints came from the governors of the five chief corn states of the West, that the corn crop was in imminent danger of spoiling, and that a large proportion of it would be lost unless facilities for transporting it to market were available within a few weeks.

Transportation Control

The question of the length of time of Government control and operation of the railroads continues to be much discussed at Washington, and the decision of it by Congress in pending legislation is still uncertain. Testifying before the Senate Committee on Interstate Commerce the Director General, Secretary McAdoo, exprest the opinion that the roads should remain in the hands of the Government for three years after the end of the war. He was not in favor of the Government's permanently retaining them, or acquiring ownership of them, but he did think that it would be impossible to return the roads to their owners under exactly the same system under which they were formerly operated, but that there would have to be retained a larger measure of Government control than ever before. Concerning the complaints of hardship to the numerous short railroads which had not been taken under Government control and operation, and which therefore did not enjoy a Government guarantee of income, Mr. McAdoo said that the Government had no intention either of tak-

ing possession of them or of indemnifying them for their losses. If they suffered because the Government took the trunk lines with which they connected and did not also take them, they must either endure their loss as a patriotic sacrifice, or seek redress in the courts, if any was there to be found. He further intimated that if it was found desirable the Government would assume control and operation of canals and river traffic.

A Railway Wage Commission

The Government, having taken over the control and operation of most of the railroads of the United States, is of course more directly concerned than heretofore in the question of the wages of their 1,700,000 employees, a question which is now being agitated with strong demands for an increase of pay. To meet this condition the Director General of Railroads, Mr. McAdoo, on January 18 appointed a Railway Wage Commission, to have supervision of the entire field of railway labor, to investigate its conditions, the compensation of the employees in relation to the wages of men in other occupations, the special emergency which exists at this time because of the high cost of living, and the relations among the various classes of railway labor; and to recommend to the Director General what adjustments of wages ought to be made. The commission consists of Franklin K. Lane, Secretary of the Interior; C. C. McChord, Interstate Commerce Commissioner; J. H. Covington, Chief Justice of the Supreme Court of the District of Columbia; and William R. Willcox, formerly Postmaster at New York and more recently chairman of the Republican National Committee, which latter office he resigned upon accepting the commissionership.

Constitutional Amendments

The proposed amendment to the Constitution providing for nation-wide prohibition of the liquor traffic has already been adopted by the legislatures of Kentucky, Virginia and Mississippi; three states which hitherto have been so strongly committed to the principle of State Rights that it was doubted if they would approve a measure directly at variance therewith. Their example encourages the expectation that the other southern states which have adopted state prohibition will similarly waive their State Rights predilections and adopt the national measure. Other states to whose Legislatures the amendment has been or will be submitted this year are New York, New Jersey, Massachusetts, Maryland, Georgia, South Carolina, Louisiana and Rhode Island. Meantime it is pointed out that these legislatures were elected by the people before the adoption of the amendment by Congress and when there was no knowledge that it would be submitted to them; and it is urged that they therefore should not act upon it, but should postpone it to be acted upon by succeeding legislatures elected by the people for that purpose, or at least with the knowledge that they would be called upon to take such action.

Relief for Asia Minor

The sum of \$1,200,000 was appropriated on January 22 by the American Committee for Armenian and Syrian Relief, for immediate distribution among the relief workers among the remnants of the Armenians and Syrians and other destitute peoples in Asia Minor, from southern Palestine to the Caucasus. The needs of these unfortunates are more extreme, probably, than those of any other war sufferers, because of their remoteness from succor.

Losses by Enemy Action of Merchant Tonnage British-Allied-Neutral.

German Submarines Sunk.

LOST BRITISH SHIPS AND LOST U-BOATS

This diagram of comparison between the merchant tonnage sunk by German submarines and the U-boats sunk by the Allies is based on a recent official statement of the British First Lord of the Admiralty. The first curve shows that the hight of enemy submarine attack on merchantmen was in the second quarter of 1917 and that since then the line has steadily fallen, reaching in the last quarter of 1917 the same figure as in the last quarter of 1916, before unrestricted submarine attack began. The second diagram shows that since September, 1916, there has been a steady rise in the number of submarines sunk, and the fact that the last quarter of 1917 is no higher than the previous one is accounted for by the omission of figures for the last two weeks of December, which could not be included. These diagrams are statistically accurate and drawn to scale, but obviously the scale is not the same for both, one being for tonnage of merchant vessels and the other for the number of submarines

# THREE WAR HORIZONS

BY ALBERT BUSHNELL HART

PROFESSOR OF GOVERNMENT AT HARVARD UNIVERSITY

**A**PRIL is a fateful word for the United States of America! Thrice the tide of affairs has in that month risen to a point where it burst the dikes and spread war over the nation. Thrice the United States has been in great peril; April 19, 1775, on the day of Lexington and Concord; April 12, 1861, the bombardment of Fort Sumter; and April 8, 1917, when the solemn declaration was made by Congress that war had begun by acts of the Germans. These are three great world dates, which will be remembered by our children's children. The three critical days, and still more the year which immediately followed each of those dates, show many points of similarity which may help us to understand the times and to brace ourselves for the shock of the hour.

Each of these crises marks a stage in the growth of the American nation. On the morning of April 19, 1775, the American colonies were an integral part of the British Empire; tho discontented and defiant, they were discontented and defiant Englishmen; on the evening of that day an American commonwealth had been founded. Samuel Adams said to John Hancock in their place of refuge that day, "Oh, what a glorious morning is this!" He realized that an irrevocable step had been taken; that to draw back would mean defeat of the hopes of a people; he safely expected that Massachusetts would be supported by all New England, the middle colonies and the South. As the troops withdrew to Boston, after the first fight in history in which a British army had been driven by British colonists, they left behind them a piece of federal territory—the initial area of the coming United States of America.

**F**ORT SUMTER was the central point of another national day, the potency of which was felt instantly thruout the Union. While the shells were bursting over the fort, while the devoted garrison was replying, putting out the fire, rolling its powder into the sea to avoid an explosion, people gathered about telegraph offices and bulletin boards to hear the news that the national flag no longer floated over an undivided country. The first gun fired at Fort Sumter was the explosion of a great civil war. On that day a new Union was born, the northern states were shaken together into a closer brotherhood. It was impossible for the country ever to return to the state of sectional division, distrust and hatred which had been growing up for three decades. The Union must prove itself a

genuine government, able to carry on war, obstinate to do and to suffer, or the hope of a great, enduring American democratic federation must fail.

So in April, 1917, the issue was fairly raised, bravely met: either the United States must accept the kind of international law prepared for us by Germany, either our trade and our place in the family of nations must be finally adjusted for us from over seas, or else we must take part in the world struggle. The Act of Congress therefore was more than a recognition of war; it bound the United States to take a proper place among the nations who were resisting the attempt to create an arrogant German world power, with dependent Hungarians, Slavs, Bulgarians and Turks. Our nation had already shown an amazing power to build up a mighty and prosperous commonwealth, it excelled in arts of peace; nowhere in the world was the average wealth, the average comfort, the average opportunity so great. The question now presented itself whether the great complex of people and industries and wealth was to be an eventual prey, to a relentless enemy, or whether it could organize for defense and offense. The change in the relation of the people of America to the rest of mankind was as great from the morning to the night of April 8, 1917, as on the days of Lexington and Sumter.

Underwood & Underwood

PROFESSOR HART

In all the three critical years there was some division of feeling about the necessity of war. Till the struggle actually came, the Loyalists in the Revolution, the Peace Democrats at the beginning of the Civil War and the Pacifists in our own time held back; but when the battle was joined, the ranks closed up and the leaders in the struggle were carried along on the tide of popular support. The flame of the Revolution swept swiftly from colony to colony. "Oh, those Virginians are patriots!" said Oxenbridge Thacher, of Massachusetts, "they are noble spirits!" There were slow days and dark days, there were fainting spirits and disloyal spirits, but a large part of the plain, common people in country and town moved forward carrying the Revolution on their shoulders. They gave men, they gave ships, they gave supplies, they paid taxes, they chose members of Congress, they kept at it for seven weary years.

**A** like spirit of pluck and endurance characterizes the Civil War. No one born since that time can realize the passionate ardor and sense of service of the people in their homes, on the farms, in the factories, behind desks, and in counting-rooms. The Sanitary

Commission (corresponding to the Red Cross of our day) busied the fingers and the hearts of the women, and its work blest the field of battle and the hospital. Good soldiers used to say, "We will stay in the army till the work is done, so that our children may not need to do it over again." On both sides there was this passionate, heroic spirit of self-sacrifice. The taxpayer, the workman, and the mother caring for the family while the husband was at the front, all united in that superlative grit which is a mark of a true nation.

The same spirit shows itself again in 1917. Whatever the uncertainty and confusion down to the actual day of reckoning, the nation sprang to the task when clearly presented. We realize, better than our fathers and grandfathers, that the war must be fought at home, by the farmers and workmen, and transportation men, just as much as by the troops in the field. We are drawing into service a class of masters of industry and trade who hardly existed sixty years ago, for in the civilian armies of the modern world there must be enlisted the manufacturers, the bankers, mine owners, railroad presidents, the shipping firms, the corporations. Wars nowadays are fought not only by riflemen and machine gun men and bomb throwers, airmen and submarine men, but also by the engineers in their cabs. [Continued on page 210]

# MAKING OVER MEN

## My First and Second Visits to Camp Pike

BY HILTON HOWELL RAILEY

A friendly atmosphere greeted the first soldiers of the National Army who reported for duty at Camp Pike, Arkansas, early last September. The trees still flourished with the green hue of summer's nursing. The sun poured its warmest rays upon the yellow dunes and the rugged hills seemed to reflect the peace of the surrounding country and beckon the tired traveler to the haven of their shades. Even Fort Roots, which stands like a sentinel on the hill guarding the approach to Camp Pike several miles beyond, seemed to have lost its military aspect in the lull of Nature's bountiful goodness to the inhabitants of this wild, free state. There were a few soldiers of the National Guard straggling along the dusty roads, but even they appeared so very aimless and nonchalant that one would not think of them, at first glance, as men who were being trained in the art of killing.

On the way to the cantonment I could not realize the tremendous significance of the event I was to witness a few hours later, the arrival of the first selectives. I was conscious of the fact that on this, the eighth day of September, thousands upon thousands of the youth of the nation would be taken from their normal pursuits and assigned to the grimmest tasks they had ever been asked to do.

Subconsciously I felt the heart-throbs of their anxious mothers and I could visualize the many pathetic scenes that took place when these boys left their homes . . . perhaps never to return again. But until I reached the receiving station of the 87th Division and saw the men who are to fight over there, I could not, I would not face the cold fact that we were at war.

But there came a rude awakening. Long, ragged lines of heterogeneous men stood in front of the many buildings in which they were to be registered and accounted for. I saw the boy of twenty-one and the man of thirty standing and talking together. The mobile expressions on their faces gave no clue to the trend of their thoughts. Some were gloomy. Others were artificially gay. Many were merely calm and very quiet. The only thing they seemed to have in common was the shabbiness of their clothes. I afterward learned that they had previously been instructed to report with only such apparel as they could afford to discard.

*Mr. Railey is lecturing and working at the army camps as representative of the War Department Commission on Training Camp Activities. He is writing exclusively for The Independent his impressions of how the camps are "Making Over Men."—THE EDITOR*

It was my privilege shortly after this to address these same men in provisional companies of two hundred and fifty each. I saw no change. They were assembled in the mess halls of the barracks I had to visit and the shabby clothes they wore when their training began were exceedingly funny. There before me sat professional men, laborers, college boys and clerks—all molded into a single standard of society.

They had not been together long enough to perfect a democratic spirit. The only tie that bound them together was sympathy.

Later on I viewed them in the field

after they had been assigned to provisional companies under the command of reserve officers. Their appearance was anything but encouraging. They seemed discontented, sulky, extremely awkward and altogether incongruous. They plodded along on the hikes which they were compelled to take preliminary to their military training. Many of the men seemed tired, winded after the first mile or so. Here and there was noticed a bright young man who had entered into the spirit of the thing and who made admirable efforts to assume a soldierly appearance.

WHEN they were formed into companies and drilled in squads there was a perceptible change in their attitude. "Company pride" was beginning to awaken them to serious efforts and the interest they took in their instruction was quite fine. After two weeks, tho far from being soldiers, they were comparatively well satisfied and anxious to "get started." I questioned many of them rather closely. One interview I remember was as follows:

"Well, old top, what do you think of it?" I asked a fairly serious looking young man.

"At first," he replied, "it was just plain everyday hell! But now things are different. We get along pretty well in the barracks, the food is good enough and most of us feel one hundred per cent better for the exercise and regular hours. Sometimes we get a little blue, but later on I know it's going to be great."

I asked him to give me his views about the Germans.

"We're here to tackle a big job—licking the Kaiser and his million Fritzes. But we're going to do it and do it well! After all," he continued, "if the fellows would only keep that in mind we would all work like the very devil."

That was three months ago. Last week I happened to be at Camp Pike again and what I saw made me proud of every man who wears the uniform of the National Army.

Standing on a hill near one of the great training fields a full regiment of men in khaki stood at attention. The command was about to pass in review. I could hardly believe these were the same soldiers I came in contact with several months before. Each man of the great body of six thousand seemed to stand out alone—a well developed soldier. Their faces, ruddy [Continued on page 212]

"Long, ragged lines of heterogeneous men came crowding into camp, discontented, gloomy, awkward—that was three months ago"

The same men in khaki, standing at attention, in place of the old apathy a grim expression of pride and determination

# OUR DIRECTOR OF STEEL

BY DONALD WILHELM

AUTHOR OF "THE STORY OF STEEL"

**T**HE mailed fist of the Great Malevolent is Steel. He has Lorraine, now—and the war dare not end till he relinquish it. He has all the steel in Europe save the relative little that is England's and Spain's and the little in the Black Sea district of southern Russia—almost anybody's now!

And America has almost infinitely more. America has nearly three-fourths of the entire steel capacity of the world—another reason, when expressed in terms of ships and shells—why the Malevolent is now on the straight and narrow road to ruin, and why there is hope for everlasting peace.

And the Director of America's steel, like Steel itself, is a lusty Youth who is doing more, these days, than to match the Kaiser shell for shell, ship for ship—more by far than all the Kaiser's horses and all the Kaiser's men can do. The war, in a sense is, thus, a war between the Kaiser and a young steel man, Director of Steel in America, for the United States and the Allies—J. Leonard Replogle, whose "job," as he modestly puts it, is "to get steel when and where and in the form that's wanted."

And that, too, is the Kaiser's job.

It is the job of young Mr. Replogle because he made good as a steel man. And the steel industry says he made good as a steel man principally because, like Charles M. Schwab, he made good as a salesman.

He is a salesman extraordinary because he has, among other faculties, a rare knack of making buyers find something in common with him. "He certainly does that!" said one buyer. "Why, it's no time at all till you're calling him 'Rep' and asking him to smoke a cigar with you." Any buyer—or any one else—who has ever made two million dollars in twelve brisk and interesting days has something in common with J. Leonard Replogle.

Any one who is a baseball fan has something in common with him. Any one who has ever played baseball. And if any one has ever been a player-manager, then, says his secretary, "You're friends with him for life!"

But these are only a few of the "common" phases of this salesman and steel man extraordinary. He is Pennsylvania Dutch. He was one of a very large and struggling family. He was a minister's son.

And, twelve years after he was born, just a little way above his father's house a dam broke one day and the big and disastrous Johnstown flood came reaching, roaring, down the valley. It came on, roaring, crashing its way along, and tho there were screams and warnings, tho the dimpled, freckle-faced young Leonard raced up the stairways toward the family roof, the water raced up after him, till the house itself left its moorings, went ricocheting down the line. It so happened that

*Underwood & Underwood*

*J. Leonard Replogle, who directs three-fourths of the world's steel production*

this young minister's son, wet and red and cherubic and scared three-fourths to death, like Luck, the infant in "Luck of Roaring Camp," was snatched downstream at destroyer speed, to be yanked out to safety by and by, "wetter," he says, "than Moses could have been, and colder than any boy since the beginning of time!" And he adds, "That woke me up, I guess!"

He was taken to the rest of his family. Two of its members had been drowned. Finally he went along with his father to the family house, and there he discovered something that makes him feel common sympathy for any flood victim from Noah's day to this.

He discovered mud, in short! There was mud in the house everywhere, and of course its windows were broken and the furniture was falling apart. There was mud on the carpets—sticky, stubborn mud, inches thick. There was mud on the walls and mud in the corners and closets, in the drawers and in the pantry, in every conceivable niche and location from the attic to the cellar. And the house itself, it should be remembered, was one long mile from its natural habitation.

**A**LL this meant that the Rev. Rhinehart Z. Replogle was ruined utterly. And it meant, also, that young J. Leonard understood the situation so thoroly that—a sturdy, bright-eyed, red-cheeked boy—he applied to the Cambria Steel Company, whose big plant is in Johnstown, for a job. He got one as messenger then and there, at three dollars a week, and quit school imme-

diately. Hardly twenty years later—this one sentence tells how successful he was—he formed a syndicate, got control of Cambria Steel, and by dint of twelve days of interesting maneuvering, sold it and cleared for himself and his associates, \$12,000,000—\$2,000,000 of which was his.

He was able to do that for several reasons. One reason is, he had studied. He had studied night and day, and learned everything he could learn about steel. Another reason is, he smiled! It is a fact that he then had, and he now has, three dimples, and a smile—it is almost a perennial grin—ready to work with them. He has been smiling ever since they saved him from that flood, all the way up the line from the bottom of the steel industry, clear up to the top. He cannot swim a stroke, or one might say, figuratively, that the only persons who smile as successfully as he does are those who, some time in their lives, have had to "swim for it"—swim hard to hang on to life at all.

He got his smile into his work as a messenger, with the result that in three years he was made a clerk. Then, with the same despatch that he had employed when a messenger, at eighteen he was assistant superintendent of the forge and axle department. It was then that the railroads were begging a way in which to let their passengers "down easy"—i. e., they sought a steel axle instead of an iron one that very often broke. Young Replogle was given the task of ascertaining their needs and, as a result of infinite conferences, his department brought forth at last what is known as "the Coffin Treatment" for axles, which has proven eminently successful.

About that time, too, he began to demonstrate his instinct for salesmanship in other ways.

**T**HE Hudson Tubes were being built. They needed four thousand tons of bolts. Four thousand tons of bolts constituted what steel men called "a plum." And the question at once uppermost in the minds of them was, "Who is to get this plum?" And they all considered carefully and got ready to bid. So, too, did young Mr. Replogle. He knew his bolt department thoroly; he knew what the three hundred men in it could do, what their materials cost—knew, in a word, about all there was to know about that department except a sure way in which to make it so efficient it could seize that plum! He looked about. He studied, and the spectacle that bothered him most was that of his bolt makers turning bolts by hand like plumbers at the end of wagons. "Why not invent a machine for rolling threads instead of cutting them?" he asked himself. In plenty of time to seize that plum he invented such a machine. With it one man could do the work formerly done by ten.

He got his plum. He got a patent on

his machine, and a great many bolt makers pay him royalties now.

Cambria's president took heed. He wasn't content to have such resourcefulness restricted entirely to the forge and axle department, over which young Replogle was superintendent now, tho hardly yet of age. "Rep," said the president one day, "you come over and get that smile of yours and that Neolithic jaw into the order department and see if you can't cut out this warfare between the sales and the operating departments. You're now general superintendent of the order department!"

THEN this startling young executive not only developed a sales spirit that is one of the rarest things in the world—one such that every salesman knew the young chief would back him up to the very last and then make a trip to close a deal himself—but he got the operating departments working hand in hand with the order department, so that when he promised deliveries by a certain date the operating departments accepted that promise as their very own.

It was no time, in fact, till the young chief of sales was assistant to the vice-president and general manager. Then he was made assistant to the president, then vice-president and general manager of sales.

Then along came American Vanadium, the largest corporation of its kind in the world, with its mines high up in the Andes Mountains—17,000 feet above sea level—and llamas, tough, stubborn little animals capable of carrying 115 pounds burden, willing never to carry more, bringing the precious converted metal down, for use in making armor, projectiles, many of the hardest kinds of steel there are. American Vanadium said, "We'll give you almost any old figure if you'll come over and be vice-president and general manager of sales." He went over. Shortly afterward he formed a syndicate and would have made himself president—if the syndicate had been successful in getting complete control, which it wasn't!

But Cambria was his real love. His thoughts persisted there. He learned that the Pennsylvania Railroad for reasons he understood fairly well wanted to get rid of its control of Cambria. That interested him. He wondered why he shouldn't have that control himself. He went out and got certain options on Cambria stock, in Pittsburgh and Philadelphia. One day he strolled into the office of a certain executive of the Pennsylvania Railroad. "You've got 240,000 shares of Cambria I want to buy," he said.

"What'll you give?"

He named his figure. The executive named his. They compromised on sixty dollars.

Without much delay or much ado, J. Leonard Replogle, looking very young, handed over a check for fifteen million dollars and more—which did not by any means represent all the capital he had back of him on this little adventure. For his adventure was to combine Cambria, Lackawanna Steel and Youngstown Sheet and Tube, and give U. S.

Steel the stiffest competition it had ever known.

In the days following the stocks of all three companies climbed by leaps and bounds. Wall Street was wide-eyed at the antics of this "youngster." And things got to going at the pace of a Johnstown flood. "Why," says Mr. Replogle's secretary, "there was a stretch there when I didn't know whether I was drowned or swimming!" And another assistant said, "I thought I knew what was happening and when it was over I found I had been all wrong."

Saturday afternoon came. It was certain, as Wall Street viewed things, knocking off for Sunday, that everything was going thru—and equally certain that the failure of the combine meant a crash and disaster, a ducking or drowning, for thousands of investors.

Then something went all wrong. Lackawanna, in short, demanded more money. "Why, that has all been settled," argued young Replogle, coming down hard on the edge of a table. But Lackawanna thought differently. And Lackawanna wouldn't give in, wouldn't come in, wouldn't be forced in!

"It looked just there," said one of the participants in this Brest-Litovsk, "as if the 'Rep' was about to be knocked out of Replogle!" Circumstances said, in other words: "Young fellow, you've got to swim for it!" "Rep" swam! He swam easily over to W. E. Corey of the Midvale Steel and Ordnance Company. Smiling as he entered, he said, "Mr. Corey, do you want to buy Cambria?" "How much?" "Well, I'll give it to you for 81!" Corey took it.

When the deal was done the young financier put, as he says, the "Rep" back into the Replogle and two million dollars, his share, of change into his pocket and went out to play the best eighteen holes of golf he had ever played!

ONLY forty miles out of New York City were the Wharton mines, at Wharton, New Jersey. They were known well enough to the steel industry—not very favorably known, for old man Wharton, having made a fortune from them, left them to two daughters, who had by no means been successful with them. Yet the ore, so this young steel king knew, was in places so close to the surface that it could be mined by the steam-shovel method, tho most of it is 1300 feet down. It could be made to pay. But some one had an option on the property. One day that option expired. That day, in Philadelphia, the man who later was to be made, by dint of shrewd Mr. Baruch and others, Steel Director, "snapped it up!" Now, with modern methods the property pays. It is, he says, producing, with three blast furnaces going, a thousand tons of pig-iron every day and fifty tons of ferromanganese, which is quite as essential an element in the making of steel as coke or ore or limestone.

And surely, in these years when steel is the arbiter of our very civilization, when such a city as New York City would fall apart into segments and drop back thru the ages a century or two,

if, suddenly, there were to be no steel, there is something impressive in a steel property with a healthy store of ore only forty-five minutes from Broadway!

United States Steel, it is worth noting, brings its ore from northern Minnesota. Bethlehem Steel brings it from Cuba and South America. Mr. Replogle gets his forty-five minutes from Broadway! It is not so large a supply, of course, yet it is nevertheless extremely important.

But the responsibility that rests heaviest upon this young steel man, who is not yet forty years of age, is not to make Wharton Steel successful. It is rather to make the Allies successful.

"YOU have a tremendous job, haven't you?" I asked him.

He leaned back in his chair behind the desk in a corner of a corner office in the new building of the Council of National Defense in Washington—a typical steel man, ruddy, dressed in a suit that showed hard usage.

"Yes," he said, smiling, "this job is nearly overwhelming."

He is charged with keeping thoroly informed about the steel production in every plant of all America; with the proper classification of products; the standardization of them, and for the administration of the capacities of all the mills. He doesn't actually buy the billions of dollars' worth of steel that are being bought, but he does nearly everything else and keeps reins and whip on all the mills. Each week, in other words, the great sheets that are on his desk before him, tell him just what mills, if any, are "not coming up to scratch."

"Here is one, for instance," he explained, "that is falling off in tonnage. Here is one that is shipping non-essential steel."

"Then what do you do?" he was asked.

"Simply say, 'Here, you fellows are out of line!'" he smiled, tho he hastened to explain that he has had the best coöperation imaginable.

"Then what do they do?"

His gray eyes narrowed, tho still the smile persisted.

"They get into line!" he said.

"Why, you're general manager of three-fourths of the steel capacity of the world, aren't you?" he was asked. He smiled.

"It's a big job?"

"Yes," he admitted, "it's a big job!"

And it is a big job—providing steel for the big program that is America's: Steel for ships, for guns, for shipyards and shells, for cannon and all the thousand other wartime uses. It's the job in which failure might even lose the war, to the old Malevolent.

"Tell me," I urged, "how does this job look to you?"

He considered, smiling. "Why," he said, conclusively, "it's simple enough! My job is to get steel for the United States and the Allies where, when and in the form that's needed. That's easy, isn't it?" Then he laughed. And you can hear him laugh half a mile away!

#### GUYNEMER'S AVENGER

The French aviator, Lieutenant Fonk, who was a friend of the famous "Ace of Aces," killed last August, paid a spectacular tribute to the memory of his comrade. A famous German aviator boasted that "he feared no one with Guynemer dead." Two weeks later Lieutenant Fonk shot down his plane

# WHEN NEW YORK STOPPED LIVING

ON a morning in the heart of the great cold, a coal wagon turned up Jones Street. Jones Street is a short, mean street, where old homes transformed into rookeries alternate with "dumbbell tenements." It is a mean New York street like any other. Usually it is populous, but the cold had made it as deserted as a frozen cemetery.

Before the unsuspecting coal wagon was halfway down the street, children shivering in mean doorways called up cavernous staircases, "Hey, ma, coal!" and the street swarmed. The crowd became a mob, the mob a pack, people leaped at the horses' heads. They tore the driver from his seat, and then—the strongest arm was the one that got the coal in Jones Street that day.

In a moment they were at one another's throats. Women beat each other over the head with pails. One woman, a bucket of coal in her hand, made off screaming shrilly, her neighbors yapping after her like a wolf-pack. Men knocked women aside to get at the coal. A half-grown boy, his cheek gushing blood, fought with a woman. Her hair was down, her blouse torn at the shoulder. You didn't need to hear her screaming to know that her children at home were freezing. The long training of civilization, the drill of the factory, the discipline of the city ceased to exist. The driver, with whip in his hand, stood backed against the cart. Looting was only delayed by the fight among themselves, and then the police turned up, and the people, growling, formed some semblance of a line and stood waiting their turn.

It was indescribably sudden and savage, the riot on Jones Street, terrifying in its violence. That crowd had fury in it. It had the quality which makes for swift murder. Those women, those children, would have torn one another to shreds to get coal.

THEY leaped out of their cold individual discomforts, first to fight the coal man and then to fight each other. You would not suspect New York or Jones Street of such naked savagery. The scene didn't belong to here and now. It belonged to an earlier and more violent age and to another country. Jones Street is a law-abiding street of mixt races. It has not even a "hard name," but a two-days' breakdown of the system of distribution, and women who had lived their toilsome and limited lives, with the patient fatalism of the poor, sprang forth from their houses to take by force what they needed.

Their suffering was the barometer of their violence.

It was more than the lack of coal that ailed Jones Street. There was no light, there was no water. The people could no longer cook food or wash. There were tenements where the toilets had overflowed and where the water and sewage had gushed down the stairs and hung in icicles upon the banisters of the dark halls. No wonder they fought. As I watched them go off, a

BY MARY HEATON VORSE

AUTHOR OF "THE HEART'S COUNTRY,"

thought pierced thru me. The whole East Side was like Jones Street—potential riot.

Civilization had broken its promise with them; they broke their promise with it. Jones Street's answer to the breakdown of society had been riot, so during the cold, riot stalked the city streets, blazing forth here and there in sudden fury.

FOR once the well-to-do and the poor suffered side by side. It was not only in Jones Street that icicles hung for days from banisters.

What happened to uptown New York during the great cold will always be typified to me by a richly drest woman I saw stalking indignantly along with an oil heater in her outraged hand. She might have stood for a poster of Manhattan. The well-to-do in this country have for so long lived their comfortable, well-ordered lives that they could not understand what had happened to them. Something like this conversation took place in thousands of homes:

"Why has not the coal come?"

"Madam, there is no coal."

"Then send for gas or electric heaters."

"Madam, the company is out of them."

"Draw my bath, and I will find some for myself if you can't."

"The pipes are broken and the bathroom ceiling is lying in the tub."

When the bathroom ceilings in a town make a habit of lying in the tubs in any great quantities, there is something wrong with society. There was something very wrong with our society, and that was, that it had in some of its essentials temporarily broken down, but we couldn't believe it. We couldn't credit our eyes even with ceilings of our houses around our ears.

We called for the plumber. There must have been during the cold spell people who found plumbers. There must have been some strong, angry man who forcibly took a plumber home with him, but I have seen no such hero. I have not yet heard of any one who was not told by the plumber—caught only after superhuman efforts—that he would try and get around by the first of February.

One cannot stay in a house when the ceiling is a lump of ice, where there is no water and no fire. All New York started for the hotels. Only a little of it got there. What to do but leave town? But the trains on which one could leave were found to be taken off.

It sounds like Ollendorf or exaggeration. It is a record of truth.

New York stopped living. It stopped everything—bathing, first of all, except a few people whose hot-water supply gave out later than the heat and who remained night and day in their tubs to keep warm. You cannot exaggerate the discomfort borne by careless, comfortable New York, when for

the first time it got a taste of what any disorganization of society brings inevitably to the poor.

What New York underwent physically was reflected in its collective mind. A spiritual change came over the people. Cold New York thought only of one thing. Usually New York is broken up into as many thoughts as there are people. Now it had but one thought. Total strangers told one another tales of darkness and of cold. But it was not only that they were so uncomfortable that they talked so continually about one thing and thought only of one thing, New York's preoccupation with its troubles had a deeper inner meaning than discomfort.

The organization of society had failed.

It had broken down. To remedy the situation the President had taken over the railways. Coal had the right of way. The community became imaginatively interested in the whole intricate question of mining and distribution. Since the lack of it stopped our war industries, took our bread from us, stopped the schools and the factories, delayed transportation, put out our lights.

No wonder we could talk of nothing else. No wonder our spirits were bemused. For once wealth and influence were powerless, as they are only under one circumstance—they are powerless when society is disorganized. They are useless when civilization breaks down.

The trinity of civilization, light, heat and water, had failed New York and the Goliath was helpless.

FOR any one who chooses to read it, this breakdown is the writing on the wall. During the reign of terror, we have had our lesson. *Our civilization may not break down.* It may break down as little as a heart may cease beating. Our cities are the children of steam and electricity, the products of the highly centralized and the highly organized state. You may not disorganize one part of its complex variety without all the rest suffering. It is truer of us that we are all members one of another than of any other country on earth.

There are several luxuries which we may not have; one is an old-fashioned revolution, another is an invasion. Our civilization as it stands is built only for normal conditions. We are not only unprepared for the invasion of an enemy but for any unusual disorder and any great calamity. If our systems of production and distribution fail, we die.

Whose is the fault of our breakdown? America's most popular sport, "Passing the Buck," has never been more passionately played. Every one except the I. W. W. has been blamed.

Whatever the nearer contributory causes were, one thing is certain—that we suffered more than a touch of cold. It was a touch of war which we suffered. War stretched out its grim finger from across the ocean, and we perished. And the life of our fair-weather Republic, built upon normal conditions, shriveled up.

FOR months the battle of Verdun had been raging. Thiaumont—sixteen times taken,

lost, and retaken—was held by the French. Ceaselessly the Germans poured against it a withering, devastating rain of shells. Within the battered fortress pandemonium reigned. Its guns were disabled. The ammunition was exhausted. Communication was utterly cut off. Long ago the wireless had been blown to pieces. Telephones had ceased to exist. Yet the defenders clung to their posts, chanting as their death song that now immortal phrase, "They shall not pass." One German battery in particular was doing terrible execution. Its shells were land-

ing in the very heart of the ruined fortress. Unless that battery could be silenced, the fate of Thiaumont and every man in it was already sealed. But the commandant had wires neither aloft nor below, nor any messenger that could live to reach the lines behind him.

Suddenly from those lines a dark speck darted forth. Now it paused behind some protecting rock, now dashed across the shell-torn terrain, now slunk, crouching, thru a depression. But ever it made its way toward that inferno, Thiaumont. As it drew nearer, the defenders saw that the approaching creature was a liaison dog. The entrance was flung open, and with a final burst of speed the faithful animal dashed into the fort, unhurt.

# THE DOGS OF WAR

BY LEWIS EDWIN THEISS

In the pocket of the animal's collar was a message, telling of relief to come thru an attack on a

nearby point on the German lines. And strapped to his back was a tiny pannier, within which were two terrified, half-paralyzed carrier pigeons. Quickly the commander wrote, "Stop the German battery on our left," and jotted down the elements for gun pointing. The message made fast, a trembling bird was flung thru a breach in the wall. Straight to its home, thru shot and shell and exploding shrapnel, flew the pigeon. In a few moments its message had been conveyed to the gun crews, the German battery was silenced, and Thiaumont was saved.

International Film

*These heroic canines are attached to the Red Cross division of the Italian army. It is their duty to seek out the wounded so they can be treated and sent to the hospitals*

International Film

*The dog makes an excellent sentry and must be trained to detect approaching poison gas*

Thus, Sterling Heilig tells us in his despatches to the New York Sun, did one of the dogs of war do his share in the struggle to save democracy. In the lines behind Thiaumont, where stood the great guns that shattered the "German battery on the left," other dogs were likewise doing their bits. Deep down in the earth, in shellproof chambers, with charts and maps and airplane photographs before them, sit the battery officers figuring ranges and elevations, and directing the firing of the guns. But under the devastating blasts of the German guns neither telephone nor wireless any longer existed. The gun crews were cut off from their directing officers, and no human messenger could hope to convey instructions thru that hail [Continued on page 206]

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## SETTING OFF THE ROOM

BY LOUISE DAY PUTNAM LEE

**T**O have harmony one must have unity, and the architect, if he is wise, considers the façade of his house from this standpoint, and every detail from the chimney down he makes an integral part of this unit so that it holds its place, fulfils its function, and gives just the right emphasis and no more, thru harmony of line, scale, color and placement.

In many an interior the householder gives way to unrestrained whim, and the souvenir collector, the bargain hunter, the athlete with his cups, the hunter and his stuffed deer heads, and he who would make his home a museum of antiques, makes a conglomerate mess of his interior. If one is sentimental and would keep these things, let him have a "den" or put them in cases where they may be out of sight, and may be taken out on occasion to be looked at and enjoyed; for it is a difficult task indeed, to bring out harmony between a moose head, a sea shell and a loving cup! Such things also complicate housekeeping, disturb the sense of rest in the room and are in no way decorative or useful.

A room to be a unit must have a direct relationship between its parts as regards scale, proportion, color and design. The background or the walls, floors and ceilings serve as the foundation of the room against which are projected all things such as pictures, furniture, hangings and even people, and these act in reality as decoration, as does also any treatment we may make of these structural features, be it wall paper, paint or carpet. The surfaces of the

background are so great that they become the dominant features in the room, and consequently are the most important and require much care and attention.

Decoration is always subordinate to structure tho directly related to it, and it should follow or conform to the main structural lines, never detracting from them but, if anything, emphasizing them. Thus the cornice, the doors, windows and mantel are spots which naturally lend themselves to decoration, for these lines are created by structural necessity.

However, if the ornamentation of any structural feature is out of proportion, or does not conform to the linear movement of the object it adorns, it will bid perhaps too insistently for our attention, thus detracting from the rest of the room and violating the laws of decoration.

**L**INE harmony is based on order and order is the basis of all design; we can appreciate this more readily if we consider an analogy in music. We do not have anything approaching music until sound or noise becomes developed into regular ordered beats which we call rhythm. So with design. Take for example the much used polka dot pattern which receives its only interest thru the orderly repetition of forms. With the development of design we may have much more complication of line and a greater variety of motifs, but the fundamental principle of order and repeti-

tion and the close relationship between lines and forms must be forever maintained even when it merges from the realm of pure design into the pictorial.

Different lines convey to us psychologically different sensations or impressions; horizontal lines convey rest, whereas vertical lines give the impression of height or growth, and slanting lines the impression of movement.

When the line movement in the wall paper in no way conforms to the horizontal or vertical lines of the wall, our decoration becomes in no way related to it but is a thing alone and of itself. If we choose a paper pictorial in design, it becomes the main decoration of the room and all else is subordinate. Such a paper then is most successfully used in a hall, a dining room, or an impersonal kind of a room where there is either an air of formality or where there are few or no personal notes introduced to conflict. The photograph on the opposite page is a good example of such treatment. To place pictures on such a wall of course becomes an absurdity, for we would have a picture placed upon a picture. When the paper, as in this instance, becomes the dominant decorative note in the room we cannot successfully add more decoration to the form of figured curtains or figured furniture covering, but will obtain a better effect by using plain colors. Also a room in which the curtains, furniture covering, etc., are of the same design as the wall paper, is, as a rule, exceedingly monotonous and

A plain wall paper makes an excellent background for pictures and furniture, particularly in a living room. Albro & Lindeberg, architects

*The wall paper forms the main decorative interest in this room. Plain rugs and plain curtains are used. Albro & Lindeberg, architects*

uninteresting. The more conspicuous in design a paper is, the less of it should be used and of course the larger the design the larger should be the room.

There are two classes of designs, one which we may term naturalistic and which attempts to imitate nature "as she is" and the other which we may term pure design or an orderly repetition of a conventionalized motif. In the first class are to be included most of the so-called "best sellers" in wall papers, great masses of pink and sometimes even blue roses sprawling across our walls with no sense of restraint or of order. No true lover of nature could commit such a desecration, and no one with a sense of order and rhythm could enjoy the restlessness created by the many flowing, meaningless lines which are in no way related to the structural lines of the thing they are supposed to decorate. The same criticism may be made of many of the textiles upon the market, tho these are not so objectionable since they are used in a smaller mass, and when used as curtains the design is lost in the folds.

In the realm of conventional design we should expect to find papers which would relate themselves more closely to the wall, since in the repetition of any motif we gain a sense of balance and of order and a structural feeling which is not obtainable in the naturalistic patterns. In this class of design are to be included stripes, geometrical patterns, and all patterns produced by repetition of conventional motifs.

WE have seen that in proportion to the prominence of the design of our wall paper other interests in the room must be subordinate. In the same way if we use a color upon the wall, all other things and people must be toned or keyed to it so that the more intense the color of the wall, the lower and more neutral or colorless must be the tone of the other things in the room and vice versa. By a neutral color is meant a fusion of all colors. For instance, if the primary colors, red, blue and yellow are mixt in equal quantities, the result is a gray, and this is, strictly speaking, a truly neutral color, but if we were to take any number of samples of so-called grays and compare them a great difference in shade would be discernible. Some would be warmer in tone and some colder, which would mean that some would have a predominance of red, or of yellow, if warm, and of blue if cold. Generally speaking, by a neutral color we mean a color whose intensity has been greatly diminished. A tan, for instance, is, strictly speaking, a yellow or orange, which tho it still retains its character has nevertheless been neutralized thru its fusion with other colors and is no longer pure yellow in tone. The less of yellow that appears in a tan the more neutral it is.

The more neutralized colors are, the easier are they to harmonize in spite of the fact that the gamut of color is larger. In order to appreciate the value of a very neutral color and its use, try placing on such a tone bright bits of color and notice how the intrinsic value of their colorfulness is brought out. By this we can see that if we have a neutral wall, color can be brought into the room by means of curtains, furniture or small pieces, such as lamps, etc., and in fact a greater variety of colors can be used because the neutral background unifies and harmonizes them.

There is a rule which states that the more intense the color, the smaller should be the amount of area used, and this may apply also to strong and prominent design in either wall papers or draperies.

So great has been the interest and vogue for wall papers in the last thirty years that the decorative possibilities of plain walls have been greatly neglected. Before the advent of the wall paper, walls were generally paneled or painted and in very recent years decorators and architects have returned to this manner of treatment as giving the widest scope for decoration. Walls paneled in wood are, of course, expensive, especially if made of very fine woods, but by painting the wall we can obtain very much the same charm that was obtained in the early wood paneling of the French period and some of the later English periods. Of course by the means of paint all sorts of subtleties of tone may be secured which one is not always able to get by means of wall paper.

By using a plain or two-tone neutral color upon the [Continued on page 201]

# A Farmhouse Made Over

The Bogart homestead at River Edge, New Jersey, built before the American Revolution, is splendidly illustrative of what can be done with our native architecture in the hands of competent architects. It was originally a simple, square Colonial house with a kitchen wing and the only structural changes made in remodeling it were the extension of the north wall to give more floor space and the raising of the wing roof. A new service wing was added at the back and the old kitchen turned into a dining room. The house has the old style hall running thru from front to rear. The hospitality and stately dignity of the Colonial portico and doorway are emphasized in the photograph at the left by the group playing at an old-time tea party in old-time gowns

In many of the rooms, as this corner of the library suggests, the original mahogany furniture is still in use. The beauty of the old red-tiled fireplaces and white mantels is emphasized by the crisp, flat treatment of the woodwork

Nowhere is the Georgian influence more marked than in the dining room with its paneled wainscoting, glass cupboard doors, hospitable fireplace and hand-modeled mantel. The window grouping is in itself an effective architectural detail and by its cheerful outlook adds not a little to the hospitable aspect of the room as a whole

RESIDENCE OF A. Z. BOGART AT RIVER EDGE, NEW JERSEY. FORMAN AND LIGHT, ARCHITECTS

# LAMPS

BY GEORGE LELAND HUNTER

Lamp B

half of the nineteenth century could not bring lamps back to their position of honor in fine residences. It remained for electricity in the twentieth century to restore lamps, and banish electric fixtures of the type evolved from gas fixtures.

The word *lamp* that started in Greek as a torch, and gradually came to include Greek and Roman terra cotta and bronze lamps burning oil, now means primarily "a movable light with its container," altho we still continue to employ the term for alcohol and heating lamps. Fortunately the words "electrolier" and "portable" once used to designate electric lamps have passed into oblivion. The trade use of the word *lamp* for electric bulbs is not sufficiently popular to cause confusion.

Floor and table lamps are the most important part of any residential lighting equipment. Chandeliers and wall brackets may be more prominent architecturally, but the architect who does not have his houses supplied generously with base and floor plugs as sources for electric lamps, is not doing his duty by his clients. Lamps mean comfort, convenience, beauty and economy, when wisely selected.

The most beautiful lamps I know are those that have been handed down to us from the Greeks and Romans. Equally beautiful are their floor lamps and their table lamps, so many of which were buried in Pompeii by Vesuvius over 1800 years ago, and now in the Naples museum and elsewhere, furnish inspiration for modern makers. The ugliest lamps I know were those employed for kerosene in the nineteenth century and since. The least attractive electric lamps are those transformed from kerosene lamps or modeled on them. At this point, however, it is only fair to state that the three dollar kerosene lamp now in most general use is a striking exception to the rule, especially when finished in dull brass and fitted with an appropriate shade of gentle tone.

Especially abhorrent to me are the electric lamps whose obtrusive rotundity below compels one to think always of the oil tank

which is a necessary part of oil lamps. In electric lamps no oil tank is necessary, and the shape that recalls it should be banished. Not that I would banish all vase forms, merely those that are unpleasantly suggestive. Among Chinese porcelain, Wedgewood and Persian vases, we find some of the best light standards in existence, and I have seen Oriental and Russian hammered brass and willow and wicker and bamboo containers that were excellent when appropriately environed.

The most important part of electric lamps, however, is not the standard, but the shade. Anciently the problem was how to get enough light. Now the problem is how to tame and tone the light so that it will not injure the eyes, or spoil the appearance of the room with its glare. Fortunately beauty and utility here go hand in hand. The shade that is necessary to protect the vision and distribute the illumination is most effective when beautiful.

Of course all shades do quench some light, and many shades waste light. But the economic efficiency of a shade has to be determined not by the quantity of light that it distributes, but by the quantity of useful light that it distributes, that is to say by the help it gives the eye in seeing. The

crystal glass that forms the electric bulb is not an efficient shade because it leaves the light from the electric filament so intensely bright as to cause eye strain. Even frosted bulbs are neither safe nor comfortable when too near, and in the direct line of vision.

Light not only reveals beauty, it is itself beautiful. Small wonder that the ancient Persians worshiped fire, and the ancient Egyptians the sun, and that the sun's halo has been sacred ever since. Sunrise and sunset with their wealth of color are loved even by those to whom other nature makes little appeal.

Artificial light like natural light is most beautiful when colored. Electric fountains are vastly more pleasing than searchlights. The spotlights that transform the costumes of the ballet draw applause even from the crudest audiences. So with lamps, the most interesting and delightful are those that develop color harmonies, and especially those that develop also texture harmonies, like those with silk shades, silk fringed on bases of porcelain or pottery, or painted wood: or those with leaded glass shades on standards of brass or bronze, or of metal finished in silver or gold

or antique green; or those with parchment paper shades painted gaily over with flowers and decorative personages and landscapes, on standards of carved wood or bent and hammered iron.

Examples of some of these illustrate this article. While none of them is the utmost that is possible of accomplishment, they have been chosen for grace of design and attractiveness of color and texture, and can be purchased at from ten to one hundred dollars, with some of the ancient Chinese pieces mounting as high as one thousand dollars, shade and standard complete, and tiny wooden or light wicker standards descending to three or even two dollars upon bargain occasions. Unfortunately the lamps at the cheap end are apt to be imperfectly made of inferior materials. The best of them have slender classic standards of turned wood finished in mahogany or paint, and shades of silk fringed and ballooned appropriately. There stands on my desk as I write one purchased at a retail shop for three dollars, with standard nineteen inches high and terra cotta silk shade thirteen inches wide. The bulb screws into the standard vertically, and the frame of the shade rests upon the bulb.

Here I should like to digress to say that

Lamp C

Lamp E

Lamp F

Lamp G

Lamp D

other things being equal, the lamp is most economical and convenient which carries only one bulb. The grouping of two or three bulbs consumes more current, and is not apt to give any better distribution. Of course, tungsten bulbs should be used, because they excel the old carbon bulb as much in efficiency as incandescent mantle gas lamps excel those with naked flame. Lamps with opaque metal shades should be avoided. The light reflected from the shiny surface is almost as ugly and disagreeable and hard on the eyes as light directly from the filament.

Floor lamps are a luxury not for small rooms. They waste floor space. But in rooms of generous size they are splendidly convenient for reading and writing and knitting and sewing and tete-a-teteing. They also compose well with the architectural lines of a room. Lamps N, O, P—the first with ruffle-bordered silk shade, the second with Chinese silk tapestry shade picturing a boat festival, the third with velour shade that wears an embroidered collar—also color the light agreeably, and can be made the jewels of a decorative scheme. The standard of the first is in wood of mahogany finish, of the second in carved wood painted and lacquered in the Chinese style, of the third in iron finished antique with bent iron base. The finial of Lamp O like that of others of the Chinese style lamps illustrated, is in carved jade and in itself contributes materially to the scheme of decoration in a room. Any of these three

uses for shades like these thruout the house, for lamps on odd tables, desks or bureaus, for candle shades in the dining room or perhaps in the library. They fit into many different schemes of decoration and give a charming effect of color without becoming a dominant decorative note. It is possible to have shades like these made to your own design, thus carrying out the exact plan of decoration and emphasizing

any original note you may have introduced. The silhouette designs illustrated at the top of the opposite page suggest the possibilities of a thousand and one similarly effective patterns.

Lamp B has a base of painted wood and shade of painted parchment in gay colors, showing a bright landscape and a flaunting peacock. Lamp C carries a Chinese embroidered shade upon an ancient Kien-Lung porcelain, and is a marvel of color harmony, but by no means inexpensive. Lamp D has a porcelain base with landscape and personages in blue and red, and a shade in one-tone Chinese brocade with a deep fringe. The painted parchment paper shade of Lamp E shows a vase and flowers with balustrade and landscape. It has a rather heavy ornamental base. Lamp F is a modern Chinese porcelain in the style of Kien-Lung, who was the Chinese contemporary of Louis XV. Its shade is exquisitely embroidered in heavy flowers and figures and it has a deep scalloped fringe. Lamp G is a very important ancient Kien-Lung standard in blue porcelain 45 inches high, with shade of Chinese silk tapestry. Lamp H has an iron standard finished in silver, or in antique iron and gold, as preferred. The shade is of silk with a long, close fringe. Lamp I has a base in antique iron and a colorful painted shade. Lamp J has a metal base finished in silver and black, or in antique gold, and a parchment paper shade delightfully adorned with flowers and butterflies, and with a bird of elaborately decorative composition.

Lamp H

Lamp K

Lamp L

Lamp M

Lamp I

Lamp J

lamps would be admirable in a living room, and Lamp N might fit equally well into a boudoir, particularly if the silk shade were made of some soft, rather light color.

The small shades at the head of the article are in parchment paper gaily painted and sufficiently transparent not to waste too much of the light. The painting of such shades gives employment to many young women from our art schools, and is one of the signs of our revolt from machine-made to hand-made. Even more beautiful are the shades in real parchment. There are dozens of

Floor lamps are now as much in vogue as domes and showers were once upon a time. These three are N, O, P reading from the left

Lamp K has a square Chinese porcelain standard rich with colored flowers, and shaded with one-tone Chinese brocade. Lamp L has a slender metal base of turned effect, extremely simple, and a long-fringed rather flat silk damask shade that is heavily corded above and below. Lamp M has a Colonial base in metal with American painted shade showing Chinese inspiration. The colors in the shade look equally well in the daytime and when the lamp is lighted; and they will harmonize with any except the most radical or unusual plan of decoration.

# IN A SMALL DINING ROOM

BY ABBOT McCLURE AND HAROLD DONALDSON EBERLEIN

THE small dining room is nearly always a problem. And just because it is a problem, and not seldom a tough problem at that, the small dining room is, in consequence, very often a horror; whether it be in a private dwelling or in an apartment house. That it should be a problem is reasonable. That it should ever be a horror is inexcusable, tho there may be a variety of causes for it; and that any place where human beings meet two or three times a day to eat and presumably to converse the while, a place which considerations of good digestion and mental well-being alike demand should be one of the pleasantest spots in the home, should be depressing and distressing, is all wrong and intolerable. And it is all the more inexcusable when the small dining room is susceptible of being endowed with great charm.

The remedy for the small dining room that is a horror is to be found by the application of plain common sense. The first thing necessary is to divest the mind of all prepossessions and then hark back to fundamental principles and mercilessly analyze the situation. This close scrutiny of the essentials to the make-up of the dining room will show that the movable appointments may be divided into two classes—indispensables and optionals. The only absolute indispensables are a table from which to eat and seats to sit upon. The optionals, however desirable they may be, when conditions of space permit their presence without crowding, may in one way or another be dispensed with and their proper functions be performed by a substitute. In carrying out this process of elimination in the scheme of a small dining room, the chief difficulty lies in persuading the owners to accommodate their preconceived notions to the actual limitations of space, make a virtue of necessity and content themselves with what is really expedient rather than attempt to defy the law of physics which forbids two bodies to occupy the same space at the same time and try to force in an equipment that needs double the space available. The result of such an attempt is the constant sensation of being smothered and the discomfort of sideling between objects that encroach on freedom of passage. Once the mental attitude is accommodated, the rest of the task becomes comparatively easy with the exercise of a little ingenuity.

To begin at the beginning, in a systematic way, before attempting to advise about the exclusion or inclusion of different optional pieces or substitutions to take their place, something must be said about the preparation of the setting. The prime requirement of this setting is to create the greatest possible impression of space. To do this one must carefully avoid everything that will detract from the apparent size. Avoid heavy and prominent moldings in door and window trims and about the fireplace, if there be one. Dispense with a mantelpiece or shelf, having instead merely a molding with an overmantel panel or chimneypiece, or some such simple device, and avoid all projections such as plate rails, which are happily out of fashion at any rate. By keeping the moldings in low, flat relief and eliminating projections, altho very little actual space is gained, the impression of freedom and space is measurably increased.

In the second place, eschew strong, assertive colors, the so-called "advancing" or warm colors in whose composition there is

a predominant element of red or yellow, which may be described as the positive colors of the spectrum. The reason for this is that warm or advancing colors seem to come forward and detract from the apparent size of a room, especially a small room, while cool or receding colors, on the other hand, seem to go back and have a tendency to magnify the apparent size of a room. If, for example, the walls of a room that has been painted or papered a deep terra-cotta are done over in a light cream color, the apparent increase in size is immediately striking. For the small dining room it will be advisable to stick to such colors as cool, quiet grays, gray greens, pale blues, pale greens in which the blue element is stronger than the yellow, or putty color. If there is a cold north light and any of the tones just named seem too frigid, it will be safe to use a biscuit or a pale light buff color in which there is enough white to neutralize the advancing quality of the yellow. Of course the woodwork should be light—white, cream, soft gray or gray green—as dark woodwork tends to diminish apparent size.

STICK to smooth, flat textures, whether in hangings, upholstery or wall coverings. A rough, coarse or deep texture with a large percentage of relief, such as loosely woven monk's cloth, or a texture with depth of shadow, such as deep pile velvet, or, in fact, any velvet, has a space-decreasing tendency. If one wishes to be convinced in this respect, let them try the experiment of first putting velvet hangings in a small room and then replacing them by silk or poplin of exactly the same color and see with which the room looks larger. Or, again, replace a burlap surface covering on a wall by smooth filled canvas with a coat of paint and see which more helps the sense of space. This solicitude about mouldings and textures may seem to some a trifling matter, but it is by punctiliously heeding just such subtle, little points that the total result is very materially affected. It is always the little things that count.

Any kind of surface with a strongly marked pattern appears smaller than a plain surface of the same size. It is plainly better to eschew patterned fabrics, wall papers and rugs or carpets; or else, if patterns be used at all, it is advisable that they be small, inconspicuous and evenly distributed and not insistent nor violently emphatic in their colors. Likewise avoid prominent stripes; if any lines are to be emphasized, let them be horizontal, as a little emphasis of horizontal lines will help the sense of space. For this reason, it is well, if opportunity offers, to have shallow valances above the windows, as they tend to increase the apparent width of the windows and so add to the sense of space. Furthermore, avoid central "domes" or other lighting fixtures dropping from the middle of the ceiling, as they make the room look smaller than it really is. It is better to have side fixtures.

The propriety, indeed the necessity, of keeping the scale of everything small in a small room ought to be self-evident. Not only is it true that a large piece of furniture in a small room looks larger than it really is and that a small piece of furniture in a large room is apt, by comparison, to appear smaller than is actually the case, but it is also true that if two pieces—let us say tables—of exactly the same size, but of different proportions, are put in a

small room, the table whose legs and underframing are designed upon a large and heavy scale will appear considerably larger than the same sized table with parts designed on a small scale. For example, a table with straight, slender legs looks smaller than a table with the same sized top but supported on a massive pedestal with spreading feet. For this reason probably no type of furniture, by its refined and slender scale, is better suited to the small dining room than Sheraton. Sheraton furniture is here mentioned merely because it is so well known to be characteristically light, thin, and rather high-shouldered in the scale of its structural members and details. In the list of eligibles might properly be included Hepplewhite furniture, many items of Duncan Phyfe design, and likewise tables and other articles with slender baluster-turned legs, such as some of the early American pieces and the modern cottage types that have been adapted from them, that may appropriately be used along with the thin-spindled chairs of Windsor extraction.

As to the color of the furniture, a word of comment, perhaps, is necessary. The admonition to avoid dark woodwork does not apply in the case of movable furniture of some dark wood, like mahogany, or painted a dark color. If the scale of the furniture be in keeping with the size of the room, the color will neither decrease the apparent size and weigh the room down, nor will it offer an objectionable contrast against a light background. In fact, the optical effect will be such that the contrast of the dark legs and stretchers against a light wall will only serve to emphasize their slender proportions. On the other hand, there is no objection to properly scaled furniture of some light wood, such as curly maple, or painted a light color, so long as that color be not of obtrusively advancing quality. But there is a serious objection to light furniture painted an assertive advancing hue. The contrast, then, against a quiet, receding background will be too sharp and disturbing and will magnify the size of each individual piece.

IN choosing the optional pieces for the small dining room, remember that the sideboard is *not* a *sine qua non* for respectability and, in many small dining rooms, had better be left out of the scheme and its place taken by a small console or a pair of consoles, which afford the requisite facilities for serving and for holding such permanent objects as may be proper, but not for the usual superfluous and objectionable display of small silver. One of the first objects to eliminate is a china cabinet or cupboard. The display of china and glass in any dining room is nearly always in questionable taste; when a room is small such things are invariably better out of it. Avoid too many wall decorations and mercilessly exclude ponderous frames.

As a final word of suggestion, it may be added that round or oval tables are more prodigal of space than rectangular tables, whether square or oblong; that narrow tables—the idea adapted from the refectory table—are worth considering; that draw tables are especially commendable and convenient in saving space and, at the same time, giving comfort; that hanging furniture, such as wall cabinets, are worth remembering; and, finally, that either backless forms or single stools, at the sides of the table, may often be advantageously substituted for chairs.

A flat with broken pieces of flower pot covering the drainage holes. Over these place a layer of inverted, decayed soil

Scatter seed over the surface of the soil. Use labels like these to mark the name of each variety and the date of sowing seed

Sift a little sand and garden loam over the surface before sowing and cover the seed about its own depth in the same way

# HASTE SAVES WASTE

BY HUGH FINDLAY

Beet seedlings before they are trimmed and ready to be transplanted

Forethought is the only sure way of success in gardening. February is the time to start if you want full crops next fall. Sow your seed early and protect it from frosts. The most convenient way is to sow the seed in a flat which may be made from a box of any convenient size, four inches deep. After the seed is planted the flat may be placed in the hotbed, greenhouse, or a sunny window.

It is always advisable to transplant the seedlings. The plants are set 2x2 inches and by April or May they are a stocky, strong growth. Before the final transplanting to the open the plants should be hardened off by gradually exposing them to the open and decreasing the supply of water.

Ready to plant. The trimming decreases the demand for moisture

## SEED TO BE SOWN IN FEBRUARY OR MARCH UNDER GLASS

Vegetables	Seeds required for a 50-foot row	Time required for the germination of seed in days	Time required for a crop to mature from seed in days	Approximate yield per 50-foot row	Number of feet of row to supply a family of five	When to plant in the garden
Beets .....	1/2 oz.	5 to 10	60 to 80	1 to 1 1/2 bu.	50	April or May
Brussels Sprouts.....	1/8 oz.	4 to 11	95 to 130	16 qt.	25	May 1st
Early Cabbage.....	1/6 oz.	3 to 10	100 to 115	25 heads	50	April or May
Early Cauliflower.....	1/8 oz.	4 to 10	100 to 125	25 heads	50	May 1st
Celery .....	1/4 oz.	9 to 15	150 to 175	150 stalks	50	May 1st
Egg Plant.....	1/8 oz.	7 to 12	135	80 fruit	50	June 1st
Lettuce, Loose Leaf..	1/2 oz.	4 to 7	60 to 95	50 heads	25	April or May
Onions .....	1/4 oz.	8 to 17	125 to 140	1 bu.	150	April 15th
Peppers .....	1/8 oz.	8 to 13	110 to 130	400 pods	25	June 1st
Tomatoes .....	1/8 oz.	5 to 10	125 to 150	7 bu.	100	June 1st

The dates given on this planting table are for the latitude of New York City. For every hundred miles north or south subtract or add from 5 to 8 days.

It is very important to press down the soil over the seed before watering. Doing this aids decidedly in germination

After sowing cover the flat with glass to retain the moisture. After the seed germinates give the plants plenty of light

A flat full of vigorous early beet plants well-grown and ready now to be transplanted to the vegetable garden out of doors

A flat divided into sections 4x4 inches. Each plant can be transplanted separately

A flat of seedlings properly thinned in order to develop thrifty plants

Seedlings crowded. If they are not transplanted they grow spindly and suckly

# GETTING THE RIGHT FENCE

BY HAROLD A. CAPARN

FORMER PRESIDENT OF THE AMERICAN SOCIETY OF LANDSCAPE ARCHITECTS

**I**NASMUCH as my previous article for The Independent set forth the advantages of omitting fences, it may seem a little inconsistent to follow it with another describing them. But ever since men have claimed the right to exclude others from certain parts of the earth there have been fences, and tho they could often be suppress to the benefit of the parties on either side of them, they are often desirable and even absolutely necessary.

Fences are so many and of such infinite variety that to treat the subject at all fully would take a book. So this article must confine itself to a few of the commonest and most practical types, which may be classed under four headings: (1) Fence Walls; (2) Wood Fences; (3) Iron Fences; (4) Wire Fences. There are also many combinations of two of these.

**Walls.** Most walls of brick, stone or concrete may be dismissed with a bare mention. They are matters between the owner, the architect and the mason, one or more of whom must decide on the height, length and thickness and choose between the materials available in any district. But there is one kind of low wall that makes the most attractive of all fences in the country, and that is the rustic or boulder wall, usually built "dry," or without mortar, wherever weathered or broken stones are found in quantity.

**Wood Fences.** Perhaps the commonest and most generally useful and attractive is the picket fence, say three or three and a half feet high with pickets about  $1\frac{1}{2}$  inches square (or flat, say  $2\frac{1}{4}$  inches wide by  $\frac{3}{4}$  inch thick), fastened to upper and lower bars or stringers extending between the supporting posts which are sunk in the ground. These posts may be six to eight feet or more apart, the stringers getting thicker as they get longer. It is an economy to space the uprights so that the stringers will cut to advantage from stock lengths of lumber. The lengths or divisions of the fence should be equal thruout its length: thus, a fence 39 feet long would divide into six lengths of 6 feet 6 inches each. The traditional wood for fence posts is locust, with cedar a good second, but both these are getting so scarce that substi-

Perhaps the most useful and attractive fence for a door yard is the wooden picket fence

A high, close-meshed wire fence like this is a valuable protection on a country place

tutes are mostly used, the favorite at present being chestnut where the chestnut bark disease has killed the trees, making the wood plentiful and cheap. But almost any wood will make a satisfactory fence if it is well set and protected. Below ground, and three or four inches above, it may be protected by charring or tarring, or both, or by boxing, which means casing in boards. But the best way is to set the posts in concrete poured into a wood form or even a hole in the ground with the post set in the middle. The part of the post set in the concrete should be well waterproofed with waterproofing to be got at a paint store. The best practise is to make a hole in the concrete about half an inch wider than the post, and fasten the post by pouring in melted pitch to fill the space between the post and concrete. The concrete should extend three inches or more above the ground and be sloped in all directions to shed water from the post. This three or four inches just above the ground is the most vulnerable part of the post where it finally rots and breaks off unless

properly protected. Paint or some kind of creosote stain will protect the upper part of the post indefinitely, if they are renewed when necessary. As for the kinds of wood, it should be remembered that all woods look pretty much alike when painted, and any lumber ordinarily on the market will make a good fence, tho some will warp more than others.

The picket fence is usually a spic and span affair, suitable for suburban yards, and there are innumerable forms of it, and innumerable other kinds of wood fences, mostly uninteresting. But there is one type that gives a great air to certain types of country places, and that is the common farm fence with three or more rows of boards fastened to uprights and whitewashed.

**Iron Fences.** These may look very well in citified suburbs, and the only one to be generally recommended is the plain or almost-plain wrought iron picket fence. These, of course, must be kept painted, or they rust and ultimately fall to pieces. The best construction inserts the pickets thru a top and bottom bar, plain, no straps or channels, which are water and rust traps, impossible to paint where painting is most necessary. The danger place in an iron picket fence is the bottom, where weeds and grass forever conserve the moisture.

**Wire Fences.** There are a thousand and one kinds of wire fences, and they can best be studied in the catalogs of the makers. Numerous combinations of brick, stone or concrete with wood or iron exist, often attractive, but there is no space for detailed description of them here. Excellent and everlasting fence posts can be made at home by casting concrete in a wood form say four or five inches square, or tapering up to four inches square, with an iron rod thru the center, and such posts will support fences of wood or wire. For wood, holes may be cast in the concrete; for wire, hooks may be inserted when it is wet. These posts, like others, should be sunk into the ground well below frost line.

In fences, even more than in most things, it is usually better to stick to a few tried-out, simple and durable types, and to let any excess of originality find an outlet in other directions.

# Have You Troubles of Heat and Help?

*Automatic temperature control is a comfort and a safeguard*

*Have the ice put in your refrigerator from outside the house—it saves time and much annoyance*

*Where there is no value in the kitchen refuse an incinerator like the one on the right is a real convenience*

*When you want hot water quickly—light the gas in the heater above and get it*

*There is economy in burning kerosene oil-gas in your kitchen range. It saves coal and prevents the dirt and bother that ashes always cause*

*If you dislike ice in cakes, why not make it in your own refrigerator by an electrical device like this*

*This device (operated by electricity, gas or gasoline) is a rapid ironer, saving time and saving backaches*

*This kitchen door is planned as a time and disappointment saver. All goods can be delivered safely and conveniently at any time whether you are at home or not*

*From any floor, at any time, by use of this device, you can "shoot" soiled clothes down to the laundry. No basket accumulations around*

Test the eggs first carefully with a lamp

# COUNTING YOUR CHICKENS

BY E. I. FARRINGTON

A practical, small English incubator

**I**F the Food Administration's appeal is heeded, more chickens will be hatched this spring than ever before in the history of the country. Hundreds of amateurs will buy new incubators, even tho the big hatching plants will turn out chicks by the thousands. Buying chickens from a public hatchery is always more or less of a gamble. When one hatches his own chickens, he may be certain as to the stock. The amateur trying to build up a strain of heavy laying fowls will do his own hatching, as a matter of course. He will select his eggs from a breeding pen made up from his best hens and headed by a male bird which is known to be the son of a heavy laying hen. Don't forget this proven fact—the male is of even more importance in fixing an egg laying tendency than his mates.

Hatch early. This will be necessary in order to get a large supply of roasting chickens ready as soon as possible. It is difficult to find broody hens early in the season, but an incubator cares nothing about seasons or weather. It is ready whenever there are eggs to fill it. That is one reason why the use of incubators will be very general the coming season.

Early hatching will result in the production of big birds. Moreover, the early hatched pullets will make the early layers next fall. Yet pullets hatched too early may molt the same season. March is probably the most desirable month to get the chickens out. Remember that late birds will not mature until winter, and the pullets will not lay until spring. This means a waste of grain. Late hatching cuts food production all along the line. Early hatching gives more meat and more eggs. It is a patriotic duty, therefore, to hatch early.

Set eggs of the larger breeds, such as Rhode Island Reds, Wyandottes and Plymouth Rocks, by preference. These are the meat breeds, and it is meat that is wanted. At the same time, the hens lay almost as many eggs as those of the smaller breeds which have comparatively little meat value.

It is possible to buy an incubator with a capacity of only fifty eggs. Such a machine is satisfactory for a fancier, but hardly practical for general purposes. An incubator holding at least 120 eggs is more satisfactory. It is always best to get out the chickens in fairly large flocks, as chickens of the same age are most easy to care for.

In years past there has always been an enormous

loss of eggs and chickens due to carelessness or ignorance. Neither reason can be considered a satisfactory excuse at present. Every effort should be made to avoid losses this season. One prolific cause of trouble is failure to properly care for the lamp, which should be cleaned, filled and trimmed regularly every day. It is important to use the very best oil, and to set the machine where it will not be exposed to a draft or receive the sun in direct rays. Perhaps the cellar is the best place for an incubator, altho any room where the temperature neither runs low nor varies greatly will serve. There must be good ventilation, tho.

Remember that it is necessary to get a permit from the insurance company before setting up an incubator in a dwelling. A nominal fee will be charged, and certain conditions, very easily complied with, probably imposed. If the house should get on fire from any cause, there is likely to be trouble in collecting the insurance unless the insurance company is consulted when an incubator is installed.

Let the machine be set level, and operated for a day or two before the eggs are put in, so that a steady temperature of 103 will be recorded. When the eggs are put in, the temperature will naturally drop, but will return to the proper point after some hours.

The proportion of chickens hatched will be increased if the eggs to be incubated are chosen carefully. Eggs with uneven or rough shells seldom hatch, even tho fertile. Porous eggs and those of abnormal shape should be rejected. Probably a great many pullets' eggs will be used this year, but when one can make a choice, it is much better to use eggs laid by year-old hens, mated up with matured cockerels. Pullets' eggs will hatch stronger chickens later in the season than they will in February.

If the eggs are not gathered frequently in cold weather, they may become chilled, which will prevent their hatching. If kept too long, also, they will deteriorate. Two weeks should be the limit. Do not keep the eggs in a warm place before they are put in the machine. It is on record that eggs stored in a kitchen cupboard on a farm have hatched out there.

White eggs have thinner shells than brown eggs, and are likely to hatch a few hours earlier. Mixing white and brown eggs in the incubator is not desirable. The more uniform the eggs in every way, the better the results will be.

Many poultry keepers like to spread a piece of coarse muslin or burlap over the wire bottom of the egg tray. This seems to give better results than when the eggs are placed directly on the wire netting. If the cloth gets soiled, scald it two or three times in the course of the hatch. This cloth offers a good means of providing moisture, if one happens to be living in a very dry climate. If it is kept moist by dipping it occasionally into water at a temperature of 103, all of the moisture needed will be supplied. It's a good plan, in any event, to wet the cloth with lukewarm water just before the machine is closed the last time. Some people prefer sprinkling the eggs or placing a wet cloth on top, but the plan described is to be preferred.

Beginning with the second day the eggs must be turned regularly. It is this turning of the eggs which keeps the germ from sticking to the shells. The rule is to turn the eggs morning and night, but if the room happens to be very warm, it is wise to turn them at noon also. Don't understand, of course, that the eggs must be turned absolutely top to bottom. If they are simply moved around with the hands so that their positions are changed, the

desired results will be accomplished. It is always best to use the hands rather than to tip the tray, and of course the eggs must be moved gently. Some people take a few eggs from the center of the tray, rolling the others toward the center, and placing those removed at the outside.

When the eggs are taken out of the machine to be turned, they naturally become cooled to some extent. It has been the custom in the past to give the eggs considerable cooling, especially after the first week. Whether or not this is necessary [Con-

tinued on page 209

Chicks like these speak for themselves as the best argument for incubator hatching

## SUCCESSFUL SWEET PEAS

BY GEORGE W. KERR

PRESIDENT OF THE AMERICAN  
SWEET PEA SOCIETY

**T**HE sweet pea with its beautiful colors and delicious perfume takes pride of place among all annual flowers, but to get perfect results the seed should be sown just as early in the spring as soil conditions will allow. In fact, experienced growers prepare their sweet pea ground in the fall so that there may be no delay in getting the seed, or plants, into the ground quite early in the spring.

It is absurd to sow sweet peas in May and expect first class flowers, for altho late sowings may reward you with a profusion of vine, rarely, if ever, will these plants produce sufficient flowers to repay you for your trouble. Unless the seeds have been sown sufficiently early to allow the plants to make strong and deep root growth under cool conditions, failure will undoubtedly follow. Therefore, my advice is to get the seed sown just as early in the spring as soil conditions will allow.

Better still, if you have a cool greenhouse, mild hotbed or even a cold frame which can be protected, the ideal method of starting sweet peas now is to sow them as early as possible this month in pots or shallow wooden flats, using the pots for preference. The pots should be three and one-half or four inches in diameter. A suitable compost is one composed of turfy loam, leaf soil and a little sand, all thoroly mixt. The pots will not require much drainage, but perhaps a little of the roughest of the turf may be placed in the bottom. Then fill the pots to within an inch and one-half of the top, and cover with an inch layer of pure sharp sand into which the seed should be sunk one-half inch. We use the sand to ensure perfect germination and obviate any risk of the seed rotting. Put three, or at the most four seeds in each pot, firming the soil and labeling each variety as it is sown. The pots should then be placed in the greenhouse bench, hotbed or frame, and soaked thoroly with tepid water.

If the pots are now shaded with paper, it may obviate the necessity of further

waterings until the seeds have germinated. When the plants are three or four inches in height, a few small twiggy branches inserted in each pot will tend to assist the perfect growth of the little plants. Without such assistance there is danger of the seedlings developing a bent or crooked growth, and this undoubtedly acts as a check, from which it may take the plants some time to recover after planting in the open.

**I**F they are started in a greenhouse, remove the plants later to a cold frame, where air should be admitted on mild days. If a cold wind is blowing, the sash may be raised on the side opposite that from which the wind is coming.

What we have to aim at now is to grow the little plants as hardy as possible, for they are very impatient of heat and averse to any coddling. As spring advances the sashes should be removed entirely during the brightest part of the day, and as planting out time draws near, they should be kept off night and day.

If the plants are properly hardened, they may safely be planted out in this section (Philadelphia) about the middle of April; in fact, in some seasons we have been able to set them out during the first week in April. Thoroly prepared plants, that is plants which have been exposed freely to the weather a few days previous, will now be able to withstand two or three degrees of frost, and, altho for a few weeks they may not make much top growth, you may be sure that the roots are working overtime in preparation for the hot weather which they doubtless know will soon be coming along.

If the ground has not been prepared for sweet peas in the fall, a start must be made

just as soon as the soil is in a sufficiently dry condition to allow of its being cultivated. If it is very wet and sticky, better delay for a few days.

Ere starting, give the entire area a dressing of finely powdered lime, applying it to the entire patch at the rate of at least twenty pounds per forty square yards. Lime is an absolute soil essential for all leguminous plants, therefore, as we are aiming to grow perfect sweet peas, it must not be omitted in our preparations.

The soil should be turned over at least two feet deep, and if we are planting in rows, two to three feet wide. As a rule the lower soil is generally poor, therefore it should not be brought to the surface, but it must be turned over, mixing with it a liberal quantity of good old manure, cow manure for preference. If you are unable to procure good manure, substitute well decayed leaf mold, or old garden refuse. More of this manure or its substitute must be mixt into the top silt, and after finishing rake into the surface soil a dressing of acid phosphate at the rate of two ounces per yard run of row.

**T**HE question of staking the vines properly is a most important one, for unless the plants are given a suitable opportunity to start away right early in the season, they are badly checked at a very trying period of their growth.

Presuming the plants were started in pots as advised, each potful should be planted eighteen inches apart in the row. To those who have not tried this method, it might appear that this is too great a distance apart, but grown in good soil, the plants will quickly meet in the row and form a perfect hedge of growth. Therefore, as soon as possible after transplanting, a trellis of some sort must be provided. The best and most natural support is that provided by good twiggy brush. This is not, however, always easily procured, but a first class sub- [Continued on page 208]

# What to Do in February

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## GREENHOUSE

**Cuttings** Pot the rooted cuttings of chrysanthemums and carnations. A new bed of coleus and geraniums may be set in now. These will be large enough for planting out in June. Cuttings made the early part of last month should be shifted to a larger (3 inch) pot and pinched back so as to form a branching stocky plant.

**Bulbs** Start the bulbs for Easter by shifting them into the hotbed or a cool greenhouse.

The bulbous roots of cannas, caladium and dahlias may be started the last of the month in pots filled with rich soil. Keep them in a cool greenhouse or hotbed.

**Seedage** If the seed of ageratum, heliotrope, lobelia, petunia, pansies, verbena, salvia, cyclamens, primula, gloxinia, begonia and asters are planted now the plants will be well formed by planting-out time.

The seed of ten weeks' stocks if planted now will be in bloom the early part of May. These are used mostly for cut flowers in the greenhouse. The plants are not suited for planting out after cutting the first bloom.

The seed of Cuphea Llaviae if sown the last of the month will produce fair sized plants for vases or hanging baskets.

Periwinkle (Vinca Minor) for window boxes and Cabaea Scandens for porches should be started from seed and planted out the last of May.

Early tomatoes, peppers and eggplants may be started the last of the month.

Celery seed started the first week of February will be ready for use in July.

Larkspur, single hollyhocks and other perennials if started the first of the month will bloom late in the fall.

**Carnations** Apply a little lime to the bed and work it into the soil.

Clean off the leaves badly affected with carnation rust. The flower buds usually come fast with the first bright days. Always disbud these flower stems so that the main bud may properly develop. Spray on bright days to keep the red spider in check.

**Roses** Pot roses for Easter should be sprayed on bright days. The foliage should always be dry by evening. Do not over-water. There is always this danger while spraying.

Top dress the rose bushes with a heavy coating of well decayed manure and bone meal. Keep the pipes coated with sulfur to keep under control the mildew. Keep the houses well ventilated so that the air is fresh but never allow a draft. This is more practical south of Philadelphia, Pennsylvania, than around New York.

**Potting** Repot ferns, palms, crotons, etc., for next spring. Watch for scale on the palms. If any is found, wash off leaves with a soft sponge and whale oil soap.

## VEGETABLE GARDEN

**Seed Order** Don't accept substitutes in your seed order. Insist on having the varieties you know are standard. This is not a year to experiment. It is a year to produce.

**Old Seed** Do not throw away seed left from last year but place a representative collection of 100 seeds between two sheets of blotting paper in a soup dish or plate. Cover with another plate or a pane of glass. Note carefully the time and per cent of seed to germinate and sow accordingly.

**Sowing Seed** The seed of Early Jersey Wakefield cabbage, White Plume, or Golden self-blanching celery, Early Snowball Cauliflower, Detroit Dark Red Beets should be planted the second week of this month. The last of the month, sow a flat of Loose Leaf Lettuce. Sow the seed thinly, cover lightly about the depth of the seed, and press down the soil very lightly with a piece of board. Keep the soil moist and the flats in a warm, sunny situation, preferably a greenhouse or hotbed.

**Onions** The latter part of the month, sow the seed of Danver's Yellow Globe, Southport White Globe, or Prize-taker onions and place the flats in a moderately warm place. After the young onion plants have reached a height of four inches, they may be hardened off by gradually exposing them to the open air on all favorable occasions. After a week or more of this treatment plant them into rich soil in the garden in rows fifteen inches apart and three inches apart in the rows.

**Artichokes** If the French Globe Artichokes are started this month, they will produce well developed fruiting heads this season providing they are kept growing vigorously and rapidly.

**Hotbed** This is the month to start the hotbed. The manure should be fresh and heating. After placing about three inches of coarse ashes on the bottom of the hotbed, pack in about one foot of manure and pack down. It will be of great advantage to the action of the manure if it is then moistened with hot water, after which add another foot of manure and pack this down, again watering it with hot water. The manure should be moist but not wet. Place over this surface from four to six inches of clean garden loam. Place a standard thermometer in the manure in the center of the hotbed and close the sash tightly. Do not plant the seed until the temperature drops to 80° F. If seed is planted when the temperature is rising, it is in danger of being baked. Keep the air in the hotbed pure and fresh after sowing

## IN THE GARDEN TRENCHES

*The gardener who by the lack of early preparation fails to keep in check insects, disease and weeds when they commence their "ruthless warfare" on the garden trenches belongs in the enemy's ranks.*

*Ammunitions necessary:—To destroy all chewing insects such as tent caterpillar, potato beetle, etc., apply a stomach poison, Paris green, arsenate of lead, hellebore or slug shot.*

*Sucking insects like the aphids may be destroyed by the use of tobacco dust, nicotine or kerosene emulsion.*

*Scale insects are destroyed by spraying with lime sulfur, scaleside or soluble oil.*

*Plant diseases are prevented by spraying with Bordeaux mixture, a summer solution of lime sulfur or by dusting the foliage with flowers of sulfur.*

*Weapons necessary:—Spray machine (hand or power), hoe, Narcross weeder, wheel cultivator (large gardens) and a well balanced digging fork.*

*The War Garden Bureau will advise you as to the amount of solution to buy if you will send in the size of your garden and state the kind of vegetables to be grown, also the age and number of fruit trees or berry bushes.*

the seed. Keep a protective covering of mats or straw over the hotbed during cold nights.

**Home Garden Fertilizer** After applying a liberal coating of manure, which may be spaded or plowed under later in the season, apply on the surface of the soil and work in it with a cultivator about 100 pounds of mixt fertilizer. This is the time to mix your fertilizer providing you can keep it dry. Mix thoroly, for a garden 25x50 feet, 25 pounds of nitrate of soda, 1 bushel of wood ashes, 25 pounds of acid phosphate, and 25 pounds of high-grade tunkage. This may be applied at different times during the season in the rows before transplanting or just before a rain alongside of a growing crop.

## FLOWER GARDEN

Make your garden plans now and arrange your planting plans so as to give you the best color effect in bloom and foliage throughout the season.

**Climbers** If there is a fence, pergola, old stump or outhouse that you wish to beautify, this is the month to order Akebia, Virginia creeper, Boston Ivy, Oriental Bitter Sweet, or the hardy Clematis.

**Water Garden** Why not plan a home made artistic and naturalistic water garden for this coming year? Order not only the water lilies now but send in your order for Marsh Marigold, Japanese Iris, Arrow Arum, Great Bulrush, Common Reed Mace and Wild Rose, all of which are sub-aquatic plants suited to make the water edge attractive.

**Flower Seeds** Don't buy cheap flower seeds. The vitality is usually low and the varieties are poor, especially where the seeds are mixt.

## FRUIT AND BERRIES

**Ordering Trees** This is the last call for ordering both berry bushes and fruit trees. Remember that it is a better policy and a safer practise to buy from a point north rather than south of you. State in your order when you desire the plants delivered, so that they will not arrive while the soil is locked up with frost. When they do arrive, keep the varieties separate and heel the plants in until their permanent home is prepared.

**Disease** Now is the time to cut out all black-knot or plum knot from plum and cherry trees, both the wild and cultivated. Also gather all "mummy" plums still clinging to the plum trees. If these are allowed to remain and drop to the ground they will spread fruit-rot. All black-knot and "mummy" plums should be burned.

**Insects** Make a thoro inspection, especially of your young trees, in search for clusters of tent caterpillars eggs and also San Jose, Oyster shell scale, and Scurvy Bark louse. These should be sprayed with the dormant solution of one part of lime sulfur to eight parts of water. Spray only on mild-calm days.

**Pruning** See to it that your pruning saw is sharp, clean and well set before going into the orchard. Prune out first the dead limbs, then all of the limbs that cross and rub and a few others if necessary. Do not over-prune. Beware of professional men whom you do not know but who want the job of pruning your orchard. First get the advice of a practical man who has an established reputation. It takes years for an orchard to recover from the work of a tree butcher.

# THE POULTRY YARD IN FEBRUARY

BY E. I. FARRINGTON

IT is time now to plan definitely for the coming season's work. If day-old chickens are to be purchased, the order for them should be put in promptly. It will be discovered, probably, that the price has increased since last year. If one can hatch his own chickens from a strain of birds with the egg-laying habit well developed, he will be wise either to set a considerable number of hens or to buy an incubator. If, on the other hand, his hens have not proven to be good layers, or if they have been confined closely, there is no advantage in breeding from one's own stock.

There is always something of a gamble in buying day-old chicks from large hatcheries, because as a rule the eggs have been bought up from farmers for miles around, without much regard to the character of the stock. Nevertheless, this offers an easy way to make a beginning in poultry keeping.

If you are planning to set hens, wait until you get two or three which are broody at once, so that they can be given a considerable number of eggs. Then you will have one large flock of chickens, all the same age, instead of several small flocks of varying ages.

The question of breeds is one which bothers many beginners. Undoubtedly White Leghorns come the nearest to being egg machines of any hens known. They are also light eaters, which is a point in their favor in sections where grain is hard to obtain. On the other hand, they are too small to be of much value for dressed poultry. Just now the Government is making a special effort to speed up the production of table poultry in order to help relieve the meat shortage. For that reason, it seems wiser, or at least more in accord with the Government's purposes, to start poultry keeping with birds of the heavier breeds such as Rhode Island Reds, Plymouth Rocks, Wyandottes and Oppingtons. The hens of all these breeds lay well, and the cockerels will dress four pounds or over. It is expected, of course, that this year all the cockerels except a few needed for breeding will be sent to the table as soon as they have approached maturity. Even the poorer pullets should be culled out and used for meat. On the roaster plants pullets are killed before they have laid half a dozen eggs. Then the meat is soft and delicious. The birds soon harden up after they have begun to lay.

Usually there seem to come some warm days in February, making it possible for the poultry keeper to give his hen houses a thoro cleaning. If there are glass windows, let them be washed. Curtains, if there are any, should be thoroly brushed. As a matter of fact, this brushing of the curtains should be done weekly if they are used much, for when covered with dust the curtains are almost as opaque as a board.

Probably it will be found that the litter on the floor has become packed rather hard. In that event, it should be removed and a new lot substituted. Litter is of little use unless it is fresh enough so that the grain disappears from sight when thrown into it.

Be certain that there are no drafts in the house which the hens will feel at night, and that neither the floor nor the walls are damp. Dry, cold air is not to be feared. In a deep house the hens will go thru the winter safely, even tho the front is entirely open. Sometimes birds having long combs and wattles need a little extra protection

## The Radiator Bugaboo Overcome With Decorative Metal Grilles

SO skillfully is it possible to enclose radiators with harmonious treatments of wood panelings, combined with our decorative metal grilles, that their obtrusive objectionableness is entirely overcome. Let us make suggestions. Send for catalog 66-A.

Showing the complete circulation of air, insuring economy of heating radiation.

## The "Beaut-i-ator"

The "Beaut-i-ator" is a portable all metal Radiator Enclosure. You simply place it over your radiator. Nothing to put together. Nothing to fasten. No outside help needed. Instantly removable. Ask for the "Beaut-i-ator" Booklet, when you ask for Booklet No. 66-A.

## DINGEE ROSES

Sturdy as Oaks

Pot-grown rose bushes, on own roots, for every one anywhere. Plant any time. Old favorites and new and rare sorts, the cream of the world's rose culture. "Dingee Rose" is the best for 1918. Send for a catalog and write to U.S. White for a copy of our "New Guide to Rose Culture" for 1918. It's FREE.

Plant now, and you will have a beautiful garden of roses for the summer. Dingee Rose has 1000 varieties of roses and other flowers and trees to grow them. **THE DINGEE & CONARD CO., Box 231, West Grove, Pa.**

in very cold weather, which may be given by dropping canvas or burlap curtains in front of the roosts. Oftentimes roosters freeze their wattles as a result of getting them into the water when drinking. It may be necessary to arrange the drinking fountain in some way so that this will be avoided. Of course roosters with very long combs may have these combs frost bitten. This is bad for breeders. Some poultrymen make a practise of anointing the combs with vaseline when the temperature gets perilously low. This is a reasonably sure protection.

Too much beef scraps should be avoided in planning rations for the breeding stock. It is important, tho, that the breeders should have an abundance of green food. Sprouted oats are perhaps the most available and are very satisfactory, if fed when the sprouts are not more than an inch long. Oats and corn with a dry mash of bran and ground oats with ten per cent of beef scraps make a good combination for the breeding pens. It is of importance to pay especial attention to the hens which are to lay the eggs to be used for hatching, because this will make for greater fertility and stronger chicks, both being highly desirable this season.

Farmers and others having a considerable amount of land available, especially if it is marsh or low land, are earnestly advised to start keeping geese. Geese are naturally grazing birds, therefore can be kept at less expense than any othr kind of poultry. Each bird provides a large amount of meat as well as considerable fat. For some reason the goose industry has been allowed to go backward. It ought to be revived. Probably it will pay to buy a few settings of goose eggs in order to raise goslings to be drest next fall, even tho the eggs are rather expensive. They can be hatched out under hens, but require thirty days for incubation

## The New Plays

*Lord and Lady Algy.* Notable revival of one of last generation's greatest successes. (Broadhurst Theater.)

*Happiness,* a comedy written by G. Hartley Manners, stars Laurette Taylor. Is well acted, refreshing and worth while. (Criterion Theater.)

*Yes or No.* By Arthur Goodrich. Ingeniously wrought play with a lesson for discontented and discontenting wives. Well acted and worth while. (Longacre Theater.)

*Going Up* is a musical comedy as clean as it is clever. The plot is vastly better than usual, music and dancing are delightful. Frank Craven as the pseudo-aviator is irresistibly funny. (Liberty Theater.)

*Seventeen* is a perfectly delightful human comedy of innocence and love making for young and old based on Booth Tarkington's adolescent romance of the same name. Well written, well reproduced and well acted. (Booth Theater.)

*General Post* is one of the most charming of the new war plays of the season. It is full of wit and clever situations, and is admirably acted, both in its humorous characters and in the more serious parts. (Gaiety Theater.)

The American audience at the French Theater seems to prefer the modern to the classic drama and Cúrel to Molière. *La Nouvelle Idole*, like Shaw's "Doctor's Dilemma," deals with vivisection but presents a finer appreciation of the psychology of the scientist. (Théâtre du Vieux Colom-bier.)

## A Breakfast Food You Will Like

For tomorrow's breakfast serve a few N. B. C. Graham Crackers with hot milk, in place of the usual hard-to-prepare breakfast foods. You will find them a most pleasing change.

Always crisp, appetizing and wholesome, they furnish maximum nourishment at minimum cost. Sugar is saved, too, as N. B. C. Graham Crackers are sweet enough without.

## How to Use Our Plan and Purchase Dept.

- I. Look over all departments of your business organization with a view to helping your workers, by finding the weak spots and showing them better ways and methods. You may find the spots easier to locate than the remedy.
- II. Write to the Plan and Purchase Department for the free Check List, which provides you with a list of items likely to help you.
- III. Check the items you want to know about, those you think you can use. Write on the blank pages the details of your problem.
- IV. As promptly as possible after receiving your request we will make reply, drawing upon our files of information and the experience of expert counsellors to give you helpful suggestions.

**Independent Efficiency Service, 119 W. 40th St., New York City**

## Remarkable Remarks

THOMAS W. LAMONT—Luxuries can be eliminated.

DR. J. S. DICKEY—No man ever obtained an education by daylight.

MAYOR JOHN F. HYLAN—I want New York to look out on life unafraid.

HERBERT C. HOOVER—In this emergency only the simplest living is patriotic.

LEON TROTZKY—We did not overthrow the Czar to bow to German imperialism.

CARDINAL GIBBONS—We have entered into the struggle with a clean conscience.

CLEVELAND H. DODGE—Tammany Hall is the greatest organization in the world.

HENRY MORGENTHAU—The Turks have ruined every place where they ever lived.

DOROTHY DIX—For a widower women have a soft, tender, half maternal feeling.

FLORENZ ZIEGFELD, JR.—This past year I have lost some of my loveliest chorus girls.

CARL HERMAN TORGES—Bachelordom of today is a cancer which must be extirpated.

LINA CAVALIERI—From the standpoint of beauty one should retire before twelve.

WILLIAM DEAN HOWELLS—May the war for liberty win equality and fraternity too.

CHARLES S. WARD—Give until it hurts and then go on giving until it doesn't hurt.

JOHN WANAMAKER—A real good smile and a hearty handshake cost but a minute.

BILLY SUNDAY—I have more respect for a saloon keeper than for a dancing teacher.

EMPEROR CHARLES—It will be the finest day in my life when I can conclude peace.

JOHN D. ROCKEFELLER—I feel ready to agree to anything that will help in any way.

JOHN BURROUGHS—I wish that at this moment we had five million men in Europe shooting Germans.

PROF. J. MCK. CATTELL—I should think the New York papers would be as tired of me as I am of them.

LADY CHETWYND—They say in Europe that American women are the most graceful flirts in the world.

PRESIDENT A. LAWRENCE LOWELL—The result of this war must be either a worse world or a better one.

HENRY FORD—It is time to stop trying to solve the railroad problems by book-keeping in Wall Street.

VICE-PRESIDENT MARSHALL—The Kaiser is getting it thru his thick head that America is going to win the war.

PROF. WILLIAM JONES—Iodine monochloride reacts as follows:  $I + Cl + H \rightarrow HI + HCl$ .

JEANETTE Y. NORTON—A sauce is usually served in a sauce boat, while gravy is put in a gravy boat or tureen.

GEN. HENRY A. GREEN—Officers and men of my command may meet as social equals outside the cantonments.

DAVID LLOYD GEORGE—I warn nations to watch men who think there is a halfway house between victory and defeat.

VISCOUNT NORTHCLIFFE—It will be hell for those who didn't go to war when those forty millions who did come back.

THEODORE ROOSEVELT—We want to fight abroad with our allies so that we shall not have to fight at home without our allies.

SECRETARY DANIELS—The day will come when all appointments to Annapolis will be made from the ranks of the enlisted men.

SECRETARY BAKER—Civilized men must take hope that the future has in store a relief from the burden of armament and the destruction of the waste of war.

ARTHUR POLLEN—Whether the war ends this year or next or the year after, I am faced with a five years' shortage of food which may well mean a five years' famine.

ED HOWE—There is not in New York a peculiar type of man who thinks of things that have not been thought of by some one in the vicinity of Kokomo, Indiana, or Vandalia, Illinois.

# THE NEW BOOKS

## The Ulysses of China

THE biography of *Li Hung-Chang*, by J. O. P. Bland, who has won no small reputation as a close student of Eastern politics, is the biography of an admirer but not of a hero-worshiper. Li Hung-Chang was, in his view, a "one eyed leader of the blind"; the shrewdest and most enlightened of Chinese statesmen and yet devoted to the ruling dynasty and Confucian tradition and unable to divest himself of the class prejudices of the mandarin. His strength and his weakness were alike well illustrated by his military policy. He realized the military impotence of China as compared with foreign nations, employed European experts to remodel the army and navy, introduced as best he could the European military tactics, armament and discipline, and strove in every way to emulate the achievements of Japanese statesmen in order that China might later debate on equal terms with the great powers. But he could not refrain from undoing all his work by permitting the military services of the Celestial Empire to become demoralized by graft, and even soiling his own fingers with every kind of corruption. As a result the Chinese went to battle under incompetent officers, who owed their commissions to their kinship with high officials, short of supplies and divided into hostile provincial factions. The result was Japan's smashing victory over China and Li Hung-Chang's temporary fall from royal favor.

Li Hung-Chang was greater as a diplomat than as an internal administrator, because in domestic affairs he thought first of his own pocket and in foreign affairs of his loyalty to the nation. A few citations from the good advice tendered by the statesman to his not always appreciative Government will serve to show the keenness of his insight into the realities of international politics:

The truth is that, at present, foreigners are powerful and the Chinese feeble. And whence arises the power of the former? It certainly is not innate in them, but depends upon the fact that "the requisites of Government are sufficiency of food, sufficiency of military equipment, and the confidence of people in their ruler" (Confucian Analects).

The fact is, that the prosperity of foreign countries is inseparably connected with the welfare of the Chinese people; and instead of draining that people to the last drop, would they not prefer to use without exhausting—to take, and still leave a residue?

There is no human agency capable of putting a stop to the expansionist movement of Japan; has not your Government been compelled to inaugurate a new era by making a treaty of commerce with them? As matters stand, therefore, is not our best course to neutralize one poison by another, to set up one energy against another? You should seize every opportunity to establish treaty relations with Western nations, of which you would make use to check Japan. There exists in the West a general rule that a nation may not seize the territory of another without good cause; but international law acts only as a protective force in the case of the Powers with common commercial interests.

Altho Li Hung-Chang was no lover of the greedy European powers which clamored for concessions and annexations at China's expense, he realized that China's only hope lay in having friends rather than enemies to deal with. He, therefore, set his face like flint against the Boxer outbreak; telling the formidable Empress Dowager who then directed the destinies of the Empire that "Under any enlightened sovereign these Boxers, with their ridiculous claims of supernatural powers, would most assuredly have been condemned to death long

since." Like other diplomats he frequently told lies to foreigners, but he usually told the blunt truth to the ruler and to himself. But the man was greater than his thoughts, for his diplomatic successes were due even more to physical energy and endurance, genial manner, impressive presence, skill in self-expression, prudence and persistency than to the wisdom of his plans.

In Mr. Bland's opinion Li Hung-Chang was born either in the wrong age or the wrong country, for only where representative institutions existed could his talents have found their fullest scope:

For a practical-minded man like Li the dreams of Sun Yat-sen and Kang Yu-wei were interesting but unprofitable: nothing but the sin of rebellion (which was not for him) could come of their loose talk of voters and elections, Houses of Parliament, and democratic government. He foresaw quite clearly that a successful attempt to establish the letter of a non-existent spirit would end (as indeed it did ten years after his death) by reducing Young China's dreams to a lamentable spectacle of paid members of Parliament shamelessly struggling for the spoils of public administration. But had the materials for party government existed in China—that is to say, a politically semi-conscious electorate, a stock of catch-words for its mystification, and party funds for its demoralization—Li would have made an ideal party leader and Prime Minister. He might have had no constructive policy (except for the distribution of the loaves and fishes), but he would assuredly have been a past master in the game of "ins and outs." If, instead of a horde of greedy relatives and hungry fellow-provincials battenning crudely on the public purse, he could have led into the logomachy of party politics a well-trained phalanx of glib lawyers and astute financiers, his genius would have found its true vocation. For Li Hung-Chang combined the wait-and-see temperament with remarkable *fais* as to the direction in which the political cat would jump at any critical emergency: his infinite courage and resource were never more conspicuous than in the hour of danger, and he possessed a certain bluff geniality, a tactful capacity for saying smooth things to rough men, which would have made him an ideal manipulator of the party machine and a graceful exponent of public opinion after the event.

*Li Hung Chang*, by J. O. P. Bland. Henry Holt. \$2.

## About Modern China

THE *Fight for the Republic in China* is a large volume (485 pages) of more than ordinary interest and value. The announcement on the cover says that this is "a semi-official statement of China's case to the world," and that "the author occupies a very important position under the present Chinese Government." He has to his credit six political and eight romantic works on Oriental affairs. Mr. B. L. Putnam Weale offends the reader by his first sentence, which boasts that "This volume tells everything that the student or the casual reader needs to know about the Chinese Question." An anti-Japanese bias, moreover, is often so markedly pronounced.

In spite, however, of defects which are only incidental flies in the ointment, and disregarding the sentences frequently cumbersome and sometimes pedantic, the work before us is worthy of careful reading.

The body of the volume is devoted to the period from the establishment of the Republic in 1911 until the spring of 1917. Two preliminary chapters constitute a brief but adequate introduction. The title well describes the subject matter. The author has collected a large number of original and important documents relating to the struggle for democracy within China herself and to the efforts of Japan to bring China more completely under her influence. The appendix of nearly one hundred pages is particularly valuable.

Mr. Weale's account of Yuan Shi-kai and his selfish ambitions, intrigues and policies goes far to confirm the assertions of Japanese that Yuan Shi-kai was working for Yuan Shi-kai and not for China.

The life story of Yuan Shi-kai, and the part European and Japanese diplomacy played in that story, form a chapter which should be taught as a warning to all who enter politics as a career, since there is exhibited in this history a complete compendium of all the more vicious traits of Byzantium.

In carrying out his secret plans for seizing the throne for himself and his family. Yuan Shi-kai

turned the Military Court into an engine of judicial assassination, within whose gloomy precincts many thousand of unfortunate men perished, practically untried in the period 1911-1916. (p. 274.)

The story of the famous "twenty-one demands" is told afresh with full documents and omniscient interpretations. Japan's "perfidy" and "sinister ambitions" are duly stressed at repeated points. The reader should not, however, fail to look at the other side of these matters. Perhaps the most satisfactory discussion is to be found in Mr. K. K. Kawakami's "Japan in World Politics," Chapter X. Mr. Weale fails to give the reader a full and sane view of that affair because he so completely fails to see or to sympathize with Japan's own problems and the situation that has been created for Japan by the predatory and aggressive governments of Europe in their dealings with nations that are backward and weak. This is where such writers as Frederick McCormick and Thomas F. Millard also fail.

The solution of China's problems involves, according to Mr. Weale, the liquidation of "her financial obligations which constitute a huge network of foreign interests—particularly British interests—which seventy-five years of treaty intercourse have entwined around the country" (page 380).

Japan's real objective in the termination of the implied trusteeship which Europe and America still exercise in the Far East . . . and using this attorneyship as a cloak for the advancement of objects which other powers would pursue on different principles, so impregnably to entrench herself where she has no business to be that no one will dare to attempt to turn her out (page 383).

The author expresses many other judgments provocative of thought and discussion.

*China from Within*, by Charles E. Scott, is a record of personal experiences in missionary work. The disclosure of Chinese character and sterling qualities serves as a wholesome antidote to the discouraging view one gets from reading about Chinese mandarins, generals and politicians. The volume before us grew out of a course of lectures on missions. Little is said here about politics, revolutions or international relations. But real insight is given into the regenerative forces that are at work creating a manhood that some day will take high place in China's development.

*China*, by E. H. Parker, is a revised and enlarged edition of a work by the same author that appeared first in 1901. It is an attempt to give in a single handy volume of 400 pages a complete survey of the Chinese people—their country, history, government, civilization and recent developments.

*The Fight for the Republic in China*, by B. L. P. Weale. Dodd, Mead & Co. *China From Within*, by Charles E. Scott. Revell. *China* by E. H. Parker. E. P. Dutton.

# SETTING OFF THE ROOM

(Continued from page 186)

wall, we will find that our choice of other things used in the room may be freer and more varied, because of the unifying effect of this neutral color. In selecting either wall papers or fabrics to be used in a room, one will find it far simpler to bear in mind that one cannot be chosen absolutely irrespective of the other. It is a common mistake for a person to choose wall papers and then have tremendous difficulty in finding fabrics that will harmonize.

The trim in a room must, of course, be treated in connection with the wall. A trim that is absolutely unrelated in texture and color to the wall paper will invariably stand out and spoil the whole room. For instance, a paper with white ground and delicate pastel tints will never be harmonious in either color or texture with a weathered oak trim. Such a paper demands painted woodwork, and conversely such a trim demands a wall treatment of a rough and somewhat crude character. Also if a stained trim be used, the color of the wall should be on the tone of the trim, nor is a dead white trim harmonious with a colored wall if the contrast in color is so great that the trim is continually forced upon our attention. A very satisfactory thing is to paint the trim either the same color as the wall or a few shades lighter in value.

If stained trim is to be used the householder should know when he accepts the plans of his house just what the treatment of his rooms is to be, for different woods take stain in an entirely different way. It is, for example, difficult to get a satisfactory gray stain on any wood and entirely different results will be obtained by the use of the same stain on different woods. Chestnut and white-grained oak will take a fairly satisfactory gray but each should be first scrubbed with sapolio or an alkali to bleach it; white wood if carefully selected and free from black streaks will also take a good gray. In choosing samples one must remember that they are generally made without shellac, which changes the color of the stain; so that when a sample of color is made the final color may be seen only if the wood is wetted. White zinc and oil used as a filler will emphasize the grain of the wood.

Underlying color is a tremendous study in psychology, for it is a well known fact that different colors convey different qualities and excite different emotions in our nervous system.

Because these colors are psychological in the effect upon our consciousness it is necessary that they should be understood in order to be used scientifically. It is obvious that since red is stimulating and exciting, it is the color which one can most easily have too much of. Of course the more neutralized a color is the greater quantity we can stand. Yellow and all its intermediary tones, because they are warm and cheerful, are very satisfactory for rooms that are dark or that have a north exposure. We must recognize that all color exists in light only and that what would appear to be one color in a bright light, is quite another color in shadow so this fact must be taken into account in selecting a color for a dark room. A very intense yellow or orange, for example, would be impossible to use in a very light room, but in a very dark room might appear almost a tan and be very charming. Blue used in a north room absorbs the light and is cheerless; violet, too, needs a warm light, but when blue and violet are used with their complementary colors, orange and yellow, the warm tones will alleviate the cold qual-

Scientific study coupled with practical manufacturing methods—this is the basis of the MAZDA Service that helps lamp-makers produce better lamps. :: :: ::

# MAZDA

*"Not the name of a thing, but the mark of a service"*

### The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research

Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

## What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation's paper that prints all the news of the world and tells the truth and only the truth as it is on the 25th year. The paper fills the bill without exceeding the postage in value, just \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper to read home clearly, fairly, briefly—here it is. Send 15c in stamps that you might like such a paper, and we will send the Pathfinder to you postpaid 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

## DANERSK DECORATIVE FURNITURE

DANERSK FURNITURE has been planned to fill a very definite human need,—the craving for individuality in form and color. It possesses the greatest possible interest and charm in proportion to its cost because each piece is finished for the one who buys it.

Our whole equipment of factories, fabric department and upholstery shop is organized to give rapid service in working out lovely interiors for single rooms or the whole house direct with our customers.

Consultation and advice given without obligation to purchase.

Females, \$10

Perfect health; sable and white, very handsome; RAISED WITH CHILDREN; well shaped immediately on receipt of check; money refunded if not absolutely satisfactory; certified pedigree given.

### FIRE, BURGLARS

Many a home has been saved from Fire and Burglars by the intelligence of a thoroughbred Collie; it is conceded that all evildoers always avoid a place where a thoroughbred Collie is kept.

We send thousands of dollars' worth of Collies to the late J. Pierpont Morgan. We have letters from the late Mr. Morgan to prove this statement. PINE GROVE COLLIE KENNELS, Long Branch, N. J.; order immediately; directions for feeding with each puppy.

ity. It is, of course, far more difficult to harmonize different colors as they approach their full intensity, and whereas bright red and green as they appear in nature seem to us very pleasing out of doors, we cannot bring them within a limited space except in very small areas and expect them to convey rest and refinement.

In the use of colors on the wall it has been proven that the more intense or the darker the color used, the smaller the room will appear. Great, large rooms can afford to be treated with a dark tone on the walls better than small ones, since the dark color appears to draw the wall together, apparently contracting the area.

One of the most difficult things for people to understand is the correct use of pictures, for the general opinion seems to be that a room is not furnished without them, and when the room is complete, pictures (almost anything will pass as a picture) are hung here and there without rhyme or reason. The average person does not seem to realize the importance of the relationship of each picture, first to the wall space, then to the others, and finally to the character of the room, and yet like everything else these relationships must be considered if the room is to be a harmonious unit.

Look at your own walls and ask yourself why you have hung your pictures as you have. Do they either by size or arrangement adequately fill the space; and have you followed the structural lines of the room, or is there tucked away somewhere in your mind the conviction that real beauty exists in irregularity? We have seen that a confusion of lines destroys the sense of order and yet order is the basis of fine living and true beauty.

Pictures were at first painted as frescoes upon walls and as such were of course directly related to the space they were to decorate. The correct use of an easel picture is to form a center of interest, or to break up the wall space in a pleasing way, and our choice will necessarily be limited to the things which shall meet these requirements. Often we can utilize several small pictures as a group to fill in an important place, but these would have to be closely related in color scale and framing so that they will be in effect a unit and not an aggregation. One other point; remember that pictures are meant to be seen, do not hang them too high. In hanging a picture, not only must the size be taken into consideration, but its color must be of the same key as the wall, for if we were to place upon a dark wall a picture framed with a great white mat or any picture in a very light key, it is apt to pop out of its background and appear absolutely unrelated to it.

The second thing to be considered in our discussion of backgrounds is the floor. Unity in a room is dependent upon unity in design and color between walls, ceiling and floor, and no room should be considered without bearing this relationship constantly in mind. It is quite as important that the design of the carpet be related in scale and character to the rest of the room as that the colors should harmonize. There can be no relationship, no unity of idea between a flowered bedroom wall paper and an Oriental rug no matter how excellent the color harmony, since each is conceived in an entirely different spirit and character. There seems to be a common fallacy at present that an Oriental rug is always good, and harmonizes with anything; as a matter of fact the modern Oriental is frequently very bad in color and exceedingly difficult to use harmoniously from the standpoint of design. The most satisfactory

## How to Use the Countryside Shop

I.—Write for our free Requisition Chart. Read the list of interesting items it brings you.

II.—Check the items you expect to buy and about which you want information.

III.—Write on the blank pages all details and questions. Mail to us.

IV.—As promptly as possible, we will make reply, drawing upon our files of information and the experience of our Expert Counsellors to give you helpful suggestions.

## THE COUNTRYSIDE SHOP

The Independent Corporation

119 West 40th St., New York City

of Oriental rugs for the average use are those in which the surface is pretty well covered with the design and in which the color values are close, for when this is the case the design is not constantly forced upon our attention. This applies to large rugs intended to cover the whole floor, for the small Oriental rug should be regarded more as a picture, and should be used as such upon the floor, that is to say, in its placement it should form a focal spot before some object of especial interest, such as perhaps a fireplace, a door or an important piece of furniture.

There is probably nothing that can cause such a lack of unity in a room and such restlessness as a lot of small rugs scattered about on the floor, and this becomes doubly objectionable when they are placed at angles absolutely unrelated to the lines of the walls or the furniture, or to each other—again we contend with that diseased belief that art lies in placing things in any but the sensible way.

Floors that are too light in color by contrast with the other things in the room will appear to "come up" at one and thus lose their place in the scheme of things, for above everything else the floor should be inconspicuous. It is safe to say that in the average small room the floors should be the quietest and darkest tone in the room, the walls middle value and the ceilings lightest of all.

Wood floors should be carefully treated as to color, for a wood floor that is too light or of too pronounced a color may easily ruin the artistic effect of a whole room. Yellow pine is the wood most used for the floors of the average inexpensive dwelling and on top of this is usually applied an orange shellac. This treatment is about as harsh and uncompromizing in color as possible. This is the most difficult wood of all to treat and make beautiful because it is made up of layers of hard and soft wood, and an oil stain will only take effect on the soft parts of the wood so that the grain is brought out in a striking contrast. There are acid stains which will do moderately well, but it is not an easy matter to obtain a good color with them, inasmuch as the yellow of the wood is so strong in tone that it persists thru any stain which may be applied. Oak, as regards color, is the best flooring on the market today and takes stain beautifully. The best treatment is to stain it with as dark or as neutral a tone as desired, then to apply one coat of shellac (well rubbed after it has hardened) and one coat of wax, but to keep such a floor in order requires constant polishing and occasionally a small amount of wax; it is a common fault for housekeepers to apply too much wax and too little rubbing. Oak floors are sometimes stained and then finished with several coats of shellac or of varnish, which is good to use in any place where it is liable to be spotted with water, but does not make as pleasing a floor as the wax finish. Maple is a very hard wood and does not take stain very well, but its closeness of grain does not absorb grease and it is therefore good for kitchens, pantries, etc.

The ceiling is the last place to which we wish our attention continually called, for the sense of rest is most easily disturbed in a room where our eyes are constantly led to the ceiling. A dark ceiling has a tendency to lower the apparent height of the room, so that for the average small room it is better if the ceiling is considerably lighter than the side walls. White ceilings reflect the light and may cause a glare in the room, so that the tint used should be just off of white and closely allied to the color of the walls.

## Buying economy in locks and hardware

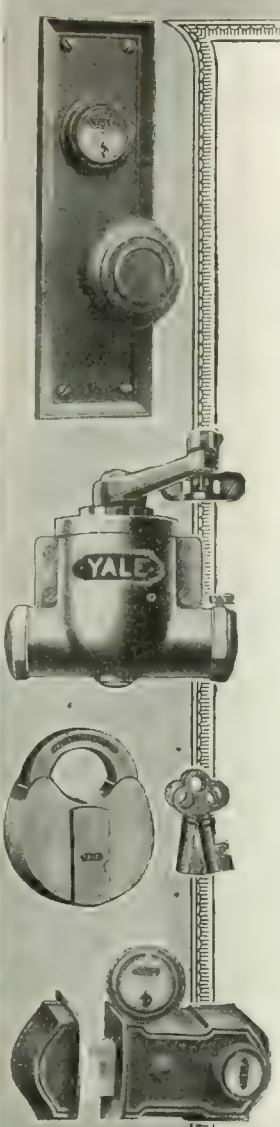

When you buy a Yale padlock, or night latch, or door closer, or builders' hardware or a cabinet or trunk lock, you buy *economically*. To begin with you buy for a moderate fair price; you buy long enduring service; you buy a product that is provably *better* for its purpose and use; you buy highest quality in materials, design and workmanship.

That is what you get when you buy a product bearing the trade-mark "Yale". And you will appreciate the real sound economy of a Yale product the longer it is in your service.

Yale products are always trade-marked "Yale"—regardless of price or kind. And that trade-mark is as much a *part* of the product as the metal itself.

If you want the economy of Yale products you have just one thing to do: *See* that trade-mark "Yale". Otherwise it won't be a Yale product. It is a simple way to prove economy—a sure way to guarantee it.

CON-SER-TEX

THE IDEAL COVERING FOR SLEEPING BALCONIES PORCH FLOORS AND ROOFS

CON-SER-TEX

There is no better covering than

CON-SER-TEX Canvas Roofing

Above all things you are interested in your home. You are always willing to add to its comfort and coziness—its security and charm.

Here's an opportunity to make your porch floors and roofs as up to date as the interior of your home. Your opportunity lies in the use of CON-SER-TEX, a scientifically treated canvas roofing.

When properly laid it lasts longer than tin or shingles. It is much easier and cheaper to lay. It is mildew proof. It deadens the noise of the rain and stops the rattle of the wind. It lessens work and the cost of repairs. The cold of the blizzards and the heat of midsummer do not affect it.

It adds charm and neatness to your home because it lies flat, clings tight and does the work. Generous sample, price list and descriptive matter upon request. Write today.

FOOD WILL WIN THE WAR

LESSONS IN AMERICA'S PART IN THE WORLD'S FOOD PROBLEM, PREPARED BY THE UNITED STATES FOOD ADMINISTRATION FOR THE INDEPENDENT

The Nature of Food

WE have seen in a general way what the Food Administration advises in the matter of conservation. But we cannot carry on intelligently a program of conservation unless we understand the nature of food.

Food is "fuel." It is burned in our bodies somewhat as fuel is burned in an engine. But whereas the fuel in the engine has the one purpose of furnishing heat to make the machine "go," our food fuel serves not only that purpose but various others. These purposes are: to form blood, tissues and bones; to repair waste; to furnish energy for muscular movements and all kinds of work; to keep us warm; to regulate the body processes.

WHERE FOOD COMES FROM

Plants are the great first source of human foods. Light and heat from the sun are changed to chemical energy by the plant cells and this with elements from the air and soil forms the three great classes of food substances that man must have to live: protein, fat, carbohydrate.

Animals are the next great source of food. Animals eat plants and the food substances of the plants are worked over in their bodies to produce animal protein, animal fat and animal carbohydrate. In animal food, therefore, man is getting plant food converted. Protein and fat are well represented in animal food, but carbohydrates has little representation except in milk, and a few sea foods.

FOOD VALUES: PROTEIN

Now let us find out just what these terms mean that we have been using. We can say simply that the foods whose special work is to build the body and repair the waste, are *proteins*. Proteins is a term standing for a large number of substances, all made by the chemical union of simpler substances containing nitrogen. Because our cells are discarding nitrogen in some form hour by hour as waste products of bodily activities we must be sure to have protein in our diet every day. We need a certain amount of it, and a certain variety. In this country about 3½ ounces of protein a day is considered a reasonable amount for a man of average size, weighing 150 pounds, doing moderate muscular work. A larger person would have more body tissue to keep in repair and hence would need more; a smaller person would need less.

It is only recently that we have realized that different kinds of proteins vary in food value. We do not as yet know all about this matter, but we will be taking a safe course if we choose for our diet varied animal and vegetable foods containing protein. Foods which are considered rich in protein are: milk, eggs, meat, fish, cheese, grains and dried legumes, such as beans and peas. Except for the legumes and grains, which are vegetable, all these foods are of animal origin.

FAT AND CARBOHYDRATE

The foods on which we depend chiefly to give us heat and power to work are called *fats* and *carbohydrates*. Fat is excellent body fuel, and also serves to improve the flavor of food. It is found in meats, poultry and nuts, but it is especially familiar in the forms of butter, cream and oils.

Carbohydrates are the sugars and starches we all know. Sugar is present not only in sugars, but also in syrups, apples, bananas, and almost every fruit, especially the dried ones, in beets, carrots and other vegetables. Starch is abundant in cereals, dried beans and peas, potatoes, chestnuts, cocoa and peanuts.

OTHER FOODS

We spoke of the regulation of body processes. There are other substances necessary for this work which are called *mineral substances*. These are lime salts, compounds of phosphorus, iron, etc. They serve also for body building and are especially needed by children. Milk, fruits and vegetables as well as many other foods contain mineral substances.

Cellulose we may mention as a regulator. It comes under the head of carbohydrates of which we have spoken above. Its function is to give bulk to the diet and to tend to prevent constipation.

Newly discovered substances, sometimes called *vitamines*, are found in milk, eggs, meat, fruits, vegetables and the whole grains. They are believed to play an important part in keeping people well and in promoting the growth of children.

In addition to this we ought not to forget that a large part of the body is water, and that water is a kind of carrier which helps distribute the nourishment in the body that carry off the waste.

A WELL BALANCED DIET

We are told that we require a sufficient quantity daily of body building, energy giving, and regulating foods in proper proportion. Our age and weight and the kind of work we do have an influence on both the quantity and the proportion needed.

The food substances we have mentioned have been put into five groups: 1. Foods on which we depend for mineral matter and regulating substances. 2. Foods on which we depend for protein. 3. Foods on which we depend for starch. 4. Foods on which we depend for sugar. 5. Foods on which we depend for fat. Our daily diet should contain some from each of these groups, but not too many from any one. Just now we should be particularly careful how we select from the sugar group.

The amount we need is measured by fuel value, and the unit of measure for this is a "calorie." It measures heat energy. A calorie is the amount of heat needed to raise one pound of water four degrees Fahrenheit.

Here are some tables which will show us how a daily food need is given in calories:

Fuel requirement for a working man, 3500 to 4000 calories a day

Fuel requirement for an active woman, 2600 to 3000 calories a day

Fuel requirement for a sedentary man, 2200 to 2800 calories a day

Fuel requirement for a sedentary woman, 1800 to 2300 calories a day

Here is a table in more detail:

A DAY'S FOOD PLAN  
(Age Fourteen to Sixteen Years)  
Fuel requirement—1800 to 3200 calories:

SOLDIERS MUST SING

A long, white, dusty road stretches away until it drops out of sight over the hilltop. It gives back the sound of nearly 400 marching feet as a company of dusty, khaki-clad men swing into sight on the last lap of a fifteen-mile hike. Sweat is dropping from the faces of dozens as they struggle along. The sun beats down; dust rises in choking clouds; file leaders look anxiously along the line—it closes up at the glance, then wavers and elongates once more.

“Buck up, Bill!” admonishes a rear-ranker to the man on his left.

Bill makes no reply. His face is taking on the dull gray hue of utter fatigue; lines chisel themselves around his set lips. Down the uneven ranks of marchers the ashy color is spreading; eyes stare straight ahead; the line elongates still more. The captain looks sharply along it. Then a glance of understanding passes between him and the young chap trudging along beside the guide.

The latter turns.  
“Come on, boys,” he shouts. “Sing ‘Pack Up Your Troubles!’ Make a noise they can hear clear to Berlin!”

Two hundred voices roar out the chorus; two hundred pairs of shoulders straighten; ranks close up; eyes brighten; squad by squad they swing into camp to the blood-quickenning rhythm of

What’s the use of worrying?  
It never was worth while;  
So pack up your troubles in your old kit bag,  
And smile, smile, smile.

It was the song did it.  
Sometimes it is “Smile, smile, smile”;  
sometimes it is that favorite parody of the officers’ training camps:

There’s a long, long trail a-winding  
Into No-Man’s Land in France;  
There the shrapnel shells are bursting,  
But we must advance.  
There’ll be lots of drills and hiking  
Before our dreams all come true,  
But we’re going to show the Kaiser  
How the Yankee boys come thru.

Or it may be the song of the field artillery:

ROLL, ROLL, ROLL  
Get that smell of slum and coffee, hear the cursin’  
as we load,  
Sections right, behind the guidon, and we’re out  
upon the road.  
Roll, roll, roll, just keep them rolling;  
Roll, roll, roll, just keep them rolling;  
Roll, roll, roll, just keep them rolling,  
As we’re rolling in the field artillery.

Army and navy officers are not simply permitting their men to sing—they are encouraging song in every way possible and making a place on the program of camp routine for the song leaders. They know that song makes a good soldier a better soldier; that it makes a tired soldier a rested soldier.  
“A songless army,” says Major General J. Franklin Bell, commander of Camp Upton, “would lack in the fighting spirit in proportion as it lacked responsiveness to music. There is no more potent force in developing unity in an army than in that of song.”—New York Times.

# Saves Coal

by saving  
6 degrees of heat

**K**ELSEY Health Heat at 66 degrees gives the same warming results as radiator heats at 72 degrees.

You save 6 degrees of heat. It is the special Humidifier in the Kelsey Generator that does it. Instead of a dry, parching heat at high temperature, you have a moist, healthful heat at a moderate temperature. Still you secure exactly the same comfortable warmth.

There is nothing wonderful or mysterious about it.

It is based on the same reason that so-called "humid days" in the summer seem so much hotter than other days, with the thermometer standing the same.

The Kelsey simply takes advantage of one of nature's natural laws.

But all moist heats are not economical healthy heats. Therein is where The Kelsey excels.

Send for Saving Sense Booklet. It tells why.

## THE DOGS OF WAR

(Continued from page 183)

of death and live. Then it was that other dogs crept thru the holocaust bearing the vital messages. The guns continued to fire, their shells being true, and the Germans did not pass.

When, in the darkness of night, a French sentinel crawls thru his wire entanglement and worms his way to a "listening post" in No Man's Land, to guard his comrades from a surprise attack, a sentinel dog goes with him. Crouched in a shell hole, hidden behind a rock or a stump, or prone on the earth, the outpost peers thru the night and listens with bated breath for telltale noises. At times his dog crouches beside him; at times the animal slinks with velvet paws thru the misty darkness, scouting for danger. In the fog his master can neither see nor hear the enemy's patrol gliding across the debatable ground. But the dog can hear the slightest sound, even at a great distance, and his sense of smell tells him an enemy is abroad, tho' his master may be utterly unconscious of danger.

But the animal makes no noise, gives no betraying bark. Instead he stands to attention, his ears pricked up, his tail moving, his hair bristling on his shoulders. Noiselessly he paws the ground or growls almost inaudibly. If he is separated from his master, he races back to him and indicates that danger is abroad. Should a struggle ensue, he will unhesitatingly hurl himself upon his master's enemy and try to bear him to the ground and hold him.

Yet it is as a messenger of mercy that the war dog is perhaps most useful. As a searcher out of the wounded he has no equal. When the battle ranges over a front of many miles, and the Germans shoot down Red Cross nurses and stretcher bearers without compunction, thousands of wounded men would be left to die on the field of battle were it not for these marvelous dogs of war.

Thru the darkness they go scouting, scurrying from place to place, searching thickets and shell holes, alert for smells or sounds, questing eagerly for the wounded. They cover rods where a man would cover yards. They can smell the wounded in the densest cover—under a straw stack, in a caved-in cellar—where a man might not think even of searching. Infallibly they can distinguish between a wounded man and a corpse. And once a dog has located his quarry, he tugs off a hat, or pulls loose a glove, or noses out a handkerchief, or tears away a shred of clothing, and goes racing back to the lines with this evidence of his discovery. Then, while the stretcher bearers follow behind, he excitedly leads the way to the wounded man.

We know how long it takes to train a soldier. It requires, perhaps, even longer to educate a modern war dog. For the animal must be trained to obey implicitly, to make no sound save when ordered to do so, to find the most skilfully hidden object, to distinguish between the dead and the wounded, to allow nothing to turn him aside from his duty, to refuse food from strangers, and to deliver his token, after finding a wounded man, only to a Red Cross nurse. The sentinel dog must be trained to watch, to detect approaching poison gas, the liaison dog must learn to bear despatches, the draft dog to pull. For in Alsace and the snowy passes of the Vosges Mountains dogs are hauling ammunition where horses cannot go.

Even before the war began European nations were training dogs for war service. But after the struggle opened their usefulness became so apparent that large num-

The Flower City

bers of them were utilized. It is said that not less than 10,000 dogs are serving with the armies in Europe. But we are as unprepared in the canine branch of war as we are in the artillery. Uncle Sam has neither big guns nor dogs. Soon after we entered the war, Senator Brady, of Idaho, introduced a bill into the Senate providing for a force of 1000 dogs. But other Senators did not realize the need of dogs and the bill was defeated. And so Uncle Sam is preparing to send his soldiers dogless into battle, to let his wounded die undiscovered and unsuccored.

The Red Cross is trying to supply the needed dogs. Shepherd dogs, collies and large Airedales seem to be the best breeds we possess for that purpose. But dog trainers say that any alert and intelligent dog of good size will answer. Dogs between eight and twelve months are of the best age for training.

The French not only provide war dogs for their army, but award honors to their canine heroes. Gold collars have been given by the French Society for Protection to Animals to fifteen war dogs for distinguished service. The Government has repeatedly cited dogs for bravery and heroic conduct, and has even published a Golden Book of Dogs, in which are recorded for all time some of the deeds of these canine heroes.

And assuredly they deserve to be preserved. Follette, No. 11B, is one of the dogs named in this volume. "On September 27, 1915," reads the account of her service, "she accomplished a distance of one mile under curtain fire. Wounded, she continued her mission successfully, dying five days later of her injuries."

Picture to yourself the courage and devotion of a dog like Follette. Creeping thru a hellish rain of shells that would have terrified the bravest man, she did not seek shelter when wounded, but dragged herself on and on thru that deluge of death until she accomplished her errand.

During a very trying period of the struggle in France, a certain messenger dog bore despatches from one corps commander to another almost continuously for seventy-two hours. During that time the animal hardly ate or slept. Once, while this dog was trotting wearily on his way, some soldiers stopped him and tried to feed him. The hungry animal looked wistfully at the food, sniffed longingly at it, then broke away and trotted on.

Far in advance of the French lines along the Aisne, a scout lay hidden in a thicket. A shell burst immediately above him, tearing his body almost into shreds. The pain was intense; but he was so terribly wounded that he had not strength even to give himself an anesthetic from the medicine kit he carried. Hidden so securely, there was no hope that searchers would ever come upon him. An agonizing death by inches was all the wounded man could see ahead of him. But when darkness came, destroying the little hope he had cherished, two red eyes suddenly glowed in the darkness of the thicket, a shadowy form stood over the helpless man, and a moment later a war dog was racing back to the lines with the dying man's cap in his mouth. The soldier lost consciousness. When he came to, stretcher bearers were carrying him back to life and safety and the faithful dog was trotting on behind.

One of these dogs of war that wears the French Government's medal of honor is a plucky fox terrier that saved 150 lives after the battle of the Marne.

Shakespeare tells us that "The dog will have his day." Apparently that day has arrived.

## Make Your Flower Garden "Do Its Bit"

**F**LOWER gardens in these war times must meet the needs of the *Nation's soul* as well as of its body. Never was the Country in greater need of flowers and trees and growing plants to delight the sight and lift the thoughts and cheer the heart. Plan and plant with a flower lover's instinct.

HENRY A. DREER

714-716 Chestnut St. Philadelphia, Pa.

## SUCCESSFUL SWEET PEAS

(Continued from page 195)

stitute will be found in wire netting, four inch mesh, and which should be at least five feet wide. If it is carefully housed while not in use, it will last for many years.

Another method is the use of soft jute twine. In this case stout stakes are used, driving them into the ground at distances of five feet, along either side of the row, thereafter running the twine from stake to stake, starting the first line four to six inches from the ground, and allowing six inches between each line of twine. This will be found a very easy and simple method of supporting the plants, tho never so satisfactory as branches or wire netting.

### PREPARING THE SOIL AND SEED

As the sweet pea is naturally a very deep rooting plant, it can only be successfully grown on land which has been well broken up. Ground which has been trenched or deeply dug, consisting largely of fine soil particles, naturally retains moisture much better than lumpy ground that has been surface dug only. In periods of continued heat and drought, plants growing in the former have a great advantage over those planted in the poorly prepared land, for hard ground is more or less impervious to moisture, either in the shape of rain or applications of water, and owing to the force of capillary attraction it parts more readily with what it may contain. Thus the small fibrous roots of the plants which are its chief feeders die, and the life of the plant is much shortened.

Remember that the several varieties do not all germinate at the same time, some differing considerably in the time they take to sprout under similar conditions. In the majority of cases this depends on whether the seed was ripened quickly or not, and on the conditions governing the harvesting. Then again, some varieties have a much tougher seed coat, or skin, than others, and do not respond so quickly to warmth and moisture when sown.

If you have been troubled with poor germination of sweet pea seed, I would suggest that you soak the seed over night in warm water previous to sowing. If on examination the seed shows no signs of swelling, cut each of the hard seeds with a sharp knife, making the little cut or chip on the side of the seed, taking care not to cut the eye or germinating point.

Keep after the sweet pea plants with a hoe at least twice a week, working well up to and around the plants, thus providing a thorough dust mulch which will keep out the drying influences of the sun's rays and so help retain the soil moisture. A mulch of farmyard manure extending twelve inches on either side of the row will be very helpful when warm weather becomes too severe.

Water the plants only when you can give them thorough soakings at each application. "Dribbles" of water work harm instead of benefiting, by bringing the fine hairy roots to the surface in search of the moisture, where they are invariably killed the following day, as the soil dries out and the sun gets in its work. However, if it is possible to give the plants a sufficiency of water, it should be applied copiously, at least twice a week, and after very hot days the plants will be greatly benefited by spraying them overhead after the sun has gone down.

When the plants have been flowering for a few days, liquid manure may be applied with great benefit, but never apply it alone; in all cases it should follow a thorough soaking of water. Above all, don't forget the old advice to cut all flowers produced, never allowing a single seed pod

to form, or the flowering season will be much shortened.

#### CHOOSING YOUR VARIETIES

The question of selecting varieties of sweet peas from the long lists offered us by seedsmen making a specialty of sweet peas, may be rather confusing to the amateur, but it is chiefly a matter of personal taste. The best flowers are of the Spencer type, and to prolong the flowering season it will be advisable to include a few of the new early flowering Spencers, as they will begin to flower at least two weeks earlier than the regular or summer flowering Spencer type. If the seed is sown under glass early in February, these early flowering Spencers should begin to bloom early in May, and with proper attention and under good culture may continue to produce flowers almost as long as the summer flowering varieties.

The best early flowering sweet peas are: Early Enchantress, a beautiful shade of bright rose pink; Early King, bright rich crimson; Early Pink Beauty, deep pink, similar in color to the old Countess Spencer; Yarrowa, rose pink with lighter wings; Forshook Pink and White, bright rose pink standard with white wings; Early Primrose Beauty, primrose flushed rose; Early Lavender King, large flowered lavender self; Early Snowstorm, a pure white self. The best summer flowering Spencers offer a choice of King White, large pure white self; Elfrida Pearson, blush pink; Hercules, a rich dark pink self; Margaret Atlee, rosy pink and cream; Mrs. Routzahn, cream pink; Orchid, an extra fine lavender; Margaret Madison, a light blue; King Edward Spencer, rich crimson; Rosabelle, a large rose colored self; Illuminator, salmon cerise; Fiery Cross, a sensational fire red self; The President, orange scarlet self; Cherub, rich cream, edged rose; Constance Hinton, pure white; Wedgwood, large light blue self; King Manoel, rich deep maroon self.

## COUNTING YOUR CHICKENS

(Continued from page 194)

has come to be a disputed question. Most poultry keepers think that cooling results in stronger chicks. Perhaps the novice can do no better than to place a thermometer on the eggs and let them remain out of the machine until the mercury marks 85.

At the end of the eighteenth day shut up the machine and keep it closed until the chickens are all out. No greater mistake can be made than to keep opening the door, for any reason whatever. A wet chicken is easily chilled, and this chilling may be fatal. It may happen, tho, that the chickens are found to be panting in such a way as to indicate the need of fresh air. In that event, open the door the width of a match and fasten it there. This will give the needed ventilation.

It's always best to have the egg chamber dark when the chicks are coming out. If necessary, pin a piece of cloth or heavy paper over the glass. There is a deep nursery under the egg chamber in many machines. The chicks are expected to fall into it in order to relieve the crowded condition above, but if they are wet, they are likely to suffer. Keep them in the egg chamber until they are dry.

Of course the wise poultry keeper will have his brooder heated and ready for the chickens before the hatch is finished. Then the youngsters may be shifted as soon as the hatch has been completed, altho it is not well to be in any hurry about removing them from the incubator.

## MAGALOG

*Our Illustrated Catalogue in Magazine form. A reference book for all the year. Sent free upon request.*

The well balanced garden will yield food for the body as well as the soul. Grow more fruit. Fruit is nature's gift of wholesome nourishment served in most appetizing form. Eat fruit and save sugar. Eat nuts and save meat. By eating fruit from your own gardens you will save food for the fighting men.

Are you planning a Home Orchard of early bearing fruit trees this spring?

A Berry Garden from which you can pick berries this summer?

A Rose Garden that will bloom from spring to frost?

Or a Garden Beautiful?

Let us help you! We are landscape builders. We create pictures with plants for year round beauty and fruit gardens of real value.

Our entire organization of landscape engineers, architects, shrub, tree and orchard experts is at your disposal.

Plant symmetrical, advanced, carefully selected, fresh dug, heavily rooted stock for immediate effect and results.

## THREE WAR HORIZONS

(Continued from page 175)

the munition makers at their lathes, the miners in the coal pit, the farmers on their reapers, the teachers in the schoolroom, the saleswomen in the stores—by whatever there is of national power and energy.

### MATERIAL PREPARATION

This task involves the creation, distribution and use of military material beyond anything previously known in the world. In 1917 as in 1861 and 1775 that material had to be made ready after the war began. Never was anything more harebrained in appearance than the fight at Lexington and Concord. The British force in Boston was 5000 in number. Against these trained men of war the Massachusetts colonists opposed perhaps 1000 or 2000 minutemen. Back of the British garrison of Boston was Great Britain, with eleven million people, a navy of 270 ships, and a standing army of 30,000 men, with the experience, the prestige and the memories of a century of successful war. The two million white colonists were weak in muskets, field guns, organized transport, medical stores, discipline, and sometimes food.

Again, in 1861, the nation began a great war without a military organization, without supplies, without a navy and without an army. Once again American pluck, patriotism, and the ability to make the most of unfavorable conditions, pulled both sections up, till the North enrolled two million different men and had a million in arms at the end of the war. Northerners recognize the splendid pluck and tenacity of the men of the South, who out of a white population of military age, about a fourth as numerous as that of the North, enlisted eleven hundred thousand men. It was the "anaconda policy" which won the war, that combination of a throttling blockading fleet, with a pounding and advancing military line in the interior.

In April, 1917, the United States again went to war, this time with the most powerful nation that the world has ever seen, on a basis of a regular army of about a hundred thousand men, a good navy: without a single military aeroplane, without one battery of the big field and siege guns which win modern campaigns; without rifles enough for its first army, without a single regiment trained to the trench, wire and bomb methods essential for holding a line of battle. That is why we are pouring out men and energy now, to produce these necessities of warfare, to catch up with our own enthusiasm.

### NATIONAL PILOTS

The parallel may be carried farther to include the leaders in the three great struggles. It is true that wars are won by the average man, or rather by the combination of the efforts of average men: it is equally true that intelligence, education, and business organization are big factors. No nation can successfully make war without leaders who understand, combine and apply the mass and weight of their countrymen. The heads of the state in the Revolution, the Civil War and the German War have been men of very different type: Washington, the aristocratic gentleman, the richest planter of his time, thruout his life the associate of the most famous men in the country. Lincoln, the worker with his hands, student by candle-light, child of the frontier, lover and exemplar of the plain people, looking from within outward on the problem of keeping the nation up to its work. Wilson, the professional man, type of the active lawyer and business man and professor who are trained themselves and are training their fellows, member of

the republic of letters, a bookman with a Scotch-Presbyterian shrewdness and practicality.

These three men are alike in their appeal to their countrymen to stand fast in the midst of tumult and danger. Washington was a great practical organizer, who could make a weak and undisciplined army beat the best soldiers that Great Britain sent; a man of action, a man to follow, a man by the common consent of mankind set among the immortals for his unshakable and heroic confidence. He keyed up the whole people to a sense of their duty.

Lincoln was a shepherd, rather than a commander. His rugged character, as strong as that of Washington, approached his countrymen by an address less formal yet more effective. Like Washington, he had an amazing insight into the character of those about him, like Washington, he saw the necessity of selecting the strongest and ablest men whom he could find, to share in the great task of governing and directing the army. He could and did appoint his political enemy, Stanton, to be Secretary of War, because the country needed a Secretary of War with a backbone. In his Cabinet and in his civil and military appointments, he gave the country the best that he found.

Upon President Wilson falls the same burden of setting the pace for his country, of designating the military and civil leaders of the war, of making final decisions as to the distribution of troops and the field of warfare. The task is enormously greater when measured by hundreds of thousands of men, by millions of debts, by shiploads of war material; but the task is substantially the same as that of Washington and Lincoln. The President is great and powerful by reflecting the greatness and power of his country. His word rings among the nations because it expresses the will of the American people. Hardly a public man in the world has such a gift of lucid, logical, unmistakable statement.

The President is infused with a sense of the prodigious latent force resident in his hundred million fellow Americans. He appeals to high motives; he applies his vast influence to the task of concentrating the physical resources of the country, as he has already concentrated the national administration. Germany has taught the world that the effective weapons of war are not simply powder, guns and ships, but national resources and their scientific use. The President must command shipyards and railroads as well as armies and navies. Now as in the two previous crises of the nation's history, we look to the Pilot of the White House!

Cambridge, Massachusetts

### RUNS IN THE FAMILY

"I am sure I don't know where that boy of mine gets all his impudence and self-assurance; surely, not from me," complained the head of the family. "He returned home from school the other day to spend the holidays, as I supposed, and, entering my office, he threw his hat on the floor, selected an easy chair, put his feet on my desk, lighted a cigaret, and then drawled:

"I say, dad, do you remember the time you were expelled from school?"

"I did. There was no use denying it, for one day, in a burst of confidence, I had told him of my escapades as a boy.

"What do you mean, you young rascal?" I roared.

"Oh," said he, easily, "I've been expelled, too. Astonishing, isn't it, dad, how such things will run in a family?"—Chicago Daily News.

Pebbles

Elliott—Do you like bow legs?  
Phyllis—Yes, they give a man such an arch look.—*Princeton Tiger*.

No, Oswald, persons who wear wrist watches do not necessarily have a lot of time on their hands.—*Cornell Widow*.

IN OLE KENTUCKY  
“My father was killed in a feud.”  
“I never would ride in one of those cheap cars.”—*Cornell Widow*.

“Tremendous crowd up at our church last night.”  
“New minister?”  
“No, it was burned down.”—*For Instance*.

She—I like a man of few words and many actions.  
He—You will like my brother; he has St. Vitus’ dance.—*Tiger*.

’20—I want to enroll in the tenth regiment.  
Recruiting Officer—Why that regiment?  
’20—I want to be near a friend of mine. He’s in the eleventh.—*Syracuse Orange Peel*.

“I wouldna say McTavish canna learn the game,” remarked Sandy, as they trudged home from the links; “but it will be deeficult for him.”  
“Aye,” agreed Donald. “At times he will be like to burst, what wi’ being sa releegious and tongue-tied.”—*Exchange*.

With apathy did the village resident listen to the city visitor’s account of the joys and excitement of life in town. “We get everything here that is worth seeing,” said the villager. “Why, last week we had the champion brass band here, the week before the greatest trombone player in the country, and this week we are going to have a great production of the drama, ‘Lewis the Cross-Eye.’ I tell you that is going to be a real show!”

“What did you say was the name of the play?” asked the visitor.  
“Here, have a look for yourself,” said the other, as he produced a much folded program announcing “a grand production of ‘Louis XI.’”—*Exchange*.

It was a broiling hot day in the park, and those walking therein were well-nigh exhausted, when a very stout old lady came bustling along one of the paths, closely followed by a rough looking tramp. Twice she commanded him to leave her, but still he followed just behind. At last the old lady, quite disgusted, turned angrily round and said:

“Look here, my man, if you don’t go away I shall call a policeman.”  
The poor fellow looked up at her with a tear in his eye, and then remarked:  
“For goodness sake, mum, don’t go away, for you’re the only bit of shade in the park.”—*Everybody’s*.

The story of the rival bootmakers, which appeared recently, is matched by a correspondent of an English paper with another story, equally old but equally worth repeating. It concerns two rival sausage makers. Again, they lived on opposite sides of a certain street, and, one day, one of them placed over his shop the legend:

“We sell sausages to the gentry and nobility of the county.”  
The next day, over the way, appeared the sign:  
“We sell sausages to the gentry and nobility of the whole country.”  
Not to be outdone, the rival put up what he evidently regarded as a final statement, namely:  
“We sell sausages to the King.”  
Next day there appeared over the door of the first sausage maker the simple expression of loyalty:  
“God save the King.”—*Christian Science Monitor*.

### Terra Cotta TILES for ROOFING

Architects: Shepard, Farrar & Wilson, Kansas City, Mo.

A Tile Roof adds wonderfully to the beauty and character of a building. Note this beautiful Glasner-Strauss residence of Kansas City, Mo. The roof is of Imperial Closed Shingle Tiles. (See detail of design in border of this advertisement.) Ask your architect about a tile roof for your new home.

Our illustrated booklet “The Roof Beautiful,” printed in colors, contains views of many beautiful homes with roofs of Terra Cotta Tiles, and is sent free upon request.

HODGSON *Portable* HOUSES

When Spring comes you don’t want to bother with building. Even the erection of a play house or screen house will make enough dirt, dust and din to take away the joy of Springtime. Hodgson Portable Houses relieve you of building-worries. They are built at the Hodgson factory. They are made of neatly finished, fitted and painted sections which can be easily put together and taken apart.

You select the bungalow, cottage, garage, play house or poultry house you want from the Hodgson catalog which gives photographs, plans and prices of great variety. Then by paying 25% of the cost of your house we prepare and hold it until wanted. We then ship it in sections and it is just a day’s work for unskilled workmen to put it together. Send for a catalog today.

## MAKING OVER MEN

(Continued from page 176)

and glowing from the cold air, were full, stern and strong. Their bodies had filled out wonderfully and they stood erect, proud, silent. I drew closer in order to examine them thoroly. In place of the old apathy that was apparent on each face when they first arrived, I saw a grim expression of pride and determination. They were fully equipt. Their Enfield rifles gleamed in the sunlight as a result of their labors. A profound respect for their remarkable appearance swept over me. After a few moments the commanding officer's orders were given in clear, terse tones.

"Present arms!"

"Right shoulder, arms!"

"Pass in review!"

And the subordinate officers followed with the command:

"Squads right, march!"

The military band struck up a lively air and the great body swung into motion like a huge machine well under control. They passed in perfect line and marched in step with the music. Three great stalwart soldiers bore Old Glory ahead of the moving troops.

For more than thirty minutes I watched them, absolutely fascinated. My "Adam's apple" kept swelling into my throat and choking me.

When they were dismissed I mingled among them and my astonishment was even greater than before. "Husky" is the best word I can employ to describe their physical condition; "splendid and truly American" most adequately typifies their spirit. Without an exception I found them to be happy and well contented—and extremely anxious to go over there "and give 'em hell."

This time I picked out another young soldier of the average type I saw. I asked him virtually the same questions I asked the "rookie" several months before. And this is what he said:

"Like it? Yes, sir. I'm just naturally a fool about it. God knows I will never be able to return to an office after the job is done. Here's to the Great Outdoors. The only objection I have to offer is the delay in getting over there with the rest of the boys. But you can take it from me that when we do get there we sure will make things hot for Fritz . . . damn him!"

And I believed him!

Camp Pike, Arkansas

### AN OCTOBER WARNING

Oh, Mistoh Hoover mentions wheat  
An' taters, corn an' beans.  
De beef an' pork an' other meat  
Is now beyond our means.  
But, oh, you 'possum on de topmost twlg,  
It's a-tellin' of you true,  
Mistoh Hoover's lookin' after de cow an' pig,  
But he ain' no puttection to you!

It's, oh, you rabbit, on de run,  
You gotter lost your pride;  
An' ol' Bob White, when I gits my gun,  
It's time foh you to hide.  
An', oh, you oyster in de great big bay,  
Whur de water is so blue—  
Mistoh Hoover, he surely has to have his say,  
But he ain' no puttection to you!  
Philander Johnson in the Washington Star.

### CRIBBED FROM VAUDEVILLE

John—I hear you enlisted.  
Henry—Yes. Joined the National Army of American Jewelers.  
John—What on earth is that?  
Henry—They're the boys who are going across the ocean to put a new set of works in the Watch on the Rhine.

### \*SPECIAL OFFER

Nine Numbers of Vogue for \$2—ten if you mail the coupon now.

We will start your subscription with one of the first copies off the press of our Forecast Number, thus giving you TEN numbers of Vogue instead of nine, if your order is received in time.

Since the additional copy must come out of a small reserve supply on hand to meet the demand for this annual Forecast Number, you can see why this extra number cannot be guaranteed unless your order is received immediately.

### Don't Send Money

Don't bother to enclose a cheque, or even to write a letter. The coupon opposite will do, and is easier and quicker. With one stroke of the pen, you will solve your entire spring and summer clothes problem, assuring yourself valuable and new ideas and insuring yourself against costly failures.

VOGUE, 19 West Forty-fourth Street, New York City  
Please send me the NINE numbers of Vogue as described. I will forward \$2 on receipt of bill (OR) I enclose \$2 herewith. It is understood that if this order is returned promptly, you will send me an extra complimentary copy of the Forecast Number, making TEN issues in all.

## Capital Copy

The second training camp in Porto Rico will be opened in February.

The War Savings Stamps are known in Washington as "Little Baby Bonds."

Now that all the draft exemption claims are in, it is found fifty men in every hundred attempted to obtain exemption.

The Food Administration proposes to buy thirty per cent of the output in every flour mill in the country for the use of the army and navy.

The army is calling for 37,500 nurses to support its first army of 1,500,000 men. The present strength of the nurses' corps is only 3800.

The Controller of the Currency announces that the national bank resources of the country at this moment amount to \$18,553,000,000.

The Third Liberty Loan will be greater than the loans raised in both the previous issues, and will probably be floated about the first of March.

The United States has sixteen new cities, each about the size of Sacramento, that the geographies do not mention. They are the cantonments of the army.

The total insurance policies taken out by American soldiers and sailors have passed the \$3,000,000,000 mark. The average policy is for \$8557.

Persons who wilfully fail to make returns to the Government food survey will be subject to a fine of not more than \$1000, or imprisonment for one year.

The first ship launched under the Government's emergency fleet contract was an 8000-ton standardized steel merchantman. Seattle was the honor city.

Within the next three months motor truck parcel post routes will be in operation in various parts of the country aggregating between 3000 and 4000 miles.

The Department of Labor denies the existence of a real labor shortage in the United States. All that is needed is a series of labor exchanges. This is being planned for.

In the year from November 15, 1916, to November 15, 1917, prices of food as a whole advanced 23 per cent. Potatoes is the only article that shows a decline in price.

The Navy Department has just learned that the two men of the "Jacob Jones" captured by the German submarine on December 5 are Albert De Mello, seaman, and John Francis Murray, ship's cook.

General Pershing has forbidden American soldiers to buy or accept as gifts whiskey, brandy, champagne, liquor or other alcoholic beverages other than light wines or beer.

The President has issued an executive order to the effect that all changes made in the laws for the governing of the Virgin Islands must have the approval of the American Governor.

Secretary Lane finds he has a deficiency of \$23,000,000 to be met because of the law passed last October increasing the rate of pensions of widows of soldiers of the Civil War and Philippine Insurrection to \$25 per month.

The Post Office Department wish it understood that magazines devoted to literature or containing matter of general interest can only be sent to the soldiers, under the one cent postage stamp, when clean, untorn, unwrapped and not out of date.

Those entitled to wear the service flags with ribbon to be known as the Mexican service flag include those officers and soldiers who were in Mexico as members of the Vera Cruz Expedition, who were members of the authorized expeditions between March, 1916, and February, 1917, those who participated in any engagement against Mexicans between April, 1911, and February, 1917, and those who were present as members of the Mexican Border Patrol between April, 1911, and February, 1917.

# Why You Need This Work NOW

*You need it as a good citizen of our Nation* which is just entering upon an international era when we must meet and compete with other countries. Furthermore, the United States is the acknowledged world-leader and to lead other nations rightly and safely, we must *study* and *know* them.

*You need this work as an individual* because in whatever profession or occupation you may be engaged, you must study it with reference to other nations, with whose people, either as visitors or naturalized citizens, we must do business.

That's why, both as a citizen and for individual benefit, you need

## 24 Volumes **THE NEW INTERNATIONAL ENCYCLOPÆDIA** 80,000 Articles

*Second Edition; Recently Completed*

Revised, Rewritten and Reset from A to Z  
Printed Throughout from New Plates  
Number of Volumes Increased  
Size of Page Enlarged

*Editors:*

FRANK MOORE COLBY, M.A.,  
TALCOTT WILLIAMS, LL.D., L.H.D., Litt.D.

THE NEW INTERNATIONAL is the only standard general reference work that is *new from cover to cover and right down to date*. It is seven years later than the only leading encyclopaedia that claims to be a competitor.

### STRONG POINTS

- 1. Accuracy:** all important articles written by specialists.
- 2. Authority:** can be quoted on any subject without fear of successful contradiction.
- 3. Comprehensiveness:** covers a wider field than any other general reference work. It contains 80,000 articles—30,000 more than any other encyclopaedia.
- 4. Lucidity:** written in language so plain that even the young folks can understand.
- 5. Illustrations and Maps:** carefully prepared to illuminate and explain the text.
- 6. Convenience:** printed on thin paper—not too thin but easy to handle and to leaf.
- 7. Arrangement:** all subjects alphabetically arranged and easy to find.
- 8. Pronunciation:** all except the most common words made clear by a simple phonetic system. *Derivations also indicated.*
- 9. Bibliography:** every important subject supplemented by a full list of books that may be consulted.
- 10. Courses of Reading and Study** afford specialized help toward self-instruction in leading branches of knowledge.
- 11. Attractiveness:** monthly prizes stimulate use of volumes thus increasing their interest and value.

You need THE NEW INTERNATIONAL, *now* not only to post yourself regarding other nations, especially the warring nations in whose struggle we are now bearing our part, but you also need it to keep pace with the *new knowledge* in which the present day is so prolific—such subjects, for example, as the following:

**Aëronautics, Health-Conservation, Scientific Management, Profit-Sharing, Income-Tax, Municipal Ownership, World-Peace, Home Economics, Sanitation, Woman-Suffrage, Submarines and hundreds of others.**

### Helps You Succeed

Never before did success so depend on knowledge. Never before was it so necessary to keep abreast of the times. Never before was it so easy to do so, with THE NEW INTERNATIONAL as an ever-ready helper always at your elbow. It is invaluable for personal possession and study and also to aid the young folks in their school work.

### Send in the Coupon

We will at once forward free, our *Six-page Illustrated Book* showing *Seventeen pages, Engravings, Color Plates, Maps, etc.* with the *reasonable price* and *easy terms* on which THE NEW INTERNATIONAL can just now be secured.

**SEND IN THIS COUPON NOW**

Market Place Talks

BY LUIGI CRISCUOLO

THE FUTURE OF RAILROAD STOCKS

THE endeavor was made in my last article on the railroad crisis to summarize the situation from the point of view of the shipper, that of the railroad and that of the economist, in order that the reader could be an impartial judge of the merits of the arguments presented. Since then, a great many events have occurred which will affect the whole future of the railroads and their securities. The American people begin to realize that the operation of the railroads in peace times presents problems which are but elementary in comparison with those that arise when we are at war, when we have to feed ourselves as well as our allies and supply them with the munitions of war.

There are problems which are not matters of operation which affect the investor directly and these regard the future of stocks and bonds of railroad corporations as investments.

The President's proclamation stated that nothing should be done to impair the rights of stockholders, bondholders or creditors to receive a just and adequate compensation for the use, control and operation of the properties taken over. All dividends and interest which have been regularly paid, may be paid in due course unless otherwise determined by the Director General. The carriers are permitted to arrange for the renewal of maturing obligations and are protected against attachments.

The measure is purely a war precaution and really has no connection with the many movements for government ownership of the railroads or for more stringent regulation of the carriers. The President said that it was necessary for the good of the country that security values should be maintained and that the financial require-

ments of the roads should, during the period of the war, be "wisely related to the financial operations of the Government." This reassures many of us who wondered where the railroads were going to secure funds for extensions and additions in times when industrial corporations were paying eight per cent for money.

The calendar year 1917 recorded the highest gross earnings for our railroads, exceeding those of 1916, the previous high records, by \$450,000,000. The gross amounted to over \$4,000,000,000 as compared with less than \$3,000,000,000 in 1914, while net operating income was about \$969,000,000 as compared with \$1,089,000,000 in 1916 and but \$673,000,000 in 1914. There was a decrease in net income, of course, over 1916, but this is accounted for by the operation of the Adamson eight-hour law and the increase in the cost of all material used in railroad construction, increased taxes, etc.

In the calculation of the guaranteed income, the years ended June 30, 1917, 1916 and 1915 are to be averaged. In some cases this average shows a fairly good amount earned for stocks while in others 1917 was far better than the two previous years, so that the average is brought down to a point where it appears dangerous to continue the payment of dividends on stocks now receiving dividends or the inauguration of dividends on stocks which earned a sufficient amount in 1917. This condition is apparent particularly in the case of railroads which have just emerged from receiverships extending over a period of several years. In such instances, operation prior to June, 1916, was expensive on account of high maintenance charges to take care of property which had not been previously ade-

\* As of January 21.

quately maintained. When such companies have passed out of the hands of receivers, after great sacrifices on the part of security holders both in market value of securities and in loss of interest, the results have shown substantial earnings on securities issued in the reorganization, even including the common stocks which represent potentialities only.

In the case of reorganized railroads, it would be eminently fairer to use either the last fiscal year or the two years ended December 31, 1917 and 1916 as the basis for calculating the total-net-income.

Another feature occurs at once to the student of railroad finance and that is the fact that while the total-net-income is guaranteed as a certain basis, there should not be overlooked the fact that as railroads spend large sums for improvements and extensions, issues of bonds are sold to cover the expenditures as capital charges. While the improvements in time produce additional revenue, the railroads' fixed interest charges are also increased. If the guaranteed total-net-income is to be on the basis aforesaid and if fixed charges are to continue to increase as heretofore, these charges may mount while the total-net remains stationary. The result would be that while on the basis of the three-year average there would be a surplus for dividends after the usual fixed charges, if the charges keep on increasing either the surplus for dividends must decrease or else the Government will have to draw on its own funds to prevent a deficit from appearing in its railroad accounts. Deficits should be avoided, particularly when they can be avoided by a proper system of accounting and basis of remuneration for the use of the railroad properties.

Means should be found to guarantee a surplus applicable to dividends rather than a balance for fixed charges. Stocks which have earned and paid dividends for decades and are owned by thousands of women, trustees and aged investors should be protected by an adequate guarantee.

At the present time security holders are most concerned in the immediate future of their stocks or bonds. Without any qualifications, sound bonds are protected by the order and their future will be regulated by the cost of money rather than by the matter of margin. The margin in the case of good securities will be there without any question, but in the case of stocks, the three-year average reduces it considerably in many instances. In order that the railroad stockholder may be enlightened as to the possible status of his dividends, the accompanying table has been compiled. The figures in all cases are necessarily partly estimated, but it is believed that they portray an approximately correct status. Where the margin is more than ample to pay the usual dividend the value of the stock will depend upon market conditions. In the case of stocks which do not pay dividends, their future will depend upon their earnings after government routing of traffic and any changes in regulations affecting the guarantee. At the present time, I should not care to hold any non-dividend-paying stocks excepting those where the average shows a sufficient margin to permit the paying of dividends. In the case of prospects like Erie common, Missouri Pacific common and St. Louis & San Francisco common, it appears advisable for the holder to sell in the next rise and reinvest in dividend paying stocks. These are times to watch one's investments closely and those investors who cannot do this should eliminate from their holdings all of those securities which have the tinge of the extremely speculative.

## Heavy Demand for 6% Bonds Safeguarded Under Straus Plan

HERE is a fact of profound significance: In these days of war and of economic change, when the market for investments in general has slackened, the demand for first mortgage 6% serial bonds, safeguarded under the *Straus Plan*, has been steadily maintained.

This demand comes from thousands of investors, all over the United States, old customers and new.

Nothing could be more clearly significant of the confidence felt by investors in these bonds, and of the standing they have gained for themselves in the security markets.

Their standing and the confidence investors show in them are based on their record, their amply proven safety, and their stability in value, demonstrated over a period of many years.

You should post yourself on the merits of these sound 6% bonds, and learn the definite reasons for their widespread popularity. A letter or a postcard will bring you full information. Write today for

# THE MOTOR HOUR IS HERE

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR EFFICIENCY SERVICE

**J**UST as the passenger car struggled for some time to achieve recognition in a serious way, so also has the motor truck struggled. Nowadays, when every newspaper tells of some new feat in the war, made possible by motor trucks, it is hard to believe that for years the sale of these vehicles should have been attended by an almost heartbreaking indifference on the part of business men all over the country.

The motor hour is here. And dead indeed is he who does not acknowledge it. My purpose here is to show briefly that the field and scope of the truck in civil life is expanding every day and that the truck is steadily bringing to this country something it needs above all else: a mobile, flexible and far-reaching transportation system. I shall do this by giving a number of unrelated examples:

Bids have been called for by the Post Office Department for motor trucks to be used in postal service between New York and Philadelphia, between New York and Hartford, Connecticut, and between Detroit and Toledo. This is an important step in the solution of the problem of transporting perishable foodstuffs and reducing the cost of living by bringing the producer and consumer into closer contact. The New York-Philadelphia route via Trenton will tap a great egg, poultry, fruit and vegetable section. Such produce can be delivered in the two cities, by motor truck, the same day it is shipped. Under the present system of shipping by freight and express on the railroad the delivery date of such produce has little or no relation to the shipping date. This motorized transportation will save millions of pounds of foodstuffs from rotting in freight stations.

**O**UT in Big Cottonwood canyon, in Utah, is a mining region and last July the Water Works Commission of Salt Lake City served notice on the mine owners that because the road to the mine passed thru a watershed of the city supply system the use of horses would be prohibited. The road is a tortuous one. Its grades run from 10.7 per cent to 23 per cent. Hairpin turns, high altitude and shifting soil add to the difficulty of negotiating the route. Four-horse teams made two trips in eight hours and carried half a ton up the grade. On the descent they were able to handle five and one-half tons. Today certain trucks (name of make on request) make four trips apiece in twelve hours with an average load of two tons each on the ascent and five tons each on the descent. Figures comparing the revenue production of teams and trucks show a high earning capacity for the trucks, one truck being able to do the work of seven four-horse teams. Teams and trucks are credited with \$5 per ton on everything they haul to the mine and \$1.75 per ton on everything hauled from the mine to the bins. On this basis, four horses (hired at \$7.50 per day) show a profit of \$9.25 per day, whereas one truck produced a profit of some \$60 per day. The trucks in use are special narrow tread machines and their introduction is expected to contribute much to the development of the mining industry, particularly in sections where the mines are remote from bins and

smelters with rough mountain country intervening.

Out near Seattle a big dairy farm has installed a truck and trailer. In them milk and other dairy products are transported from the farm to the city milk depot. Electric side lights and a searchlight on the roof help the driver to maintain his schedules in long hours of operation in darkness. Both truck and trailer are of the enclosed van type. Apart from its sanitary features and the reduction of time during which the loads are in transit, this equipment has lowered the cost of milk transfer and rendered a generally satisfactory service.

One of the big rubber companies maintains an intercity motor truck freight service between Akron and Boston. The trucks are equipt with gargantuan pneumatic tires which permit speeds hitherto unheard of for heavy duty trucks, while protecting both truck and load from road shocks and vibration. These overland freighters are run on regular schedule and are kept moving day and night. While one man is at the wheel a relief driver sleeps in a berth in the truck. On this 750 mile route finished tires are carried eastward and raw materials are hauled back to Akron. The service keeps a steady movement of freight going in both directions.

**S**HOE manufacturers supplying our armies operate fleets of trucks between Boston and nearby shoe centers, carrying hides in one direction and finished shoes in the other. Cotton and woolen mills in New England do not await the arrival of slow incoming freight. They go and get their raw materials. Heavy machinery is delivered direct from shops and foundries in Connecticut to factories in New York. Wholesale grocers deliver in Washington from warehouses in Baltimore. Tons of chemicals (high explosives which railroads refuse to carry) are delivered with but one handling after they leave the chemical works.

The wife of a prominent man who is now working for the Government was recently obliged to move her family from New York to Washington. Having heard that many train passengers to the capital had been forced to stand thruout the journey, for ten hours, she decided to take her children down by motor. Then, instead of relying on the railroads, she purchased a motor truck with which to transport trunks and baggage from city to city. Incidentally, along with the baggage, her truck transported many barrels of potatoes, apples and other supplies grown on her country place.

*Ask the Director anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.*

Postmaster Burleson reports that motor trucks are today saving the Post Office Department \$320,000 annually on mail routes not less than 50 miles in length. The Government operates its own trucks in Washington, St. Louis, Boston, Buffalo, Chicago, Detroit, Indianapolis, Nashville, Philadelphia, Pittsburgh, Brooklyn and New York.

**O**NE of the most valuable assets of a farmer is time. The more he can save in transportation, the more he can devote to agriculture. Farmers using horses for hauling their produce or live stock to market or to the railroad lose almost half their working time. Now they are beginning to see the motor truck. A dealer in the Mississippi Valley sold twenty-seven trucks to farmers in two or three months.

The passenger car show in Philadelphia opened right on the heels of the New York show's closing. Many manufacturers had special show cars, cut-away chassis and the like which they wanted to whisk from New York to Philadelphia. Motor trucks again came to the rescue.

An interesting and unusual case of saving by the motor truck route was printed recently in the *Commercial Vehicle*: "It has been estimated that a 300 pound hog will weigh only 280 pounds after a 12 mile ride in the average farm wagon and considerably less than that if it has to be driven on its own legs. This shrinkage is due to two causes, the kind of road and the rough riding of the average farm wagon. A good example of a motor truck saving made in this class of work is given by Roy Hickman, a farmer near Colfax, Washington. He hauled thirty large hogs to the nearest town in a large five-ton truck. The hogs were weighed before and after the trip and no shrinkage was detected. The total load weighed 9000 pounds and the hogs brought \$13.50 a hundred delivered at the market. If these hogs had been transported in horse wagons and had shrunk 20 pounds apiece, the total shrinkage would have amounted to 600 pounds, which at the rate of \$13.50 per hundred would have meant an actual loss of \$81.

In many rural districts children are now being collected and delivered to school by motor bus and returned to their homes several miles away by the same method. The bus is paid for by the community. This makes going to school pleasant. And what is more it cuts down truancy.

Membership in Methodist churches had the largest increase in its history during the past year, while the number of church edifices decreased. The change is attributed by the official statistician of the Methodist Church to the use of automobiles. "Almost every family in the Middle West owns an automobile," he says in his annual report. "It is as easy to go five or ten miles to church as it used to be to drive a mile."

The motor hour is here. Motor equipment has proved itself. Its future development for the country's good, for your own good, depends upon one thing. That thing is road-building—the establishment of substantial, properly built highways for freight and passenger motor traffic. What you can do to help in this direction I will outline in a subsequent article.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION	
BY FREDERICK HOUK LAW, PH.D.	
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY	
SECTION I. ORAL AND WRITTEN COMPOSITION.	
The Story of the Week.	
1. Prepare a spirited speech on "America's Incomparable Achievement," basing your work on "Mr. Baker's Defense."	
2. Write a circular that will appeal to the people of your neighborhood, asking them to use "Liberty Bread." See "Wheat Will Win."	
3. Explain, as if to one of your friends, exactly what is meant by a "Shipping Dictatorship."	
4. In a single paragraph explain the possible effects of the establishment of an independent Ukrainian republic.	
5. Explain to your class the geographical situation of Rumania, and its present importance in the war.	
6. Sum up the reasons that make it evident that Germany and Austria must ultimately submit to the Allies.	
7. Draw a map, and explain the situation on the Italian front.	
8. Write an argument for or against raids in reprisal.	
9. Write your own opinion of the Brest-Litovsk conference, basing your work upon the two articles about the Bolsheviks.	
Editorial Articles.	
1. Give a talk, based on "When It's Over Over There," showing some of the many reasons we have for being proud of the United States.	
2. Write an argument for or against public ownership.	
3. Write a letter to a pupil in another school, giving reasons why every American school should use The Independent.	
The Government's Message to the American People.	
1. This article is an extraordinarily good example of English composition. Show how it illustrates the following characteristics: immediate point of contact, emphatic use of detail, cumulation of effect, brilliant use of contrast, emotional appeal, figurative language, variety in sentence structure, stimulating conclusion.	
How Big Is Baker? By Donald Wilhelm.	
1. Write an argument in favor of the work of Secretary Baker, basing your work on the facts presented here.	
2. Show by what means the author has made his material effective.	
3. Write an article of the same sort concerning some man with whose work you are familiar.	
The "Goeben" and the "Breslau." By Park Benjamin.	
1. You are sitting around the fire with a group of friends. Tell the story of the "Goeben" and the "Breslau," telling it in such a way that they will take real interest in the story.	
Creative Chemistry. By Edwin E. Slosson.	
1. Show how the author makes his article interesting by referring to history, by using humor, by making comparisons.	
2. Show how the author makes his article clear by the use of diagrams and pictures, by details, by carefully prepared explanations, by orderly arrangement.	
3. How does this article differ in style from a chapter in a text book on chemistry? What are the characteristics that make the article so thoroly delightful? Write a somewhat similar article on some technical subject.	
SECTION II. LITERATURE.	
Getting the Best Out of a Book. By Ida B. Cole.	
1. Give a complete summary of the ways suggested for getting the best out of a book. Explain in full any way that particularly appeals to you.	
The New Books.	
1. Explain the following expressions: voluminous biography, principal contemporaries, journals, autobiography, basic idea, trite, the foam of modern fiction, a fog of sentimentality.	
SECTION III. WORD STUDY.	
1. Give the derivation and the meaning of every one of the following words prominent in the news of the week: dictatorship, repudiate, frustrated, circumvent, syndicating, amelioration, prestige, ....	
HISTORY, CIVICS AND ECONOMICS	
BY ARTHUR M. WOLFSON, PH.D.	
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY	
I. America "Carries On"—"To the American People," "A Message from the United States Government to the American People," "Mr. Baker Comes Back," "How Big Is Baker?" "Mr. Baker's Defense," "Support for the Administration."	
1. Quote at least half a dozen sentences which prove that the country has passed in the last week from a feeling of doubt and distrust of the Administration to a feeling of faith and good will.	
2. Is The Independent justified in calling the "Weekly Message" "the most important national service that it has ever been privileged to offer"?	
3. Make a list of the trials of the people which justify the opening sentence of Mr. Creel's article.	
4. Draw up a list of the failures of the Administration, of its accomplishments. Compare the two and mark each on a scale of 100 per cent.	
5. "In England, Kitchener's 'citizen army' drilled for months in civilian clothes," etc. Why does Mr. Creel refer to this fact?	
6. "Secretary Baker's second appearance before the Senate committee . . . was reassuring." How far do the facts justify this statement?	
7. Why does Mr. Wilhelm devote so much time to the discussion of Mr. Baker's relation to labor? What does he mean when he says: "To be perfectly blunt, it is well known . . . that the war must . . . be 'sold' to labor here"?	
8. In what way does the appointment of a man like Edward R. Stettinius "reassure persons who were worried as to the personnel of the Secretary's official family"?	
II. Europe and the War—"German Opinion of the Bolsheviks," "Bolshevik Opinion of the Germans," "The Peace Movement in Germany," "Austria's Advances Towards America," "German Strikes," "The Ukrainian Republic," "A Dictatorship of the Proletariat."	
1. What evidences do you find in the news items that justify Dr. von Kühlmann in saying: "The Bolsheviks maintain themselves by brutal force," etc.? What evidences of the Bolsheviks claim that the German military authorities do not represent the will of the German people?	
2. "The speech of Chancellor von Hertling . . . has aroused unprecedented tumult throughout the country." What are the facts?	
3. "The German Chancellor adopts an attitude of haughty indifference, while the Austrian Foreign Minister manifests an evident desire to agree with the President," etc. How do you account for the difference?	
4. How has America's entrance into the war affected the national and international policies of the various European nations?	
III. Economic Reorganization and the War—"Public Ownership: Yes and Why," "McAdoo Bans Railroad Lobbies," "An Eye on the Packers."	
1. "The world never goes back all the way to an old social order." What evidences does history offer of this statement?	
2. "Nobody in his senses doubts that the demands of workingmen and peasants . . . will have to be faced." On what grounds did the author make this statement?	
3. "Individualism vaunted itself to heaven . . . The war convicted it of inefficiency," etc. What has been the result as shown in the editorial and in the news items?	
IV. The Problem of Food—"The Rival Sugars," "Wheat Will Win," "Liberty Bread."	
1. How far does the development of the sugar industry parallel the westward progress of civilization?	
2. How do you explain the seventeenth and eighteenth century struggle for the possession of the West India islands? Why are these islands comparatively unimportant now?	
3. Explain the statement: "The American soda-water fountain is gradually driving the Demon Rum out of the civilized world."	
4. Explain the simile: "But to serve saccharine in place of sugar is like giving a rubber bone to a dog."	
5. "Each of us must do his or her share to make American wheat win the war." Why? How?	

# The Independent

WITH WHICH IS INCORPORATED  
HARPER'S WEEKLY

## TO THE AMERICAN PEOPLE

The Independent has the honor to announce that it has been authorized to present each week a message from the United States Government to the American people

AMERICA'S ability to take her part in helping to win the war depends first of all upon a thoro understanding of the problems that confront us.

"The war is bringing to the minds of our people," said President Wilson in an address recently, "a new appreciation of the problems of national life and a deeper understanding of the meaning and aims of democracy. . . .

"These and other lessons of the war must be learned quickly if we are intelligently and successfully to defend our institutions. When the war is over we must apply the wisdom which we have acquired in purging and ennobling the life of the world."

The Weekly Message of the United States Government to the American People which The Independent inaugurates on page 234 of this issue begins

MR. CREEL

therefore the most important national service that we have ever been privileged to offer. Week by week in our pages the Government will talk over with the people the work that is being done and the plans that are being made to carry on the war to a successful end.

These articles will be written by the chairman of the Committee on Public Information, Mr. George Creel, appointed by President Wilson, and they will present first hand the information that is immediately vital to the welfare of the American people. Here are the problems that we must think thru, the lessons we must learn. For, again to quote President Wilson:

"The whole nation must be a team in which each man shall play the part for which he is best fitted. We must all speak, act and serve together."

## PUBLIC OWNERSHIP: YES AND WHY

HISTORY repeats itself, but not exactly. The world never goes back all the way to an old social order. The changes to which men submit, including restrictions of personal liberty, while a great war is in progress, exceed normal limits. When peace returns innumerable "war measures" are abandoned, and life takes on the semblance of former things; but:

The blood drenched soil of the sea swept isle  
Its prey returneth never.  
And the thing that was henceforth shall be seen  
No more forever.

War destroys more than men and monuments. It terminates customs, abrogates laws, and breaks down institutions. The present war is destroying not only material treasures but also venerated intangibles as no war ever destroyed before.

At the heart of it the conflict is between lawlessness and law, between kultur and civilization; but it is also, as most men have perceived, a war between autocracy and democracy. Democracy will win. Civilization and law will win, and the magnitude of the victory imagination cannot picture. At present we do not even try to picture it, because, necessarily, attention is concentrated upon the practical

problems of ways and means; but when the enemy has been made "free or harmless" the world will immediately have to ask: "What now must be done to organize the democracy for which measureless sacrifice has been made? How shall it be made competent and law-abiding? How shall it be made the noblest expression of civilization? How shall its ideals of justice, liberty and opportunity be realized?"

Nobody in his senses doubts that the demands of working men and peasants, the world over, will have to be faced. Those demands will include an inflexible insistence upon a larger share of the world's wealth and of the annual product of industry. They will include insistence upon a more democratic control of industry, supplementing and carrying out the political participation secured by the American and French revolutions a century and a half ago. He is a bourgeois optimist who believes that these demands will not be conceded. He is a Bolshevik who believes that they will be conceded to the extent of creating an out-and-out new social order, either anarchistic or mechanically socialistic. The old individualism will not return unabashed and unchastened, to live riotously. It will have to live responsibly on good terms with other interests.

Which way will the center of gravity shift? It will shift,

as Socialists have desired and predicted, in the direction of a more extensive collective ownership and public control of natural resources, of the means of communication and transportation, of the mechanisms of trade, and of the funds of loanable capital. The forces that will do the shifting are economic, but when the change has been accomplished it will be defended on grounds of justice.

Huxley's definition of tragedy as "a theory busted by a fact," given forth when he found himself under the necessity of exploding one of Herbert Spencer's biological hypotheses by pointing to a stubborn anatomical fact, has been demonstrated in the realm of business affairs since 1914. Individualism vaunted itself to heaven for its productiveness and efficiency. The war convicted it of inefficiency, and, above all, of wastefulness.

Not to go across the seas for examples, the American railroad situation is in point. The nation has taken over the railroads for the period of the war because the railroads were not doing their job. The railroads and their spokesmen have retorted that they could not do their job because Congress and the Interstate Commerce Commission had tied them up with impossible restrictions. That is true, but it is not the whole truth, as the public well enough knows. Why had Congress and the Commission restricted and ordered? The answer is half a century long. It is the story of Erie and of New York & New Haven. It is the story of wasted millions expended in parallel trackage and stock-wrecking competition. It is the story of discriminations that became intolerable. There is no escape from the basic conclusion. The railroads of the United States are now held and operated by the Federal Government because, taking into account their whole history for fifty years, they have not done their job honestly, efficiently and economically.

While war lasts supreme efficiency in doing a few supremely necessary tasks is the one consideration. When peace is restored a broader and more varied efficiency will be demanded and another consideration, namely, economy, will be insisted on.

This second consideration, economy, will be increasingly pressing from this time forth as time goes on, and it will be felt not only by the railroads but also thruout the industrial system. The baleful fires of war have revealed to us the peril of material exhaustion which civilization faces. For half a century the world has been wasting its forests, its coal and iron and oil, and the fertility of its soil, as if it believed them to be infinite quantities. We now know that they are not, and unless they are conserved and wisely used the human race will not be able to maintain its progress.

Individual ownership has no interest to conserve anything. Every impulse characteristic of it, and of the intense competition which it engenders, makes for wastefulness. The economists know this and have long been saying it. The proletariat knows it and says it. The sober second thought of the bourgeoisie will presently admit it.

These considerations are driving the nations irresistibly toward public ownership, and they are backed up by the consideration of justice. The resources of the earth belong of right to all mankind, and the masses of mankind will not indefinitely permit them to be monopolized and exploited by the few.

It is the conviction of *The Independent* that the time has come to face these considerations squarely. The extension of public ownership ought to come, and it will come.

## PROGRESSIVE AMERICA

**T**HE Washington doctrine made the thirteen colonies safe for democracy.

The Monroe doctrine made the Western Hemisphere safe for democracy.

The Wilson doctrine will make the world safe for democracy.

## REACTION OF THE REACTIONARIES

**N**OW that the rumblings of the rising tide of democracy thruout the world are swelling into a roar, we are likely soon to see a complete change about on the part of the reactionaries in their attitude toward the continuance of the war.

When the conflict began, all the dynastic and conservative forces on both sides were for prosecuting the war to the hilt for commercial and territorial aims. But now that the issues are seen to be no longer political but social, the privileged classes are likely soon to be scurrying for peace, ere the thrones totter, and the newborn democracies seize the reins of government.

Those who sow the wind must reap the whirlwind. Little did that guilty trinity—monarchism, militarism and commercialism—realize this when they plunged the world into darkness.

## WHEN IT'S OVER OVER THERE

**W**E won't come back till it's over over there!" But it is not too early for Americans to realize that "this show" (as British Tommies call it) is not going to be "over over there" immediately when the peace treaty is signed. The United States won't be able to come back just as soon as the fighting is done. Our country has let itself into a corridor longer than it imagined when it entered. The question is whether America, tired out as of course it will be when the cannon cool, will still have enough duty-sense and stamina remaining to go on to the logical end of its contract.

The big job of constructing a League to Enforce Peace or some equivalent is foreseen as an after-war necessity by all prophets. Of course, America will have a share to carry in that undertaking. But a whole chain of minor problems not yet described by many are more likely to fall whole weight on the back of the United States, unshared by anybody else. These are summarily suggested in a single inquiry: When the war is ended, who is going to help the small nations, so nearly ruined by this life-sapping struggle, to get back on their feet again and resume hopefully something like normal living? Where these nationalities have not previously enjoyed "self-determination," the urgency of such aid is intensified and its difficulty also.

If the peace treaty makes the Armenians their own masters—and it will be a mighty poor specimen of peace treaty if it does not—will they be able to constitute their new government unaided? Palestine, it is hoped, will be thrown open to the Jews, but who will hold it safe until the "sojourners of the dispersion" get back to their ancestral land and get themselves organized to administer it? And how will Serbia, Albania, Montenegro and Belgium resume their shattered national life without some kindly and resourceful guidance to lean on? Even Russia, tho forsooth it is not to be classified as a small nationality, looks now as if it would come thru the war very much in need of a reliable "next friend."

Obviously an immense opportunity for somebody to go into the big-brother business on an international scale will unfold as the peace conferees labor over the world's war wounds. Wanted—somebody to administer Syria, protect Armenia, police the Balkans, elbow jealous jostlers out of Poland, superintend the outlay of the restitution fund in Belgium, counsel Russia in setting up the machinery of a federal republic, and possibly even to advise Germany in the art of democratization. Who shall it be? Who can it be but America? Any one with the least experience in the art of big brothering certainly knows its first lesson—"Leave self behind, all ye who enter here." A big brother with a sly eye to his own advantage is quickly out of business—put out by the disgusted repudiation of beneficiaries that won't be made game of. Likewise a big brother who admires

himself for all the time and trouble he devotes to "doing good in the world" makes himself speedily impossible. Pose and pharisaism don't go in this line of service. Nothing qualifies for it except that magic imagination which is able to occupy the other fellow's place—and act by "inside information" thus divined.

Not for peculiar saintliness, however, will this task be crowded on the United States. Only because there is nothing in Europe or the near East that America can possibly want for itself, America by common voice of the Allies (doubtless by all Teutonic voices too) will be named the sole acceptable minister of reconstruction in these areas where government has to be made new. Geography thus becomes America's seal of unselfishness. France and England can be suspected of all kinds of imperialistic designs in these regions; the United States is immune from even a plausible hint of lust for gain. What Americans do for service abroad is today and must needs be tomorrow undeniable service pure and simple. And that fact alone is bound to elect the United States big brother of Europe and Asia. Are the people of the United States great-spirited and self-sacrificing enough to be willing to see their Government accept the election—and fill the office with all the inevitable cost of it heaped on top the costs of war?

Americans like to think that their nation has been more benevolent to the lesser peoples than any other great power. But for the most part they have taken care that this benevolence should be purely platonic. Only once has it actually cost something worth the mention—in the rescue of Cuba and in the guardianship of the Filipinos which unexpectedly resulted therefrom. However, the way this latter responsibility has been borne encourages the trust that our nation has the temper and the nerve for greater duties in the same line. And if all this challenge to stay and serve looms up in the face of Americans when fighting is finished, no doubt they will still be heard singing: "We won't come back till it's over over there!"

## MR. BAKER COMES BACK

SECRETARY BAKER'S second appearance before the Senate Committee on Military Affairs was reassuring. It was so not merely because of what he said, but because of the way in which he said it. On his first appearance Mr. Baker was jaunty and at times almost flippant in his replies to questions from the committee. Last week he was serious, frank and helpful. The change was refreshing. It discloses an admirable quality in the Secretary of War—an ability to learn from events and to grow to meet changed conditions.

An administrative officer in a democratic government has no right to resent criticism, decently expressed and responsibly supported. He has every right and an unescapable obligation to meet it fully and frankly and to disarm it, if he can, not by retort but by facts. This Mr. Baker has now proceeded to do, and with gratifying success. No loyal American can regret that the head of the army organization of the United States has been able to put upon the record such a fine report of progress as Mr. Baker presented.

Our war work has been well done. Doubtless it might have been better done; of what human accomplishment could that not be said? Doubtless there have been errors of judgment; human judgment cannot escape fallibility. But that there has been any failure of spirit, of purpose, of devotion, of diligence, of application, has not been proved. Nor has it been shown that any capital errors in judgment have been committed.

We may all be proud of the record. We may all be gratified with the spirit and the energy with which the great enterprise of hurling against German autocracy an army that will settle the matter once for all is being prosecuted.

But we should all keep our critical faculties keen and

bright. We owe two duties to our leaders in this fight: the duty of loyalty and the duty of critical judgment. Neither is of full value without the other. This is the people's war. The people's servants can only be kept to a high standard of achievement in it if the people support them wholeheartedly and scrutinize all their acts with vigorous minds.

## THE BIG THREE

IN the crises of life a man's dominant characteristics come to the surface. Likewise in the crises of a nation's life the statesman's governing qualities determine his thought and action.

Theodore Roosevelt, warrior patriot, is going up and down the land preaching preparedness, a vigorous prosecution of the war and an undiluted Americanism.

William Howard Taft, humanitarian jurist, is devoting practically his entire time to the alleviation of human suffering thru the Red Cross and to the political reconstruction of the world thru the program of a League to Enforce Peace.

Woodrow Wilson, teacher democrat, is converting the peoples of the earth to the principles of the founders of the United States to the end that all nations may dwell together in unity and the world may be made safe for democracy.

## THE TOUCHSTONE

A little knowledge is a dangerous thing, but it is a danger from which none of us is exempt. No one can be a specialist in every branch of human knowledge and the lawyer who leaves his office the assured master of every technical intricacy of his profession may enter the consultation room of his physician with all the innocence and credulity of a child of five. The most learned scientist may be as helpless in Wall Street as a Captain of Industry would be in a chemical laboratory. A question that confronts us daily is how to tell the legal specialist from the shyster; the medical specialist from the quack; the inventor from the fancier; the original poet or artist from the self-advertising professional "Bohemian"; religion from superstition. Even the faker has usually a sufficient store of catchwords and smatterings of information at his command to bewilder the layman; and in nine matters out of ten the best informed of us is but a layman.

One of the best tests for determining the honesty and competence of the specialist whose knowledge whether adequate or inadequate at least outranges yours, is the manner in which he gives his explanations. The honest master of his craft is eager to make things clear to you; the charlatan to mystify you. The light of science is the daylight that shows every detail as it is; the light of magic, like the colored lights of a theater, aims to bewilder and delude. The scientist may use long words that you do not understand, but he does not use vague words that you are not meant to understand. Beware of the inventor who talks of "occult forces" or of secrets which not every one is to know. The chances are ten to one that he is kin to the Indian "medicine man" who holds his tribe in terror of his powers by the simple expedient of refusing to explain the incantations which he recites and the symbols which fringe his robe. The chemist does things as wonderful as the medieval alchemist ever claimed to do, but we have more confidence in the chemist because he is willing to teach everybody else what he does and why. The teachings of astronomy are as strange as the lore of astrology, but the astronomer can demonstrate his method of predicting an eclipse whereas the astrologer will not tell you for what reason the position of a certain star on your birthday makes it certain that you will travel and fall in love with a dark lady. You must take his prediction on trust.

But this touchstone of candor applies to other fields of knowledge than the natural sciences. Every one knows that the shyster lawyer aims to confuse his client with unfamiliar terms; that the patent medicine vender is marvelously elusive in his references to the "mysterious properties" of his "secret discovery"; that the get-rich-quick sharper can treble your money by taking timely advantage of a "private tip," and that the futuristic artist or poet explains that only the few can ever hope to understand his work and glories in the fact that it is "over the heads of the multitude."

Even in religion the same truth holds. Christianity is distinguished from other religions in that its creeds are open for all the world to read. It has no esoteric doctrines peculiar to the priesthood; no "inner circle of illuminati"; no "mysteries" for "initiates." Even the Catholic Church, which bids

the laity take their faith on authority, shares that faith ungrudgingly with every communicant. It was not so with the other faiths that contested with Christianity for the religious mastery of the Roman world: the mystical cults of "neo-Platonists," the secret orders of the Mithra worship and many other fashionable faiths from the Orient; it is not so with the theosophical, spiritualistic and Buddhist cults which delight a certain section of the idle rich today. Christianity is and always was an open air religion of candor and democracy. The Christian does not treasure piety and virtue as the miser treasures gold; he wishes to make piety as commonplace as water and virtue as universal as sunlight. Christianity was the first religion that taught theology, that is, the deepest and most difficult truths of all philosophy, to the common people. And the common people heard it gladly.

*Lincoln never ceased to be a Common man. That was the source of his strength. But he was a Common man with genius, a genius for things American, for insight into the Common thought, for mastery of the fundamental things of politics that inhere in human nature and cast hardly more than their shadows on constitutions; for the practical niceties of affairs; for judging men and assessing arguments. The whole country was summed up in him: the rude western strength tempered with shrewdness and a broad and humane wit; the Eastern Conservatism, regardless of law and devoted to fixed standards of duty. To Eastern politicians he seemed like an accident; but to history he must seem like a providence—*

*Woodrow Wilson*

#### A LETTER ON LINCOLN FROM PRESIDENT WILSON

Just now when the coming celebration of Lincoln's birthday is emphasizing for us the parallel between his presidency and the stern task of the United States today, it seems particularly opportune to publish this letter of President Wilson's in which he sums up his appreciation of the great leader of the Civil War. The letter was written at the time of the Lincoln Centenary in 1908 and sent to the committee in charge, of which Mr. Isaac Markens was chairman. The estimate of President Lincoln which President Wilson has here expressed was first written in an essay of his in "Mere Literature," published by the Houghton, Mifflin Company

# THE STORY OF THE WEEK

## THE GREAT WAR

**January 25**—Hertling and Czernin state peace terms. French and British aviators bomb Belgian and German towns.

**January 26**—The Rada declares a Ukrainian republic. Bolsheviki and Rumanians fighting in Bessarabia. German air raid on London.

**January 27**—Cunarder "Andania" torpedoed off Ireland. Pershing reports five wounded and three deaths from disease.

**January 28**—Italians take 2000 Austrians on Asiago plateau. General Wood wounded by explosion of a gun in France.

**January 29**—Supreme War Council of Allies meets in Versailles. Pershing reports four deaths from pneumonia.

**January 30**—Peace strikes break out in German munition works. Brest-Litovsk conferences resumed.

**January 31**—Bolsheviki take possession of Helsingfors, Finland. Pershing reports eight deaths from pneumonia and three from other diseases.

**Raids in Reprisal** The English were very reluctant to adopt the German practise of dropping bombs upon towns in the interior and the proposal to make reprisals for the air raids on England met with remonstrances from the clergy and other humanitarians. But as the German raids became more frequent and bloody the opposition to reprisals in kind was overcome and now aerial attacks are resorted to by all parties. On January 25 French fliers penetrated twenty miles behind the German lines, dropping eight tons of explosives and taking more than three hundred photographs. The British dropt several hundred bombs upon the German airdromes and hangars about Cambrai and Douai, then extending their raids into the interior attacked the barracks and factories of Mannheim, the railroad station of Treves, the steel works of Thionville, and the stations of Saarbrücken and Oberbillig. Of the German airplanes attacking the raiders sixteen were brought down, while the British lost only one. Four American aviators took part in the French bombing expedition.

The Germans for their part report having attacked Dunkirk, Calais and Boulogne "with good effect" and having downed twenty-five enemy airplanes and three captive balloons within four days. Three raids were made on England early in the week, causing more casualties than any since last June. About eight o'clock on the night of January 28 two groups of German airplanes crost the Essex coast and one the Kent coast, concentrating upon London. Some fifteen machines took part in the raid and four or five of them reached the capital, altho it was a clear moonlit night. Alarms were given by rockets, colored lights, bugles and steam sirens, so the population had

time to seek shelter in the subways and basements. But Londoners are getting used to such bombardments and they do not cause the confusion and alarm that they did at first. Altho the firing kept up intermittently for four hours, most of the theaters continued their performances and the House of Lords did not adjourn. At the Royal Geographical Society General Smuts, the Boer commander, was giving an address when the police warned the audience to take refuge in the basement, but the warning was met with cries of "Carry on!" and General Smuts calmly continued his speech for an hour in spite of the cannonading. The casualties comprized 14 men, 17 women and 16 children killed and 93 men, 59 women and 17 children injured. One of the German machines was set on fire at a hight of two miles and the three members of the crew burned to death.

**On the Hills Above Asolo** When the Austrian invasion took place last November it was feared and in fact expected that the Italians would have to withdraw as far as the Adige River before they could make a stand, altho this meant the surrender of Venice. But the invasion did not have the driving power that was anticipated, and the Italians were rallied and reinforced so quickly that it was stopped at the Piave River twenty miles north of Venice. The attempt of the Austrians to circumvent the Piave and come down into the valley on the western side was frustrated, and the army of the enemy was held in the highlands between Asiago and Asolo. Instead of advancing in this sector

the Austrians are losing ground. They have lost Monte Tomba, the 2400 foot high that guards the pass thru which the Piave flows from the plateau into the lowlands. The French troops carried this point in a brilliant dash on December 31, taking 1400 prisoners, and the other day Italian patrols discovered that the Austrians had since evacuated their entrenchments for several miles. Their withdrawal had not been suspected because of an ingenious system of camouflage. Dummy soldiers had been put in the trenches with their helmets slightly protruding, and the muzzles of machine guns and heavier artillery were imitated by zinc tubes, gas pipes and big wooden logs.

In the Asiago hills west of the Brenta River the Italians on January 29 broke thru the Austrian lines and took over 2500 prisoners, including 100 officers. The booty comprized six guns, a hundred machine guns and several thousand rifles.

In the air the Allies have the supremacy. The Italians brought down twenty-five airplanes in the fight on the Asiago plateau and the British report having shot up thirty-seven enemy airplanes and four balloons since November.

## Rumanians and Russians Fighting

It is rumored that Rumania is making peace with her former enemies, the Austrians, and making war with her former allies, the Russians. According to the documents unearthed by the Bolsheviki from the secret archives of the old régime Rumania was compelled by Russia to en-

Press Illustrating

## THE DEADLOCK IN ITALY

These are the two generals in command of the opposing armies now facing each other on the Piave line. General Diaz (at the left) was put at the head of the Italian army at the time of the recent Austrian advance. General Borovich (at the right) has just been given command of the Austrian and German forces against Italy. His appointment is construed as indicating a concession to the Slav element in Austria, since General Borovich is of Slavo-Croatian origin. His military tactics in the past have been uniformly defensive.

Central News

#### THE SURVEYOR-GENERAL OF ALL ARMY PURCHASES

Secretary Baker has forestalled congressional criticism by appointing as virtual munitions director for the army Edward R. Stettinius, one of the partners in the firm of J. P. Morgan and Company. He was put in charge of purchasing war supplies for the Allies at the beginning of the war and made contracts amounting to more than three billion dollars' worth of goods. He has lately been in Washington advising war purchases. Mr. Stettinius' present position puts him in charge of the procurement and production of all supplies for the five army bureaus—Ordnance, Quartermaster, Signal, Engineer and Medical.

ter the war on the side of the Allies at a time when she was unprepared and the Russian court party were not sorry to have Rumania sacrificed, for it stood in the way of Russia's advance to Constantinople. But the Bolsheviks seem to be treating Rumania worse than the Czar's government, for the few Russian troops that had been sent against the Austrians in Rumania are now fighting their way back thru Rumania from the south, while the Bolshevik forces in Bessarabia are attacking the Rumanians on the north.

All nations, even the most barbarous, have hitherto held sacred the persons of envoys, but the Bolsheviks repudiate the morality of the past, so they had no scruples about throwing into prison the Rumanian representatives at Petrograd and confiscating the funds of the Rumanian Government which were removed from Bucharest on the advance of the Austrians and deposited for safekeeping in Moscow banks. The British and French ministers at Petrograd intervened in behalf of the Rumanian representatives, altho this in-

volved a *de facto* recognition of the Bolshevik government. In consequence of their interposition the Bolshevik Foreign Minister, Leon Trotzky, has released and expelled the Rumanian delegation and stated that the Rumanian gold reserves, amounting to \$600,000,000, are held to be returned to the Rumanian people. He has outlawed General Stcherbatcheff, commander of the Russian troops in Rumania, as a rebel against the revolution and an enemy of the people because he cooperated with the Rumanians in disarming the revolutionary Russian troops.

The conflict between the Rumanians and the Bolsheviks is over the possession of Bessarabia, the Russian province lying next to Rumania on the east and separated from it by the river Pruth. The region adjoining the river is largely inhabited by Rumanians but was seized by Russia, quite unwarrantedly, in 1878. Here are stored the reserve munitions supplied by the Allies for the use of the Rumanian and Russian troops in their campaign against the Austrians. The Rumanian troops

have crossed the boundary and seized these depots to prevent them from falling into the hands of the Bolsheviks who, the Rumanians fear, would sell them to the Germans. The Red Guards, or Bolshevik troops are, it appears, now trying to hold Kishinev against a besieging army of Rumanians. Kishinev is the chief city of Bessarabia and infamous for the massacre of the Jews that took place there in 1903.

#### The Ukrainian Republic

The central Rada or assembly at Kiev has declared by a vote of 508 to 4 the complete independence of the Ukrainian Republic. The proclamation denounces the Bolshevik government at Petrograd for delaying peace and states that the desire of the Ukraine is to live on terms of concord and friendship with Rumania, Turkey, and her other neighbors.

This appears to be a realization of nationalistic aspirations of the Little Russians of the Ukraine. But the Kiev Rada is not to have its own way. The Bolsheviks as internationalists have no sympathy with nationalistic movements and as representatives of the working-class they are determined that no other class shall have any power. They dismissed by force the Constituent Assembly at Petrograd because other parties were in a majority, and they object to the Ukrainian assembly because it, too, is under the control of the hated bourgeoisie or middle class.

The Bolshevik faction has failed to secure a hold in the south of Russia as it has in the north. The Don Cossacks are in part at least opposed to the Bolsheviks and so are the Ukrainians on the Austrian border. But the Bolsheviks claim they hold the region about Kharkov, which lies between the Don on the east and Kiev on the west, and a delegation of Bolsheviks from this region has appeared at Brest-Litovsk and claimed admission to the conference as the true representatives of the Ukraine.

This upsets the Austrian plan, almost consummated, for a separate peace with Ukrainia, which would provide the Central Powers with the grain, cattle and metals that they very much need. Count Czernin admits that he is embarrassed by this difficulty, because he does not wish to interfere with the internal affairs of Russia. If he continues negotiations with Kiev delegates he offends the Petrograd Bolsheviks with whom Germany and Austria are trying to make peace. If he recognizes the Kharkov delegates he alienates his Ukrainian friends and loses the chance of splitting up Russia and getting immediate supplies. An independent Ukraine, if it could hold its own with the help of Austria, would entirely isolate Rumania, which would then be obliged to make peace with Austria on any terms it could get.

#### Austria's Advances Toward America

President Wilson's recent restatement of the war aims of the United States drew from the enemy a much more definite declaration of their aims than had hitherto been elicited.

Both Berlin and Vienna reply *seriatim* to the fourteen points specified by the President. We place in parallel columns an abbreviated summary of the statements by President Wilson before Congress, January 8, by Chancellor von Hertling before the main committee of the German Reichstag and by Count Czernin, the Austro-Hungarian Foreign Minister, before the Austrian delegation of the Reichsrat, on January 24. From this comparative summary we may get a general idea of the extent of agreement and disagreement, but the language of the original text is not the same and the tone of the three speeches is very different.

Altho the German and Austro-Hungarian Governments are in constant consultation over foreign policy and are supposed to be acting in complete harmony, yet their reaction toward the President's proposals is in distinct contrast. The German Chancellor adopts an attitude of haughty indifference, while the Austrian Foreign Minister manifests an evident desire to agree with the President on as many points as possible and he ends with a definite invitation to enter into a conference with the United States with a view to peace. After giving a report of the progress of the negotiations with Russia at Brest-Litovsk, Count Czernin says:

When peace has been concluded with Russia it will no longer be possible, in my opinion, to prevent for long the conclusion of a general peace in spite of the efforts of the Entente statesmen.

Altho I am under no delusion and know that the fruit of peace cannot be matured in twenty-four hours, nevertheless I am convinced that it is now maturing and that the question whether or not an honorable general peace can be secured is merely a question of resistance.

President Wilson's peace offer confirms me in this opinion. Naturally an offer of this kind cannot be regarded as a matter acceptable in every detail, for that obviously would render any negotiations superfluous.

I think there is no harm in stating that I regard the recent proposals of President Wilson as an appreciable approach to the Austro-Hungarian point of view, and that to some of them Austria-Hungary joyfully could give her approval.

Count Czernin leaves the case of Turkey and the questions of Germany's conquests in Europe and of her lost colonies to these countries, but makes it plain that "Austria-Hungary, faithful to her engagements to fight to the end in defense of her allies, will defend the possessions of her war allies as she would her own." But as to Poland the Austrian Foreign Minister adopts almost the exact language of the American President:

We also are supporters of an independent Polish state, which would include all territories and populations which indisputably are Polish. On this point we believe we should quickly come to an understanding with President Wilson.

Finally, in his idea of a league of peoples the President probably will meet with no opposition in the monarchy.

We, therefore, are in agreement in the main. Our views are identical not only on the broad principles regarding a new organization of the world after the war, but also on several concrete questions, and differences which still exist do not appear to be so great that a conversation re-

garding them would not lead to enlightenment and a rapprochement.

This situation, which doubtless arises from the fact that Austria-Hungary on the one side and the United States on the other are composed of states whose interests are at least at variance with one another, tempts one to ask if an exchange of ideas between the two powers could not be the point of departure for a personal conversation among all states which have not yet joined in peace negotiations.

Count Czernin later gave emphasis to this point when in reply to interrogatories of the Socialist members of the Reichsrat he said that his speech was intended as much for President Wilson's ears as for the committee before him.

Count Czernin's act in holding out a hand to the President has naturally brought down upon him a storm of criticism from the Pan-Germans, who are determined to pursue the war to a victorious conclusion regardless of the feelings of Austria. Yet it is surmised in the German press that this step was taken with the concurrence of Chancellor von Hertling. The Socialist paper *Vorwärts* says: "Count Czernin's fraternal kiss for President Wilson received the German Government's blessing in advance."

The Peace Movement in Germany

The speech of Chancellor von Hertling setting forth Germany's peace terms has aroused unprecedented tumult thruout the country. On one hand the Pan-Germans demand his resignation because he did not speak as a victor but is willing to surrender the conquests of German arms. On the other hand the Socialists declare that he "will be hurled from power" unless he endeavors to secure a rational peace by spring. Philip Scheidemann, the leader of the German Socialists, in replying to the Chancellor in the Reichstag, denounced the mil-

itary party for deceiving the people. In 1916, he said, they promised that the U-boats and army would bring a decisive victory within six months:

Alas, that period has long since passed, and while the U-boat has admittedly harmed England enormously, its chief visible effect has been the entry of America into the war.

If the United States had not entered the war we may be sure the Russian revolution would long ago have brought a general peace.

What about the army? Suppose the army should capture Calais and Paris; would that mean peace? I say "No!"

Suppose the army conquered France and England; would that mean peace? I say "No!" for we would still have to conquer America.

I am unable to see the day when Germany will say to the Entente, "We are beaten; we accept your terms." I am equally unable to see the day when England and France or America will say the same to us. Let us give up illusions on both sides.

Herr Scheidemann express the opinion that it was easily possible to reach an agreement on eleven of the fourteen points stipulated by President Wilson but he agreed with the Chancellor that the cession of Alsace-Lorraine to France was out of the question.

The peace question has been carried from the Reichstag to the country. Both the Pan-Germans and the pacifists are engaged in a popular campaign by holding mass meetings and breaking up the mass meetings of the other party. Shouts for peace and for Trotzky interrupt the Pan-German speakers and the "Marseillaise" sometimes drowns out "Deutschland Ueber Alles." *Vorwärts* sets forth in opposition to the Chancellor three peace terms which, it says, would have the support of the great majority of the German people:

First, honest concession of the right of self-determination to the Eastern peoples, including the right, if they so choose, of declaring their adhesion to Russia.

COMPARISON OF THE PEACE TERMS

AMERICA	GERMANY	AUSTRIA
1. Open diplomacy.	1. Open diplomacy.	1. Open diplomacy.
2. Freedom of the seas except as closed by international action.	2. Freedom of the seas. England should give up Gibraltar, Hongkong, etc.	2. Freedom of the seas.
3. No trade war.	3. No trade war.	3. No trade war.
4. Disarmament.	4. Disarmament.	4. Disarmament.
5. Adjustment of colonial claims.	5. Reconstitution of world's colonial possessions.	5. Leave the question to Germany.
6. Evacuation of Russian territory.	6. To be settled with Russia on principle of self-determination.	6. Now under negotiation with Russian and Ukrainian republics. Annexation disclaimed.
7. Belgium evacuated and restored.	7. Annexation disclaimed. Details to be settled by negotiation.	7. Leave the question to Germany.
8. France freed and restored. The wrong of Alsace-Lorraine to be righted.	8. Annexation disclaimed. Conditions of evacuation to be settled between France and Germany. No dismemberment of imperial territory.	8. Leave the question to Germany.
9. Readjustment of Italian frontiers along lines of nationality.	9. Leave the question to Austria.	9. Refuses to cede territory.
10. Autonomy for peoples of Austria-Hungary.	10. Leave the question to Austria.	10. To be settled by Austrian parliament.
11. Rumania, Serbia and Montenegro evacuated and restored.	11. Leave the question to Austria.	11. Refuses concessions by which the monarchy would permanently suffer.
12. Autonomy for peoples of Turkey. Free Dardanelles.	12. Integrity of Turkey and safeguarding of her capital.	12. Turkish possessions will be defended.
13. Independent Poland of all populations indisputably Polish.	13. To be settled by Germany, Austria and Russia.	13. Independent Poland of all populations indisputably Polish.
14. League of Nations.	14. Sympathetically disposed.	14. Agreed.

## ENTERING THE HOLY CITY

Following the old custom of the Crusaders, General Allenby, commander of the victorious British forces, made a triumphal entry into Jerusalem on foot. The Turks and their German allies had already evacuated the city when the British troops took possession. Accompanying General Allenby and his staff are the commanders of the French and Italian forces who coöperated with the British in their successful drive

Second, complete restoration of the independence of Belgium, without any division of the country between the Walloons and Flemings.

Third, return of the occupied districts to France under the single condition that France shall renounce any claim to German territory.

**German Strikes** The strikes in Austria have been brought to a close, but similar disorders have broken out in Germany. The censorship is severe and several of the newspapers, including not only the Socialist *Vorwärts* but also the bourgeois *Berliner Tageblatt*, have been suppressed for discussing the strike. It appears that several hundred thousand workmen are out and that such essential war industries as the Krupp works at Essen, the Vulcan works at Hamburg, the state mines of Westphalia, the shipyards at Kiel, and the munition factories of Berlin are involved. The movement seems to have resulted from the food shortage and resentment at the military party for having brought to nought the peace negotiations at Brest-Litovsk thru their grasping designs. According to *Vorwärts* the strikers presented an ultimatum to the Government making the following demands:

1. Accelerated conclusion of a general peace without indemnities or annexations.
2. Participation of workmen's delegates of all the countries in the peace pourparlers.
3. Amelioration of the food situation by better distribution.
4. Immediate abolition of the state of siege and restoration of the right of public meetings suspended by the military authorities.
5. Abolition of militarization of war factories.
6. Immediate release of all political prisoners.

7. Fundamental democratization of state institutions.

8. The institution of equal electoral suffrage by direct or secret ballot.

The Government is trying to stop the strike by drafting the men into the army and by the use of force. In some places the troops refused to fire on the strikers. The immense prestige of Field Marshal von Hindenburg has been brought to bear and he has issued a warning that

Every hour you lose means the weakening of Germany's defense. You are committing a crime against our army and an act of cowardice against your brethren in the front trenches.

**German Opinion of the Bolsheviki**

The conference at Brest-Litovsk between the representatives of Russia and of the four Central Powers began in December with the exchange of expressions of mutual esteem and confidence, and it seemed at first as tho all parties were in substantial agreement on the fundamental principles involved. But as soon as it came to translating these generalities into concrete terms a wide gulf was disclosed and the conference broke up in mutual recriminations. Dr. Richard von Kühlmann, the German Foreign Secretary, in a speech before the Reichstag hurls back upon the Bolsheviki their charge that the German Government is tyrannical:

Herr Trotzky twice declared in open discussion that our Government has no other basis than force. The Bolsheviki maintain themselves by brutal force; their arguments are cannon and machine guns. Differences of opinion are settled by their getting rid of their opponents in a radical and satisfactory manner. The Bolsheviki preach beautifully but practise otherwise.

In regard to the border provinces which Germany refuses to evacuate or refer for decision to popular vote, Dr. von Kühlmann said that the national will could in such cases be better "expressed by a relatively small number of spiritually developed and patriotically inspired leaders" than by the masses. Referring to what Count Czernin says in regard to the ultimate gravitation of Poland to Austria, the German Foreign Secretary said: "We have precisely the same confidence in the attractive force of the great free German state for these peoples and German policy never will resort to petty police pressure or any similar methods, which in the long run would only have the contrary effect."

**Bolshevik Opinion of the Germans**

On the other hand the Bolsheviki said that it would be impossible to secure a fair and free vote in the border provinces while the German troops occupy the territory and that it would be absurd to take as expressing the will of the people those men whom the German military authorities have picked out to stand as the representatives of the conquered territory.

Chairman Joffe of the Russian delegation at Brest-Litovsk declares that the Germans were hypocritical in pretending to accept the Bolsheviki pro-

gram of "no contributions and no indemnities":

At first the Germans indicated a willingness to be reasonable, but clearer definitions of their position showed they expect Russia to reimburse German citizens for losses which they had suffered as the result of laws passed by Russia, but are unwilling to pay Russian peasants for goods commandeered by the Germans.

The Germans argued that all contributions exacted from occupied cities and territories as well as all requisitions were for supporting order and consequently should not be refunded. The German members said the Russian plan for creating an international fund to indemnify individuals for losses was impracticable and they also declared that submarine, Zeppelin and airplane damages were not indemnifiable.

**A Dictatorship of the Proletariat**

It was expected by some that the rule of the Bolsheviki in Russia would be brief because they would be outvoted in the first elections. The elections went as expected, but the anticipated result did not follow, for as soon as the Bolsheviki found that they were in a minority in the Constituent Assembly they turned the guns of the fleet on the hall and the sailors cleared out the delegates. In place of this they set up an All-Russian Congress of Soldiers' and Workmen's Delegates, which promptly declared against a government by all classes and in favor of a dictatorship of the proletariat. All power is to be held in the hands of the working class, who will be organized in local councils (soviets) and these joined in a national federation. The transfer of land to the peasantry is confirmed. All banks are nationalized and the National Committee is authorized to repudiate the national debts of Russia "if they find it expedient, necessary or desirable."

The navy has been democratized and all commanders are to be elected and may be removed by the personnel committees. The democratization of the army has meant its demoralization.

**Mr. Baker's Defense**

Half a million men in France soon, and a million more ready to go as fast as there are ships to take them, with the outlook for ships "not unpromising"—that was the message given to the American people by Newton D. Baker, Secretary of War, when he appeared in his own defense before the Senate Committee on Military Affairs on January 28 to answer criticisms made by Senator Chamberlain and others. Mr. Baker spoke for four and a half hours, and made an excellent impression.

Mr. Baker admitted that there had been a shortage of clothing, overcoats principally, in the National Army camps, extending in some cases at least to the first of January, tho the supply was adequate after that. But it was necessary that a large army be rushed into training.

The Secretary stated that before the country entered the war the American uniform consisted of seventy-five per cent wool and twenty-five per cent cotton. Since the war an all-wool uniform had been provided. Shoddy had been

used in only a negligible percentage of cases.

Mr. Baker discussed in detail accusations of callous indifference to the needs of sick soldiers in the camps and lack of hospital equipment. He admitted that at the start there had been some miscalculation about the establishment of base hospitals, but this had been remedied. There was still a lack of trained nurses, which was difficult to fill.

On the advice of French and British military experts, Mr. Baker said, the army in France was being provided with quantities of heavy artillery and ammunition made in France and England. This expedient saved much ship tonnage for the transport of men, and put no hardship on the Allied countries, which had a surplus of munitions. The manufacture of heavy artillery was a slow process, he pointed out, but we are now manufacturing the French 75's and other guns in increasingly large quantities.

General Pershing, Mr. Baker declared, had influenced the final decision against the much discussed Lewis machine gun. The General was opposed to using the gun for trench work, tho a considerable number had been sent over to be used in aeroplanes. The delayed adoption of the Browning gun for general use had not held up our machine gun output "for one second." While the supply of machine guns in the camps here had been inadequate, the War Department was now rushing work on these guns to catch up with the demand.

In France Pershing's army was adequately provided, deficiencies being made up by Chauchat machine guns supplied by the French.

Mr. Baker emphasized successfully the tremendous character of America's military task, and her far-reaching achievement. At first, he pointed out, Balfour, Joffre and other Allied leaders held that America's part in the conflict was principally to furnish industrial and financial aid. The rapid depletion of the Allied man power changed this, and a huge army was demanded of us.

"Where, I want to know, in all history can you find an achievement comparable to that of America's in raising such a great army from her citizenry in this period of time?" demanded Mr. Baker. "It has never been done before, and it is to America's credit that she has accomplished it in the nine months we have been at war."

It was announced that Mr. Baker would be cross-examined by the Senate committee at a later date.

**For Army Purchases** Previous to his appearance before the Senate committee Mr. Baker had made several appointments in his department of a character to reassure persons who were worried as to the personnel of the Secretary's official family. His chief appointment was that of Edward R. Stettinius, formerly president of the Diamond Match Company, to be sur-

veyor general for all army purchases. Mr. Stettinius entered the firm of J. P. Morgan and Company after the war began and had charge on behalf of the firm for all purchases for the Allies in this country. His work was considered admirable.

Mr. Baker's friends maintained that the Stettinius appointment met wholly the demand for a director of munitions, which took concrete form in Senator Chamberlain's bill. The other Chamberlain bill for the appointment of a super-Cabinet of three men to take over the conduct of the war seemed to drop out of sight during the week. It is not expected to pass.

**Support for the Administration**

A revulsion of feeling in favor of the Washington Administration and against the most persistent of its critics was apparent in most parts of the country thruout the week. Many representative business leaders, including Charles M. Schwab and Theodore N. Vail, spoke out in defense of the Administration's vigorous efforts to make American strength effective in the war. Senator Borah, progressive Republican leader, in a public speech, declared that much of the criticism should not be taken too seriously and intimated that politics played a not inconsiderable rôle in it. Several labor unions in different parts of the country endorsed the war policies of the Administration and pledged their support.

The labor unions in particular manifested hostility to what they termed

the reactionary character of the interests represented in attacks upon the Administration. One union, the Central Labor Council of Los Angeles, affiliated with the American Alliance for Labor and Democracy, issued an attack on Colonel Roosevelt and characterized his utterances as "seditious," a term that has been applied with considerable freedom of late by many persons, including Colonel Roosevelt himself.

Colonel Roosevelt returned to Oyster Bay on January 24, rather precipitately, after a few days in Washington. His visit attracted surprisingly little editorial attention and can scarcely be said to have set the political pot boiling. Members of the Republican Old Guard flocked around him and apparently welcomed a return to his old-time party leadership, but at the dinners and receptions given in his honor certain progressive Republicans were conspicuously absent.

**McAdoo Bans Railroad Lobbies**

A general order of far-reaching importance, designed to conserve finances, and incidentally, during the period of Government operation to curb the great political influence of the railroads, was published by Director General McAdoo on January 28. The order forbids the carriers to pay from operating revenues any legislative agents, or attorneys not engaged in necessary legal work, or to expend money to maintain any associations of carriers not approved by the Director General, or for any political purpose.

© Underwood & Underwood

A NEW LAW I GIVE UNTO YOU

The priest is reading the proclamation of the British Government to the people of Jerusalem, promising them freedom from taxation and the opportunity of living and working under a government that will aid instead of tyrannizing them. The Tower of David, where the priest is standing, was a meeting place of the people in the time of Christ.

Passes are also put under the ban, save those few permitted under amendments of the Interstate Commerce law of 1887.

Under private control railroad lobbies had their legitimate uses, but Mr. McAdoo points out that they are now superfluous. The Federal Government, as directing head of the railroads, is not controlled by state laws, and all activity in connection with national legislation will be carried on by the Federal administrators. As many of the most high-priced attorneys in the country have been employed by the railroads for political work, the new order is expected to effect a saving of millions of dollars. The order will probably do away with the extensive publicity organizations maintained by the carriers to conduct their campaign against Government ownership.

**Coal Shortage Continues** Under a continuance of "bad railroad weather," with two more snowstorms, the third and fourth within a month, not much progress was made toward clearing up the coal shortage. Reports from sections of the anthracite regions during the week showed a partial shutdown at mines for lack of cars.

Along most of the eastern seaboard there were evidences of some improvement, but this had not reached as far

as New England, where famine conditions prevailed. Thru the Middle West the shortage showed little letup. Many cities reported schools and churches closed, and a number of industrial plants were unable to operate for lack of fuel. Prospects for immediate general relief were not encouraging.

As an additional blow for the sorely tried householder, Food Controller Hoover predicted an approaching meat shortage over the eastern part of the country.

#### A Shipping Dictatorship

Because ship tonnage is a vital factor, perhaps immediately the most vital factor in Allied war plans, the formation of an American-Allied Shipping Control Committee of three men to assume the dictatorship of transport on the Atlantic was an inevitable step. Announcement of the committee was made on January 30. The members are P. A. S. Franklin, president of the International Mercantile Marine; H. H. Raymonds, recently appointed Controller of Shipping at New York, and Sir Cunnop Guthrie, who will represent Great Britain, France and Italy.

The object of the committee will be to make already available tonnage fifty per cent more efficient, to make good Secretary Baker's boast of a mil-

lion and a half troops in France by the year's end, to pour a steady stream of food and supplies into Europe. A thoro coöperation with the Food Administration, the Railroad Administration and other Government departments is being worked out.

#### An Eye on the Packers

The investigation of the Federal Trade Commission into the devious ways of the Big Five in the packing industry has brought forth evidence tending to indicate that the packers controlled banks and other agencies, dabbled in politics for their own purposes, attempted to pull wires to prevent any investigation of their activities, and indulged in the familiar practise of local price-cutting to put trade rivals out of business.

A report of the Trade Commission on its investigation into the hide and leather industry also exhibits the packers in an unenviable light in connection with the prevailing high prices for shoes and leather. Tho the slaughter of cattle and calves last year showed an increase of 30 per cent over 1913, and imports of hides had increased 70 per cent over 1912, the packers were holding the hides at prices of 75 to 100 per cent over those obtaining before the war. Tho tannery plants generally were working at far below normal capacity last year for lack of material, the packers were holding in storage about 50 per cent more hides than in 1916. They were paying 17 per cent more than the previous year and charging 35 per cent more. In the case of one company the net profits showed an increase in one year from \$945,651.37 to \$3,576,544.27.

Both investigations are continuing.

#### "Liberty Bread"

Following the urgent plea of Lord Rhondda, the British Food Controller, asking for an additional 75,000,000 bushels of wheat from our already depleted supply, President Wilson issued a proclamation published on January 27 calling upon the country to curtail its consumption of wheat by thirty per cent. Bakers of bread and rolls are to reduce their use of wheat flour to eighty per cent of normal, and manufacturers of other wheat products to seventy per cent. Mondays and Wednesdays are to be wheatless days, and there is to be a wheatless meal each other day. Tuesday is to be observed as a meatless day, and Saturday as an additional porkless day, with one meatless meal daily.

In accordance with the President's proclamation, Food Controller Hoover has issued new food pledges for householders and has requested patriotic citizens to eat the new war loaf, which he has christened "Liberty Bread." The bread came into being on January 28. It started with a requisite adulteration of five per cent of some cereal other than wheat, and the percentage of adulteration will be increased gradually to twenty per cent by February 24. In his statement Mr. Hoover points out that the percentage of adulteration in bread being used in France is forty per cent and in England thirty per cent.

#### THE VITAL NEED OF SHIPS

These photographs, taken three months apart, are a graphic illustration of one of the enormous war tasks that the Government is accomplishing. The desolate swamp above had to be cleared and made over into a great shipyard before the work could really begin on the ships which the Emergency Fleet Corporation was charged with turning out. The lower photograph shows piles being sunk for fifty ship ways. Since it was taken keels have been laid for as many standardized cargo vessels

# HOW BIG IS BAKER?

BY DONALD WILHELM

ONE of those "last moments," one of those curious and revealing farewells to old things, old conditions, old limitations that are at once the dread and the hope of war, came, here in a large room in the Senate building—the very room where, only a few months ago, the lottery that established the order in which ten million young men were to be called to the colors was held.

The Senate Committee on Military Affairs was seated behind and to right and left of its chairman, the littlest man in the biggest chair, before a great gilt mantel and mirror, beneath a glistening, lighted chandelier. There were other senators near, lounging, as senators do, even on the stiffest of all chairs; and more newspaper men than senators, at a long table; some congressmen, too, in that one small room, and more women than congressmen—knitting.

Women are often in the official landscape now.

A lithe, slender, clean-jawed man standing among the senators, buried to his shoulders, as it were, in officialdom, was speaking, swiftly, eagerly, despite the noise and whisperings and the curtains flapping, the opening of windows when they were closed, the closing of windows when they were open. For more than three hours he had spoken, putting together, bit by bit, a graphic picture. "Never, Senator," he remarked a little later, "have I spoken so long, in one day." from 10.30 till 1 he had spoken, to pause then, in the neighboring restaurant to have luncheon, then to resume. And as he went on, little by little, the room lost its air of an inquisition, with a defendant on trial for his life; little by little a sense of closer intimacy and understanding pervaded it, till at last the tired yet clear and resonant voice fairly leaped up to the paragraph:

"Now, instead of having 50,000 or 100,000 men in France in 1917," he said impressively, "we have many more than that in France; and instead of 500,000 men whom we could ship to France if we could find any way in which to ship them in 1918, we will have more than 500,000 men in France early in 1918, and we have available, if the transportation facilities are available to us, and the prospect is not unpromising, 1,500,000 men who in 1918 can be shipped to France."

He paused—for the Secretary, like the President, knows the arts of the speaker.

He paused, and in that pause those who looked quickly saw the "last moment" in America's provincialism, goodby to military weakness.

In that "last moment" the women stopped knitting, but there were no applauding hands; men leaned forward, listening, and the critical, like the enthusiastic, seemed for the nonce to give their support to the only kind of recognition that senators vouchsafe in meetings such as these. Then the Secretary heard what went to show his power no

less than the genuineness of the Chairman, for Senator Chamberlain glanced up, smiled, a little guiltily, it seemed—smiled a little, somewhat in the manner of an indulgent pontiff—and said:

"Mr. Secretary, why have you not felt it proper to let the public into your confidence with reference to these things that you are telling us now?"

The Secretary replied substantially: "That's the way armies are accustomed to do things."

That very morning one of his friends told me: "Psychologically Mr. Baker is a failure. That's the whole trouble."

"You mean," this friend was asked, "that within himself he is a failure?"

"No," he averred, "he is an amazingly able man. I mean that there has been an effort, it seems, to get him before the country as a failure."

"Why?"

"I don't know why."

And in the course of a whole breakfast he couldn't tell why.

"Blow the lid off," a half dozen newspaper correspondents gave me as the specific for all Mr. Baker's ills.

"But you can't tell all our military secrets to the enemy," countered a United States Senator.

Then came a business man, exclaiming: "I don't see why he *won't* appoint a Minister of Munitions." And he told at length what a sensation Waddill

Catchings, of the National Chamber of Commerce, had created by telling the Senate committee that all of the Allied purchases in America in the first years of the war were made by Mr. Stettinus, the new Surveyor-General of Purchases of the War Department, and five assistants.

I went up and down Washington and there seemed to be no class of individuals who were agreed about Mr. Baker except the officers of the army. As they explained, "We *understand*." One said that of course his troop was short of saddles. "Why? Because those saddles have been sent to France for troops that were sent six months ahead of schedule." Another said, "Well, whatever the army's shortcomings, we've good faith in Baker, and we know—any one does who has studied military history—that diffusion of authority in an impossible war cabinet of civilians would be running counter to all our experiences in the Civil War, as the *Army and Navy Journal* points out."

There were a thousand other opinions, pro and con—as many as there were persons, it seemed. Looking back now one can see how much America was in the dark, how earnestly almost every individual was offering his panacea for all Mr. Baker's ills. The town was rife with rumor, criticism, commendation, even bitterness, with the currents going gustily about a Secretary who, curiously, was judged by the run of people as about to go under, but upheld by the majority of all those who know him. "Of course he won't be permitted to resign," Senator Owen told me. "He is a very, very able man." And so on—more opinions, right and left.

The Secretary's speech—his first speech—before the committee, Senator Chamberlain's bills, crude tho they are, for a war cabinet and a ministry of munitions, his speech on the Senate floor with the disclosures that forced the blowing off the lid—all these factors, with the misunderstood Garfield closing orders going before; more and more cries of inefficiency, more and more demands for full knowledge; all were tied into a mighty knot together, out of whose center writhed poor Mr. Baker.

There was talk, too—the old, old usual talk—as soon as Colonel Roosevelt came to town, of his intentions in 1920; talk also of forcing a coalition cabinet; much talk also from Bolshevik quarters about a gigantic conspiracy to force universal military training before the Tory elements lost their power altogether.

There were a thousand and one opinions, and the most refreshing of them all I got from the Secretary himself. He was worn, a little slower than usual in his mental perceptions, tired, haggard, dusty; yet he took up his pipe and swung round in his chair, to smile, shake hands, and frown disapproval on the idea that there are any personal enmities driving their lances at him. "No," he said, with apparent reluc-

tance to take up such an idea, "it's the natural thing, and it finds itself at the point of expression at this moment. The people of the whole country want to be assured that they are doing big things as fast as they can be done."

He paused, dispelled a few more misconceptions that I had carried to him, and added:

"Other factors that must be considered are that the affairs of the War Department are, perhaps more than those of any other department except the State Department, necessarily undiscussable. Vast things have to be done without being disclosed because of the information that might be afforded the enemy."

He followed his thought further. It is characteristic of him to exhaust a theme, if he has the leisure.

HE went on, thus, and explained how easily an impression of confusion and disorganization might be afforded to callers who long had knocked on certain doors and found certain familiar faces, and now found strange faces, great alterations, all the appearance, often, of a lack of plan. "Everybody wants to help," he said. "Every one who has an idea brings it, wants immediate action on it, because he has faith in it."

It became clear, little by little, that most of the criticism arose in the notion that the War Department had no plan. Mr. Baker's description of the adoption of the only plan practicable—a plan made imperative by the very nature of the circumstances of this war—has since been given, before the Senate committee.

He discussed his plan, analyzed it, and it became clear as he did so why this lawyer and lover of books and flowers, who isn't at all like a warrior, or a massive, grim-visaged "torch-eyed horrible," is so fascinating to the President. Certainly, too, it became clearer that he has been acting in the light of a great deal of information—in a whole world, as he revealed in his testimony—comprehended by the War Department, that the public has known little about.

In other words one should, in all fairness, in these discussions of Secretary Baker, which of course will continue thruout the war, seek to look out on his problem from his desk chair, or, even, act more intelligently still, and seek to understand what are the deeper currents swirling now in the nation about him. It is only by doing that, that one can come near to understanding his difficulties.

A member of the British Parliament, one who has won recognition there, no less than on the battlefield, told an audience here in Washington the other day that British labor, without whose support of course the cause of the Allies could hardly last a week, is as loyal as it is because of their faith in President Wilson.

To be perfectly blunt, it is well known by those who understand both sides of our industrial problem—and it is up to them very frequently to remind Mr. Hoover, Council of National Defense

officials, and many others, that the war must, as advertising men say, "be sold to labor" here. That is, labor's coöperation is absolutely the most essential of all war material.

NOW it has been Mr. Baker's lot to deal, for the President, with labor. He, as Chairman of the Council of National Defense, was charged with the responsibility of bringing forth coöperation therein between capital and labor—in which struggle toward coöperation, so officials of the Council say, labor got the best of it. And for other reasons he is accused of having given in to labor. Perhaps he has given in to labor; perhaps there are, as is whispered here, labor troubles coming. Perhaps labor is lingering, too, on the job, as is whispered also. But Mr. Gompers has other ideas. The other evening, to a great audience—this, too, indicates some of the leavens that are working, to rouse opposition perhaps—that leader said, with the utmost confidence:

"What will come out of the war for labor? In a word, disenfranchisement from every vestige of wrong and injustice. Out of this war the men of labor of the democracies of the world will come, standing upright; no longer like the man with the hoe. There is a new concept among mankind—the question, Am I my brother's keeper? This war and the democracies of the world are going to answer in the affirmative. If I have read history right there has never been any great struggle in the history of the world that has not had its baptism in blood. And the great cause of human liberty and justice is being baptized in human blood; and the spirit of freedom, of human justice, of human brotherhood, will triumph here, as in Europe. I ask you to believe in the loyalty of the great mass of the people who toil."

There are in the air new triumphs. Listen, thus, to Secretary Daniels, whose speech is now reported for the very first time:

"We have done more for democracy in six months of war than in six years of peace. Our soldiers who come back from France aren't going to be anything but men. For in this war we are establishing a new spirit of universal equality and brotherhood. Too long has America been enslaved, too long has caste been enthroned. Kings will be relics, thrones will be in museums, here and abroad."

Was ever a challenge to opposition so pointed?

And millionaires, even, are passing, it seems.

For listen to ex-Congressman Kent: "We have done business on the basis of profit, and service and morals have been forgotten. We are suddenly confronted with the idea of doing business for service. Business henceforth is the exercise of social knowledge of foods, of labor, of life; work itself will be social—and no man shall use his property to the detriment of another."

These, without doubt, are vital things for men in high place to say, like the things the President said of

the Bolsheviks. Such utterances, indeed, would have been inconceivable six months ago, even at a "Trench Dinner" of the Good Government League. They come to mind in the writing of this article simply to illustrate the fact that there are forces at work here just as definite in their character and just as vital to the welfare of the nation as the forces of big business and political parties. And all these forces revolve around Mr. Baker. For it is principally his task to deal with labor, as well as with industrial production; and it is principally his task to deal with capital (he is Chairman of the Council of National Defense and of course the War Department is charged with making the bulk of war purchases), as well as with the army. Then, of course, there are political factors, but it is believed these are made too much of and some that are mentioned here are made too little of. There was nothing, thus, intrinsically warranting the attention that was given the Chamberlain speech in the Senate. The Secretary was, in the first hearing before the Chamberlain committee, a little supersensitive. He might better have been more congenial, and after all, tho these hearings are like inquisitions, nevertheless it was only by dint of them that Mr. Baker was able to establish sentiment strong enough to remove Generals Sharpe and Crozier, that is, move them up to the War Council.

THEN Senator Chamberlain went on the floor of the Senate and did that typical American stunt called generalizing from a single instance. That is, he said that since there was evidence of a kind, from grief-frenzied parents, to show that one or two soldier boys had been neglected, therefore all of two millions must be neglected. The President came down on him because no doubt he was fully aware how far in the Civil War the same method was pursued to embarrass the Administration—the same old exceptions with the conduct of the war, the same hue and cry of business, even when Sherman was marching into Atlanta.

"The big task of the War Department," Secretary Baker told me, in another connection, "has been to relate industry as a factor in war."

That task has not been so great a part of the problem of any War Secretary before Mr. Baker, and he has done marvelous and statesmanlike things with industry.

His testimony showed what marvels he has done with our military resources.

There are a thousand and one other phases of his achievement that cannot be summarized here. There is no space here, for instance, to make an end of the foolish parallel often drawn between the developing of the navy and the making of the new American army. There is no parallel. Appropriations show that the ratio of achievement is as seven to one. The war cabinet bill isn't the least likely to become a law. The establishment of a ministry of munitions [Continued on page 244]

A psychological moment in the progress of the Russian revolution came, toward the end of Kerensky's regime, when 13,000 armed Bolshevik sailors were sent into Petrograd to intimidate the crowds of revolutionaries and so to take possession of the capital

# A Message from the United States

Presented each week in The Independent by GEORGE CREEL, Chairman of the Committee on Public Information, appointed by PRESIDENT WILSON.

**T**HIS is a trying time for America. It is the peevish time. The tragedy of our losses in battle has not yet come to dignify us. The glory of our successes has not yet arrived to uplift us. We are struggling with the drudgery of preparation, impatient, suspicious, short-tempered. The railway trains are late and slow. Some businesses have been hurt and others killed. Fuel is scanty and houses are cold. Meals are wheatless and meatless and dear. Our enemies are busy among us with discouraging rumors and irritating reports. Partizan criticism is stung into exasperated complaint. Class quarrels are aggravated. Every domestic grievance of a distracted people is made voluble. And, in the midst of it all, the Government is required to carry on the greatest undertaking that America has ever attempted, with unflinching success in every detail, calmly, attentively, with inexhaustible patience toward endless criticism and with unflagging cheerfulness toward unflagging discontent.

Not so long ago, a determined campaign of misrepresentation was waged against Secretary Daniels of the Navy. It received an incredible popular support. Time has proved it to have been baseless and unfair. The record of Mr. Daniels, since the war broke out, is now acclaimed one of the great performances of the day. A similar campaign against the Secretary of War has just achieved its height of uproar. What are the facts about the War Department?

In nine months, the military establishment of the United States has grown from a force of 100,000 men to 1,500,000.

It has now as many trained officers as it had officers and men when war was declared.

It is an army larger by more than half a million men than Lincoln had to defend the Union when the Union's armies were at their largest. It is nearly six times as large as the army which we raised to fight the Spanish-American war. It is three times as large as the Grand Army with which Napoleon invaded Russia.

To house and train this army, the Government has built sixteen permanent cantonments for the drafted men; sixteen other camps are housing National Guard Divisions; and seventeen regular army stations are taking care of the regular army recruits.

The sixteen cantonments of the drafted men were built in three months, at a cost of \$150,000,000. Each is a small city. The northern camps are steam heated. All have water supply, drainage, streets, hospitals, etc. They have been built at a time when labor and materials and trans-

portation were already strained to the limit of their capacity by war work. A billion feet of lumber had to be moved to the camp sites. Hundreds of thousands of carloads of building materials were transported and food supplies for an army of more than 100,000 workmen.

These camps were prepared on schedule time. The recruits were moved into them. The railroads carried, in all, 1,300,000 men to the camps or to ports of embarkation for France. To the men in the camps, six million blankets have been delivered, two million overcoats, eight and a half million pairs of shoes, three and a half million hats, five and a half million woolen shirts, two and a third million winter uniforms, nearly eleven million pieces of winter underwear, and so on. And every day 2500 carloads of food and coal are being hauled to the camps of the National Guard and of the National Army.

The men have been comfortably housed in the cantonments, under sanitary conditions. They have been well supplied with the best of food. Some of the camps were short of overcoats in the early part of December, but all the shortages have now been made up, and at no time were the men short of heavy woolen underwear. There was no serious suffering, no privation. There were no contract scandals, no graft, no shoddy work.

The sites for the camps were selected by department commanders with the advice of military boards, and upon these boards medical officers served. The barracks and hospitals were built according to plans approved by the Surgeon General's office. While in process of construction, they were inspected by a committee of the American Medical Association, and the recommendations of that committee have been followed in allowing each soldier 500 cubic feet of space. There has been no overcrowding except in one cantonment where there were at one time 200 more men than the ideal minimum number.

The medical experts feared that sickness would be most likely to break out in the larger permanent cantonments. They did not fear epidemics among the men under canvas. Yet it is among the men under canvas that disease has been most prevalent. The Government has hastened to supply larger hospital facilities to meet these unprecedented conditions. As a matter of fact, the percentage of sickness has been but little larger than it would have been among the same number of men in civil life. It has obviously been due to the fact that the men, drafted from sheltered homes, were ignorant of how to protect themselves under conditions of outdoor life, new to them.

Rumors of medical neglect have been easily disproved by the Secretary of War, who has showed that in the dozen cases thus far reported there have been found only two instances where neglect

# Government to the American People

President Wilson in his proclamation of April 15 said: "This is our opportunity to demonstrate the efficiency of a great democracy, and we shall not fall short of it!"

not bring men together who have been exposed to communicable diseases to which they are not immune. And the most which can be done is to meet these conditions with every device and every suggestion which science and care can devise. And that is the aim of the Surgeon General, and in the doing of this he has the support, and he knows he has, of every officer in the War Department from the Secretary down."

In England, Kitchener's "citizen army" drilled for months in civilian clothes, with sticks for arms. To the draft army in our camps, 700,000 rifles were delivered at the outset. These were inferior rifles. A remodeled Enfield rifle was prepared with interchangeable parts. Every soldier in our camps who is to carry a rifle now carries one of these improved Enfields. Every American soldier who has gone to Europe has carried one. And there is an adequate supply for every soldier who will go in the future.

To each cantonment of the draft army 138 machine guns of different types were delivered, for practise work, before the machine gun corps were ready for them, and for each camp of the National Army 160 machine guns were provided. Lewis guns were ordered as soon as that gun had been adapted for the use of American ammunition.

But the Lewis guns which were taken abroad by the marines have been retired from service by order of General Pershing, and the men have been armed with the Chauchat rifles or light guns and with the heavier Hotchkiss guns which the French army prefers for land operating troops. The French are willing and able to furnish our troops abroad with all of these machine guns that are now needed. The Lewis gun is being taken by the army here as fast as it can be manufactured, and the factories are making improved machine guns, similar to the French type, for quantity production to supply our needs. Similarly, the British and the French governments, on their own initiatives, have offered to supply the American forces in France with heavy ordnance, because the British and French munitions works are now producing more heavy guns than their armies need, and because the allied governments wish to save for other purposes the ship tonnage that would be needed to transport across the Atlantic big guns and ammunition for American use in France.

These are the plain facts behind the complaints that our troops abroad are drawing on the meager French supplies for guns; that there has been neglect of the sick in our home cantonments; that our drafted men have been without rifles,

without overcoats, and without uniforms.

These are the facts upon which the statement has been based that "the War Department has completely broken down." They are not facts which in any way bear out a hundredth part of the criticism that has been founded on them. Scaled against the things which the department has done superbly, they are microscopic points to cavil at. That such a serious campaign has been successfully based upon them is a criticism of the American people.

We have sent to France an army that is far larger than the most optimistic military experts expected of us. We will have half a million men there "early in 1918," says Secretary Baker. And the work that has been done to receive them in France has been almost as great as the work done here in order to send them. Docks have been built. A railroad of 600 miles has been constructed. Depots and warehouses have been erected. An enormous plant has been needed, and it has been designed and assembled in America, transported to France in parts, and erected in its place there. Provision is being made on a scale to take care of a million men. And the million men will be trained and ready as soon as the shipping is ready to transport and supply them.

This is a trying time. It is the peevish time of drudgery and impatience. But it is the time above all when the people of our country should not be peevish—when they should be cheerful and patient—when they should give support to their public servants until *facts* prove that the continuance of this support is unwarranted and unwise.

Each month sees new thousands pouring across the sea to join the American Expeditionary Force in France. No man left behind has any right to consider his lot save in comparison with the lot of those who have gone forth to offer their lives on the altar of liberty. Here in America the worst that may befall us is discomfort, inconvenience or money loss, but our soldiers and sailors face daily the danger of death and the horror of those wounds that are worse than death.

This is the thought with which we must lie down at night and get up with in the morning. We are safe at home while others go down into the valley of the shadow to fight for us.

The least that we can do is to keep blazing the fires of courage and determination so that the light may flame across the sea into the very trenches.

Washington, D. C.

occurred and in these two instances the responsible officers were court martialed and dismissed from the service. "No army was ever assembled nor can be," Secretary Baker says, "which does

# THE "GOEBEN" AND THE "BRESLAU"

BY PARK BENJAMIN

**A**BOUT a year before war was declared Germany sent two ships, the "Goeben" and the "Breslau," into the Mediterranean. They were exceptional vessels in their respective classes. The "Goeben" was a battle-cruiser and the best of that type which Germany possessed, for she combined the swiftness of a destroyer with the armament of a battleship. She could make without pushing 28½ knots per hour and in her turrets she carried ten 11-inch guns. In her electric steering and turret turning gear she was the last word in the application of electricity to marine warfare. The "Breslau" was a small cruiser armed with twelve 4-inch guns, but her speed was nearly the same as that of the "Goeben." The two ships could therefore work together, and as they were faster than any potential enemy ship in the Mediterranean they could undertake raiding expeditions and, if pursued, could run away from any assailant likely to be encountered. Nobody seems to have foreseen the resulting possibilities, or to have taken effective measures to counteract them. Nor did the assignment of an admiral of distinguished reputation and especially familiar with Turkish affairs to so small a command apparently prove suggestive.

In May, 1914, these vessels anchored off Constantinople and proceeded to establish remarkably friendly relations with the Turks, whose officials welcomed them with enthusiasm. "Goeben" days and "Goeben" fêtes were arranged, visitors on board were lavishly entertained and when one of the periodical fires in the city broke out the German crews were landed to extinguish it. All of which went to show, as was then rumored, that Germany had completed an unusually altruistic transaction in selling the ships to the Turks, who wanted them to offset the purchase by the Greeks of our "Idaho" and "Mississippi" and so to elevate their navy above the condition of floating junk of which it was mainly composed. As we now know, the visit really marked the culmination of the intrigue which secured Turkey as the Kaiser's ally, two months before the war started.

**M**EANTIME a division of opinion among the German naval authorities not in the secret began to appear: some opposing the stationing of so small a naval force in the Mediterranean, others contending that should trouble ensue these ships added to the combined fleets of Austria and Italy (the latter country then being expected to throw in her lot with the Central Powers) would aid materially in challenging British and French supremacy in southern waters.

The German ships received news of the first declaration of war against France while at sea on August 3d, four hours before it was known to the French fleet then mobilized at Toulon. There were at that time in the Mediterranean two British battle-cruisers, seven cruisers and about a dozen de-

stroyers, all in the vicinity of Sicily and Malta. The German admiral promptly made for the Algerian coast, and the "Goeben" bombarded Bona and Philippeville and then steamed westward. He did not mention where he was going—and the fact that he was steering toward Gibraltar was certainly not suggestive that his real objective was the Dardanelles. At all events, speculation exhausted itself in wondering whether he meant to attack the Rock or get out into the Atlantic.

**B**ETWEEN Tunis and Sardinia he fell in with the British cruisers "Indefatigable" and "Inflexible" accompanied by the light cruisers "Weymouth" and "Gloucester." As this was twelve hours before England declared war, no hostilities took place. The two squadrons passed each other in grim silence, without salutes and cleared for action. The British vessels swung into formation astern of the Germans and manifested an intention to follow. The German admiral, seeing that they were the more powerful force, proceeded with all possible celerity to part company. "For twenty-four hours," writes one of the "Goeben's" officers, "everybody on board, including officers and warrant officers, took his turn at stoking and coal trimming. In the afternoon we had worked up to a speed of thirty knots and I thought every moment the ship would blow up. The 'Goeben' shook and trembled as she went thru the water, but, by evening, the British were out of sight and the harbor of Messina was safely reached."

But here the finish of the German ships seemed inevitable. England had declared war and the British cruisers quickly beleaguered the port. The Italians ordered the Teutons to leave within twenty-four hours and surrounded them with a cordon of destroyers to see that they did it. To go out meant certain destruction, to stay meant internment for the war. The German admiral and his officers brought ashore their wills and their valuables, and gave them to their consul, for Berlin had radiographed "His Majesty expects the 'Goeben' and the 'Breslau' to succeed in breaking thru." And then, with their colors aloft, their bands playing and their men stripped at the guns, they steamed forth to meet—not the assembled array of Britain, but a single little cruiser, the "Gloucester," upon which they contemptuously refrained from opening fire, nor even blocked her wireless warnings to the other British warships, which for some unaccountable reason had suddenly left their posts and gone to the Straits of Otranto.

When the British admiral was court-martialed for thus withdrawing his squadron when the enemy was obviously in his power, he was acquitted on the astonishing showing that he had received by wireless orders directly from the Admiralty commanding him so to do, which orders in fact had never been

sent. How German spies in the very heart of the Admiralty office managed to get hold of the secret signal code and to surround the forged official dispatch with all the cryptic safeguards of identification may perhaps come to light after the war. But the mischief was done and the court-martial was satisfied.

The brave little "Gloucester," however, had no notion of being ignored, even if the Germans did show a strange desire to avoid her company and rush to the eastward. She launched a torpedo at the "Breslau" as that ship swept by her, which missed, and then hanging on at the rear she poured in such a savage fire that the great "Goeben," which could blow her out of water with a single salvo, showed symptoms of slackening her pace and turning back to demolish her. Only then did discretion become the better part of valor, and before her huge antagonist could complete the turn, the "Gloucester" made her escape. Of course the "Goeben" could have caught her, but being desperately short of coal prevented any chase. There was not enough fuel in the bunkers of the German ships to carry them to the Dardanelles, and to make matters worse, they learned by wireless that the affection of the Turks had cooled. The Sublime Porte seemed to have forgotten their existence and was stolidly showing a disposition not to let them enter the Straits. So they went to an unfrequented Greek island where nobody lived except some fishermen who had not heard of the war and there received their coal. They also stayed there fuming with anxiety, for the British were searching for them and getting dangerously nearer all the time.

**A**T last, in utter despair, they decided to force a passage to Constantinople no matter what the Turks might do to prevent. When they reached the Dardanelles another surprise awaited them. Instead of a hail of big shells from the forts which guarded the entrance, they found a small steamer flying the signal "Follow me." Four hours later the British pursuers arrived to discover their entry refused and the Turks, under German direction, busily at work strengthening the defenses. Next day the "Goeben" and the "Breslau" lay in the Bosphorus off the Dolma Bagtché palace with the city of Constantinople under their guns.

Not that it can be positively averred that the German admiral actually intended to resort to the last of arguments, but the hesitancy of the Turks this time in welcoming him contrasted painfully with the earlier love-feast, and besides indicated a certain weakness of backbone which needed tonic treatment, and of course in this particular nothing would yield better results than the immediate reinforcing of the Turkish navy by two such fine vessels as the "Goeben" and the "Breslau." Had not the perfidious British grabbed the "Reshadî" [Continued on page 242]

# CREATIVE CHEMISTRY

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

## THE RIVAL SUGARS

THE ancient Greeks, being an inquisitive and acquisitive people, were fond of collecting tales of strange lands. They did not care much whether the stories were true or not so long as they were interesting. Among the marvels that the Greeks heard from the Far East two of the strangest were that in India there were plants that bore wool without sheep and reeds that bore honey without bees. These incredible tales turned out to be true and in the course of time Europe began to get a little calico from Calicut and a kind of edible gravel that the Arabs who brought it called "sukkar." But of course only kings and queens could afford to dress in calico

and have sugar prescribed for them when they were sick.

Fortunately, however, in the course of time the Arabs invaded Spain and forced upon the unwilling inhabitants of Europe such instrumentalities of higher civilization as arithmetic and algebra, soap and sugar. Later the Spaniards by an act of equally unwarranted and beneficent aggression carried the sugar cane to the Caribbean, where it thrived amazingly. The West Indies then became a rival of the East Indies as a treasure-house of tropical wealth and for several centuries the Spanish, Portuguese, Dutch, English, Danes and French fought like wildcats to gain possession of this little nest of

islands and the routes leading thereunto.

The English finally overcame all these enemies, whether they fought her singly or combined. Great Britain became mistress of the seas and took such Caribbean lands as she wanted. But in the end her continental foes came out ahead, for they rendered her victory valueless. They were defeated in geography but they won in chemistry. Canning boasted that "the

A sugar beet

MAP SHOWING LOCATION OF EUROPEAN BEET SUGAR FACTORIES—ALSO BATTLE LINES AT CLOSE OF 1916  
ESTIMATED THAT ONE-THIRD OF WORLD'S PRODUCTION BEFORE THE WAR WAS PRODUCED WITHIN BATTLE LINES

New World had been called into existence to redress the balance of the Old." Napoleon might have boasted that he had called in the sugar beet to balance the sugar cane. France was then, as Germany is now, threatening to dominate the world. England, then as now, shut off from the seas the shipping of the aggressive power. France then, like Germany now, felt most keenly the lack of tropical products, chief among which, then but not now, was sugar. The cause of this vital change is that in 1747 Marggraf, a Berlin chemist, discovered that it was possible to extract sugar from beets. There was only a little sugar in the beet root then, some six per cent, and what he got out was dirty and bitter. One of his pupils in 1801 set up a beet sugar factory near Breslau under the patronage of the King of Prussia, but the industry was not a success until Napoleon took it up and in 1810 offered a prize of a million francs for a practical process. How the French did make fun of him for this crazy notion! In a comic paper of that day you will find a cartoon of Napoleon in the nursery beside the cradle of his son and heir, the King of Rome—known to the readers of *Rostand* as *l'Aiglon*. The Emperor is squeezing the juice of a beet into his coffee and the nurse has put a beet into the mouth of the infant King, saying: "Suck, dear, suck. Your father says it's sugar."

In like manner did the wits ridicule Franklin for fooling with electricity, Rumford for trying to improve chimneys, Parmentier for thinking potatoes were fit to eat, and Jefferson for believing that something might be made of the country west of the Mississippi. In all ages ridicule has been the chief

The sugar cane of the South holds its own against the sugar beet of the North

CHART SHOWING MOVEMENT OF SUGAR FROM THE UNITED STATES TO EUROPE  
AND FROM CUBA TO THE UNITED STATES AND EUROPE

weapon of conservatism. If you want to know what line human progress will take in the future read the funny papers of today and see what they are fighting. The satire of every century from Aristophanes to the latest vaudeville has been directed against those who are trying to make the world wiser or better, against the teacher and the preacher, the scientist and the reformer.

In spite of the ridicule showered upon it the despised beet year by year gained in sweetness of heart. The percentage of sugar rose from six to eighteen and by improved methods of extraction became finally as pure and palatable as the sugar from the cane. An acre of German beets produces more sugar than an acre of Louisiana cane. Continental Europe waxed wealthy while the British West Indies sank into decay. Before the war England was paying out \$125,000,000 for sugar, and more than two-thirds of this money was going to Germany and Austria-Hungary. Fostered by scientific study, protected by tariff duties, and stimulated by export bounties, the beet sugar industry became one of the financial forces of the world. The English at home, especially the marmalade-makers, at first rejoiced at the idea of getting sugar for less than cost at the expense of her continental rivals. But the suffering colonies took another view of the situation. In 1888 a conference of the powers called at London agreed to stop competing by the pernicious practise of export bounties, but France and the United States refused to enter, so the agreement fell thru. Another conference ten years later likewise failed, but when the parvenu beet sugar ventured to invade the historic home of the cane the limit of toleration had been reached. The Council of India put on countervailing duties to protect their homegrown cane from the bounty-fed beet. This forced the calling of a convention at Brussels in 1903 "to equalize the conditions of competition between beet sugar and cane sugar of the various countries," at which the powers agreed to a mutual suppression of bounties. Beet sugar then divided the world's market equally with cane sugar and the two rivals stayed

substantially neck and neck until the Great War came. This shut out from England the product of Germany,

Austria-Hungary, Belgium, northern France and Russia and took the farmers from their fields. The present battle lines of the Central Powers enclose the land which used to grow a third of the world's supply of sugar. In 1913 the beet and the cane each supplied about nine million tons of sugar. In 1917 the output of cane sugar was 11,200,000 and of beet sugar 5,300,000 tons. Consequently the Old World had to draw upon the New. Cuba, on which the United States used to depend for half its sugar supply, sent over 700,000 tons of raw sugar to England in 1916. The United States sent as much more refined sugar. The lack of shipping interfered with our getting sugar from our tropical dependencies, Hawaii, Porto Rico and the Philippines. The home-grown beets give us only a fifth and the cane of Louisiana and Texas only a fifteenth of the sugar we need. As a result we are obliged to file a claim in advance to get a pound of sugar from the corner [Continued on page 246]

The crushing machinery of a cane sugar mill

Vacuum pans of the American Sugar Refinery Company. In these air-tight vats the water is boiled off under diminished atmospheric pressure until the sugar crystallizes out

Two pages torn from the Book of Teuton Treachery are set in all their criminal blazonry before the American public in the February issue of  
**THE WORLD'S WORK.**

## Germany's Plots Exposed!

*The German Spy System has woven a network of intrigue over the country since the War began. Thousands of men and women, American citizens in name only, are under direct orders from Berlin to terrorize the nation and hamper to the utmost our preparations for war. To this end they have dynamited industrial plants, burned grain warehouses stocked with food, sunk ships in mid-ocean by means of bombs placed in their cargoes, and have even murdered our people in cold blood.*

*To John R. Rathom, editor of the Providence Journal, belongs much of the credit of revealing hundreds of these plots. With infinite patience he has deciphered code messages and run down dangerous clues until he has uncovered the details of the most astounding web of intrigue imaginable. The peril is still in our midst, and it is for the purpose of warning his countrymen that Mr. Rathom now writes for the first time the full story of his marvelous detective work. Begin it now, in the February issue.*

## Germany's Preparations For The Next War

*J. B. W. Gardiner, one of America's foremost military critics, presents convincing evidence of the intensive preparations now being made by Germany to win the next war and emerge triumphant as the supreme ruler of the world. She has realized since the battle of the Marne that she could not win this war, and her sole purpose in keeping it up is to cripple the man-power of her enemies so that they will not be able to recover for a generation.*

*Meanwhile Germany is building up her own future man-power by means of infamous "lateral marriages," and by forcing her soldiery to ravish the women of conquered territories and taking the male-offspring of such acts into German institutions. Hand in hand with these crimes go the ravaging of the land and the despoiling of the economic life of Belgium, Serbia and Northern France. Read this terrific indictment in the February issue of THE WORLD'S WORK.*

# THE NEW BOOKS

## Audubon Revealed

THE cult of Audubon, the ornithologist, which has made this voluminous biography possible, at least as a commercial venture, is rather surprising. Measured with his two principal contemporaries in the same field, he was neither as scientific nor painstaking as Nuttall, nor will his loose, florid, often extravagant manner of writing compare for literary excellence with the pure English and poetic feelings of Alexander Wilson. Audubon, however, was a draftsman, and to some extent an educated one, and in his painted portraits of birds he excelled every man of his day. But the magnificent plates of his great folios could be seen by very few; and their reproductions, reduced in size and badly colored, in the later "miniature" (octavo) editions, made them appear commonplace. His accounts of our birds have not been quoted much by recent descriptive writers, and then often in a critical way, while the "episodes" with which they are interlarded are often fanciful; and it is probable that he would be little known to, or cared for, by the modern public had it not been for two circumstances—first that he obtained much publicity by his early eccentricities among a matter-of-fact people, and later in the business of getting subscriptions for the proposed very expensive (\$1000) folio edition of the truly great "Birds of America"; and, second, that he spent the latter part of his life in a suburb of New York City, so that, due to local interest and pride, his name was given to the movement for the preservation of bird-life which resulted in the Audubon Societies. It is owing to this last circumstance more than to anything else that the public has become acquainted with and interested in this artist-ornithologist, altho he himself paid little consideration to the matter of saving bird-life. He was a sportsman and always eager for a big "bag."

Several biographies of Audubon have been issued, including two volumes of his "Journals" containing the beginning of an autobiography, but all have been unsatisfactory and more or less erroneous. Even the time of his birth has been unknown or misstated. In Professor Herrick's two thick volumes, now under review, every question is answered, and a wealth of new facts are revealed or co-related. Having discovered by chance a mass of letters and documents relating to his hero, the author set himself to follow their novel suggestions, and complete to the last possible detail the hitherto half-told story. The result is a monument of research, too successful, if anything, in its completeness, often elaborating matters of trivial importance. Audubon had an exceedingly active and adventurous life, and his biographer has studied out every incident with indefatigable zeal and industry, throwing a thousand sidelights on both the character and the history of his subject, not always to their advantage; and he has reproduced a surprising number of pictures of places where Audubon lived or traveled, and of men with whom he was associated here or there, for Audubon was incessantly moving about, often as an almost penniless, scientific vagabond. Thus many portraits of early naturalists add much to the value of the book. All the wanderings and transactions of the first half of his life are traced with minute care, and

verified by innumerable documents—the detailed story of a career of failures; and this selfish impracticality would never have been turned into a final success had it not been that Audubon had a wife who was a wonderful woman in her capability and bravery and patient faith in her harum-scarum but delightful husband. Perhaps no man could stand such a pitiless exposure of every day of his life as that to which Professor Herrick has here subjected Audubon; but one feels when he has finished these archives that somehow he does not like the naturalist as well as he did before. The books are excellently made, bountifully illustrated and provided with a capital index.

*Audubon the Naturalist*, by Francis Hobart Herrick. Appleton. \$7.50.

## The Book of France

SCIENCE AND LEARNING IN FRANCE is a work compiled by a company of the most eminent scientists and scholars of America in honor of their French contemporaries. Such a work as this has a permanent importance, it is a monument erected to the learning of France which may be compared, as an international tribute, to the Statue of Liberty in New York Harbor made by a French sculptor in honor of America. We trust that this book will but be the forerunner of many such careful appreciations of one great people by another.

The work is divided into sections, each dealing with some particular field of knowledge, and each section is opened with a survey of recent French achievements in that line of research. Necessities of space have made these general surveys all too brief. Scholars are familiar with the contributions of France to human knowledge, but the book would be more interesting to the general reader if these introductions were made somewhat more complete. After these summaries follow critical and well considered accounts of the facilities offered by the French universities and other institutions of learning to the student who comes to France for materials to aid his researches or for the inspiration of contact with the greatest minds of the nation. The chief living scholars and scientists are mentioned with a brief notice of the activities which brought them fame. To every admirer of France the book should be of interest; and today who is not an admirer of France? But to the man who desires to study in France the work is more than interesting, it is indispensable, for nowhere else can he find so adequate and impartial a guide to the libraries, the museums, the technical and special schools and the great teachers which will aid his work.

*Science and Learning in France*, published by the Society for American Fellowships in French Universities. \$1.

## Choose a Story

If the reader turns to the latest novel by Robert W. Chambers with the thought, or hope, of finding the old *chocolat éclair* of sentiment whipped into sweetened foam, he will be disappointed. The Russians themselves could barely match the stark horror of some of these tales told in *Barbarians*. A group of men meet on the deck of a mule transport in the early days of the Great War; they separate; go their ways; and the stories of each man's rendezvous

with Death or some other form of terror make up the book. There are scenes that De Maupassant might have written, or Poe, or the Wells who wrote "The Strange Orchid," or the Kipling of "Bimi," and "In the Matter of a Private." The chapter entitled "Marooned" recalls the last mentioned tale in the tragic result of nerves strained to the breaking point by monotony and waiting for a fight that never comes. Mr. Chambers is no neutral observer; he is wholeheartedly pro-Ally and his opinion of the Teuton is but faintly exprest in the title. (Appletons, \$1.40.)

In *The Wayfarers at the Angel's*, Sara Ware Bassett tells the romantic love story of a woman who was called in to nurse one of three men who kept bachelor's hall together in a picturesque old house in a fishing village on Cape Cod. (Doran, \$1.25.)

*Gaston Olaf*, by Henry Oyen, is a novel of logging-camp and pioneer settlement of the "great woods" type so familiar at present, but sufficiently sincere and realistic to make good reading except when the author abandons his hand-to-hand battles and attempts to be humorous. (George H. Doran Company, \$1.35.)

*The Three Black Pennys* are men of an old American industrial family, widely separated by years, and yet united by their mutual resemblance, due to a curious dark strain in their blood. Joseph Hergesheimer tells their story and that of the women whom they loved in his usual vivid manner. (Alfred A. Knopf, \$1.50.)

*The Blue Streak* is a malamute dog of Alaska, one of the dog-team leaders whose careers of service and devotion are recorded in a collection of short stories by Jack Hines. Without literary value, the book nevertheless is interesting reading for those who appreciate the worth of a dog's loyalty. (George H. Doran Company, \$1.35.)

*A Change of Air* has the ingenious plot characteristic of Katharine Fullerton Gerould's work—the adventures of a group of persons among whom a wealthy benefactress divides her fortune. Further true to type it is a skilful exercise in fine shades of expression without any attempt to discuss serious issues. (Scribner's, \$1.25.)

*Ladies Must Live*, according to Alice Duer Miller, preferably in the luxury provided by rich husbands. After the amusing complications of a duel between two skilful man-hunters for a desirable victim, one of the ladies decides that she must indeed "live," in another sense, even in comparative poverty. (Century Company, \$1.25.)

Many a late vigil will be held by devotees of the detective story over the thrilling adventures of *The Other Brown*, by Adele Luehrmann. In spite of the somewhat too generous allowance of coincidences which bring about the universally happy ending, the book is plausible and very engrossing. (Century Company, \$1.35.)

Kathleen Norris is suffering the inevitable penalty of over-prolific production. During the last three years her novels have succeeded each other with the rapidity which means hasty and careless work. *Martie the Unconquered* shows signs of being less thoroughly thought out, less compactly organized and planned, than, for example, *Mother*, which still marks high tidewater for Mrs. Norris. If her tricks of manner grow a bit hackneyed, the basic idea on which she works will bear a great deal of repetition. The standard of sane and wholesome living which she uplifts in all her books is not and never will be trite. She preaches again and again in her vivid glancing style, her doctrine of that sense of propor-

tion, that emphasis on the important factors of life, lack of which causes unnecessary misery in so many lives. Mrs. Norris has achieved a rare distinction in American literature. She is an extremely popular novelist—a writer of best sellers, whose books are sound, honest and significant. (Doubleday, Page & Co., \$1.35.)

*Twenty-two Goblins*, translated from the Sanskrit by Arthur W. Ryder and most charmingly illustrated by Perham W. Nahl, is artistic thruout and well suited for a gift book. (E. P. Dutton Company, \$3.)

*The Heart of O Sono San* is the story of the life whose law is obedience, submission and renunciation—the life of a Japanese woman. Elizabeth Cooper writes with a delicacy and quiet restraint of style which suit her subject very well. (Frederick A. Stokes Company, \$1.75.)

*The Mysterious Stranger*, a romance by Mark Twain, is beautifully bound, and charmingly illustrated by W. C. Wyeth. (Harper's, \$2.00.)

Christopher Morley has achieved the impossible. He has written an original love story in the original setting of a *Parnassus on Wheels*. It is a delightfully absurd little book, whose quaint whimsies make excellent reading aloud for winter evenings. (Doubleday, Page & Co., \$1.25.)

*The Green Tree Mystery*, by Roman Doubleday, makes no pretense of being more than what it is—a rather unusually clever and entertaining detective story, all complete with a mysterious murder and a large amount of misleading circumstantial evidence. (D. Appleton & Co., \$1.40.)

*Ommirandy*, by Armistead C. Gordon, is a collection of short stories of the life of the darkies on Kingsmill Plantation. The stories are built up about the dominant personality of Ommirandy, an old-fashioned mammy. Folklore and quaint humor add to the interest of the book. (Scribner's, \$1.35.)

A needle is a small and unusual weapon to take on an adventure, but Anna Walther in *A Pilgrimage With a Milliner's Needle*, found it effective. She tells her own story of a courageous young Danish girl's travels in many countries and her final journey to America. (Frederick A. Stokes Company, \$1.50.)

Charles M. Sheldon, whose book, "In His Steps," attained over a million circulation, has written a short story, *Modern Pagans*, in which the transformation of an average modern, and by Sheldon dubbed pagan family into active and aggressive Christians occurs. (The Methodist Book Concern, New York, 50 cents.)

*The Clammer and the Submarine* is the story of the coming of the war into the lives of a quietly contented family and their friends, accompanied by a mild love affair. It does not represent William John Hopkin's best work. In it his usually happy manner of naivete drops occasionally into insipidity. (Houghton, Mifflin Company, \$1.25.)

*How Could You, Jean?* by Eleanor Hoyt Brainerd, is another pretty bubble in the foam of modern fiction, an improbable tale of a young girl who, in spite of family traditions, takes a position as cook and then wins the love of a young millionaire who becomes "handy man" for the same family in order to win her. (Doubleday, Page & Co., \$1.35.)

The historical novel, *William by the Grace of God*, by Marjorie Bowen, with the indomitable revolt of the Netherlands against Philip of Spain as a background, if not always unquestionable as history, makes a very acceptable novel, being remarkably free from the stilted unreality of most books of its type. (E. P. Dutton & Co., \$1.50.)

Apparently Emerson Hough considers that the possession of an illegitimate child puts the stamp of Nature's nobility upon a woman. *The Broken Gate*, tho sincerely conceived and painstakingly executed, is a fog of sentimentality, thru which move pallid and lifeless figures. Mr. Hough should confine himself to his lighter vein. (D. Appleton & Co., \$1.50.)

## New Dress Cottons and Linens for Spring and Summer 1918

THE leading fashion authorities in Europe and America have adopted Cotton fabrics very largely for the coming season.

In anticipation of the demand for these fabrics, which will be greater than ever before, we have secured from the foremost manufacturers in France, Switzerland, and Great Britain the choicest products of their looms

American manufacturers have also supplied us with a beautiful range of high-grade materials which goes to make up the finest collection we have ever presented.

The assortment comprises **French Cotton Crepes**, **Japanese Cotton Crepes**, **Heavy Silk and Cotton Crepes (French)**, **French Silk and Cotton Crepon**. These materials are offered in both White and plain colors.

**French Crepes** in new printed or woven effects. **Organdies** from Switzerland in plain shades, Self-Stripes, Checks, and Plaids. **French and English Voiles**, every shade desired, printed or woven effects in pleasing color-combinations. **Swisses from St. Gall**, White grounds with Dots of color or colored grounds with White or contrasting Dots. **Ecrus** with White, or all White, in almost endless variety.

**Ginghams** will be one of the most-wanted fabrics of the season. We are amply supplied with these fine materials featuring the world-famous David and John Anderson Gingham in plain colors, Stripes, Checks, and new plaided effects, "Glen Roy Ginghams," the finest fabric made in this country, as well as other equally well-known makes.

**Handkerchief Linens** in plain colors, new Checks and Stripes, and the heavier Linens in every shade wanted including our celebrated "Non Krush Linen," French Linens, "Cossack," and Linen Crash, Devonshire Cloth, Irish Dimities, Madras, Percales and Oxford Shirtings, White Silks, Natural Pongees, Silk and Cotton Shirtings, Washable Tub Silks and heavy All-Silk Shirtings and Waistings of every description. These fabrics can also be had in all White.

Samples are ready and may be had upon request.

## THE "GOEBEN" AND THE "BRESLAU"

(Continued from page 236)

and the "Sultan Osman," two powerful battleships which they had been building for the Turkish people, who for convincing reasons had patriotically subscribed their hard-earned savings to acquire them? Should this perennial bully of little nations thus confiscate the proceeds of a Turkish popular loan? What more noble or generous conduct could there be on the part of Turkey's ancient and faithful friend than to repair this robbery by depriving herself of her whole Mediterranean force—for a reasonable consideration?

The Turks melted with warm gratitude and incidentally forgot that their new purchases could not get out of the Dardanelles. They renamed them; the "Goeben" becoming the "Sultan Selim" and the "Breslau" the "Midullu." With much ceremony the banner of the Crescent replaced that of the Iron Cross, and the rubicund Teuton mariners donned the red fez. They also remained on board and systematically refused to let any Turk go below the berth deck.

Great Britain, France and Russia sent a sharp demand to Turkey for the repatriation of the German crews which, needless to say, was not heeded. Germany continued all kindness in her offers of help and instruction and before long the bought warships were put to work in the Black Sea, chiefly convoying colliers and creating great interest in the Russian fleet there stationed, which then comprized ten battleships, two cruisers, twenty-two destroyers, eleven submarines and a lot of miscellaneous craft—an array of eighty-seven vessels in all.

But they did not get the "Goeben" and the "Breslau." The former came to grief almost immediately (fall of 1914) by picking up a cable connecting two mines which exploded on opposite sides of her hull, tearing huge holes in it but not sinking her. That laid her up for three months in the little harbor of Stenia on the Bosphorus, where her men were made to cultivate a farm. The nearest she came to capture was when she tackled a Russian squadron and caught a salvo of four 12-inch shells squarely against her side. But, as usual, her speed saved her and she disappeared in the prevailing fog. The "Breslau," after losing heavily in men, got away from a combined attack of Russian destroyers. From time to time reports of other fights with Russians have been published and also of bombardments of Black Sea ports, but neither ship has been put out of action, nor did either leave the Dardanelles until their fatal venture of a fortnight ago.

Why they finally tempted fate has not yet been explained—perhaps may never be. One day at dawn the British destroyer "Lizard," patrolling northeast of the Island of Imbros, sighted them steering northerly with the "Breslau" in the lead. Single handed the "Lizard" attacked, opening fire at 11,000 yards. Then some British monitors hove in sight, to which the "Goeben" devoted her attention, the "Breslau" continuing the fight with the "Lizard," which was unable to close into torpedo range because of the accuracy of the "Breslau's" fire. Meanwhile another British destroyer, the "Tigress," arrived and pitched in with the others. The monitors steadily got the worst of it, tho fighting doggedly. The destroyers tried to screen them with great clouds of black smoke, but finally the largest monitor, the "Raglan," sank and a smaller one blew up. The German ships ceased firing and once more relying on their speed tried to shake off the destroyers. The "Breslau" ran into a mine field, keeled over

and went down. The "Goeben" circled once around the grave of her comrade and then headed for the Dardanelles. Four Turkish destroyers and an old Turkish cruiser emerged from the Straits only to be torn and ripped by fierce fire of the "Tigress" and the "Lizard" until they turned and ran back.

Now over the "Goeben," driving at full speed southward, appeared the British aeroplanes—far faster than herself and making the water around her white with their dropping bombs. To avoid them she essayed to swing into the channel of the Dardanelles, missed her course and struck a mine. The great wound crippled her, for after that she crawled, water-logged. The airmen followed. The Turkish destroyers closed around her and tried to help her as she painfully surged onward. The "Lizard" and the "Tigress," who had stayed behind to rescue the survivors of the "Breslau," were now seeking a chance to deliver their torpedoes, but spying a submarine periscope and knowing that the "Goeben" could not escape, started off on the new trail. The great ship, with the water in her hold steadily rising, staggered thru the narrows at Chanak and then unable to float any longer, beached herself beside the lighthouse at Nagara Point.

So ends the epic. The "Goeben" and the "Breslau" played their parts in the drama of German intrigue which dragged Turkey unwillingly into the Great War. They helped in confining the Russian fleet to the Black Sea, outwitted their enemies more than once, showed what could be done offensively by powerful cruisers of superior speed acting independently of the battle fleet, demonstrated the importance of getting information ahead of the enemy—and last, tho perhaps not least in the Hun estimation—brought to their owners a handsome commercial profit.

New York City

## Capital Copy

When war was declared the army had 66,145 horses and mules. Today it has 344,000.

Using the very words of President Lincoln during the Civil War, President Wilson today has admonished the army and navy to observe the Sabbath.

Practically all the vast sums loaned to our allies since we entered the war are spent in the United States for the products of our farms, mines and factories.

All the officers and men of the United States army must now undergo "psychological" tests, according to the authorization last week of the Surgeon General.

Japan has just sent the American Red Cross a set of six gold cups and a letter of merit in appreciation of the Red Cross's donation of \$10,000 in relief of the sufferers from the famine in six prefectures of northern Japan and a volcanic eruption.

All the damage done to the 109 German ships by their crews, prior to the seizure by the United States Government when war was declared, has been repaired and these ships are today in service, adding more than 500,000 gross tonnage to our war fleets.

The War Department has published a list of the "Banner Communities" who filled their entire gross quota by voluntary enlistments, and therefore did not need to contribute any men under the selective draft act. Oregon led with fifteen counties. South Dakota had twelve, and pacifist Kansas eleven. On the whole the West, as was to be expected, exhibited more patriotism than the East or South.

## Remarkable Remarks

**GEORGE BERNARD SHAW**—The autocratic game is up.

**SENATOR JAMES H. LEWIS**—Socialism is already here.

**LINCOLN STEFFENS**—The Kaiser did not start the war.

**DOROTHY DIX**—Women regard the bachelor as a slacker.

**EMPEROR WILLIAM**—Without Him all would have been in vain.

**ELSIE M. SEARS**—Do your girls regard you as a friend or as a boss?

**THE GERMAN CROWN PRINCE**—I hope to go to Canada after the war.

**THE MAYOR OF TOPEKA**—In Kansas the human nut attains its richest rarest flavor.

**CHARLES W. MEARS**—If people earn without spending, earnings eventually stop.

**LEON TROTZKY**—The English are the most chauvinistic nation on earth, without knowing it.

**GEORGE W. PERKINS**—I believe the entire system of financing campaigns is fundamentally wrong.

**OTTO H. KAHN**—I believe the Socialist state to be an impracticable conception of Utopian dreams.

**RABBI STEPHEN S. WISE**—The Middle West was slow in coming in, it will be slower in going out.

**STEPHEN LEACOCK**—The lunch I like best is a beefsteak about one foot square and two inches thick.

**ED HOWE**—As soon as you tell a woman you love her she begins to think up stunts whereby you may prove it.

**SENATOR STONE**—I charge that Theodore Roosevelt is the most potent and willing friend of the Kaiser in America.

**LILLIAN WHITNEY, M.D.**—Why will women put themselves in the hands of charlatans for cosmetic purposes?

**PRES. ARTHUR T. HADLEY**—You took off your hat to the Yale spirit in the old days, you must do more than that today.

**REV. PERCY STICKNEY GRANT**—The public school is the last place "instinctive respect" for officials should be taught.

**VICE-ADMIRAL SATO**—It has long been my conviction as a naval man that a nation's armament should be merely defensive.

**BILLY SUNDAY**—It's the God-forsaken gang who run things today who are letting the church go to Hell, not the common people.

**PROF. SCOTT NEARING**—Profiteers! Profiteers! Digging gold out of the ground that is soaked with the blood of other men. Profiteers!

**DR. HARVEY M. WILEY**—The man with false teeth has one advantage, he can take them out and give them a good scrubbing at any time.

**CHARLES E. HUGHES**—Leaders of every party have rejoiced at the moral and eloquent leadership of the President of the United States.

**MAXIM GORKY**—The woods came to meet us like a dark army, the fir trees spread out their wings like large birds, the birches looked like maidens.

**EX-AMBASSADOR GERARD**—The Hungarians have agreeable manners and are able to laugh in a natural way, something which seems to be a lost art in Prussia.

**PRINCE HOHENLOHE**—Every American soldier sailing for Europe knows with a firm conviction that he is to fight for the certain freedom and justice of the world.

**CARL SANDBURG**—If I were driven to name one individual who in the English language has done most to living men to incite new impulses to poetry the chances are I would name Ezra Pound.

**DUKE ERNST DUNTHER**—Were a referendum of the German people to be taken today as to the man whom they most detest, they would give a unanimous vote for President Wilson because of his phariseism.

## "Where Do They Get That Flavor?"

### That Fascinating Puffed Grain Flavor

Thousands of women, at food expositions, ask where we get that wondrous flavor in Puffed Wheat and Rice.

We tell them this: That almond flavor comes from heat alone. The grains are sealed in guns, then rolled for an hour in 550 degrees of heat. That extreme toasting—and that alone—makes Puffed Grains taste like nuts.

### Why These Airy Bubbles?

They ask why Puffed Grains are so big, so flimsy and so porous. That is due to steam explosions. After an hour of toasting the grains are shot from guns. The inner moisture changes to steam, blasts every food cell to pieces. A hundred million steam explosions occur in every kernel.

They ask the reason for this heroic process. Is it just to make enticing cereal tidbits?

No; it is done to make whole grains wholly digestible. This is Prof. Anderson's process for making hygienic grain foods. When grains are puffed in this way, every atom of the whole grain feeds.

Cooking and baking will break part of the food cells. Puffing blasts them all.

**Puffed Wheat**      **Puffed Rice**  
**And Corn Puffs**  
 Each 15c Except in Far West

Think of these as scientific foods, though they seem like food confections. Grains puffed in this way do not tax the stomach. And there is no waste.

There are three kinds, so you get a variety. Serve like other cereals, mix

with fruit, float in bowls of milk. Let hungry children eat them dry like pea nuts. Use as wafers in soups.

Among all the food dainties made of wheat, rice or corn, Puffed Grains stand supreme.

## The Saddest Thing in All the World

OUT of her life forever—disillusioned.

One more home wrecked! And all because he and she missed the true meaning of the marriage relation.

Could she have held him? What is the real secret of married happiness?

No nobler, more enlightening answer to that question—no surer clew to happiness—no loftier discussion of the sex relationship was ever published than

### PERSONAL HELP FOR THE MARRIED

By PROF. THOS. W. SHANNON, A. M.  
and other eminent specialists

The ethics of marriage, the rules of conduct (often learned too late) and the laws of sex are discussed in a frank, straight-forward manner that will be of inestimable value to every married or marriageable man and woman.

Personal Help for the Married has meant the turning point to happiness—the fulfillment of wedded life—for hundreds of thousands of wives—and husbands. It has cheated the divorce courts innumerable times and brought complete harmony out of unbearable misery—it is the book you should

have. There is no other book like it in the world. Special Price—as long as the present edition lasts, "Personal Help for the Married" will be furnished—cloth bound, \$1.35 net—Morocco grain, \$1.90 net. Ten cents additional for postage.

Write for Table of Contents—free on request.

If you have a husband, brother, son, relation or friend in the army or navy, send him "Personal Help For Men"—the same price. It will help to keep him well and happy.

Any of these books are returnable within five days at full price, if not satisfactory to you

## Put vim in jaded muscles

by stimulating and arousing the circulation with light applications of Absorbine, Jr., rubbed in thoroughly. This invigorating liniment acts quickly and surely. It is fragrant and pleasant to use—leaves no greasy residue on the skin.

As Absorbine, Jr., is a powerful germicide as well as a liniment it is effective for prophylactic and aseptic uses; it destroys the germs in cuts and sores.

Farmers and mechanics will find Absorbine, Jr., especially valuable in taking care of the little injuries that are "part of the day's work" and in relieving soreness and strains. Absorbine, Jr., is purely herbal and safe to use anywhere.

Get a bottle today and keep it in your desk, in your traveling bag, in your medicine cabinet or in the side pocket of your automobile. It is health insurance of a high type.

\$1.25 a bottle  
at druggists or postpaid

A Liberal Trial Bottle will be sent to your address upon receipt of 10c in stamps.

## HOW BIG IS BAKER?

(Continued from page 230)

means the consolidating of purchases of army and navy and disturbance at least to the navy's satisfactory system.

Mr. Baker hasn't conclusively triumphed, of course, yet he has displayed enough of his peculiarly modest and statesmanlike character to uphold the conviction held by most of the country that the President in his choice of men is extraordinary.

The mass of the observers here appear to conclude that just as Mr. Daniels made good, just as three months ago he was assailed from every quarter, so Mr. Baker is, also, in for better days.

Certainly the country must have faith in the President, and he cannot have Mr. Baker reassuring it every single day.

The writer is privileged to give an illustration of this necessity of faith. He is able to state, in short, that instead of the universal condemnation of Doctor Garfield being justified, the Coal Administrator simply did what had to be done for reasons he dared not divulge, and demonstrated himself one of the strong men here by doing so. The War Department was gratified, no doubt. Doubtless the navy was. Certainly the Allies were, for England had to have the 120 cargoes in the ships that the Garfield order released. There was no way out, "in the face of the tremendous German offensive," the writer is informed. "England was down on her knees for those supplies and munitions. It made no difference if this whole nation had to shut down, those ships had to go. We would have lost the war if they had not gone, had attack come."

This information is permissible now because it will reach readers too late to do any harm, for the ships concerned will have returned from the other side.

Briefly, then, the closing order was imperative primarily because of the failure of the railroads, an utter failure now no longer disputable. It was Dr. Hoover and Dr. Garfield—and President Wilson—who forced the railroads into the open. And when the executives of the War Board threw up their hands and quit it is a fact that the Government took upon its own shoulders one of the sorriest messes ever handed to a good natured people; a mess, moreover, that had been hidden from the public and from the Government to no small extent, by the trained publicity agent of the War Board, one who represents twenty-five major corporations, exerts a tremendous censorship, and was carried right into the consultations of the Council of National Defense.

These things show at least what undercurrents our Secretary of War must struggle against.

And they sustain one's faith, too, in President Wilson and the group of administrators he has got about him.

Washington, D. C.

## February 12th Is the Last Day

The relatives and friends—particularly the dependent wives, children and mothers—of more than a million men in the army and navy should use their influence in favor of a prompt acceptance of the Government's insurance. It is the most liberal offer of life insurance benefits ever made.

The poorest paid man in the service can afford to accept it. The cost of \$10,000 under age thirty is but \$6.50 a month.

The Government's policy not only protects a man's dependents in the event of his death, but it gives the man himself maintenance for life if he is totally disabled.

Pebbles

HOOVER'S GOIN' TO GET YOU

The darned old Hoover pledge has come to  
our house to stay;  
To frown our breakfast bacon down, and  
take our steak away;  
It cans our morning waffles, and our sau-  
sage, too, it seems,  
And dilates on the succulence of corn, and  
spuds and beans.  
So skimp the sugar in your cake and leave  
the butter out,  
Or Hoover's goin' to get you if you  
Don't  
Watch  
Out!

Oh, gone are the good old days of hot cakes  
thickly spread;  
And meatless, wheatless, hopeless days are  
reigning in their stead;  
And gone the days of fat rib roasts, and  
two-inch T-bone steaks,  
And doughnuts plump and golden brown,  
the kind that mother makes.  
And when it comes to pie and cake, just  
learn to cut it out,  
Or Hoover's goin' to get you if you  
Don't  
Watch  
Out!

So spread your buckwheats sparingly and  
peel your taters thin;  
And tighten up your belt a notch and don't  
forget to grin.  
And if, sometimes, your whole soul yearns  
for shortcake high and wide,  
And biscuits drenched with honey, and  
chicken butter fried,  
Remember then that Kaiser Bill is short  
on sauer kraut,  
And Hoover's goin' to get him if we'll  
All  
Help  
Out!  
—Laramie Republican.

Daughter (admiring a set of mink skins  
from father)—I can hardly realize that  
these beautiful furs come from such a  
small, sneaking beast.  
Father—I don't ask for thanks, my dear,  
but I must insist on respect.—Williams  
Purple Cow.

After church parade the C. of E. padre  
said, "I wish to speak to those who have  
not been confirmed. Will the men divide  
themselves into two parties, please? Those  
who *have* fall out on the right and those  
who have not on the left." Most of us fell  
on the right. In the shuffle I heard this:  
"You been confirmed, Bill?" "Bet yer life!  
Got the marks on me arm yet."—Sydney,  
Australia, Bulletin.

"Please, Sergeant-Major, may I be ex-  
cused from church parade? I'm an agnos-  
tic."  
"Don't you believe in the Ten Command-  
ments, then?"  
"No, I don't."  
"Not even the one about keeping the  
Sabbath?"  
"No."  
"Well, you're the very man I've been  
looking for to scrub out the canteen."—  
Sydney Bulletin.

The acumen of Julius Rosenwald, who  
subscribed \$2,000,000 to the Liberty  
Loan, led a Chicagoan to say:  
"It was impossible to overreach Rosen-  
wald even when he was a boy.  
"One summer day, when a boy, he de-  
livered some eggs to a druggist for egg  
phosphate and such like drinks. The drug-  
gist counted the eggs and there was one  
egg over. Julius demanded it back, but the  
druggist said:  
"No, I'll keep it, and you can have a  
drink at the fountain."  
"All right," said the boy.  
"Now, then," said the druggist, 'what'll  
you have?'  
"Egg phosphate," said Julius."—Phila-  
delphia Bulletin.

When the Call Came  
for More Ships

The CONCRETE ROADS of Snohomish  
County, Wash., were ready for immediate hauling, by motor  
truck, of millions of feet of timber for ships and airplanes.

Motor trucks carry the ponderous logs over the 106 miles  
of concrete roads in Snohomish County at steady speed,  
365 days a year, without interruption, more quickly and  
dependably than any other means or avenues of transport.

This is but one instance of road preparedness supporting  
and expediting war preparedness. If concrete road  
systems were available everywhere, the Nation's vast  
war production as well as its commerce would be un-  
hampered by shortages of fuel and raw materials. Its  
full military and industrial power could be mobilized.

Concrete highways are as necessary in peace as in war. They are  
becoming the very arteries of national life. Systems of them should be  
built. Delay only adds to the enormous burden which the public bears  
in maintaining impermanent highways under heavy motor traffic.

CONCRETE FOR PERMANENCE

## To Bankers, Lawyers, Corporations:

The demand for accurate, unquestionable means of identification, *inimitable and unchangeable from infancy to death*, becomes more insistent every day.

Finger print records are superior to any and all methods utilizing signatures, passwords, test questions, photographs or physical outline charts. Finger print identification systems are the most positive and reliable known today.

Finger print records are almost indispensable in handling transactions with persons at a distance, those seen only at long intervals of time, foreigners, illiterates, children, and those who lack business training.

With finger print identification coming into general use, it remains only to choose the best system offered.

The Bauder Inkless System of Identification is more than *safe and certain*. It is *clean and quick*. It requires no change in ordinary record and filing equipment of corporation or bank and can be used wherever positive identification is desired.

Banks can use the Bauder System for identification to avoid payment to wrong persons and to protect depositors as well as themselves. It is used for savings accounts, on letters of credit, checks and certificates of deposit.

Lawyers can use the Bauder System, with and without signature, on trust deeds, contracts, leases, wills and other documents.

Corporations can use the Bauder System for pay roll signatures, letters of recommendation, and identification cards.

Life Insurance Companies can use the Bauder System for comparing finger prints on applications for insurance when applicants appear for medical examination. Finger print records of the beneficiaries are often requested by the insured.

You will find our booklet, "Finger Prints for Bankers," contains information of interest to all men of affairs. It is promptly sent to any address on request.

### Thirty-Day Trial Free

Write us today on your firm's stationery that you want to make a test of the Bauder System and we will send you an outfit, by prepaid express, *to try at our expense* for 30 days. After two hours of study with the instruction chart, you will find the directions for use so simple that you can make, read and compare any and all finger prints so satisfactorily that you can identify the finger prints of different persons without doubt, hesitancy or mistake. If, at the end of 30 days, you are not satisfied, send the outfit back to us, express collect. The price of the outfit is \$50.

## CREATIVE CHEMISTRY

(Continued from page 238)

grocery and then we are apt to be put off with rock candy, muscovado or honey. Lemon drops prove useful for Russian tea and the "long sweetening" of our forefathers has come again into vogue in the form of various syrups. The United States is accustomed to consume almost a fifth of all the sugar produced in the world—and just now we can't get it.

The shortage has made us realize how dependent we have become upon sugar. Yet it was, as we have seen, practically unknown to the ancients and only within the present generation has it become an essential factor in our diet. As soon as the chemist made it possible to produce sugar at a reasonable price all nations began to buy it in proportion to their means. Americans, as the wealthiest people in the world, ate the most, ninety pounds a year on the average for every man, woman and child. That is, each one ate about his weight of sugar in a year. The English consumed nearly as much as the Americans; the French and Germans about half as much; the Balkan peoples less than ten pounds per annum; and the African savages none.

Pure white sugar is the first and greatest contribution of chemistry to the world's dietary. It is unique in being a single definite chemical compound, sucrose,  $C_{12}H_{22}O_{11}$ . All natural nutriments are more or less complex mixtures. Many of them, like wheat or milk or fruit, contain in various proportions all of the three factors of foods, the fats, the proteids and the carbohydrates, as well as water and the minerals and other ingredients necessary to life. But sugar is a simple substance, like water or salt, and like them is incapable of sustaining life alone, altho unlike them it is nutritious. In fact, except the fats there is no more nutritious food than sugar, pound for pound, for it contains no water and no waste. It is therefore the quickest and usually the cheapest means of supplying bodily energy. But as may be seen from its formula as given above it contains only three elements, carbon, hydrogen and oxygen, and omits nitrogen and other elements necessary to the body. An engine requires not only coal but also lubricating oil, water and bits of steel and brass to keep it in repair. But as a source of the energy needed in our strenuous life it has no equal and only one rival, alcohol. Alcohol is the offspring of sugar, a degenerate descendant that retains but few of the good qualities of its sire and has acquired some evil traits of its own. Alcohol, like sugar, may serve to furnish the energy of a steam engine or a human body. Used as a fuel alcohol has certain advantages, but used as a food it has the disqualification of deranging the bodily mechanism. Even a little alcohol will impair the accuracy and speed of thought and action, while a larger quantity, as we all know from observation if not experience, will produce temporary incapacitation.

When man feeds on sugar he splits it up by the aid of air into water and carbon dioxide in this fashion:

When sugar is burned the reaction is just the same.

But when the yeast plant feeds on sugar it carries the process only part way and instead of water the product is alcohol, a very different thing, so they say who have tried both as beverages. The yeast or fermentation reaction is this:

Alcohol then is the first product of the decomposition of sugar, a dangerous half-way house. The twin product, carbon dioxide, or carbonic acid, is a gas of slightly sour taste which gives an attractive tang and effervescence to the beer, wine, cider or champagne. That is to say, one of these twins is a pestilential fellow and the other is decidedly agreeable. Yet for several thousand years mankind took to the first and let the second for the most part escape into the air. But when the chemist appeared on the scene he discovered a way of separating the two and bottling the harmless one for those who prefer it. An increasing number of people were found to prefer it, so the American soda-water fountain is gradually driving the Demon Rum out of the civilized world. The brewer nowadays caters to two classes of customers. He bottles up the beer with the alcohol and a little carbonic acid in it for the saloon and he catches the rest of the carbonic acid that he used to waste and sells it to the drug stores for soda-water or uses it to charge some non-alcoholic beer of his own.

This catering to rival trades is not an uncommon thing with the chemist. As we have seen the synthetic perfumes are used to improve the natural perfumes. Cottonseed is separated into oil and meal; the oil going to make margarin and the meal going to feed the cows that produce butter. Some people have been drinking coffee, altho they do not like the taste of it, because they want the stimulating effect of its alkaloid, caffeine. Other people liked the warmth and flavor of coffee but find that caffeine does not agree with them. Formerly one had to take the coffee whole or let it alone. Now one can have his choice, for the caffeine is extracted for use in certain popular cold drinks and the rest of the bean sold as caffeine-free coffee.

Most of the "soft drinks" that are now gradually displacing the hard ones consist of sugar, water and carbonic acid, with various flavors, chiefly the esters of the fatty and aromatic acids, such as I described in a previous article. These are still usually made from fruits and spices and in some cases the law or public opinion requires this, but eventually, I presume, the synthetic flavors will displace the natural and then we shall get rid of such extraneous and indigestible matter as seeds, skins and bark. Suppose the world had always been used to synthetic and hence seedless figs, strawberries and blackberries. Suppose then some manufacturer of fig paste or strawberry jam should put in ten per cent of little round hard wooden nodules, just the sort to get stuck between the teeth or caught in the vermiform appendix. How long would it be before he was sent to jail for adulterating food? But neither jail nor boycott has any reformatory effect on Nature.

Nature is quite human in that respect. But you can reform Nature as you can human beings by looking out for heredity and culture. In this way Mother Nature has been quite cured of her bad habit of putting seeds in bananas and oranges. Figs she still persists in adulterating with particles of cellulose as nutritious as sawdust. But we can circumvent the old lady at this. I got on Christmas a package of figs from California without a seed in them. Somebody had taken out all the seeds—it must have been a big job—and then put the figs together again as natural looking as life and very much better tasting.

Sugar and alcohol are both found in Nature; sugar in the ripe fruit, alcohol

How the sugar beet has gained enormously in sugar content under chemical control

when it begins to decay. But it was the chemist who discovered how to extract them. He first worked with alcohol and unfortunately succeeded. Previous to the invention of the still by the Arabian chemists man could not get drunk as quickly as he wanted to because his liquors were limited to what the yeast plant could stand without intoxication. When the alcoholic content of wine or beer rose to seventeen per cent at the most the process of fermentation stopped because the yeast plants got drunk and quit "working." That meant that a man confined to ordinary wine or beer had to drink ten or twenty quarts of water to get one quart of the stuff he was after and he had no liking for water.

So the chemist helped him out of this difficulty and got him into worse trouble by distilling the wine. The more volatile part that came over first contained the flavor and most of the alcohol. In this way he could get liquors like brandy and whisky, rum and gin, containing from thirty to eighty per cent of alcohol. This was the origin of the modern liquor problem. The wine of the ancients was strong enough to knock out Noah and put the companions of Socrates under the table, but it was not until distilled liquors came in that alcoholism became chronic, epidemic and ruinous to whole populations.

But the chemist later tried to undo the ruin he had quite inadvertently wrought by introducing alcohol into the world. One of his most successful measures was the production of cheap and pure sugar which, as we have seen, has become a large factor in the dietary of civilized countries. As a country sobers up it takes to sugar as a "self-starter" to provide the energy needed for the strenuous life. A five o'clock candy is a better restorative than a five o'clock highball or even a five o'clock tea for it is a true nutrient instead of a mere stimulant. It is a matter of common observation that those who like sweets usually do not like alcohol. Women, for instance, are apt to eat candy but do not commonly take to alcoholic beverages. Look around you at a banquet table and you will generally find that those who turn down their wine glasses generally take two lumps in their demi-tasses. We often hear it said that whenever a candy store opens up a saloon in the same block closes up. Our grandmothers used to warn their daughters: "Don't marry a man who does not want sugar in his tea. He is likely to take to drink." So, young man, when next you give

## In The Nation's Service

America is sending its best men to fight for freedom, and in their honor the whole land is dotted with service flags carrying the stars of sacrifice.

It is a far cry from the crowded city streets above which floats our service flag to the telephone exchange hidden in the front-line trenches. But the actuating spirit of service here and abroad remains unchanged.

The Stars and Stripes is the

emblem which unites us in war for human liberty and national honor. The service flag is the emblem which unites us in mutual sympathy for the men who give themselves and for those who give their men.

These flags should inspire all citizens to greater endeavor and greater sacrifice. As one of the agencies of preparation and military support, the Bell System is honored by the opportunity to do its share.

## What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c is a small price to pay for the Pathfinder, which is sincere, reliable, entertaining, well-written, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c and we will send the Pathfinder for 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

## To Dispel Gloom Read Vanity Fair

*Now, more than ever, there is need for what the English call "the cheero spirit." Need for keeping a stiff upper lip. Need for hiding a long face, for a full measure of pluck, and for great good humor.*

Vanity Fair cannot build ships. Or move freight. Or go over the top with an Enfield. But it can help to dispel gloom. It can keep cheerful the men who go and the men and women who stay. It can chronicle that side of the war which refuses to be dark—its unquenchable humour, its unconscious heroism, its outstanding figures, and mirror—cheerfully—the swift current of war-time life at home. That is our "bit" in this war.

FROM the beginning, England has made it a national point of honour to see the cheerful side of the war, to the complete mystification of the apostles of kultur and hymnsters of hate. *Punch's* handling of the war is famous. Captain Bairnsfather's cartoons have made *The Bystander* a household word in the British Empire. They have been read with delight in the trenches—and with horror in Berlin!

VANITY FAIR, of course, publishes serious articles on serious phases of the war. It also treats as they deserve those incidents and accidents of war-time life which call for humorous appreciation or caustic comment. *Punch* has never jested about Gallipoli—but it has ridiculed notoriety seekers, scorched slackers with satire, and made sympathetic fun of Tommy's minor tribulations. So, also, does Vanity Fair.

### Get the Cheero Spirit:

Vanity Fair covers the war. But it also publishes—as always—news of everything entertaining and amusing in civil life. Not only should you have on your library table those publications which treat only the most serious aspects of the war in the most serious way. But with them, you should also have Vanity Fair, which echoes the songs of the Sammies, the skirl of the pipers, and does its bit to maintain the cheero spirit here at home.

The men who have gone to camp have left their familiar worlds behind them. They are hungry for news. They need laughter. They want something amusing to read. There is nothing you could give them that would more exactly fit their needs than Vanity Fair.

### 9 Issues of Vanity Fair for \$2

ten, if you mail the coupon now

*If you do not know Vanity Fair, or would like to know it better, you may have the next nine issues for \$2—and even ten, if you mail the coupon now.*

You think nothing—in your poor deluded way—of spending \$2 for a single theatre ticket, or two faded gardenias. Yet for that very \$2 you may have ten months of Vanity Fair, and with it more entertainment than you would get from a winter of problem plays, or a five-foot shelf of novels.

Attention! Eyes right! Salute the coupon! Tear it off, fill it out, and let Vanity Fair keep you—for ten months—in step with the times.

a box of candy to your best girl and she offers you some, don't decline it. Eat it and pretend to like it, at least, for it is quite possible that she looked into a physiology and is trying you out. You never can tell what girls are up to.

In the army and navy ration the same change has taken place as in the popular dietary. The ration of rum has been mostly replaced by an equivalent amount of candy or marmalade. Instead of the tippling trooper of former days we have "the chocolate soldier." No previous war in history has been fought so largely on sugar and so little on alcohol as this one. Since the war has both reduced the supply and increased the demand we all feel the sugar famine and it is a mark of patriotism to refuse candy and to drink coffee unsweetened. This, however, is not, as some think, the mere curtailment of a superfluous or harmful luxury, the sacrifice of a pleasant sensation. It is a real deprivation and a serious loss to national nutrition. For there is no reason to think the constantly rising curve of sugar consumption had yet reached its maximum or optimum. Individuals overeat, but not the population as a whole. According to experiments of the Department of Agriculture men doing heavy labor may add three-quarters of a pound of sugar to their daily diet without any deleterious effects. This is at the rate of 275 pounds a year, which is three times the average consumption of England and America. But the Department does not state how much a girl doing nothing ought to eat between meals.

Of the 2500 to 3500 calories of energy required to keep a man going for a day the best source of supply is the carbohydrates, that is, the sugars and starches. The fats that we considered a fortnight ago are more concentrated but are more expensive and less easily assimilable. The proteins are also more expensive and their decomposition products are more apt to clog up the system. Common sugar is almost an ideal food. Cheap, clean, white, portable, imperishable, unadulterated, pleasant-tasting, germ-free, highly nutritious, completely soluble, altogether digestible, easily assimilable, requires no cooking and leaves no residue. Its only fault is its perfection. It is so pure that a man cannot live on it. Four square lumps give one hundred calories of energy. But twenty-five or thirty-five times that amount would not constitute a day's ration, in fact one would ultimately starve on such fare. It would be like supplying an army with an abundance of powder but neglecting to provide any bullets, clothing or food. To make sugar the sole food is impossible. To make it the main food is unwise. It is quite proper for man to separate out the distinct ingredients of natural products—to extract the butter from the milk, the casein from the cheese, the sugar from the cane—but he must not forget to combine them again at each meal with the other essential food stuffs in their proper proportions.

Sugar is not a synthetic product and the business of the chemist has been merely to extract and purify it. But this is not so simple as it seems and every sugar factory has had to have its chemist. He has analyzed every mother beet for a hundred years. He has watched every step of the process from the cane to the crystal lest the sucrose should invert to the less sweet and non-crystallizable glucose. He has tested with polarized light every shipment of sugar that has passed thru the custom house, much to the mystification of congressmen who have often wondered at the money and argumentation expended in a tariff discussion over the question of the

precise angle of rotation of the plane of vibration of infinitesimal waves in a hypothetical ether.

The reason for this painstaking is that there are dozens of different sugars, so much alike that they are difficult to separate. They are all composed of the same three elements, C, H and O, and often in the same proportion. Sometimes two sugars differ only in that one has a right-handed and the other a left-handed twist to its molecule. They bear the same resemblance to one another as the two gloves of a pair. Cane sugar and beet sugar are when completely purified the same substance, that is, sucrose,  $C_{12}H_{22}O_{11}$ . The brown and straw-colored sugars, which our forefathers used and which we are now again using, are essentially the same but have not been so completely freed from moisture and the coloring and flavoring matter of the cane juice. Maple sugar is mostly sucrose. So partly is honey. Candies are made chiefly of sucrose with the addition of glucose, gums or starch, to give it the necessary consistency and of such colors and flavors, natural or synthetic, as may be desired. Practically all candy, even the cheapest, is nowadays free from deleterious ingredients in the manufacture, tho it is liable to become contaminated in the handling. In fact sugar is about the only food that is never adulterated. It would be hard to find anything cheaper to add to it that would not be easily detected.

Besides the big family of sugars which are all more or less sweet, similar in structure and about equally nutritious, there are, very curiously, other chemical compounds of altogether different composition which taste like sugar but are not nutritious at all. One of these is a coal tar derivative, discovered accidentally by an American student of chemistry, Ira Remson, afterward president of Johns Hopkins University, and named by him "saccharin." This has the composition  $C_6H_4COSO_2NH_2$ , and as you may observe from the symbol it contains sulfur (S) and nitrogen (N) and the benzene ring ( $C_6H_4$ ) that are not found in any of the sugars. It is several hundred times sweeter than sugar, tho it has also a slightly bitter after taste. A minute quantity of it can therefore take the place of a large amount of sugar in syrups, candies and preserves, so because it lends itself readily to deception its use in food has been prohibited in the United States and other countries. But now, on account of the shortage of sugar, it is coming again into use. The European governments now encourage what they formerly tried to prevent, and it is customary in Germany or Italy to carry about a package of saccharin tablets in the pocket and drop one or two into the tea or coffee. Such reversals of administrative attitude are not uncommon. When the use of hops in beer was new it was prohibited by British law. But hops became customary nevertheless and now the law requires hops to be used in beer. When workmen first wanted to form unions, laws were passed to prevent them. But now, in Australia for instance, the laws require workmen to form unions. Governments naturally tend to a conservative reaction against anything new.

It is amusing to turn back to the pure food agitation of ten years ago and read the sensational articles in the newspapers about the poisonous nature of this dangerous drug, saccharin, in view of the fact that it is now being used by millions of people in Europe in amounts greater than once seemed to upset the tender stomachs of the Washington "poison squads." But saccharin does not appear to be responsible for any fatalities yet, tho people are said

DAVE: "Say, dad, I've discovered a great thing for razors—3-in-One Oil. Just use a drop on blade and strop, and you get one of those fine velvety shaves you read about!"

HIS DAD: "You're *come* discoverer, Dave. Pretty soon you'll discover that there are seven days in a week. Why, young man, I've been using 3-in-One on my razors and strop for years!"

### 3-in-One Oil Prevents Razor Rust

EVERY man knows the agony of a "pulling" razor. But many don't know *why* it "pulls." Look at any razor's cutting edge through a magnifying glass and you'll see why.

A razor is like a miniature saw—it has *teeth*. Moisture collects between these tiny teeth. Rust results. The naked eye can't see this rust—but its effect is what

your face feels when the razor "pulls." 3-in-One Oil prevents rust from forming. Do this: Moisten your thumb and forefinger with a drop of 3-in-One. Draw the razor blade gently between them. Do this before and after shaving, and your razor will never "pull."

Also rub a few drops of 3-in-One well into your strop occasionally. Keeps it soft and pliable.

3-in-One Oil is sold at all stores, in 25c Handy Oil Cans and in 15c, 25c and 50c bottles.

Three-in-One Oil Company

to be heartily sick of it. And well they may be, for it is not a substitute for sugar except to the sense of taste. Glucose may be regarded as a substitute for sucrose and margarin for butter, since they not only taste much the same but have about the same food value. But to serve saccharin in the place of sugar is like giving a rubber bone to a dog. It is reported from Europe that the constant use of saccharin gives one eventually a distaste for all sweets. This is quite likely, altho it means the reversal within a few years of prehistoric food habits. Mankind has always associated sweetness with food value, for there are few sweet things found in nature except the sugars. We think we eat sugar because it is sweet. But we do not. We eat it because it is good for us. The reason it tastes sweet to us is because it is good for us. So man makes a virtue out of necessity, a pleasure out of duty, which is the essence of ethics.

In the ancient days of Ind the great Raja Trishanku posset an earthly paradise that had been constructed for his delectation by a magician. Therein grew all manner of beautiful flowers, savory herbs and delicious fruits such as had never been known before outside heaven. Of them all the Raja and his harems liked none better than the reed from which they could suck honey. But Indra, being a jealous god, was wroth when he looked down and beheld mere mortals enjoying such delights. So he willed the destruction of the enchanted garden. With drought and tempest it was devastated, with fire and hail, until not a leaf was left of its luxuriant vegetation and the ground was bare as a threshing floor. But the roots of the sugar cane are not destroyed tho the stalk be cut down; so when men ventured to enter the desert where once had been this garden of Eden, they found the cane had grown up again and they carried away cuttings of it and cultivated it in their gardens. Thus it happened that the nectar of the gods descended first to monarchs and their favorites, then was spread among the people and carried abroad to other lands until now any child with a penny in his hand may buy of the best of it. So it has been with many things. So may it be with all things.

### QUESTIONS AND REFERENCES

You will see from the dictionary that the genealogy of the word "sugar" is (1) Sanscrit, (2) Arabic, (3) Spanish, (4) French, (5) English. Explain from this the history of sugar and trace on a map the course of its migration. Read in the encyclopedia or any available books about the processes of making sugar from cane and from beets.

Why is the liquor problem more serious now than in ancient times?

Cite from the Bible or other ancient literature passages showing how highly honey was esteemed. Can you think of any similar sayings and usages of today?

What is the difference between sugar cane and sugar beet culture in the kind of labor it requires and the type of community it supports?

Can you think of any other instances besides sugar where a pleasant taste is indicative of food value? Can you think of any exceptions to the rule besides saccharin?

"The Cane Sugar Industry" (Bulletin No. 53, Miscellaneous Series, Department of Commerce, 50 cents) gives agricultural and manufacturing costs in Hawaii, Porto Rico, Louisiana and Cuba. "Sugar and Its Value as Food," by Mary Hinman Abel, (Farmer's Bulletin No. 535, Department of Agriculture, free.)

"Production of Sugar in the United States and Foreign Countries," by Perry Elliott. (Department of Agriculture, 10 cents.)

"Conditions in the Sugar Market January to October, 1917," a pamphlet published by the American Sugar Refining Company, 117 Wall street, New York, gives an admirable survey of the present situation as seen by the refiners, from which we borrow our maps.

"Cuban Cane Sugar," by Robert Wiles, 1916 (Indianapolis: Bobbs-Merrill Co., 75 cents), an attractive little book in simple language.

"The Story of Sugar," by Prof. G. T. Surface of Yale (Appleton, 1910). A very interesting and reliable book.

Food Will Win the War

LESSONS IN AMERICA'S PART IN THE  
WORLD'S FOOD PROBLEM, PREPARED  
BY THE UNITED STATES FOOD ADMIN-  
ISTRATION FOR THE INDEPENDENT

Wheat Will Win

WE have learned something about the nature of food and the food needs of the body. For a long time we have heard the saying: "Bread is the staff of life." As civilization and plenty increase wheat bread becomes more and more the foundation of human diet.

Wheat was grown long before the days of history, for our very first records show it as an already cultivated grain. It belongs to the grass family, and its fruit or seed is the part we use for food.

There are three parts of this wheat seed—the germ; the kernel; the bran or outer covering. The germ contains cellulose, protein, sugar and fat; the kernel contains starch, protein and sugar; the outer covering is largely cellulose and mineral matter. The most important protein substance in wheat is called gluten.

According to the figures for the world crop of 1916, the countries which produced the most wheat were, in order: United States, Russia in Europe, India, Canada. As far as we have 1917 figures they indicate the same order exactly with the entrance of Argentina as fifth in line, this crop being harvested at the very end of the year.

Russia is the one of all these countries which is closed to the world's commerce. But let us look at the situation among the others. There is an estimated reserve of exportable wheat in Australia of approximately 136,000,000 bushels, in India of 80,500,000 bushels, in Argentina of 86,000,000 bushels, while the new Australian crop is expected to add about 110,000,000 bushels to the Australian supply. Altho not actually closed to commerce, this Australian wheat is virtually cut off from trade by length of route. Small cargoes of wheat coming across the Pacific in sailing vessels to us, are transported across continent and reshipped from the Atlantic seaboard.

Belgium, Italy, Great Britain and France are largely dependent on the outside world for supplies. Ships to move supplies are scarce and the ocean routes are dangerous because of submarine attack. Our country is the nearest and best able to cope with these conditions. We must help!

Our 1917 wheat crop is estimated at 650,000,000 bushels. This is a slight increase over 1916, but is behind the average for the years 1911-1915. By the first of last December we had exported all our surplus out of our production. *We must send 90,000,000 bushels more.* This must come out of our savings.

Every one of us can help by using other cereals. Remember this: there is no pure wheat bread in Europe except among the soldiers. All other bread there is mixt with some other cereal. Only the fighting men get pure wheat bread.

The United States Food Administration asks us to have at least one entirely wheatless meal every day, and two wheat saving days every week, when we shall substitute for part of the wheat other cereals, such as corn, hominy, rice, rye, oatmeal or more potatoes. We have plenty of these. Bread is not only the staff of life; it is the support of the soldier. Each one of us must do his and her share to make American wheat win the war.

# THE CHAUTAUQUA CIRCLE

A MONTHLY DEPARTMENT DEVOTED TO HOME READING,  
SELF-CULTURE AND POPULAR EDUCATION, CONDUCTED  
IN ASSOCIATION WITH CHAUTAUQUA INSTITUTION

## GETTING THE BEST OUT OF A BOOK

BY IDA B. COLE

SECRETARY OF THE CHAUTAUQUA  
HOME READING CIRCLE

SOMEONE has said that we read either to forget ourselves or to find ourselves; and it might be said with equal appropriateness that we read to feed ourselves.

A book should be regarded as mental food. Some books are the dainty ices and others form the staple diet for mental brawn. We need intellectual digestion as well as stomachic digestion, for a book should be assimilated into our thought and become part of our life and conduct. To accomplish this we must know how to get the best out of reading.

It was interesting last summer to ask different people at Chautauqua how they get the best out of books.

Miss Ida Tarbell makes copious notes and all reading is grist to her mill. "Making notes as I read is a habit of years," she replied in answer to my question: "If I haven't my notebook handy, I mark the passage with a dot and then note the number of the page and a catch-word on a fly-leaf in the back part of the book. When traveling I do not make full notes, but indicate the passages and make the notes on my return home. In reading I generally have some definite object in mind, without any thought of using it directly, altho I often find applicable suggestions. In general reading I always keep my subject in mind. I am now planning to write a book on Lincoln's religion in life and I may find a suggestion in a novel. I always have that in mind in any reading, no matter what it may be, so that the book in hand yields me its best in that way."

Dean Andrew F. West of Princeton University is a most painstaking reader. When he has finished a book its divisions and subdivisions, markings and submarkings, make it look like a bit of landscape gardening, but he has got the best out of every page.

"The danger of reading is reading in a listless way," said the Dean; "I have seen a college professor read a book with the same lack-luster eye as that of a cow looking at a pasture. Others read with such lightning speed that they scarcely seem to look at a page before they have taken in the contents. But most of us are just human readers and come in between these two."

"There are three points to be kept in mind by which we may get the most out of our books. The first thing is to read the table of contents. This indicates what is in the storehouse for us. Two years ago I read a book on international law to see if there was any international law left. I got more from the table of contents than from all the rest of the books. From it I learned that we have laws of peace, laws of war, the laws of neutrals. That was about all that, at the time of reading, was still applicable.

"The second thing is to read the book with pencil in hand. If we read without a pencil we shall find the next day that we do not retain what we have read. Some people are afraid to mark a copy; unless the book is very expensive or belongs to someone else, marking will prove very beneficial.

"In reading the first chapter, I number the points as they are given. If there is something that I do not believe or understand, I put a question mark after it. After finishing each chapter I go back over it and review the points.

"Thirdly, when the book is read I go back over it chapter by chapter, picking out the chief points of each division and getting the connection of each one to the whole. When I have finished the book I have the boiled-down beef extract. I then go over it again and in the light of the book as a whole I answer what questions I can."

EX-GOVERNOR G. H. HODGES of Kansas gets the best out of a book by a quite different method. "I read and reread a book until I can take the author's ideas and clothe them in my own thought," said Mr. Hodges; "I do not take notes, for I am blessed with a retentive memory and I can carry what I want to remember in my memory without the use of notes. I suppose that would be necessary if one were reading for literary or research work, but I am a business man and read for pleasure and instruction. I have memorized about two-thirds of Eugene Field's and about twenty of Riley's poems. At one time I could repeat from memory at least three-fourths of Milton's "Paradise Lost," which I memorized when a youth. I know people whose mentality is stronger than mine who do take notes when reading, but I get the best out of my books by never reading anything which is not worth while and the books I do read I study. When I find a worth-while book or poem, I read it carefully, then I analyze it, then I study it, not superficially but trying to comprehend what the author means. I study not merely his words, but his impelling motive. This kind of reading tests books.

"A person will not spend this amount of time on trash. You will soon read only the very best. I follow the same rule with my magazine reading. I take a number of magazines but never read any one of them thru. I take one for the editorials and read nothing else in it, maybe. I look over the pages and select the article which I want, then I study that article painstakingly until I have made its thought mine. In reading history I read chronologically; for instance, if I am reading the events of 1860 in our own country I read along the lines which led up to that event. I read everything bearing on it. I follow that thought to its conclusion and I go back for a basis. To get the best out of poetry, memorize it. It is easy because of its harmony and a person devoid of harmony is not in touch with the infinite. I read books for the cultivation of my own individuality and I get the best out of them by hanging to them, reading and re-reading until they are practically my own."

"Never read critically," advises Mrs.

Helen R. Martin, author of "Tillie, the Mennonite Maid," "Erstwhile Susan" and other popular books. "Suspend all critical judgment and just let yourself be carried along and examine your impressions. If you go at a thing critically, whether it be a book or a picture, you don't get the joy out of it. After reading, I examine myself. Why am I pleased with the book? What gave me joy? Art is for pleasure, incidentally it elevates."

Dr. Elmer B. Bryan, president of Colgate University, reads a book three times. "I want to understand it as I go along," he explained; "I do not pass over a sentence unless I understand it. I read it the second time to get the organization and method in the book. I read it the third time for purpose of retention and make copious notes in the margin. I aim to understand it as I read along, to get the way the subject is worked out, and then to remember what seems to me important. Reading may be a big asset or it may be a big liability. Many pupils fail in school because of their inability to read. Some of them make a sieve of their minds by reading omnivorously, not harmful literature, but just light books, read and forgotten. Such reading is a liability because one does not remember. To get the best out of a book you must read to remember. Do not indulge in scattered reading. If you skim a book, do it carefully so as to get all the cream. We should do three things with our reading. First, be impressed; second, meditate and reflect on it; third, give out. There is little value in being impressed unless it leads to meditation. What one takes in is of little worth unless one thinks it thru carefully and then expresses it fully for someone else."

From these interviews it will be clear that the best method is that best calculated to yield the intended result.

THE Chautauqua Home Reading Circle advocates daily mental nourishment. Twenty minutes a day is sufficient time to cover the required reading. It provides what dietitians call a well-balanced ration. Its slogans have always been, "Put system into your reading," "Use spare minutes for education." It gives not simply four books and current topics each year, but innumerable aids which help the reader get "the meat" out of each page, direct him to collateral reading and suggest connecting lines of thought. It does not do his thinking for him, but it opens his mind to new riches and possibilities, and helps him correlate his knowledge, and to read both analytically and synthetically. If he follows these helps he cannot fail to get the best out of the printed page.

The aim of the course is not only to furnish information but to help the reader develop a discriminating taste for good literature and to teach him to so use a book that it shall contribute to mental growth and enlarged vision by increasing the number of interests in life. According to his earnestness he will evolve his own method for getting the best out of a book.

Chautauqua, New York

# Business Expansion calls for Standardized Equipment

## Macey Office Equipment Meets the Need of Big Business

**I**N this day of modern progress, office equipment takes an important part in every business organization, and when such equipment bears the Macey trade mark its quality is unquestioned.

Back of the Macey trade mark is twenty-five years of knowing how. The Macey line is so standardized that today any business executive can order Macey equipment with the absolute assurance that it will meet with his every approval.

When you buy Macey equipment, you buy something more than mere wood, metal or paper.

### Macey Quality is Never Questioned

The Macey line gives you equipment that has been so standardized, is so well known and its superior features are so well recognized that office equipment dealers do not question the Macey standard.

In hundreds of cities in America you hear almost every day, "If it's a Macey, that settles it!"

### Equipment to Meet All Requirements

Macey wood and metal filing equipment, metal safes, sectional bookcases, desks and filing appliance supplies are made to suit the requirements of every business. There are sections and intersections in a great variety of styles and designs that will enable you to find in the Macey line exactly what you are looking for.

### Macey Desks

Macey Desks have the same high grade construction as the rest of the line. The writing beds are five ply, cross-banded, built-up construction. The finish on all Macey appliances is standard throughout.

If there should not happen to be a Macey dealer near you, write for our catalogue which illustrates and describes the particular equipment you are interested in. Simply tell us which of the following catalogues you want us to mail you: Filing Equipment, Filing Equipment Supplies, Sectional Bookcases, Metal Office Safes, and Macey Desks.

CANADA FURNITURE MANUFACTURERS, LTD.  
WOODSTOCK, ONT.

# How "Big Business" gets the most out of the Coal Pile

**I**F saving Coal means losing Power the ultimate economy is doubtful. Getting more heat and power out of less Coal has been the problem that the manufacturing interests of the Nation have had to solve. And in the solving of this problem there is a great lesson to individual coal users.

For the devices and maintenance materials which have conserved industrial coal piles can often be applied, in some measure at least, to smaller coal-saving problems.

For instance, the covering of heat-carrying pipes or surfaces with scientifically designed insulation is saving America's manufacturers millions of dollars' worth of heat each year—coal power that would otherwise be wasted.

Of equal importance, the loss from wear, friction and leakage has been cut to a minimum through the use of specialized "packing" devices and materials that are known to every engineer as maintenance materials—necessities to efficient plant operation.

It is a source of great satisfaction to us to

have supplied America's plants with both heat insulations and maintenance materials—to have been for 25 years one of the champions for coal saving—to feel that our commercial efforts to further the cause of power-plant economy, have in a large sense helped in national conservation.

And just as it is your personal duty to use coal carefully—just as it is a national duty to save it—it seems to us our corporate duty to further the gospel of fuel conservation.

**Johns-Manville Coal Conservation Products:** Asbestos and Magnesia Pipe and Boiler Insulations; Packings for engines, pump and valve rods and pipe joints; Steam Traps; Refractory Cements; and many other power plant maintenance materials.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.  
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY  
SECTION I. ORAL AND WRITTEN COMPOSITION.

- The Story of the Week.
1. Imagine you are at a meeting of working people. Give an account of the recent strikes in Germany. Indicate your opinion of their significance.
  2. Write a composition of contrast on "Russia as It Is, and Russia as It Might Be."
  3. If you have read "A Tale of Two Cities," write a comparison of the Bolsheviks and the people of the French Revolution.
  4. Write an interesting composition on "Finland in the Past, and Finland Today."
  5. Give an oral summary of the most recent news of the Great War.

- Editorial Articles.
1. Write an article suggested by the editorial entitled "Give the President a Free Hand," in which you summarize briefly the increases in Presidential authority and responsibility that the war has brought about.
  2. Give a patriotic talk in which you contrast the American ideal of thought with the German ideal.
  3. Write a series of short, explanatory items concerning the work of the great German leaders of past times, Luther, Kant, Schiller, and Goethe. Explain orally how the Prussian spirit of today differs from the German spirit of the past.
  4. Write a short composition in which you explain what is meant by "the higher fatherland."
  5. Write a patriotic editorial article for your school paper on the theme suggested in the following: "The American boasts that his nation is founded on an ideal."
  6. Read "Revolution and Dame Nature." Explain what is meant by saying: "The conservative is half right and the radical half wrong."
  7. In a single paragraph answer the question: "Will the war have an end?"

- Farmer John and the War. By Charles Moreau Harger.
1. What is the writer's principal thought? What method did he take to make that thought emphatic? Write a rule, suitable for inclusion in your rhetoric text, concerning this means of gaining emphasis.

- Winning the War. By Edward Earle Purinton.
1. Select at least a dozen epigrams from the article. Explain the meaning of every one. What is the advantage of using epigrams?
  2. Write a summary of the advantages gained by the American soldier.
  3. Write a letter to the parent of some soldier, making your letter at once helpful and comforting.
  4. Give a spirited talk in which you show how we who are at home may also aid in fighting.

- Journalism's Radium, the Colyum. By Alexander McD. Stoddart.
1. Show in what ways the title of the article is appropriate.
  2. What are the characteristics of a "colyum"?
  3. Write a "colyum" for your school paper.
  4. Who are some of the most noted "colyum" writers, past and present? Bring to class a paper containing a "colyum," and explain why the work contained in it is satisfactory or unsatisfactory.

- SECTION II. WORD STUDY
- The German Puzzle.
1. Give the derivation and the meaning of every one of the following words: monarchy, republicanism, aristocracy, democracy, Catholicism, Protestantism, Socialism, liberalism.

- SECTION III. LITERATURE
- The New Books.
1. Explain the following expressions: a chronicle; a companion volume; satire and discrimination; illuminating; exhortation; suggestive headings; editorial exhortation.
  2. Tell something concerning the work of the following: William Byrd of Virginia; John Woolman; "the industrial southey"; "Gypsy-loving Borrow"; "The Edinburgh Review"; "Blackwell's" and "The Quarterly"?

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.  
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

- I. A Campaign for Intelligent Patriotism—"The Battle Cry of Freedom," "A War of Peoples."
  1. "... America is facing an uncertain future on account of lack of 'preparedness,' mental as well as physical." What are the evidences of our mental unpreparedness?
  2. "Two processes . . . are necessary before we can make 'the world safe for democracy.'" What are these two processes? Explain them.
  3. "This is no new promise, this vow to keep the world safe for democracy." Trace the history of the idea.
  4. "How shall America prepare for this gigantic task?" What is your answer?
  5. George Creel says: "... public opinion has been mobilized and instructed," etc. Has this been done thus far in your community? What is still left to be done? How are you going about it?
  6. What evidences does Mr. Creel give of the weakening influence of German propaganda? What remedy does he suggest? Give illustrations of your own observations of it.
  7. What proof have you that this is not "a rich man's war," "a business man's war," "that this country is not fighting to obtain foreign markets"?
  8. What method is the Government using to counteract German propaganda? How can you help?
  9. Give some instances of German propaganda that you have combated.
- II. How the War Will Be Won—"Farmer John and the War," "The Bridge of Ships," "Winning the War," "The Sins of the Fathers," "War Needs and Industry."
  1. Explain why "Farmer John" was not interested in the war during the spring and early summer last year?
  2. "... but as the farmers rode back and forth on their plows they thought in world terms." What brought about the change in the farmers' ideas?
  3. In what sense is the "bridge of ships" our supreme necessity in the war? What means must we take to make our shipbuilding program a success?
  4. What does Mr. Purinton mean when he says that *psychology* has been the greatest factor in the success of the Germans? How does he apply the example to our own cause in the war?
  5. What benefits does he see for our soldiers in their participation in the war? What suggestions does he make for those of us who stay at home?
  6. What evidences do you find in the news items that thus far the whole country has not been organized for war? What steps are being taken in order to remedy this condition at once?
- III. Our War Administration—Attack and Defense—"War Cabinet or President," "Give the President a Free Hand."
  1. Explain the plan and purpose of the President's "super-cabinet" bill. Why did the bill bring forth "a storm of criticisms"?
  2. On what grounds did Senators Hitchcock and Wadsworth attack the war administration? Did Secretary Baker clear up the situation?
- IV. Disturbances in Europe—"Will the War Have an End?" "The Rule of the Bolsheviks," "Bolsheviks in Finland," "German Strikes."
  1. "The war may simply 'peter out' as many a war has done." How far does this statement apply to the following: (a) the "War of the Roses," (b) the religious wars of the sixteenth century, (c) the Thirty Years' War, (d) the Napoleonic Wars? What evidences are there that this war, too, may simply "peter out"?
  2. Why is "Germany now having a hard time to find a Russia to negotiate with"?
  3. Do the successes of the Bolsheviks in Russia and Finland promise a permanent victory for that party?
  4. How far do the strikes in Germany indicate that the cause of the Government is weakening? May the enemies of Germany find any comfort in the progress of events there now?

*In action!* You can't really know what this little machine can do for you—and your business—until you have seen it in action, until you have examined it for yourself. In thousands of the world's biggest businesses it is today an indispensable mechanism for cutting costs and speeding up efficiency. It prints quickly and cheaply all kinds of letters, forms, blanks, inter-department communications, bulletins, etc. And, by simply tracing or drawing them, illustrations, designs, diagrams, etc., may be included on the same sheet. No cuts to make—no type to be set—no wasteful and wearying repeat operations—no outside agencies with inside information about your affairs—and *almost no expense*. Quick, clean, the mimeograph delivers five thousand finely printed duplicates an hour. It saves time, labor, money. It systematizes and speeds up routine. It opens up new opportunities every day to keep in touch with your customers, your supply sources, your employees. You don't know the mimeograph unless you know the *new mimeograph*. Booklet "E" suggests some of its emergency uses. Write for it now. A. B. Dick Company, Chicago—and New York.

## GIVE THE PRESIDENT A FREE HAND

**T**HE proposal of the Overman bill to give the President an unfettered hand in the coördination, consolidation and readjustment of the executive departments for the promotion of war efficiency is drastic; but it is good. It is apparently the President's reply to the demand in Congress for the creation of a War Cabinet and a Department of Munitions. It is a welcome reply; for it indicates that the President has been moved by the criticism during the past few weeks of the Administration's conduct of the war and proposes to meet it not by denial, but by improvement. No one will deny that there is room for improvement. It would have been an unbelievable miracle if there were not. The task we have assumed is too stupendous and too unfamiliar to be accomplished without failures and blunders. The best that can be demanded is that our failures shall steadily diminish and that the blunders shall not be repeated.

The President's request for a free hand in the business of administration—for that is what the Overman bill appears to be—is based on a sound principle. When you select an executive to do a big piece of work, give him great authority and then hold him to a rigid responsibility for

results. Responsibility without authority spells ruin. If you want the man who is Commander in Chief of the nation's armed forces and the nation's Chief Executive in one to win the war for you, you must let him fight it his own way. That does not mean, of course, that you shall not advise or counsel him or that you shall not criticize him. But it does mean that you shall not tie his hands and that you shall not nag him. An executive who is to produce results must be permitted to organize the forces under him in accordance with his own judgment.

The formulation of policies in their broad outlines may be done by others; the selection of methods must be made by the executive himself.

As we said two weeks ago, there would be no use in creating a War Cabinet which the President did not want. He simply would not use it to effectiveness. There is every reason for giving him the freedom of executive organization which he desires. Since that is the way he wants to work, he should be given fullest opportunity so to work. In no other way can we get out of him on the side of administrative performance and leadership the best of which he is capable. We must not be satisfied with less.

## THE GERMAN PUZZLE

**O**NE of the most surprising and disturbing features of the Great War is that coincident with Germany's moral secession from civilization there has been an intellectual secession which makes it apparently impossible for the rest of the world to understand the German or for the German to understand us. There is nothing perplexing about mere wickedness. It is as natural, tho of course as deplorable, for a community to be cruel, greedy and unscrupulous as for an individual to be so. In attempting to obtain dominion by treachery and butchery the German Government is but following in the path of a thousand forgotten dynasties and empires. It is a long time since the Devil invented any new sins, and the student of history can find ample precedent for what the Germans have done in the annals of other peoples. But wonderment mingles with our indignation when we read the sayings and writings of Germany's spokesmen and apologists. They seem to think in a different way from others and even when they write in excellent English their ideas are almost untranslatable.

One example of what we mean is the inability of the Germans to realize that there are other political facts in existence than the rivalries of nations. They assume that every one is "pro-German" or "anti-Japanese" or "Anglophile" or "Russophobe"; they cannot understand that any one is interested in the international aspects of monarchy, republicanism, aristocracy, democracy, Catholicism, Protestantism, Socialism, liberalism and similar issues, and may even con-

sider them as of greater importance than the conflicts of languages and the intrigues of diplomats. They cannot comprehend why the American people were, as a whole, suspicious of despotic Russia in the summer of 1916 and cordial friends of democratic Russia in the summer of 1917. They scent "British gold" or the "Northcliffe press" as the hidden cause for the anger of the American people at the invasion of Belgium and the Armenian massacres and seek the subtlest causes to explain our simplest emotional reactions. When an American of Slovak or Siamese or Choctaw ancestry expresses disapproval of the assassination of hostages or the poisoning of wells a deep murmur runs thru all the German press, and the words are "We understand; he is moved to denounce us because of his Anglo-Saxon ancestry and affiliations."

Unquestionably the national state is a fundamental and important political fact, but it is strange that the German of today can see nothing else. It was not always so even in Germany. Kant, Luther, Schiller and Goethe are claimed by their justly proud fellow countrymen as the very essence of Germanism, but not one of them would have asked first about a stranger: "Is he a glorious Teuton or only a miserable Frenchman?" Luther would rather have inquired whether he was a Roman Catholic or an adherent of the reformed faith; Schiller whether he was a liberal or a courtier; Goethe whether he was an enlightened man or an uneducated philistine; Kant whether or not he obeyed "the

Moral Law within him." They all lived in Germany and loved it, but they all recognized a higher Fatherland in which a man of any race might acquire citizenship. Even such enemies of humanity as Metternich and Nietzsche could see over the wall of "Deutschtum" and knew that there were other lands and other ways of thought. Metternich was interested in despotism as a principle, but he did not care whether a king had blue eyes or brown. Nietzsche himself boasted of being "a good European." But the unhappy German of today applies his single measure to everything; never whether anything is good or bad, kind or cruel, wise or foolish, civilized or barbaric, but always "deutsch" or "nicht deutsch."

Even the meaning of nationality is not to the modern German what it is to the rest of the world. The German insists that the Alsatian must be a good fellow-German because he speaks the same language; which is like contending that an Irish rebel proves himself a loyal subject of the British King whenever he addresses a mob in the King's English instead of the primitive Gaelic. He is convinced that a few professors of anthropology can persuade the Flemish people that they are really Germans and have nothing in common with their French speaking fellow-Belgians. To the American, the Frenchman, the Englishman nationality is a psychological matter, a question of the allegiance of the mind and heart. The modern Germans argue that it is a physiological matter, a question of the shape of the head or the accent of the voice. The American boasts like a man that his nation is founded on an idea. The German boasts like a wolf that his nation is founded on a strain of blood, a superior tribe or "pack."

## WILL THE WAR HAVE AN END?

IN discussions of the duration of the war we have commonly and unconsciously assumed that some fine day we shall wake up and find the world at peace. We have talked of *the* treaty of peace and *the* congress of nations which shall finally settle all the questions at issue and let life resume its normal course. We have sensed the war as some terrible monster, a minotaur devouring the children of men, but certain some time to be done to death. We have considered two possible alternatives: (1) a smashing victory, after which the winning party should dictate the terms of peace, or (2) a deadlock and a compromise.

But we are beginning now to realize that these two do not exhaust the alternatives. We can dimly apprehend other outcomes and conceive of the possibility of still others that we cannot imagine. The war may simply "peter out" as many a war has done. It may smolder on indefinitely like a burning building. It may dissolve in red revolution. There may be a general disintegration of the nations which the nineteenth century built up. The nations that made war in the beginning may not be in existence to make peace. Germany is now having a hard time to find a Russia to negotiate with. The Entente may not be able to find any Austria-Hungary by the time they want her to sign a treaty.

That our doubt about a definite terminus to the war is shared by others appears from a remark by the distinguished British publicist, Frederic Harrison, in the last *Fortnightly Review*:

When fighting has ceased—and I cannot feel sure that it will cease either soon, or in any complete, definitive, mutually agreed way—there will be a wholly new social order, as different perhaps from ours, as when the catholic and feudal order superseded that of polytheism, slavery, art, and luxury. There will be no special ruling class, no select educated class, no idle class.

When did the war begin? The "Twelve Days" about the first of August, 1914, afford a formal starting point, tho of course the historian of the war will start his narrative at least ten years before when the nations likely to be involved began to put forth unprecedented efforts to arm for the coming conflict and when the pacifists of the world en-

tered upon their crusade to stave it off. But during the three and a half years since the fighting began countries have been dropping in and dropping out until it takes a well-informed man to name the active combatants and even he would be puzzled as to where to draw the line. Is Serbia still engaged in the war? Is Montenegro? Has Brazil actually entered it? Has China? Has Persia taken part in the war? Has Albania? Is Finland now at war with Russia or with Germany? Is Rumania now at war with Austria or with Russia? The Greek flag is planted over Udine in Italy and over Monastir in Serbia. On which side then is Greece engaged? On which side is Armenia? On which side is Arabia?

We may be sure that the war cannot continue at its present rate many years longer, probably not many months. But that does not necessarily mean the war will come then to a definite end for all the combatants. When we look back over history we find that wars do not invariably begin with a declaration and end with a treaty. If definite dates are assigned they are likely to be fictitious. Our last war with England is said to have come to an end on December 24, 1814, but the war was virtually over long before and its biggest battle was fought two weeks later. It would be hard to set a date for the termination of the Boer or the Philippine war. The War of the Roses, the Peloponnesian War, the Thirty Years' War, the Hundred Years' War, flared up and died down again and again for a generation or so. In fact mankind has been always in a state of intermittent warfare. If we view the world as a whole there have been few if any times when the doors of the temple of Janus could legitimately have been closed.

We hope that the time has passed when war is to be regarded, like drouth, disease and earthquakes, as inevitable and a normal feature of human life. But in view of the historic past and present possibilities it would be rash to assume that a single congress or treaty will bring the conflict to an end on a particular day. The Great War apparently has too much momentum to be stopped instantaneously. It is too complex to admit of a simple solution.

## THE BRIDGE OF SHIPS

GENERAL PERSHING has sent from France by the hand of Major Frederick Palmer, the veteran war correspondent who is now his chief censor, a message to the American people. Major Palmer gave expression to it at the National Press Club in Washington last week. He said:

Build ships and let every woman and child in the land think ships. We ought to be wearing little metal ships in our button-holes. Children ought to play with toy ships. The woman who turns from knitting to encouraging a ship's riveter to do more rivets a day is serving her country. And every time you think ships you are thinking of our men fighting for you in France. Would you have them want for food, for clothes, for ammunition to answer the German fleet? Toward our shipyards for the power they mean during and after the war the German General Staff strains its vision. Build, build and continue to build ships. Make a bridge of ships to Pershing.

This is a striking way of calling our attention to the crucial point at which we are in imminent danger of falling short in our prosecution of the war. The cold fact is that we are not succeeding in building as many ships to be launched this year as we hoped to build, as we have planned to build, as we *must* build. We must mend our pace, and that with speed.

Without ships in ever increasing numbers we shall fail in our great enterprise.

The Emergency Fleet Corporation is beginning a campaign to obtain workmen for the shipyards which are to build the ships. Mr. Charles Piez, its General Manager, has made this statement in relation to the matter:

The Shipping Board now has 716 shipways; 302 are for wooden ships, and 414 are for steel construction. The yards in which they

are established are only working one eight-hour shift per day, six days a week. This is monstrous. If we are to keep ahead of the submarine we must run three shifts per day, fifty-two weeks in the year.

Our program calls for the construction in 1918 of eight times the tonnage delivered in 1916 at a cost of more than \$1,000,000,000. The Shipping Board has the necessary yards, the materials, and the money. All that is lacking is a spirit in the nation that will send a quarter of a million American mechanics into the yards to give their best and most efficient work.

Mr. Piez states the problem frankly. But we are by no means clear that his conception of the remedy covers the ground. "All that is lacking," he says, "is a spirit in the nation that will send a quarter of a million American mechanics into the yards to give their best and most efficient work."

The spirit is there. The American people have yet to refuse a single call to service. No draft upon their patriotism and self-sacrifice has yet been dishonored. But something more is needed. What is needed besides is a plan of action. They must be shown the way. They must be given leadership.

These indispensables only the Administration can provide. No one else knows all the facts. No one else can see the problem all around. No one else has the power and the authority to provide a solution.

When the call is sent forth, clear and definite, American labor, American industry, American business will respond. The call should have gone forth before this time. For nine months we have known the need. But our handling of the ship problem has been our least successful war activity. We have had divided counsels, shifting leadership, ineffective organization, bad appointments.

The problem cannot wait. The Administration need not be afraid of the country's readiness to do whatever is necessary. But it must face the task of leadership with frankness and decision.

The bridge of ships shall be built. Only show us the way.

## PIKERISM

**M**R. C. W. BARRON, the editor and proprietor of the *Wall Street Journal* and the *Boston News Bureau*, two of the most influential financial papers in the land, intimates that those who demand the conscription of wealth are to be classed with slackers, socialists and pro-Germans.

If "big business" takes this attitude, it is in for trouble. The American people know that conscription is not only the fairest but the most democratic way to win a democratic war. They likewise know that if the home is to be conscripted so much more must the dollar.

It has been suggested that "pikerism" should be the new word to denote the dollar slackers. It is a name that should stick.

## REVOLUTION AND DAME NATURE

**T**HE real distinction between the conservative and the radical is not that the former dislikes change whereas the latter desires it. Every one can think of changes in the "existing order" which he would like to see brought about. But the conservative, while willing to admit that many things might be improved, believes that it is not within our human power to compel the improvement. He concedes that wages might with advantage be higher but he believes in an "iron law of wages," written in the nature of things, which will prevent legislative interference with the bargaining of the labor market from improving the lot of the laborer. He grants the defects of despotic government, but to him, as Burke, the greatest of conservative philosophers, so eloquently demonstrated, political liberty is not the arbitrary fashioning of man but the slow organic evolu-

tion of nature. Is not the stock argument against the international commonwealth, woman suffrage or any other innovation: "That may be all very well in theory, but you can't change human nature"? In a word, the conservative is simply the fatalist; the man who feels so keenly the grip of the great forces of race, environment and historic tradition that the reformer seems to him like a man who would hasten time by moving the hand of a clock or moderate the weather by holding a candle to his thermometer.

The history of civilization is the history of pleasant surprises for the conservative. The very changes that seemed most hopeless have become most real. "You cannot change," it was said, "the immemorial east"; but Japan leaped in a generation from feudalism to the constitutional polity of the present. "Prohibition cannot prohibit"; but it does. "You cannot educate the negro"; but it was done. "The French, not being Anglo-Saxons, are incapable of self-government"; what has become of that once familiar dogma?

We are willing to risk the prediction that a thousand years from today similar phrases now current, such as "Man is naturally a polygamous animal," "War is rooted in human nature," and "The Golden Rule in politics is an iridescent dream" will have gone the way of the cave-man's sayings: "Man is naturally a cannibalistic animal," "Belief in witchcraft is rooted in human nature" and "Security from wolves and tigers is an iridescent dream."

And yet the conservative is half right and the radical half wrong. In so far as institutions and ideas are of human construction we may change them at will, but there is a sphere of activity where science and hard work cannot be replaced by the most eloquent speeches or the most successful revolutions.

Living in cities we are prone to forget the mighty background of nature against which our civilization stands out like a little light in a great darkness. Many Socialists, especially those of the Bolshevik type, think of economics only in terms of distribution. Let the workers once overthrow the capitalists and all will be well. There is, however, another side to economic fact; goods must be produced before they can be distributed. If a mob should rise and kill a monarch they may seize on the machinery of state for themselves. If they drive out a landlord they may divide the land among themselves. But if they "seize a factory" what have they? A mere shell of brick filled with ingenious but useless machinery. The factory has no value in itself; its utility depends wholly upon a complex fabric of credit, exchange, demand, and transportation which may be shattered by violence but cannot be built by violence. Russia has abolished capitalism, but the people are still hungry. Shooting a railroad magnate does not of itself bring wheat to market.

In the United States we are in little danger of seeing the Industrial Workers of the World sacking the savings banks or commandeering the grain elevators. But we are in danger of falling into a similar fallacy, believing that whenever there is want "some one" is deliberately at fault. We blame Mr. Hoover because the sun and rain have spoiled a wheat crop. We blame Mr. Garfield because there is not enough skilled labor in the country to make and man the needed rolling stock to keep our cities fully supplied with coal.

We underestimate our enemy. It is not the inefficiency of Messrs. Wilson, McAdoo, Baker, Daniels, Hoover, Garfield and Pershing to which we owe the majority of our mishaps and disappointments; nor is it the secret machinations of Wall Street. It is nature; the coldness of the weather, the breadth of the Atlantic, and the unhappy fact that if a man is fighting in France he cannot at the same time be mining in Montana or growing grain in Kansas. Our outlook would be dark indeed if it were not that our enemies, too, must fight nature and fight her with resources less abundant than ours.

# THE STORY OF THE WEEK

## War Cabinet or President

President Wilson applied a counter-irritant this week to the demands for a super-cabinet to conduct the war. He secured the introduction in Congress of a bill giving him blanket powers to rebuild all Government departments and rearrange their functions and activities at will in the interests of more effective war service. The bill would remove for the war period all statutory obstacles to such action. In effect it would give the President powers over the great war machine similar to those enjoyed in his own domain by the head of any well-run private corporation.

Curiously enough the bill brought forth a storm of criticisms from members of Congress who have been loudest in their objections that there was lack of coördination in the Government and poor business management in the war. Some of the critics were apparently placed in the position of demanding better business management, but objecting to the head of the nation being business manager. The coming fight in Congress between the President's measure and the Chamberlain war cabinet bill should settle the controversy between those who believe in a coalition cabinet to run the war and those who are opposed to such an expedient.

Senators Hitchcock of Nebraska and

Wadsworth of New York both spoke in defense of the Chamberlain measure during the week and added their criticisms to those already given on the conduct of the War Department.

The President "does not know the real situation," declared Senator Hitchcock, and he added that Secretary Baker was "out of touch" with departmental activities. He characterized the Secretary's statements concerning the possibility of getting a million and a half men to France this year as exaggerations of the wildest sort. Among his detailed criticisms of lack of coördination in the department, he stated that "12,000,000 pairs of shoes had been ordered for 300,000 men."

"The American giant has been stumbling and groping," declared Senator Wadsworth. Lack of centralization was the burden of his complaint. As instances he stated the confusing changes of specifications which he said followed rapidly on orders for supplies made by the War Department. He told of one manufacturer who got thirty-six such changes in six weeks "on so simple a thing as the frame of a motor truck."

Speaking for the War Cabinet bill, he said:

We have had in Washington a large number of able advisers; many of them have thought of the things which have not yet been done, but none of them have been clothed with power to do them, and few of

them have been able to find an agency of the Government where a decision could be had and the work started.

I realize that some may contend that the President of the United States, the Commander in Chief of the Army and the Navy, the leader of the nation in this war, can make all these decisions, and that there is, therefore, no need for any additional element in our wartime machinery. My contention is that, be he ever so able, no President, no human being, can perform such a task. It is utterly impossible for one man to examine into all these intricate questions.

The cross-examination of Secretary Baker before the Senate Committee on Military Affairs on February 6 was not productive of much light on the general subject of the efficiency of our war administration. Mr. Baker's critics on the committee seemed to suffer from a lack of coördinated effort similar to that they have attributed to his department, and much time was lost in non-essentials. Eventually the committee decided that much of the information they wanted should not be a matter of public information at this time, so it was agreed to continue the examination in executive session on the following day.

One thing brought out in the open session was that we have at present in the neighborhood of a million tons of shipping for troop transport, 130,000 tons having been added in the past ten days. In making his estimates for the year Mr. Baker stated that he expected to divert for transport uses tonnage now on domestic routes, to be replaced by neutral ships, and he anticipated the assistance of the merchant fleets of the Allies.

In reference to the War Cabinet bill he made the following statement:

I have a feeling that legislation that would free the President's hands and allow him to transfer functions and coördinate the needs of the departments as they arise, would be the best answer to the difficulties. All departments are constantly growing. I am, as you know, continually creating new agencies, and sometimes when in doubt have to study the statutes carefully to see how far my authority goes. If the President were simply authorized to reorganize, recoördinate and transfer functions as he sees fit, we could go to him and secure the necessary orders as were deemed desirable.

The Sins of the Fathers Incidents of the week brought out more clearly than ever the fact that we entered the war in an advanced state of industrial unpreparedness. While we have successfully mobilized a great army of a million and a half men in ten months and built up a great fighting navy, our go-as-you-please industrial machine has less easily been adapted to war conditions. From many sources it is apparent that drastic changes must be made, and made quickly, in the whole industrial arrangement, changes that will demand all the wisdom and foresight of our administrators and lawmakers and all

the fortitude and patriotism of our people. The news of the week showed that unless these problems are faced with courage, an internal breakdown is threatened which may seriously hamper our war effort.

In spite of the energetic action of Director General McAdoo the railroad tie-up continued and increased. The immediate reason was another snow-storm followed by a period of zero weather. The more important reason was the inheritance of a competitive railroad system that collapsed last year under the war strain. As an instance of the extent of the tie-up it was announced on February 5 that the freight blockade extended westward 700 miles from the port of New York.

Largely because of the railroad situation much suffering was reported thruout the country for lack of coal and other necessities. The coal shortage reached from Maine to the Northwest, and was particularly acute through the Middle West. In Detroit alone 35,000 men were reported idle because factories had closed for lack of fuel. So bad was the situation thruout Ohio that Governor Cox went to Washington to plead for relief. In New England the Maine Central Railroad, which had been getting on with borrowed coal, stated that it was unable to obtain more. In Boston solid blocks of tenements were reported as having had no heat since December 29 last, and no running water in the frozen pipes this year. Yale University and many other institutions closed their doors for lack of coal. The steel industries of the country were running at from 30 to 45 per cent capacity, and even the munitions plants were appreciably slowed up.

Meanwhile attention in Washington

was directed to the fact that except on Mondays unessential industries continued to devour the coal and the supply of fuel oil, the latter sorely needed for use in our navy and those of the Allied nations.

In addition the grain problem showed signs of approaching a crucial stage. The visible wheat supply of the country this week was reported to be about a fifth of what it was this time last year. Over the eastern sections it was spread very thin indeed; in New York, for instance, the stock of wheat ashore and afloat was about 3 per cent of last year's stock. The supply of unsold flour in that city was about a sixth of that reported a year ago. Mr. Hoover's announcement on February 5 limiting the amount of bread to be served to patrons of public eating places to two ounces—about one good-sized slice—indicated the seriousness of the general condition.

## War Needs and Industry

Several constructive measures to alleviate the industrial situation were undertaken during the week. Most of these had a direct bearing on the future of the so-called non-essential industry which helps us neither to exist nor to fight.

In England the non-essential industry requiring labor or material or machinery that can be diverted to work essential to the war has been gradually eliminated by the Government. Probably the same process is inevitable here. The first step to enable our Government to decide what industries shall be encouraged and what industries slated for a process of slow starvation was made in the introduction in the Senate and the House simultaneously, on February 4, of the War Finance Corporation bill, backed by Secretary of the Treasury McAdoo.

The bill would create the Federal War Finance Corporation, with \$500,-

000,000 capital and power to issue up to \$4,000,000,000 in short term notes, to accord "financial assistance, either directly or indirectly, to persons, firms, corporations and associations whose operations are necessary or contributory to the prosecution of the war." The corporation will also license all issues of securities of over \$100,000 and may refuse permission for such issues.

It is obvious, aside from the possibilities of the governmental veto, that with the tremendous drain made upon the national resources by the Government's war loans, the industries not considered worthy of Government assistance will have difficulty in securing new capital. On February 5 it was announced that our war expenditures for ten months were \$7,100,000,000 and were increasing at the rate of \$100,000,000 a month. We have to raise \$10,000,000,000 for ourselves and loans to the Allies by July.

The Finance Corporation bill is expected to be subjected to keen examination in Congress. Its critics declare that as it stands it would give too great powers to the Government corporation and put a severe strain on the Federal Reserve system.

A further indication that the non-essential industries face short commons was contained in a proclamation by President Wilson on February 4 placing manufacturers and distributors of fuel oil under license. A priority list for deliveries of fuel oil, established by the President, contains twelve classes. Industries deemed essential are included in the first eleven, and non-essential industries are lumped in the twelfth, among "all other classes."

On the same day it was announced that the Administration was considering a fifty per cent reduction in the volume of our imports in order to conserve our shipping for military transport. It was stated that if a cut in imports is made, the Government will put under

#### STUCK AGAIN!

The coldest weather on record and an abnormally heavy snowfall have taken turns in hindering the eastern cities' anxious efforts to keep up their coal supply. This train, stalled just outside the mine, presents a graphic picture of the whole coal shortage problem

the ban a list of articles considered not essential for the prosecution of the war. Secretary Baker intimated before the Senate committee that vessels in "non-essential trade" would be added to the war transport fleet.

Agitation to curtail the non-essential industry has already been manifest. In this connection a statement issued by the National City Bank of New York on February 2 under the caption of "Bank Credit and the Bond Issues," contains an illuminating paragraph. "Production in time of peace," it says, "consists in part of necessities for immediate consumption, in part of luxuries, and in part of additions to the productive equipment." It suggests that the rational way to comply with the Government's demand for labor in time of war is to "cut out the production of luxuries or non-essentials," and to "cut down the additions to permanent improvements, restricting them to such only as will aid in carrying on the war."

**Railroad Bill Progresses** After a long discussion in committee and a delay that assuredly was not helpful in the effective prosecution of the war, the Administration bill defining the terms of government war control of railroads was reported out in the Senate and the House this week. The legislative committee in each branch of Congress had tacked on an amendment limiting the period of Government control, the House to two years after the declaration of peace, the Senate to a year and a half. The original bill fixed no specific date for a return to private ownership.

Already there are evidences thru the country of a growth of sentiment for permanent government operation. At the hearing on proposed wage increases before the Railroad Wage Commission during the week, representatives of the railroad workers made it plain that they are in favor of such a change.

**Socialist Menace Revealed** Before this year New York City never had elected any Socialist legislators in quantity. But at the last election ten Socialist Assemblymen were voted into the state legislature and seven Socialists were chosen as aldermen. These men have been in action for over a month and

#### THE GREAT WAR

*February 1*—Bolsheviki take Odessa and Kiev. Pershing reports ten deaths.

*February 2*—Supreme War Council at Versailles finds no possibility of peace in Hertling and Czernin proposals. German strike broken by military authorities.

*February 3*—Air raids on Padua, Venice and Treviso. Pershing reports three wounded, one killed, seven died from disease.

*February 4*—Rumanians take Kishinev from Bolsheviki. Pershing reports one killed and two died from disease.

*February 5*—Mutiny in Greek army suppress. Pershing reports one killed and five wounded.

*February 6*—"Tuscania" sunk with 2179 American troops on board. Pershing reports one killed and ten wounded.

*February 7*—Ten months of war have cost United States \$7,100,000,000, of which \$4,684,400,000 has been loaned to Allies. British Admiralty reports loss of fifteen British merchantmen over 1600 tons and five smaller vessels during week.

the old-time politicians are hoping they will never appear in the legislative halls.

The Socialist assemblymen have introduced a number of bills to strengthen the labor laws of the state, to permit municipalities to establish municipal ice plants, laundries and the like, and the Socialist aldermen have been fathering measures to have the city take over the milk distributing business, to have the city purchase coal at the mines and sell it to the people without profit, and similar innovations. But what the old-timers object to is not so much their measures, which are consigned to mortuary committees, as their manners.

For instance, it is the amiable habit of the New York legislature, like those of most other states, to do nothing to within a fortnight of the end of the session, when a mass of legislation is jammed thru with a rush. The Socialist assemblymen not only object to this easy method of earning their salaries, but they have the bad taste to call attention to the method. A few days ago they published the record of the legislature for the month of January, show-

ing that no committees had met, no bills had been voted on, exactly nothing had been done. Lest their statement should not receive sufficient publicity they have traveled about the state, explaining the conditions to the home folks of their fellow legislators, and incidentally spreading their political propaganda and making general nuisances of themselves. Also, instead of loafing about the hotel lobbies like regular lawmakers, they spend their spare time (when not out addressing other fellows' constituents) studying works on government, economics and history in the Capitol library, attending highbrow lectures, and otherwise misconducting themselves.

The aldermen are no better. On their spare evenings they invite Columbia professors and other experts on social and economic subjects to address them. They are indefatigable debaters, and nag the members of the Tammany board beyond endurance.

**On the American Front** Washington has at last confirmed the news which came from Berlin three months ago, that the American contingent has been assigned to a sector on the Lorraine front. This is officially stated to be "northwest of Toul," but the length of the American sector is not given. Apparently, then, the Americans are to stand guard over one of the gates of the eastern front, near St. Mihiel, where an acute angle of the German line is thrust across the Meuse between the fortresses of Toul and Verdun. This was the scene of some of the hardest fighting of the War of 1870 and the present war, and, while it has been comparatively quiet for the past year, it may at any moment have to resist another German drive or become the front of a French advance into the lost provinces.

The German raid of November 13, which resulted in the capture of twelve Americans, took place, according to the German announcement, near where the canal connecting the Marne with the Rhine crosses the Lorraine frontier. This point is east of Toul. Eight of these prisoners are reported by the Red Cross to be confined at Tüchel in West Prussia.

The famous and fashionable water-

ing place of Aix-les-Bains has been selected as a recreation center by the American soldiers in France when off duty. Here on the edge of the Alps and within sight of Mont Blanc there are numerous hotels which formerly catered to the tourists of all nations, and the Y. M. C. A. has arranged accommodations for thousands of men.

The American sector is situated on low and marshy ground and among many ponds, so it is necessary to man the pumps constantly to keep the dug-outs dry. At one point the American front trench comes within sixty feet of the German. The American artillery, established on higher ground in the rear, has been busily engaged in a duel with the German artillery of late.

**The "Tuscania" Lost** The Cunard steamer "Tuscania," used as a transport for American troops, was torpedoed and sunk off the north coast of Ireland on February 5. The War Department reports that there were 2179 Americans on board, of whom, at latest account, 1912 had been saved. The survivors were landed at Bucrana and Larne, Ireland.

The War Department states the following units were on board the "Tuscania": Headquarters Detachment and companies D, E and F of 20th Engineers; 107th Engineers' Train; 107th Military Police; 107th Supply Train; the 100th, 158th and 213th Aerial Squadron; Replacement Detachments Nos. 1 and 2 of 32nd Division; 51 casual officers. Most of the men are from Wisconsin and Michigan.

The "Tuscania," built for the Anchor Line in 1914, was one of the handsomest and best equipped of the transatlantic passenger ships. She was the first vessel of the kind to be run by steam turbines working thru reduction gearing. She was designed to carry 2500 passengers and freight besides.

The "Tuscania" was sailing under orders of the British Admiralty and manned by a British crew and convoyed by British warships. This is the first vessel carrying over American troops to be sunk.

The American transport "Antilles" was sunk October 17, 1917, on her return trip with the loss of 67 men.

**A Year of U-Boats** "From February 1, 1917, sea traffic will be stopped with every available weapon and without further notice." This announcement by the German Government inaugurated a new era of ruthlessness which, it was expected, would soon bring the war to a close. Within three months, or "certainly" within six, announced the German military authorities, England will be brought to her knees. A year of unrestricted submarine warfare has now passed and still England shows no signs of surrender. Instead, then, of knocking out Germany's most dreaded enemy, the first effect of the policy was to bring into the field a new foe, the United States, whose potential power is quite as great.

The hopes of Germany were based upon the calculation that the U-boats could sink a million tons of British shipping a month. As a matter of fact, they probably have, on the average, sunk about half that amount. The exact figures are not known because the British Admiralty no longer reports the tonnage or in general the names of the vessels lost. It does report from week to week the number of vessels sunk. From these reports it appears that during the year about 1400 merchant vessels have been sunk, of which 799 were of over 1600 tons. This does not include, however, vessels which were disabled tho not sunk, nor does it include the vessels sailing under the Admiralty flag for military and naval

purposes. The number of British civilians, men, women and children, who have lost their lives from U-boats since the war began is 14,120.

The total losses of Allies and neutral merchant shipping during the year are estimated at 6,600,000 tons. The number of ships sunk has on the whole declined week by week since last April, but they are still being sunk more rapidly than they can be built. Whether the same may be said of the submarines is uncertain. The fall in the rate of losses may in part be explained by the fact that there are fewer vessels afloat. The entrances and clearances at British ports for the first week of June were 28,204 ships. For the last week in January it was 4661.

The Germans claim to have sunk 10,000,000 tons of ships, worth with their cargoes \$5,000,000,000. Shipbuilding, they believe, will only replace about a third of this loss, and therefore not enough ships will be available in the near future to transport and maintain in France an American army of any great size. Secretary Daniels estimates that five tons of ship to a man are necessary to transport our troops to France. Hence to carry over the 1,500,000 men whom Secretary Baker says will be ready this year would require 7,500,000 tons. Of this 4,000,000 tons are already under the American flag or can be obtained from neutrals. Estimates of the tonnage which may be built during the year range from 2,500,000 to 6,000,000.

The loss to American shipping thru the U-boats during the year is sixty-nine vessels, with a total tonnage of 171,061. This is more than offset by the seizure of German ships in American ports. There were 107 of these, with a tonnage of 686,494. Altho they were supposed to have been put out of commission thru destruction of

their machinery by their crews shortly before the declaration of war by the United States, they have all been repaired and are now in service. The "Leviathan," née "Vaterland," is supposed to have taken 8000 American troops over to France.

But while the U-boat depredations have altogether failed of their main object, that of starving out England, they have inflicted appalling losses on the mercantile marine of the world. Whenever a wheat ship of 5000 tons goes down it means the loss of 2,000,000 loaves of bread, or, if it is a meat ship, 50,000 carcasses of mutton may be destroyed. Lord Rhondda, the British Food Commissioner, stated that in one week of December 3,000,000 pounds of bacon and 4,000,000 pounds of cheese were sent to the bottom of the ocean by submarines.

The depredations of the U-boats have for the most part been confined to the zone specified by the German Government around the British Isles, off the coast of France and in the Mediterranean. On January 11, 1918, the barred zone was extended westward to include the Azores and Cape Verde Islands. This may be regarded as a threat directed against the Americans.

The British Admiralty has established a new barred zone off the west coast of Scotland, completely blocking the western entrance to the Caledonian canal.

Central News

#### ENLIST YOUR LENS

We are being increasingly reminded now that the best lenses before the war were made in Germany and that there is a consequent shortage at present of the special lenses for cameras and binoculars that are needed by our army photographers and scouts. Captain Betz of the photographic division of the United States Signal Corps has established a recruiting office where civilians may enlist their lenses in the service and Assistant Secretary of the Navy Roosevelt urges that owners of telescopes or binoculars lend them to the navy. They can be sent to the Naval Observatory, Washington, D. C., with the name and address of the donor carefully marked, and they will be returned if possible in good condition after the war. Sextants and chronometers are also needed by the Government

Ford Chasers Secretary Daniels, who is not given to extravagant flights of fancy, has made the prediction before the House Committee on Naval Affairs that by the late months of this year the submarine menace would be overcome. "When the present plans for combating the submarine are entirely completed," he said, "there may be occasional loss to shipping, but the constant menace will be averted."

Mr. Daniels declared that we would have nearly 300 destroyers and submarine chasers in the war zone and on the ocean lanes by late summer or early in the fall. An improved standardized type of submarine chaser will be turned out in quantity by Henry Ford at his Detroit plant, which has been devoted to Government work. The new craft will be about 200 feet long and will carry two powerful guns. They are very fast and ride so low in the water that they are hard to see.

Enemy Peace The Supreme War Council of the Allies, which met at Versailles from January 30 to February 2 to discuss measures for carrying on the war, agreed that the time had not come for entering into peace negotiations as proposed by the Central Powers. The official statement is:

The Supreme War Council gave the most careful consideration to the recent utterances of the German Chancellor and the Austro-Hungarian Minister of Foreign Affairs, but was unable to find in them any real approximation to the moderate conditions laid down by all the allied governments. This conviction was only deepened by the impression made by the contrast between the professed idealistic aims with which the Central Powers entered upon the present negotiations at Brest-Litovsk and their now openly disclosed plans of conquest and spoliation.

Under the circumstances the Supreme War Council decided that the only immediate task before them lay in the prosecution of the war with the utmost vigor and the closest and most effective coöperation of the military effort of the Allies until such time as the pressure of that effort shall have brought about in the enemy governments and peoples a change of temper which would justify the hope of the conclusion of peace on terms which would not involve the abandonment, in the face of an aggressive and unrepentant militarism, of all the principles of freedom, justice and respect for the law of nations which the Allies are resolved to vindicate.

In the Supreme War Council Great Britain was represented by Premier Lloyd George and Lord Milner, France by Premier Clemenceau and Pichon, and Italy by Premier Orlando and Baron Sonnino. The military representatives were Weyand, Wilson, Cadorna, Bliss, Foch, Robertson, Alfieri, Pétain, Haig and Pershing. Complete unity was arrived at in regard to both the policy to be pursued and the measures for its execution.

The Rule of the Bolsheviks The power of the Bolshevik appears to be extending rather than declining. Within the week they have gained possession of Eleaborg on the extreme northwest and of Orenburg on the extreme southeast of European Russia, Petrograd, Moscow, Kiev,

Odessa and Helsingfors are in their hands. They unceremoniously dismissed the Constituent Assembly and they dominated the All-Russian Conference of Councils of Workmen's and Soldiers' Delegates, which succeeded the Assembly at the capital. The opposition is compelled to resort to assassination as under the old régime. Two attempts have been made against the life of the dictator, Nikolai Lenine. On January 16 he was shot at as he was passing thru the street in an automobile and on January 31 a student entered the Smolny Institute and fired at him with a revolver, but without hitting him.

The Bolsheviks have seized all the bank accounts of the British and other foreign embassies and consulates, to be held until the funds of the former Russian Government on deposit in London and elsewhere are turned over to them. They allow Ambassador Francis and the American staff only \$15 a week per person for living expenses. The American Ambassador is threatened with imprisonment unless the United States Government releases Emma Goldman and Alexander Berkman, the American anarchists who are convicted of interfering with the draft. John Reed, the American journalist, who is under indictment as editor of *The Masses* for a similar crime, has been appointed Consul General at New York by the Bolshevik Government.

Leon Trotzky, the Bolshevik Foreign Minister, when interviewed on the subject of President Wilson's latest declaration, said:

Mr. Wilson's latest formula was actuated primarily by the important fact that America does not seek territorial aggrandizement but is strengthening preparation for her own imperialism.

The problem of the American middle class is to obtain the weakening of both imperialistic sides in the European conflict in order to make American capitalism the heir of European capitalism. That is why the praise bestowed upon us by Mr. Wilson, when only two weeks before the American and Entente press called us German agents, has not called out from our side the enthusiastic response expected.

At any rate, we believe if Mr. Wilson and Mr. Lloyd George really sought a quick peace through their latest formulas they should have shown it by consenting to join in general peace negotiations.

The participation of all the warring lands in the negotiations would have created such a peace sentiment among the peoples that it would have made impossible a renewal of the war after the long-welcomed armistice, and would have forced a negotiated, democratic peace. Any attempt to renew the war after negotiations would undoubtedly result in the overthrow of all the governments. That is why the Entente fought shy of our invitation to join the general peace negotiations. They hope still to crush the Central Empires, and they do not desire to sacrifice their own imperialistic ambitions.

Bolshevik Helsingfors, the capital of Finland, is now in the hands of the Red Guard, who are reported to be plundering and murdering without hindrance. The revolutionary movement was fomented by Bolsheviks from Petrograd, who sent a large body of troops to overthrow the Finnish Government. Leon Trotzky, the Bolshevik Foreign Minister, left the Brest-Litovsk conference in order to

go to Helsingfors, where he made a speech from the portico of the government building, promising the people full support if they would follow the example of Russia. Members of the Finnish Diet have been thrown into prison or assassinated. When the Red Guard attempted to search the house of General Silverhjelm the octogenarian general stood them off with a revolver and after killing several of his assailants, shot himself.

On the west coast of Finland, on the Gulf of Bothnia, the Red Guards took possession of Tornea and Uleaborg, but the latter was recaptured by the Government forces under General Mannerheim. The Swedish part of the population are being carried away from Helsingfors by steamers and gunboats sent from Sweden for that purpose. They are anxious for Swedish intervention, but the Swedish Government declines to take any official action. The leading Stockholm papers advocate sending arms and ammunition to aid the Finns in their fight against anarchy and barbarism.

Previous to the war the sufferings of Finland had aroused the sympathy of the outside world, for the Czar had suppressed the liberties he had sworn in his inaugural oath to protect. But what the Finns have had to endure from the revolutionists is worse than the oppression of the old régime. Upon the overthrow of the autocracy the Finns, holding that the Grand Duchy was connected with Russia only thru the person of the Czar, declared their independence and it was promptly recognized by Germany and Sweden. But neither Great Britain nor the United States extended a hand of welcome to the new republic and now it has apparently fallen into the hands of the Petrograd Bolsheviki. A commissioner from the Finnish Government is now in Washington seeking official recognition.

**German Strikes** The strike epidemic that broke out in various parts of Germany was not premeditated or in general authorized by the labor leaders, but was a sporadic manifestation of the prevailing distress over food scarcity and discontent over the failure to make peace. The total number of men involved is estimated at 180,000; still they were not numerous enough in any one place to bring about a complete and prolonged stoppage of work. In the Krupp Steel Works, for instance, only three or four hundred workmen out of 60,000 went out, and they were fined or discharged. There was little rioting in general, tho in Berlin mobs, mostly composed of boys and girls, derailed and demolished the street cars and one policeman was shot. That the strike had in part a political aim is shown by the leaflet distributed in Berlin, which read:

Only by rising en masse, only by a general strike that shall put a stop to all industrial activities, and especially the war industry, only by a revolution and by wresting from the hands of tyrants a democratic republic for Germany, can a halt be called to the international butchery and a general peace be brought about.

Delay no longer, German workers, men

Central News

#### SEE THE PRETTY BIRDIE!

Pigeons have an important place in modern warfare as messengers to carry important dispatches to and from advanced and inaccessible positions where telephone lines are cut and bombardment makes the use of dispatch riders impossible. The United States army is following the example of the Allies now in establishing a training station for carrier pigeons. This photograph shows one of the American dispatch riders with a corps of his assistants ready to be sent forward to the lines

and women alike, but act, and act with vigor, sparing none.

The military authorities took prompt and strong measures. General von Kessel, in command at Berlin, ordered all the strikers to report for work at seven o'clock Monday morning and declared in his proclamation that:

Employees failing to resume work will be tried by court-martial, which is authorized to impose sentence of death, execution to take place within twenty-four hours of the time the sentence is imposed.

The Social Democratic party refused to father the strike and the unions declined to pay out relief funds. A Radical Socialist member of the Reichstag, Wilhelm Dittmann, who was arrested while addressing a crowd of strikers, was convicted by court-martial of inciting to high treason and was sentenced to imprisonment in a fortress for five years. His party colleagues in the Reichstag are trying to secure a remission of his sentence.

These labor disorders are ascribed by the Cologne papers to Anglo-American machinations. It is said on New Year's Day in Washington \$60,000,000 was subscribed to start revolutionary movements in Germany and Austria-Hungary. The organization is supposed to be under the leadership of Senator Stone, Earl Reading and Viscount Northcliffe.

**Troubles of Don Quixote** Spain, long considered the European nation most completely wedded to a neutral policy, is today hesitating on the verge of war. But national sentiment is divided and the present Government has controversy on hand with both groups of belligerents and thus it is uncertain whether either of the two war parties, pro-Entente and pro-Ger-

man, can win the nation to its policy.

The recent refusal of the Spanish Government to permit the transportation across the French border of supplies intended for the American army has created a critical diplomatic situation with the United States. Foodstuffs, oil and lumber had been ordered from Spain for the use of General Pershing's army when the Government interfered to prohibit their delivery. The Spanish Government has, however, consented to enter into diplomatic negotiations with the United States about the matter; perhaps to prevent the holding up of Spanish shipping now in American ports, perhaps to arrange a compromise by which Spain can obtain American commodities the export of which has been restricted by this country. Many observers of recent political tendencies in Spain see in the dispute the influence of German propaganda, but the official explanation of the Spanish Government is that it was forced to place an embargo on the American army orders because the Spanish people were suffering from a shortage of the very commodities for which our army had contracted.

To balance the controversy with the United States, the Spanish Government has decided to send a vigorous protest to Germany concerning the sinking of the Spanish coastwise trading vessel "Giralda" by a German submarine. Prime Minister Alhucemas announced that this incident might compel Spain "to take exceptional decisions." Ex-Premier Romanones is openly preaching war against Germany, and the sympathies of King Alfonso are well known to be with France and Great Britain. But the Spanish army contains a strongly pro-German element.

# THE BRIDGE OF SHIPS

BY EDWARD A. FILENE

I venture to predict that within the next three or four months, perhaps sooner, there will be greater excitement concerning our supply of ships than there is now in respect to the fuel situation.

Criticism, of course, finds strength with use. Secretary Baker pointed out, too, that the sending over of great numbers of troops is contingent now only on the production of great numbers of ships. And fathers and mothers and relatives, in whom a panicky feeling has already once been roused, are likely to feel it surge again when they realize some of the tremendous difficulties in establishing and maintaining our bridge of ships to Europe. They are likely to see, in other words, that not merely the fate of one section of an army is dependent upon that line being maintained, but the fate of all the Allied armies. Even now, in fact, before the bulk of our troops have reached Europe, the Allies already there are dependent for a thousand and one things upon America, the storehouse of the world; and it goes without saying that troops cannot be transported, munitions cannot be sent, nor aeroplanes, nor anything else unless the bridge of ships is sustained.

America realizes all this. And Germany realizes it. It was only Germany's idea that she could destroy this bridge of ships that led her to invite opportunity for ruthless warfare. It is our confidence that they cannot cut that line that makes us confident of doing our share in the war. And it is only the part of wisdom, accordingly, that we build not merely enough ships, but more than enough.

It becomes more than clear, thus, that the responsibility for the building of ships is not merely the Government's, but the responsibility of every one. If a man says to me in ordinary times that he can lift a brick building, I smile; but if he makes clear to me that his life and the life of us all depends upon the building being lifted, I hasten to assemble all the men and machinery that I can to help him.

I have been haunted with a dread that our bridge of ships might be broken and be like an unfinished bridge, or a bridge with its further end disappearing in waters infested with submarines.

*Mr. Filene, ever since the war began, has spent the major portion of his time in Washington and has had an unusual opportunity to study the question of shipping which is soon likely to become the most important issue before the American people.—THE EDITOR*

The program of the Emergency Fleet Corporation calls for five million tons in 1918 and perhaps for six million tons in 1919—enough, it is hoped, to replace those that the Germans will destroy, more than enough. But the difficulties in this large program are enormous and not at all generally appreciated. They are difficulties in part born of the fact that the machinery of production and the men had to be assembled on an unprecedented scale. And though the natural thought comes that since the shipyards are increasing the number of ships must be increasing as well, the problem is much greater than that.

It is probable that at the present time the workmen in the yards are not on the average working more than sixty-five per cent of the time. That is, of the total time of all the workers less than sixty-five per cent is being applied to the task in hand.

At once fathers, mothers, relatives of troops abroad—the whole nation, in a word—demand to know "Why?"

There are a great many reasons "Why." First, there are housing difficulties. Next there is lack of adequate transportation facilities. Finally, as a result of these first two causes, ship workmen are leaving their employment in great numbers. I understand that one of the big yards, for instance, employed 17,000 men within a few months, and at the end increased its total force by only 600.

The enormous numbers of workmen brought to the shipyard centers has resulted in a lack of adequate housing space. There is a bill now in Congress for the appropriation of \$50,000,000 to provide housing facilities, but it is clear that many months must elapse before that money can produce the requisite number of houses. Not a wheel in any community near a shipyard should revolve until every wheel in the shipyard is turning. Citizens can help greatly by giving up space in their homes to workers, just as they would permit troops to billet with them, if troops had to be quartered in the town; or by giving up a floor to the family of a shipyard worker.

In the matter of transportation, though the Government has certain powers that might be applied to relieve the situation, more can be done by coöperation than in any other way, by applying the simple formula that every shipyard worker should be supplied with adequate street railway transportation even if there is not enough means of transportation left for the rest of the town. As a matter of fact, there will usually be found enough means of transportation for all if the town works coöperatively toward making the proper adjustments.

GREAT improvement has been achieved in several instances by the opening of plants fifteen to thirty minutes apart, so that the peak of traffic for the ship workers and the other workers and shoppers did not come at the same time.

If housing and transportation facilities are provided—if these two remedies are applied, the worst difficulties in the way of better labor achievements will have been removed.

The business men should be willing to "transfer" as many experienced employees as are absolutely necessary in the shipyards.

I hold it to be axiomatic that not a wheel should revolve in our town until every wheel in the adjoining shipyard is turning, every lathe working, every pulley humming, and every possible ounce of strength applied to the making of an enduring bridge to Europe, over which the troops and supplies of democracy can go till the war is won. Washington, D. C.

Workmen rivetting the keel plates to the bow of a steel vessel at one of our shipyards

# FARMER JOHN AND THE WAR

BY CHARLES MOREAU HARGER

EDITOR OF THE ABILENE DAILY REFLECTOR

FARMER JOHN lives twelve miles due south of a Kansas county seat town. He has three boys and four girls, all at home; also a farm of 240 acres, fairly well stocked and bearing a mortgage of \$4000. He drives a Ford car, is a member of the district school board, owns two shares of stock in a little bank in a nearby village and belongs to the Grange.

For a long time the war did not appeal much to John's imagination. He was for peace and held that it was none of our business what happened in Europe. One day he protested to his banker against buying Anglo-French bonds and so helping to finance the struggle.

"You are right," replied the banker, "perhaps we ought not, but you should. Every dollar is spent here and you are selling your products at fancy prices because of it. You owe it to the Allies to take \$500—but if you don't the bank will."

All last spring John was busy in his fields. He went to town seldom. No parades pass the farm. Bunting, banners and badges are lacking.

Riding on a plow seat up and down an eighty-acre field from early morning until sundown does not awaken much exuberance of emotion. So he felt detached from it all and was only intent on producing the largest possible yield for the money it would make at the high prices.

Then came the draft—it included Henry and Melvin. He drove to the county seat that night after supper to see a lawyer friend. He could not spare the boys—was there not some way they could escape service? The lawyer thought it possible and he went back to work.

When the Red Cross committee came around he was harvesting. At first he refused to give—what business of ours was it, anyhow? We should have stayed out of it. But finally he put down five dollars instead of the fifty asked—and went back to the reaper. He did not think highly of these begging committees. Why didn't the town folks pay for their glory. Let everybody take care of himself as he did and the world would be all right. He worked for his living and paid his own debts. So he mused as he watched the yellow grain tumble off the platform of the machine and mentally figured the probable yield at twenty-five bushels to the acre.

He was right—3000 bushels were stored in steel tanks and locked safe from all harm. The elevator man tele-

*"It will be lonesome out in the field—but all the time he will be thinking—"*

phoned that he would give \$2.75 a bushel, but John refused to sell less than \$3—think what \$9000 would mean! It would buy a new six-cylinder car the children wanted, pay off the mortgage and carry him over until spring. Then one day the Government fixed the price at \$2 a bushel—again he went to see the lawyer. No, there was no way to beat it. Just \$2250 of profits gone—maybe more. John was resentful.

When he had run the car in the shed that night all the family but Melvin was in bed. The boy sat by the table waiting. "Father," said he quietly, "I am going to enlist." There was a moment of silence and the boy went on: "Somebody must fight this war and I want to do my share."

John did not argue—he knew it was no use, and the next day drove with Melvin to town and saw him start for the training camp. He and mother drove to the camp the next Sunday and gazed with wonder on the acres of buildings, the tens of thousands of fine upstanding young soldiers—and Melvin in his new uniform was the handsomest of them all. Mother gave the boy a basket of goodies and kissed him, while father tried to be unaffected but blew his nose fiercely several times.

A few days after he received a letter asking him to serve on the second Red Cross committee. He took the job and with two neighbors went over the township, growing impatient with the farmers who did not realize their duty. He told the banker that he would take \$500 of Liberty bonds—yes, and some baby bonds, too. "Guess we'll make the old Ford do another year," he laughed. He subscribed to the Y. M. C. A. campaign and the Y. W. C. A., and one day heard a woman tell of the French orphans. "I'll take one," he called out so eagerly that the crowd laughed. But he meant it.

He visited Melvin again and when he came home started a fund for the recreation hall—he was seeing the world thru new eyes. "It's our job," he told his neighbors—"we must come across."

And they did. Still no bands played in Fairview township, no parades, no banners, no orations, but as the farmers rode back and forth on their plows they thought in world terms. That is the big fact in the change that has come to the people of the prairies. They have had to think it all out with little of the impetus of crowds and oratory. It has been a growing process and has come to fruition in eagerness to serve. Do not think all the

Red Cross workers are in the towns. Farmer John's wife and daughters and thousands of other women on the farms are meeting regularly and working steadily in the cause. When the membership campaign was undertaken the farm sections came in with reports of oversubscription of their quotas as generously as did the towns.

Perhaps most striking of all the manifestations of patriotism is the attitude of the farmers regarding the fixing of the price of wheat. Like Farmer John thousands saw a large part of their promised profits taken from them in a day. For a time they felt that they had been singled out for sacrifice, but the nation's and the Allies' needs were realized. The secretary of the Kansas Board of Agriculture wrote to one thousand farmers asking them if they were satisfied with the price fixed. And this is a summary of the replies: Of 903 who replied, 584 answered "yes" without qualification; 92 said "yes, but prices should be fixed on other commodities"; 72 said "no, because other prices are not fixed"; 155 said "no" unqualifiedly. The large majority, tho price fixing meant a direct money loss, bowed with grace to the Government's mandate.

Of such stuff are made the men of the prairies. They have faced the nation's crisis with the courage of the pocketbook as well as with that of the heart.

Liberty bonds are not yet in every farm home. The farmer is not familiar with bonds—he has preferred first mortgages on his neighbors' lands. But the second issue had more buyers than the first and the following loans will show increased subscriptions in this little-touched field. Indeed, there is yet to be opened a vast territory for the disposal of the nation's obligations among the men who are prospering from the high prices of prod- [Continued on page 288]

# The Second Message from the United States Government to the American People

Presented each week in The Independent by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

## A WAR OF PEOPLES

**T**HIS is a war of peoples—not of their armies only. The strength of the fighting lines is not all in the fields. The spirit of the soldier is one with the spirit of the country from which he is drawn, and the morale of the army depends on the morale of the nation of which the army is only the fighting part.

For that reason, in this war more than ever before, public opinion has been mobilized and instructed, and a war of propaganda has been waged almost as busily as the conflict across No Man's Land. The Germans have united their own people by means of a series of convincing lies that represented Germany as the victim of foreign aggression and armed attack. They have confused neutral councils with ingenious duplicity and campaigns of falsehood. And they have attacked the morale of their enemies with every conceivable means of encouraging dissension and promoting disunity.

For example, within the past few months, all over this country, reports were circulated that the masonic orders had protested to the Government against allowing the Knights of Columbus to build "recreation huts" for Catholic soldiers in the camps; that Catholic nuns had been refused permission to do Red Cross work unless they wore Red Cross uniforms instead of their conventual habits; and that Red Cross officials were discriminating against Catholic soldiers by giving them the "leavings" of the society's supplies. These stories were put in circulation for the obvious purpose of stirring up enmity between Catholics and Protestants in order to cripple the work of the Red Cross and hamper the Government.

In Italy, German agents have weakened the national unity by fomenting the old quarrel between the Papacy and the civil power. In Russia, they are inciting attacks upon the Jews. In this country, they are inventing reports of official discriminations against Catholics, on the one hand; and, on the other, they are spreading such stories as a recent one that the President's secretary, a Catholic, had been arrested for treason and imprisoned in Fort Leavenworth. The citizens who hear these rumors, and inquire about them from one another, are innocently aiding an enemy who is not seeking to do justice either to Catholics or Protestants. He desires only to see

them forget their loyalty to their country in a sectarian quarrel. He wants them to fight one another instead of fighting Germany.

Similarly with the tales that have been current about interned German prisoners being fed five meals a day while the country was being asked to practise a rigid food-economy, about Red Cross supplies being sold to shopkeepers by dishonest officials of the society, about a disastrous naval engagement in the North Sea in which nine American warships were reported sunk, about the bad food that was being served to our men in the training camps, about the criminal waste of good food in those same camps, and so forth endlessly. These reports are all falsehoods either designed to discourage volunteer Red Cross work and the loyal efforts of housekeepers to save food, or calculated to create a troublesome distrust of the Government.

Moreover, it is not only religious differences that the enemy's agents are busily encouraging. And they are not merely inventing lies that may be denied. As in Italy and in Russia, so here also, they are actively inflaming all sorts of class antagonisms, in an attempt to divide the nation and impede its war-work. They are exasperating class grievances that are as real in America as they have been everywhere. They are supporting both sides of factional quarrels in order to promote domestic disunity. They are financing any organization that has a class fight with any other. They are trying to aggravate the negro problem, the struggle between capital and labor, the jealousy of the farmer in the West for the businessman of the East, the antagonisms of politicians and political parties, the hatred of progressives and reformers for political crooks and corporation bosses, and all the grievances that have been caused by the levying of war taxes, fixing food prices, attempting to control profiteering, enforcing conscription, and generally organizing the country for war.

It is German sympathizers, for instance, who are most eager to increase the feeling that this is "a rich man's war." They spread that lie in spite of the fact that the rich cannot buy exemption from conscription in this war as they could in our Civil War—in spite of the fact that they cannot hire substitutes to take their places in the trenches—in spite of the fact that the only exemptions are allowed to poor men with dependents, or to workingmen in vital industries—in spite of the fact that the war taxes fall most heavily on the rich, and the measures of price-control are designed to prevent them from exploiting the poor, and the excess-profits tax deprives them of the secret fruits of any such exploitation.

And it is the German agents who are encouraging the western feeling that this is "a business man's war," because when the Government called for volunteers to help organize the business of the country on a war basis, the business men were most free to respond and most fitted by experience to fill administrative positions. There are innumerable rumors that some of these men are taking advantage of their official knowledge in order to make fortunes for themselves. It would be the miracle of the world if no such betrayers of public faith were ever found among them. And doubtless, in this country as in other countries, congressional investigations will discover traitorous grafters and dishonest administrators. But it is none the less true here, as abroad, that the great body of business men who are serving the Government are as loyally self-sacrificing as any citizens who are behind the lines; and the report in the West that they are largely self-seeking is as untrue and mischievous as the report in the East that most western farmers are profiteering, or the report among employers that labor is generally disloyal, or the reports among the workingmen that their employers are seeking only to get rich out of the public need.

Recently, in the White House, President Wilson was asked by one of our most famous financiers to appoint a commission that should safeguard our foreign trade during the war and see to it that new foreign markets were made ready for our peaceful penetration after the war. And the President replied that the Government would not appoint such a commission; that this country was not fighting to obtain

foreign markets; that the struggle for foreign markets had been one of the predetermining causes of the conflict among the European nations, and it had been most difficult to make those nations believe that America was not secretly inspired by a similar greed for spheres of influence and "a place in the sun"; that America was not waging a commercial war or seeking any selfish advantage, and the Government would never appoint a commission that might, by its mere existence, misrepresent the motives of our people in their support of the nations fighting to defend the freedom of the world.

That pronouncement has been made, again and again, in the President's public utterances. He has consistently acted upon it in his war policy. And the statement that the war is "a rich man's war" or "a business man's war" is as deliberate a lie as any that the enemy has invented in order to confuse our people and divide them.

It is a lie that has been given a cheerful support by one section of American socialists. That section was first organized in this country by German exiles. They have always been led by German sympathizers. It has been a rule among them that a man is not a Socialist unless he pays dues to the party leaders, accepts all the party nominees of those leaders without question, subscribes to every plank of the party platform, and votes only a straight ticket under the party emblem. He did these things or he was expelled. That is a Prussian idea of organized servility and unquestioning obedience. It has succeeded in Germany, but it has never succeeded here. At the outbreak of the war in Europe, the Prussian Government, by means of false news and forged despatches, made the German people believe that their country had been invaded by Russia and attacked by France; and, for a time, all the German socialists supported their Government's war of imperial conquest, believing that it was a war of self-defense. Since then, the independent socialists in Germany have learned that they were deceived. They

are now fighting the German Government as the independent socialists are fighting the German Government here, under the leadership of such men as John Spargo and Charles Edward Russell. The socialists in America who are opposing the United States Government are opposing it not because it is waging "a business man's war" and they are socialistic in their convictions, but because it is waging a war against German aggression and they are German in their sympathies. The independent socialists in both countries are fighting the Kaiser and his commercial war of imperial conquest.

In our Western states, another sort of class cleavage is being widened by German sympathizers. There, for a decade past, a political struggle has been proceeding between reformers and corruptionists. In many states, the reformers have won. They have broken the political bosses and ousted their henchmen. When the civilian boards at Washington called for volunteers in the work of organizing the trade and industry of the country, many of the defeated political enemies of the Western commonwealths volunteered for service and were accepted. The assignment of such men to war work has "given the war a black eye." It is hinted that the dark powers which so long exploited the West are "running" the war. It is suspected that the Government at Washington is innocently under their control. And German agents and German sympathizers are encouraging that hint.

It was inevitable that some discredited politicians should find their way into the ranks of a volunteer army of war-workers so hastily assembled. Such men would be eager for the chance to rehabilitate themselves. They might even be genuinely loyal to the country at large, tho they have never been loyal to the best interests of their home communities. It is as absurd for any one to turn against the war, because of the participation of these men, as it would be absurd for him to withdraw from the trenches if he found old political enemies serving

beside him. It is his business to see that political crooks in war-work are watched as carefully as suspected renegades would be watched in camp. Meanwhile, it is a work in aid of the enemy to let suspicion of such men weaken support of the Government in its prosecution of the war.

In the campaign against inspired rumors, the authorities can only warn you: "Keep your ears open and your mouth closed. Believe anything you hear, if you wish to; but do not give rumors the support of your voice by repeating them. Let the German agents who invent these lies be the only persons who pass them on. That will make it easier to refute the lies. It will also make it easier to catch the liars. And it is necessary to do both, because the lies are not idle lies, but lies designed to create dissension; and the liars are not idle liars, but German agents furthering German plans."

IN the fight against the printed lie and the propaganda of seditious pro-Germans, the authorities are taking measures of legal suppression. They are not appealing to a censorship. They have allowed the enemy propagandist that freedom of speech and freedom of press which have existed in time of peace—the right of any person to say what he will and print what he will without first submitting it to the eye of authority. But after he has said it, or printed it, they are holding him to account before the courts under the provisions of the espionage act. They are denying him the use of the mails and defending the prohibition by legal process before the judges to whom he appeals. They are not silencing him in the secrecy of official censorship, as he has been silenced abroad. They are allowing him to take his case to the courts of law and the juries of public opinion. And his cry that they are infringing any rights of free speech and a free press, is a lie like his other lies—a lie in a war of lies which he is waging, in the interests of the enemy, to divide our people, embarrass our Government, and impede our defense.

*The morale of the men in the trenches depends on the morale of the nation*

# WHAT'S THE USE OF WORRYING?

## With the Boys on Leave in Paris

BY IRVING BACHELLER

PARIS is very different. It is now, above all, a playground for the Allied soldiers off on leave. They throng the theaters and hotels. Brown khaki and the bronzed face give to the boulevards and avenues their dominant color tone. But the observer, even tho he be as old and careless as myself, will see there also the flash of dainty skirts and ankles and of eyes brighter than any jewels. The young ladies of the French capital, always awake to their responsibilities, are doing their best to entertain the boys.

The latter, it must be said, are behaving well. It seems to me a remarkable thing that in going about here for two weeks I should have seen but one soldier who was the worse for drink, and he was not an American. The Yankees are notably serious and business-like in their behavior. True, I saw one playful New York lad at the Folies Bergère the other evening, standing in the front rows and with baton in hand doing what he could to assist the leader of the orchestra, but he was a real comedian and contributed to the joy of the night. A lot of young men in khaki who had learned a few French words were tossing them at the actors. The *danseuses* or singers were frequently interrupted by shouts of "Pourquoi—pourquoi?" from the boys. It was obviously just a sample of newly acquired goods and it amused the players. Everywhere the too playful soldier is treated with good-natured tolerance. The performance was partly in English and there were many compliments for Uncle Sam in it.

Among other features of the program was a giant and strong man of the name of Jan, set down on the program as "champion of the champions." When at last he appeared, with massive arms and shoulders and a chest as deep as a horse's and a bulk of some three hundred pounds, he looked formidable. A big safety net covered half the stage beside him. It was to catch his victims.

The management announced that if there were any men present who would like to try

*This is the third of Mr. Bacheller's articles for The Independent on his experiences at the battle front. "C'est la Guerre," published in the January 19 issue, described the work of a base hospital behind the British lines. In "The Merry Jest of the Airman," published January 26, he told verbatim an aviator's experience face to face with death. In a later issue we shall publish Mr. Bacheller's own adventures "Under Fire."—THE EDITOR*

their strength against Jan they would be welcomed on the stage. There were six or seven soldier boys on the stage presently. One felt sorry for them. They were foolish, we thought, to submit themselves to the humiliation and ridicule that was sure to come. Among them was a slim, awkward Canadian sergeant—a bashful, blushing, good-natured, back-country lad. A bit embarrassed by the crowd, some of whom

were calling to him, he saluted certain of his friends in the audience.

The trial was pulling sticks. The men sit facing each other on the floor with the soles of their feet together and both hands holding a wooden rod between them. At a given signal they begin pulling. Jan's trick is to get his man coming and with a sudden jerk throw him over his head into the net. The first soldier boy to try his strength was lifted off the floor and violently deposited in the hammock. The crowd roared. Jan rose and saluted and resumed his place on the floor. The green sergeant stepped forward and sat down and put some chalk on his hands and seized the stick. Jan began pulling, but the sergeant didn't move. The stick was straight above their toes. What did that mean? The crowd seemed to be holding its breath.

Jan looked worried. He bent his great bull neck in a huge effort. The stick moved an inch toward him and then came slowly back and crost their toes and kept coming. The crowd rose to its feet and filled the air with frantic cries. Jan's chin was on his breast, his face contorted. His muscles contracted into great knots on his arms and shoulders. Still he couldn't check the slow creeping of the stick toward the knees of the sergeant. He slipt his foothold—whether purposely or not I cannot say—and rolled headlong on the floor, beaten at his own game. I have never heard such an uproar in any theater as that which greeted the cordy sergeant.

In the next few minutes those soldier lads wore the strong man to a rag. One American boy gave him a desperate struggle. He had a look of relief when, dripping with perspiration, he left the stage, his period having ended.

The quality of the Americans is much admired and talked about both in England and France. The progress of their training could not be more satisfactory and the longer they stay the better their spirit. I have seen the sons of millionaires at the camps working contentedly with a pick and shovel. It will do them good.

# JOURNALISM'S RADIUM, THE COLYUM

BY ALEXANDER McD. STODDART

**A**RE you a colyum contrib? If not, you surely must be a reader of the colyum in your favorite newspaper, for there are now few cities, or even small towns, where the colyum is not a daily feature. The newspaper that cannot afford to pay the salary of a colyum conductor pays for the syndicate rights of a colyum that makes a hit with the editor and so from the Atlantic to the Pacific and from the Canadian to the Mexican border, the colyum has its followers.

What is a colyum? It is merely a space set aside appearing in a regular column every day that as the gifted Tom Dillon of the *Seattle Post Intelligencer* once said "is the radium of journalism." The composing room, those who set and proof read what the reporters and editors write, and frequently catch their blunders, gave the daily melange of paragraphs, jokes, verse, reprint, contributions, letters and even illustrations, the pronunciation, now practically adopted thruout the country.

Conducting a colyum in a newspaper is a separate and distinct art. Mr. Dillon knows whereof he speaks when he says a column, provided it begins life with the requisite vitality, improves with age and gains in the esteem of its readers by its constant appearance in the same place every day. Eventually it becomes a fixture, gets itself enrolled in the established order of things and beats a little path into the heart of the reader which becomes deeper with every issue.

Unfortunately the men who can conduct a column are so few that they are priceless. A good column man may easily make his department the most important in the paper. The good column man therefore is a genius and incidentally he is put to the hardest task of any on the newspaper. When he dies or resigns, it requires years to replace him. His work will not bear analysis. He has that indefinable quality called cleverness. He either strikes a popular chord or educates his readers, who come to like him as they come to like olives. "You can easily tell when you have a good column man," adds Mr. Dillon, "if you have one keep him, if he isn't good, fire him."

The colyum actually goes back only about a quarter of a century, that is the new twist the colyums of to today had. Its predecessors were the paragraphs of the other days: Bill Nye of the *Laramie City Boomerang*, Bob Burdette of the *Burlington Hawkeye*; George W. Peck, Petroleum V. Nasby and the like. Two humorists of that generation, still in the ring and going strong, as the sporting writers would put it, are Charles B. Lewis, more familiarly known as M. Quad, and Edgar Watson Howe, who at his Potato Hill Farm at Atchison, Kansas, cannot take off the harness and prints his observations in *Ed. W. Howe's Monthly*.

Some of the colyumists of today found their occupation quite in the manner that Bob Burdette did. Mrs. Burdette was an invalid and Burdette to amuse and entertain her wrote verse, paragraphs and other material. Frank Hatton, editor of the *Hawkeye*, later Postmaster General under President Harrison, one day said to Burdette: "Bob, when you get thru reading your stuff to your wife, hand it over to me and I will print it."

One of the famous things he turned out, written merely for his wife's benefit, afterward given to the world at large, was his famous ode to the printing office towel, one verse of which was:

Over and under was blacker than thunder  
And daily put on a more inkier hue,  
Until one windy morning without any warning  
It fell on the floor and was broken in two.

The first man to write the colyum somewhat akin to that of today was Henry Ten Eyck White, known to his collaborators as "Butch" White, who in the early eighties in the *Chicago Tribune* wrote a column a day under the heading of "Lakeside Musings"; but it remained for Eugene Field of beloved memory to make the colyum known and welcome at the breakfast table; finally now to include the luncheon and dinner tables.

Field was thirty-three years old when he left the *Denver Tribune*, where for almost ten years he had run the "Tribune Primer" and "went East" to the *Chicago Daily News* to conduct the colyum he made famous, "Sharps and Flats," with which he was identified for twelve years.

**I**T was in this colyum that first appeared the contents of "A Little Book of Western Verse," "A Little Book of Profitable Tales," "Echoes from the Sabine Farm," "The Love Affairs of a Bibliomaniac," "Poems of Childhood," and it is interesting to note that some of Eugene Field's successors in column conducting every year or two bring out a book to preserve within covers the best things that otherwise could only be obtained by search of newspaper files or scrapbooks.

"B. L. T." (Bert Leston Taylor) from his "Line-o'-Type or Two" has produced "A Line-o'-Verse or Two," "The Pipesmoke Carry," "Motley Measures," etc., while F. P. A. (Franklin P. Adams), who was originally one of B. L. T.'s contribs, from "The Conning Tower" has put between covers "Tobogganing on Parnassus," "In Other Words," "By and Large" and others in the making. Don Marquis, famous for his "Sun Dial," is the author of several books and it is almost time to "jell" another.

Readers of colyums have put "B. L. T." at the top of all colyums, perhaps because it was due to the recognition

by publishers of the value of "B. L. T.'s" column that they were willing to make a place for a column conductor of their own. Altho Taylor's colyum is best known in the Middle West, the author of "A Line-o'-Type or Two" was born in Goshen, Massachusetts, and educated in the College of the City of New York, which has turned out any number of bright men. "B. L. T." was doing newspaper work in Duluth and Peter Finley Dunne had begun to attract attention to Mr. Dooley, when Mr. Dunne becoming editor of the *Chicago Journal* looked at the horizon for a column conductor.

W. H. Turner was manager of the *Journal* and on the front page had made up a column of small items that were hardly worth headlines, but yet had a certain interest in them. Here and there a joke was contributed. The column was called "A Little of Everything" and that conveys the idea of what the column "B. L. T." made known originally contained.

**A**S they do in most newspaper offices when a new thing is started, they offered prizes for the best contributions and Taylor won so many weekly prizes that looking at it from the business office point of view, it would be cheaper possibly to turn the column over to the prize winner.

Taylor made a hit almost instantly, for he seized upon an idea that furnished possibilities for fun. T. R. was on his way West to hunt mountain lions and the like and Taylor began a series of imaginary yarns about the trip. Illustrations added much to the fun. Then came an offer to go to the *Chicago Tribune*, and it being against the newspaper ethics to carry the colyum line of another newspaper, Taylor hit upon "A Line-o'-Type or Two." With the exception of a three years' "vacation" when he edited *Puck* in New York, there has been no interruption of the daily column for many years.

Chicago took to colyuming. When Taylor quit the *Journal*, Franklin P. Adams, more better known as F. P. A., took Taylor's place and continued until he heard the call of the East and crossed the Harlem. During the intermission when Taylor went to *Puck*, Wilbur D. Nesbit, who had been writing a colyum for the *Baltimore American* under the nom de plume of Josh Wink, came to the *Tribune* to do "The Top o' the Morning," the title of which has a Mr. Dooley tinge.

Following the ethics of newspaperdom, when Nesbit went over to the *Chicago Evening Post* with his "The Top o' the Morning" it appeared as "The Innocent Bystander."

Later S. E. Kiser began his column in the *Record-Herald*, "Alternating Currents." Around that time "Hughey" Keough started in the *Chicago Tribune* "In the Wake of the News," which following Keough's death was continued by Hugh E. [Continued on page 289]

# NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

## WINNING THE WAR

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**T**HE war has entered a new stage—the most critical stage for us. The final issue, becoming more and more sharp and clear, narrows down to this: *Can the American soldier outfight the German soldier?* If he can, victory is certain. If he cannot, defeat is certain.

We have been told by enthusiasts of one kind or another that food will win the war, that money will do it, that machinery will do it, that fuel, or clothing, or ammunition, or materials or supplies, will do it. The war can not be won by any or all of these things. The war can be lost by the lack of them; it can never be won by the presence, even the abundance, of them.

It is not the weapon in his hand or the food in his stomach that makes a warrior a conqueror. It is the feeling in his heart, the purpose in his mind, the power in his soul. We talk about the efficiency of the German army, we watch their movements, measure their guns, count their submarines—and imagine we have their secret. The Kaiser, meanwhile, laughs in our face. The Kaiser is like a wizard who produces marvelous effects by pouring together a few chemicals in full view of the audience—but keeps the magic formula hidden away under lock and key. Observing the phenomena, we try to learn the formula by peering at the chemical compound, weighing or measuring it, then proudly stating we know just how it was put together and rashly supposing we can repeat the performance ourselves.

What made the German army? *Psychology*. What keeps it fighting, to the last drop of blood in the last man? *Psychology*. What

fills the mind, cheers the heart, sustains the spirit, of the German people thru long years of famine, death and despair? *Psychology*. What has enabled one man to bend a whole nation to his will, and to plunge a whole world into the most cruel, most gigantic, war ever known? *Psychology*. We do not yet begin to realize and utilize the mental forces behind the German army. Of all the subtle deceptions of the German ruler, none is more effective than this: that while appearing to rely most on machinery, he does rely most on psychology. In facing the German army, the worst handicap on our boys is the fact that they are *mentally unprepared and uncontrolled*. They have been snatched away from all their mental moorings, and are emotionally at sea. They look to us for a sustaining and empowering *thought force* equal to that exerted by the Kaiser on, for and thru his army. By "thought force" I do not mean the metaphysical, so-called thought-waves of absent treatment, but would emphasize the need of steady concentration and personal application of our minds on the work of helping our soldiers win.

A high German officer said confidentially to a close friend: "Of all things in the world, the Kaiser most fears *thought*." Why? Because the Kaiser knows that when the people of any big nation put their mind collectively and individually on the work of beating out the Huns—that is the end of the Kaiser. The minds of the German people are all bent on backing up their

soldiers, in a systematic, scientific, businesslike way. The clear thinkers among our men at the front realize the situation. One

of them writes home: "The boys in the trenches can win only 40 per cent of the war. The remaining 60 per cent is up to the folks at home." Another writes: "Perhaps the most false and dangerous error in the United States regarding the war is the idea that victory must be, can be, gained by our soldiers alone. We are doing our best—I haven't seen a streak of yellow in a single man here. But the outcome of the war will be determined by *your* thoughts, gifts, prayers and efforts."

Ludendorff says that modern war is a war of peoples, not of armies. Ludendorff handles the human side of the German army. He believes that we lack both the wisdom and the will to stand behind our soldiers. He knows that every German soldier is backed to the limit by his country, his community, his family and friends. Why should not Ludendorff, Hindenburg and Wilhelm scorn us and feel secure? They expect to win, because, in Germany, the *individual* soldier has the *individual* support of the *individual* citizen. We should like to give our boys real support, but we don't know how. We have been so loose-brained that a prominent New York German lately wrote thus in a German newspaper: "The Germanization of America is now assured. The American people will be conquered by the victorious German spirit, so that in a hundred years it will present an enormous German empire. Whoever does not believe this lacks confidence in the strength of the German spirit."

© International Film

"Smile when your boy goes and smile in your letters to him"

A ridiculous prophecy? No. There are millions of American citizens today, chiefly mothers, sisters, wives and sweethearts, who are helping to Germanize this country as effectively as tho they harbored German spies and set off German bombs. How? By weeping, rebelling, pining, whining or complaining when their boy sets out as a knight of old, to slay the Prussian dragon. Millions of Americans who imagine themselves loyal are guilty of mental desertion and emotional treason. They have sent their boy to the front with a heavy heart, a sad memory, a mind full of worry, and the poison of dejection thinning and cooling his blood. Then they write him weak, whimpering letters, perhaps not knowing that when a soldier gets a down-hearted letter from home, his fighting power drops 30 to 60 per cent, according to the temperament of the soldier and the contents of the letter. What difference does it make whether an American soldier is wounded by a German missile or by an American missive? He is wounded just the same, isn't he?

IT is probable that every grown American has at least one or more relatives or acquaintances among the five million or more youths likely to compose our army over seas. How we view the departure of these friends, and what we do for them while they are away, will exert a tremendous force in hastening victory—or defeat. We must build in a few months a national wall of mental support as firm and high as the people of Germany have built for the soldiers of Germany. Our meatless and wheatless days, our subscriptions to the Red Cross and Y. M. C. A., our home economies and other forms of self-denial, good and necessary as these acts of service may be, are likely to prove unavailing till we add the *personal touch* of thoughtfulness, confidence, remembrance and coöperation that our fighters must have to make them winners.

To become a real mental and moral support to our boys, we have got to change our thought and feeling about the world-conflict as relating to us. In war as in business the same truth holds; we do best what we want to do most. For half a lifetime Germany has wanted most to fight, therefore she fights best. There is a grandeur in self-surrender, that we have yet to learn from the humblest peasant of the Teuton empire. When we mourn or rebel at the sight of our boys marching away, we are letting a personal feeling blind us in the presence of a national trial of strength and call of duty.

Sorrow is either selfishness or blindness. Whatever looks like a misfortune is but the shadow of a blessing we have not seen. By lifting ourselves to a moral and spiritual plane from which clear vision may be had, we can see from the sunward side the glory of the blessing and not the shadow, even while the shadow is passing.

The war is a shadow, whose glory is redemption. England, France, Italy, even Russia, has been awakened, purged, renewed, redeemed, by the Great War to a fuller extent than would have been possible thru a hundred years of the deadly monotony and superficiality of civilization. War, in the nations on the side of right, substitutes a quick and mighty revolution for a slow and feeble evolution. Wonderful changes for the better have already taken place in the social, economic, hygienic, political, industrial, educational and religious affairs of the nations composing our Allies.

That boy of ours at the front goes forth to take a man's part in the crowning spiritual adventure of the ages. Are we selfish

*Camp training makes the most of men*

enough to want to rob him of his chance to be a hero in the sight of God and Eternity? Are we blind enough and mean enough to cripple him as he goes, with the moral paralysis of our sodden personal grief?

I have talked with soldiers from the training camps, have read books by soldiers who fought in France, and have read and compared scores of personal letters from soldiers both in training and on the firing line. I have yet to discover one American soldier who really wishes he had not gone to war. After a year in France, a boy whose family resides near us wrote home, a few weeks ago. He said: "I have had a wonderful time, would not have missed it for anything. Am learning a lot more than I could have learned if I had stayed at home. Don't worry about me, for Uncle Sam sure knows how to take care of his boys." Listen to another: "I have learned more, and developed more, in the past five months of military training than during the preceding five years of ordinary life, whether in school or in business." Another voices the feeling of the ambitious among our boys: "I didn't know what life was for until they made a soldier out of me. When I get home I shall do bigger things, in a better way, than would have been possible without this experience." Do such men want our pity? They want our pride, they will justify it, they have already earned it.

THE majority of the first two million men serving as American soldiers in the Great War enlisted voluntarily. Why? The boys of Camp McClellan, down in Alabama, were asked why they enlisted. We partially quote their composite answer. "To learn self-control. To guarantee the safety of my mother and sisters. To kill a few Germans for what they did to Poland. To help free the German people from Kaiserism. To show that my blood is red and my back isn't yellow. Because the country needs me. Because God called me. I never did anything worth while, so I dedicated my life to my country in order that it might be of use to some one." If we think we have a good reason for wanting to keep our boy out of the fight, perhaps a wise plan would be to write the reason down, then compare it with reasons for enlistment that were written down by the soldiers themselves. We ought to be as brave in letting them go as they are in going. If we aren't, we ought to be still.

I have seen photographs of a group of American boys before they enlisted—and after they had been thru five months of

camp drill, work and study. You would hardly know them for the same persons. Before they enlisted, they were dull, slow, idle, trivial, slouchy, dependent, unreliable, extravagant, thoughtless, careless, purposeless. Today their photographs mark them the opposite of the undesirable things they were, and as fine a body of young men as you would see in a year's travel.

IN our minds the horrors, miseries and fatalities of this war have been greatly overemphasized. Thinking and talking about them does no good except as we are moved because of them to righteous anger and ruthless determination. Have we ever stopped to consider the *benefits and opportunities* of war training to the American soldier? Let us name a few advantages compiled from the late official records of camp and trench life.

*Advantage of better health.* It may be news to you that the American soldier is healthier and stronger than the American civilian. Except for wounds or accidents, a man is safer in the American army than he is at home. In the best army camps the percentage of sickness is below 2 per cent, according to reports from the Surgeon-General's office at Washington. If serious illness, such as pneumonia, does occur, the mortality rate in the army camp is below 7 per cent, as compared with almost 20 per cent for civilians of equal age. The amount of sickness has been reduced for drafted men to one-fourth the normal average for civilians.

Food is bought pure and kept pure. The daily ration presents a balanced dietary equaled by few American households, restaurants, or hotels. Tableware and drinking water are screened from flies and dust. Every drop of drinking water used in camp undergoes medical examination. Dishes are cleaned with fresh towels, and hot water. Flies are killed. Garbage is quickly burned or removed. All the precautions of modern hygiene are utilized.

Further, the men are taught to take care of themselves, physically and mentally. They are examined every two weeks, for present or latent symptoms of disease. Their slight indispositions are fully reported and carefully treated. They soon grow physically hard as nails, and mentally keen as briars.

*Advantage of firmer discipline.* The average American youth is not naturally a worker. He has grown weak with prosperity and soft with luxury. He wastes time and money prodigiously. He lacks reverence for age and respect for authority. He lacks the virtue and virility of a Spartan, or even of a first-class Indian. How military life straightens him up, broadens him out, forces him on, makes a man of him! A prominent educator, watching a body of troops after three months of camp experience, urges upon American college authorities the necessity of adopting some of the features of the training camp in the regular college course. He believes that college professors "should go to school to army men! The professors might thus learn themselves, and teach their students, the businesslike bearing, earnest expression, keen eye, erect posture, immaculate appearance, fine coöperation, speedy and effective action, of our soldier boys.

*Advantage of closer economy.* A large percentage of the drafted men were in position of a good income, the sacrifice of which now prevents the waste that usually goes with a "good" American income. For example, 60 per cent of a whole regiment of engineers received an average income of \$5000 or more, which they gladly surrendered.

[Continued on page 284]

# SQUARE PEGS IN ROUND HOLES

BY HARRINGTON EMERSON, EFFICIENCY ENGINEER

MONTHLY ARTICLE OF THE EFFICIENCY SOCIETY

ON the subject of personality in organization I have strong opinions which I carry into practise.

Organization and personality are mutually dependent. They remind me of the mutual dependence between vegetable and animal life. Microscopic vegetables called bacteria are, many of them, intensely hostile and destructive to animal life. Very small individual animals are intensely destructive to vegetable life, but the two great races of plants and animals have after millions of years effected a truce under which the plant bribes the individual animal to serve the plant's race needs.

Personality needs an organization that both may be stronger. Organization demands a very strong and fit, yet harnessed, personality that both may accomplish a great work.

In our American life we know very little of this correlation of organization and personality. Strong personalities coming to this country in bygone centuries were like strong horses that had broken loose from the trammels of harness and control. Conditions of life were primitive and men needed little more organization than that sufficient for a pack of wolves, so they cheerfully scrapped most of the knowledge and much of the morality of the past, as they also cheerfully scrapped the accumulated community wealth of the past.

Our government itself was founded on a negation of many of the fundamentals of good organization. We flouted the idea of permanence, of special fitness of responsibility and of authority, the idea of balance of human qualities never entered our heads.

In the meantime each strong and successful personality, while more or less strictly obeying the fashions as to clothes, evolved his own organization very much as he designed and built his own log cabin, without architect, and without tradition, and without the slightest knowledge that the pyramids were still standing, that the most perfect building the world ever produced was still standing altho shaken by earthquakes and shattered by powder explosions, that St. Peter's at Rome was still the greatest church in the world, that the Taj Mahal was the most beautiful structure ever erected by man, jewelry in stone.

We have made good progress at last, but it has taken three hundred years to pass from log or sod cabin to Woolworth Building, and as to organization we are still in the architectural condition of New York a hundred years ago.

Yet certain forms of organization are as old as matter itself, the organizations of Bacteria and Monera into plants and animals are as old as life, the tree is one of the finest samples of ramified organizations known, the Catholic Church has endured and flourished and grown for nineteen hundred years.

There is one organization in the whole world that has been standardized, that is internationally interchangeable, that as far as I know is the best model the world has yet given us: the naval organization, good because no man can go alone to sea in a boat, and no men can brave the sea and neglect any wisdom.

Our railroads are said to be the life industry of our country, and so they are, yet scarcely two American railroads have the

same organization, notwithstanding all the efforts of the Interstate Commerce Commission, and the railroads of Great Britain, of France, of Germany, of Russia, are organized so differently that comparisons of operation are impossible and interchangeability of place also impossible. Yet it is solely owing to difference of a small detail of organized control that America runs too enormous locomotives and enormous cars while Europe is content with small locomotives and small cars, and the present plight of our American roads is due to that one little detail of administration.

I am not going to speak of types of organization nor of types of personality, but of the relation of personality to organization.

They must be fitted together as hand into glove, and not as fist into mitten. No, this comparison gives a false idea, for the glove is designed and made for the hand, but correct organization is infinitely older than the hand, older than humanity, older than life, and the problem is to fit the variables of humanity into the organization.

An automobile, a watch, a typewriter, an adding machine, is an organized collection of pieces of metal, and if all the pieces, of the car, of the watch, of the typewriter, were dumped into a big heap with 10,000,000 other pieces of all kinds of materials, we could only make up the perfect car, the perfect watch, the perfect typewriter, by carefully seeking, finding, and fitting together their correlated parts.

We could easily cobble together a wheelbarrow, or a sun dial, or a metal name stamp, and that is about the way American organizations are cobbled together.

It has been said of Steve Elkins that he had two great principles of action: 1. If he saw anything he wanted, he went out after it. 2. He brought it back home with him.

These are tremendous and splendid principles of personality. The first is evidence of great virility; the second of great ability; and the combination is a fine one.

But other questions have to be determined.

"It has taken three hundred years to pass from log cabin to Woolworth Building"

First. What was it that he saw that he wanted?

Second. By what means did he propose to get it?

There are six different ways of getting what we want.

(1) By finding or discovery. (Seek and ye shall find.)

(2) By persuasion and offer of reward.

(3) By intimidation and threats.

(4) By inheritance.

(5) By exchange and purchase.

(6) By force.

The greatest wealth in all the world comes thru inheritance.

We have inherited our morals, our knowledge, and our material possessions. The newly born babe is a filthy little animal, which without the training of past experience which we call morality, without our preserved knowledge and our accumulations from past labor would grow no better and little more intelligent than wolf or fox.

The next greatest opportunity comes from discovery. The universe is teeming with wealth so vast that all the existing wealth is not to be compared with what has not yet been discovered. Of the six methods four are good and two bad.

I rank the four good methods in their order: Persuasion, inheritance, discovery, exchange.

The two bad methods: Intimidation, force.

The whole Prussian military system is founded on intimidation and on force. "He that draws the sword shall perish by the sword."

Having decided on what you want and how you are going to bring it home, you are ready for an organization to help you.

The essentials are:

All the available knowledge in the universe that is necessary to be available to every material, tool, machine or man needing it.

Authority to make the knowledge worth while in the attainment of the aim.

For every single position design the functions and specify the characteristics required.

We realize that in every position there must be either in one person, or in several, a combination of physical appeal, of social appeal and of mental appeal. In this country we must persuade, we cannot intimidate or compel.

We must erect screens to keep out the unfit, and we must put in amalgams and magnets to attract and hold the fit. The fit must be tested and must be conserved after test, they must be put into operation and be inspected in operation. These are our methods as to materials and as to equipment, they are also our methods as to personnel. We try to pick them out more carefully than a baseball team, or a football team, or a circus aggregation is collected, every one a star performer for the particular position.

After I have found the best man in the whole world for a predetermined place I standardize conditions and operations and expect from him, as a matter of course, the normal and joyful best that is in him. Race horses love racing, hunting dogs love hunting, the selected man in suitable organization loves his work, and when a man loves his work it is almost impossible for him not to flourish in it.

# HELPFUL SALESMANSHIP

## Sell the Goods and Not the Customer

"**B**UT as he was ambitious, I slew him," declared Brutus, centuries ago, when the Plebeians questioned him concerning the murder of Cæsar.

Likewise, one of the sins of our modern Cæsar, the salesman, is heir to, is the sin of being, at times, too ambitious. That great and rare power of being able to make all others think with him, of bending to his will that hard-to-interest business man, of making up for him the other fellow's mind, is, he feels, a most valuable asset—one of the most valuable a salesman can possibly possess. And, to be sure, it sometimes is.

**H**E learns only too late, however, that his persuasiveness has proved, instead of helpful, hurtful, and, to his astonishment and amazement, finds the modern Brutus, suddenly and unexpectedly, turning upon him, to slay him, commercially. He wonders why this Brutus, this friend, this business man, has grown toward him so bitter and cruel; so ruthless and merciless; so unkind and indifferent.

After an hour spent in deep and solemn thought, he recalls the day when Mr. Jones called at the store, to purchase for his wife a piece of cut-glass, in commemoration of the fifteenth anniversary of their marriage. Jones, at that time, being in moderate circumstances, had placed on that particular gift, a twenty-five-dollar limit.

BY M. O. JOHNSON

He remembers how he became sentimental and talked with Jones about the beauties and duties of love, and of marriage. What a jewel was his wife! How proud of her he must be! Surely, his gift to her on this particular occasion should be something unusual, rare, costly.

As a result, Jones left the jeweler's with, instead of a cut-glass vase, a three-hundred dollar diamond ring! And he had in his possession Jones's notes to cover the amount. That he had proved himself a sales-person of no mean ability was apparent. When Jones called that evening he had no thought of spending more than twenty-five dollars, and just see what he had sold him!

**B**UT, strange as it may seem, Jones never stopped in again. Neither did his friends. Not many years after, Jones leaped into fame and prosperity. Still he avoided that store. Then, he recalled how he had changed places, going into a store where Jones traded. Here he found that it was he, and not the store where he had been previously employed, whom Jones had so carefully and successfully avoided.

"I could sell a dead horse," boasted a young salesman to a business man of some note, "if I were interested in it."

"I don't doubt it," answered the business man, gravely, "but suppose, after thinking the matter over, the man who buys the dead horse finds he doesn't really need it, and that it is of no value to him—what then?"

"Why," returned the young salesman, "I hadn't thought of that."

**I**N anything, it is always best to avoid extremes. The business world, to be sure, has little or no room for the lukewarm, indifferent, careless, inattentive individual. On the other hand, however, he who would be 100 per cent efficient, would do well to take note of himself, his assets, ability, capacity, and if he finds he is inclined to be over-ambitious, tone down a bit. Instead of being intensive, try being helpful. After all, helpful salesmanship is the more to be desired. In the long run, it pays better dividends.

Study a purchaser's tastes; mostly, his needs, and then, if necessary, reason with him. Admit, if there are and if your customer is smart enough to discover them, any bad points in a piece of merchandise you may be showing him, as well as enthuse over the good ones. Be honest, frank, and, above all, helpful; for what, indeed, shall it profit a salesman, if, by strategy and persuasiveness, he sell a man one large bill of unsalable goods, and lose, later, his valued patronage?

## WHERE TO LIVE, AND WHY

### A Comparison of American Cities from Various Points of View

**I**F there are any fogies among the faculty or students of Reed College they must be mighty uncomfortable, because there is no institution which is more thoroughly enthused with the spirit of modernism.

Each new number of the *Reed College Record* contains some new stunt, and that is not true, as a rule, of college publications. For instance the December number contains a comparison of American cities from various points of view worked out by the students in sociology and presented in very graphic fashion.

It shows how thirty-six cities rank as regards certain aspects of civic progress. The eighteen criteria chosen as indicating municipal advantages are: (1) The wage scale of ten union trades. (2) The cost of living as indicated by the retail prices of seventeen food commodities. (3) The death rate per 1000 population. (4) The death rate of infants under one year old. (5) The percentage married of population twenty-five years of age and over. (6) The number of church members per 1000. (7) The percentage of children from ten to fifteen years of age employed in industry. (8) The number of square yards of park space per inhabitant. (9) The percentage of paved area of streets. (10) The average yearly amount of property destroyed by fire per inhabitant. (11) The value of city property per inhabitant. (12) The number of volumes lent by public libraries for home use per capita. (13) Percentage of children from six to twenty years of age in school attendance. (14) The value of school property per child. (15) The annual salary of public school teachers. (16)

The cities are here ranked according to the standards Reed College has judged as those of a desirable city in which to live

Average number of pupils to a teacher. (17) The percentage of population over ten years able to write. (18) The percentage of foreign-born white population unable to speak English.

The cities ranked according to their advantages in these respects give the accompanying table, where minor differences are disregarded and the cities thrown into four classes.

**S**O arranged, the tables show some striking contrasts at a glance. For instance, all of the Western cities are in the best quarter and all the Southern cities are in the poorest quarter. Portland, where Reed College is located, is modestly content to take the sixth place for itself in this roll of honor.

Of course other statistics might have been taken, as indices of municipal betterment, and it may be objected that all of these factors are not of equal value. Some people, for instance, may say that it is more important to have a large proportion of the population in the churches than to have a large part of the city paved. From such a point of view the rating of Portland would be lowered and the standard of New Orleans raised.

But as the figures are before him in the table, the reader can give such weight as he chooses to the different scales, and so rank the cities to suit his own ideas of what constitutes a superior dwelling place.

Anyhow, President Foster is safe in saying that such a table presents a better ground for choice of residence than the ordinary advertising booklet.

# PERSONAL

A Confidential Question Box  
Conducted by Edward Earle  
Purinton, Director of The  
Independent Efficiency Service, 119  
West Fortieth Street, New York

# EFFICIENCY

For Men, Women and the Young  
Folks, Who Are Invited to Consult  
Mr. Purinton Personally by Mail on  
Their Problems of Health, Work,  
Self Culture and Personal Efficiency

Mr. B. F. R., Illinois. "I am interested in the management of a chain of stores affected by the war. Best clerks drafted or volunteered, places taken by inexperienced people, mostly boys and young women. Complaints from customers and decreased sales show that we must teach our new clerks the science of salesmanship. Where can I get modern literature and other help along this line?"

Editors of trade journals in your field of merchandise should be able to refer you to books or magazine articles on handling of your specific selling problems and war-time training of your clerks. Excellent ideas on the science and art of salesmanship may be found each month in professional magazines, such as *Salesmanship*, Kresge Building, Detroit; *Advertising and Selling Magazine*, 95 Madison avenue, New York; *Specialty Salesman Magazine*, 508 South Dearborn street, Chicago.

Why not form a salesmanship club with branch in each store, and prizes and other rewards given for best promotion ideas and sales records? Ask the editor of *Salesmanship*, address above, how to organize club.

A salesmanship library would be good, with books loaned clerks free of charge. Obtain lists of books on selling and advertising, from A. W. Shaw Company, Wabash and Madison, Chicago; also from Funk & Wagnalls Company, Fourth avenue, New York; also from American Business Book Company, Causeway street, Boston.

Miss C. E., Iowa. "I have been very much interested in reading The Independent efficiency articles. Am teaching in high school, but do not wish to continue in the teaching profession. (a) What kinds of work are open to college graduates? (b) What opportunities are there for work in the Juvenile Courts?"

We congratulate you on having the determination to leave a profession that is uncongenial to you. Most of the people who have done big things first had to break away from the work they had fallen into, and to make a way for themselves in the work they were fitted for.

(a) The Collegiate Vocational Bureau advises women college graduates on securing or investigating desirable positions. Branches of the Bureau are in New York, Pittsburgh, other large cities; see telephone directories for local address. Also consult your own college authorities, who are doubtless in touch with the Bureau.

(b) For national opportunities, obtain advice of Judge Ben B. Lindsey, Denver, Colorado, founder of Juvenile Court Work. For local opportunities, ask Judge of your Circuit Court, or Clerk of your County Court.

Mr. J. C. M., Vermont. "Would the average man receive most benefit from a course in Personal Efficiency, or from a course in Business Method and Organization? I've seen both kinds of instruction advertised extensively, but am uncertain which to take. Either course would consume about a year, and I have not time to study both together, so am anxious to have the year spent as wisely as possible. (a) What should a man pay for one of these courses? (b) Which course in Business Method do you consider most valuable?"

A good course in Personal Efficiency should be a source of mental, moral and material gain to any man between the ages of twenty and fifty. Whether he is in a trade, business or profession does not matter. Neither does the location or size of the concern where he works. The principles and methods of efficiency engineering are universal in application.

A modern course in Business Administration might be of equal, or perhaps greater benefit, to the man employed in a large factory, corporation, or other large institution having many departments, or different branches. To the worker in a small business or small town, the business course would be valuable only if he expected to move later to a wider field, and wished to prepare now for a high executive position that

might be available elsewhere. The only way to judge which course would help you most is to procure announcements of all available courses, and compare in detail.

(a) A fair price for a course in Personal Efficiency is \$25. The present cost of a course in Business Administration runs from about \$50 to \$125.

(b) General business courses are offered by Alexander Hamilton Institute, Astor Place, New York; by Sheldon School, Aurora, Illinois; by La Salle Extension University, Chicago; by Pace & Pace, Hudson Terminal Building, New York.

Mr. D. S. W., New York. "To what extent will a man's energy be increased or his strength of mind and body restored by the use of so-called nerve tonics? I am run down, exhausted, irritable, from overwork and anxiety because of home troubles. Doctor finds no organic difficulty, only nerves need building up. Evidently I require hygiene more than medicine. Are the advertised preparations of iron, phosphates, albumin, safe and pure and effective?"

We are not chemists, therefore do not pass opinion on the purity of any drug. Write one of the following authorities, specifying the drug you have in mind: Dr. H. W. Wiley, care of *Good Housekeeping Magazine*, 119 West Fortieth street, New York; or Prof. L. B. Allyn, care *Ladies' World*, 251 Fourth avenue, New York.

The source of nervous exhaustion is largely mental or emotional. Perhaps you feel too deeply. Perhaps you are too conscientious. Perhaps you have failed to organize your work. Perhaps your philosophy of life is defective, or your religion dull and poor. Excellent books on nerve-control are published by Good Health Publishing Company, Battle Creek, Michigan; also by Funk & Wagnalls, Fourth avenue, New York; also by Elizabeth Towne Company, Holyoke, Massachusetts.

The best hygienic opinion does not favor so-called nerve tonics. A balanced dietary is the best source of bodily strength. Albumins are contained in eggs, milk, cheese, lean meats, legumes, nuts, fish and fowl. Iron, phosphates, and other nerve-building substances are found in many fruits and vegetables, notably grapes, apples, pears, strawberries, peaches, dates and raisins, carrots, celery, spinach, cabbage, lettuce, nearly all greens and salad materials. The value of mineral salts in maintaining health is clearly shown by Alfred W. McCann in his book "Starving America."

Mr. G. H. H., New York. "For over a decade I engaged at a satisfactory profit in the work of applying the principles of efficiency to large enterprises, commercial and industrial. Meeting with very indifferent success in securing this work during the past two or three years, I have sought to find place for my talent in other fields, but with no success. Age thirty-six; classical, philosophical, engineering education. What is wrong? I should be very grateful for any helpful advice."

Ten years ago efficiency engineering was largely experiment; today it is science based on experience. You may be out of the running because your methods are out of date. Or your vitality may be low; or some bad habit or weak tendency may have robbed you of your self-confidence; or you may have fallen out of touch with the right people; or your sensibilities may have grown finer and the effort to push yourself correspondingly harder. The causes of success and failure that are in yourself can be reached by yourself alone; find what they are before you ask us the remedy.

A book that should be really helpful is Napoleon Hill's "How to Sell Your Services," from Efficiency Publishing Company, Woolworth Building, New York. Possibly you could work better with a firm of efficiency engineers, or under the auspices of an engineering publication or society, such connection making you of the

burden of exploiting yourself personally. Get in touch with the Efficiency Society, 119 W. Fortieth street; also with Harrington Emerson Company, 30 Church street; also with *Engineering Magazine*, 140 Nassau street; also with Business Bourse, 261 Broadway; also with Business System Company, 106 Fulton street; also with Business Information Center, 156 Fifth avenue; all of New York City; and also with H. H. Harrison and Company, 19 South La Salle street, Chicago, and also with R. W. Bixby, 9 South Niagara square, Buffalo, New York.

Mrs. E. G. K., Virginia. "A number of my friends belonging to a large woman's club are anxious, either as a club or individually, to carry out fully the suggestions of the Food Administration. But we find that the men of our families refuse to eat most of the substitutes recommended for meat, wheat and sugar. Being loyal wives, and loyal citizens, too, we are in doubt as to how to proceed. Can you tell us?"

Being at a safe distance from your husbands and other male relatives, we can. Do not expect an ordinary man to have a sensible, unselfish, patriotic palate. The miracle is too great, too sudden. A principal duty of a loyal wife is to educate the palate of her husband without his being aware of the process of education. Beguile your men folk into eating Hooverized foods without hinting that they are Hooverized until the gentlemen discover that they like the taste thereof. Experiment while the men folk are away at work, and eat yourself the results that don't taste good.

A dozen war recipe books are now available, and some of the dishes made from these recipes are as toothsome as they are patriotic. Ask your grocer how to obtain these books; also apply to the domestic science or household economics department of your state university; and watch these columns for our 1918 List of War Food Publications, now being compiled and soon to be published.

Miss D. L. W., Michigan. "I have been very much interested in your Independent article, as I am engaged in efficiency work in an office of about forty-five young ladies. Our work is mostly correspondence and advertising. Our mail amounts to several million pieces each year. I am looking for books which will outline the duties of an efficiency engineer, also books on Scientific Office Management. Can you enlighten me on these subjects?"

No book yet published fully describes the work of an efficiency engineer. The profession has grown too fast for any book to catch up with it. Volumes presenting different phases of the subject have been issued by Harper and Brothers, Houghton Mifflin, A. W. Shaw Company, Engineering Magazine Company, Ronald Press Company, and other publishers. Any large bookstore should have catalogs of yearly publications of leading houses, with topical index. A few standard books are Taylor's "Scientific Management"; Emerson's "Twelve Principles of Efficiency"; Lewis's "How to Get the Most Out of Business"; and on the personal side my own "Efficient Living" from Efficiency Publishing Company, Woolworth Building, New York City.

Some of the recent books on office methods are "The American Office," by J. William Schultze, Ronald Press, Vesey street, New York; "Scientific Office Management," by William H. Leffingwell, A. W. Shaw Company, Wabash avenue and Madison street, Chicago; also other volumes in Students' Business Book Series by same publisher; also books mentioned in advertising pages of business journals such as *System*. Two trade magazines with advertising sections of unusual interest are *Office Appliances*, 417 South Dearborn street, Chicago; and *American Stationer and Office Outfitter*, 10 East Thirty-ninth street, New York.

Honorary Vice-President :: S. STANWOOD MENKEN, President

**G**REAT as our past has been, our future is more important than our past; and yet today America is facing an uncertain future on account of lack of "preparedness," mental as well as physical. The Campaign of Patriotism Through Education is a movement aiming at mental preparedness. Its object is to bring the American people to an intelligent understanding of the real meaning of the war; to steady their minds for victory, and for a reconstruction after victory, based upon a preconceived plan of education. If America is to make the world safe for democracy, she must not only beat Germany, which has dreamed that by force she can set back the clock of civilization; she must also prove that a free government can work with methods as efficient and as far-seeing as those which the most efficient autocracy has ever employed.

Unity of thought is essential to unity of action. In nations resting upon blood kinship, it is a comparatively easy task to secure unity of thought and unity of action; but in a nation composed of all races and kindreds and tongues, this is extremely difficult. Unless natural tendencies are overcome by some stronger power, French groups in America will think as Frenchmen; Englishmen, Russians, Italians, Spaniards, Croats, Dutch, Swedes, and Germans will think and act upon each important question according to racial bias, bred of long experience, environment, and heredity. To overcome this natural tendency, and to make all these races who dwell among us and belong to our future think and act as Americans, is a task as large as it is vital.

The process of fitting our many-tongued population to think and act with a common purpose in the face of a common demand, we have christened "the assimilation of the immigrant."

We have christened it, and that is all. As a nation we have made no plans for its future; but the time is at hand when the Federal Government, whose will expressed in law begat this problem, must take the responsibility of seeing that it is solved.

Our attitude toward the problem of giving to all immigrants the ideals and ideas which will make them Americans is characteristic of our whole educational policy. We leave this most vital of problems to the option of local authorities. Some of them succeed in its solution; many of them leave it unsolved. As a result we have today in this country five million people who can neither read nor write the English language, and our cantonments are full of naturalized Americans, drafted for the service in a cause which they do not understand, and compelled to take orders in a language which they have never been given an adequate opportunity to learn.

Not only have we been unsuccessful in solving our problem of the recent immigrant; we have left thousands of our native born citizens ignorant of the true basis of our democracy. A democracy of ignorance is the vainest of delusions, yet in many sections of this country there are hosts of men and women who have never seen the vision that our forefathers beheld, the vision that makes an American.

Two processes, in addition to military victory, complete and conclusive, are necessary before we can hope to make "the world safe for democracy." First, we must put, by effective propaganda, into the minds of this generation, the ideas and ideals which will make Americans of the people of whatever blood, for it is only by common ideas and ideals that this polyglot people can be brought to act as a united nation. Sec-

# CRY OF FREEDOM

To teach loyalty to the United States in the schools, colleges, homes, offices and workshops of the Nation; to help Americans to make their citizenship most effective. A Series of Weekly Articles to Be Written by Professor Albert Bushnell Hart, of Harvard University, Professor Robert McNutt McElroy, of Princeton University, Dr. Arthur M. Wolfson, Principal of the High School of Commerce, New York City.

and, we must fit our educational machinery for the task of putting into the minds of the next generation these same ideas and ideals. Before we can accomplish or plan to accomplish this latter task, we must discover exactly what are the ideas and ideals which are able to change the people of many races into real Americans, thinking no longer by the dim light of old-world traditions, prejudices and sympathies, but thinking as Americans, charged with the duty of fulfilling the promises which America has made to the world.

This is no new promise, this vow to keep the world safe for democracy. In formulating it, the President was but applying to the problems of this generation the principle which runs like a thread of gold throughout our national history. Our Revolution was in essence a declaration "that thirteen colonies must be kept safe for democracy," a declaration made effective only after a war of seven years. Forty years later, in December, 1823, President Monroe caught an enlarged vision. He saw that democracy to be safe anywhere upon the western hemisphere must be made safe throughout the entire continent. His famous declaration, which we call the Monroe Doctrine, said in effect, "The American Continent must be kept safe for democracy," and we have kept that pledge, by virtue of an isolation now past forever, and by the existence of a powerful British fleet.

As the meaning of the great world-war, which for three years has drenched Europe in blood, slowly became clear, President Wilson caught the same vision, again enlarged, this time to suit the demands of an age of world-thinking, and he formulated the American doctrine in its ultimate form: "The world must be made safe for democracy."

This is the guiding star of Ameri-

canism. Democracy must be safe, in order that she may show how to make the many serve the entire people, a task which concerns everyone who wishes to see the principles of the Declaration which made us a nation worked out in terms of all mankind.

How shall America prepare for this gigantic task? At least two things are essential: First, we must cultivate, as never before, our belief in a Divine Providence, which is not our "unconditional ally," but which requires us to know right from wrong and good from evil. A real American cannot be content to rest his nation's conscience upon so flimsy a foundation as expediency. The philosophy which says, "I will violate a treaty because expediency, or military necessity, demands" is not one which an American can hold, without treason to the best that is in his nation's history.

In the great crises of our history we have always been taken unprepared. A certain general is famous because he "burned his bridges behind him," leaving no hope for a defeated army. But the American leader who shall induce this nation to build bridges before them will deserve undying fame. Throughout our history we have been a thrifless people, forgetting the lessons of the past, heedless of their warnings for the future, unprepared always, both mentally and physically; strong only in a certain glorious moral preparedness, the gift of idealistic progenitors. Even that we shall lose unless we make a determined effort to preserve it. Even in this crisis, when our country has added its voice to the Battle Cry of Freedom, and is buckling on its armor so long unused, we must see that our people, of whatever race, are made to understand the ideas and ideals which alone can make us a Nation.

Endorsed by Philander P. Claxton, United States Commissioner of Education, and by these State Commissioners of Public Instruction:

# TWO NATIONAL NECESSITIES

## Uniform Motor Truck Laws and Uniform Motor Truck Roads

**Y**OUR town is divided into districts. It was divided into districts, presumably, for political purposes. In so far as the principle of subdivision serves the end for which it was made you find it a good thing. So long as the existence of the several districts does not interfere with your freedom as a member of the community as a whole—except as it was intended to interfere with it politically—you do not complain. But suppose each district of your town were to attempt to regulate your conduct to suit itself, how would you like it then? Suppose, for instance, that district A should rule against the size of your shoes and forbid you the use of its sidewalks. Or that district B should bar you from its streets because of your avoirdupois. Or that district C should forbid you to carry parcels within its sacred borders unless you walk on all fours. Suppose still another district excluded you in rainy weather. And suppose, further, that each district changed its regulations from day to day, or from week to week, at the whim of its own particular boss, without notice, so that you could never tell what they were and how they affected you. What would you think of such a system? How long would you tolerate it?

Of course you wouldn't tolerate it at all. Very likely it seems to you that such a state of affairs can be nothing but the invention of a fanciful mind. But it is not an invention. It is a reproduction of an actual condition. To be exact it parallels an actual condition. And the condition it parallels may be found today in the state and township statutes dealing with motor trucks.

The motor truck owner is opposed—I say opposed advisedly—by the most bewildering, conflicting and damaging set of rules and regulations it is possible to conceive. As things now stand any one wishing to ship merchandise or other freight overland by truck for any distance must violate half a dozen different statutes in the process or content himself with wishing. It would take him weeks to find out just what he may and may not do. For not alone do the various states differ on this point, but the various townships within the states differ also. Some of these points of difference were brought out in a very able speech delivered before the motor truck meeting of the National Automobile Chamber of Commerce in January by Mr. Windsor T. White. For example:

"First of all, it is apparent that the motor industry cannot oppose legislation of every character tending to regulate the operation of motor vehicles, or roads will be destroyed and motor trucks cannot be operated over them economically. The industry must sponsor *reasonable* legislation. In order that legislation may be reasonable I submit that it should, first, be definite and not be subject to interpretation by every petty township board or official of the state. Second, it should permit the hauling of loads of such reasonable weights as are required for the economical operation of motor trucks on reasonable size tires and at reasonable speeds, and, third, it should be uniform in its operation, making no distinction between seasons of the year. At first blush it seems almost puerile to state such self-evident requirements of legislation; but look at our present state laws in reference to the requirements which I have enumerated.

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT  
MOTOR EFFICIENCY SERVICE

"First, are they definite? The Connecticut laws of 1917 provide, 'The Highway Commissioner may restrict the use of motor vehicles of over 4 tons capacity on any trunk line or state highway.' The Maine laws of 1917 provide that 'The State Highway Commissioner may regulate the speed, weight of load and time of year when trucks may be operated on regular schedule.' The laws of South Carolina provide that 'Local authorities may regulate the use of commercial vehicles and license them.' The Texas State Highway Commissioner is authorized by law to 'change the rules and rates relating to motor traffic.' The laws of 1917 of the State of Vermont provide that the 'gross weight of motor vehicles is limited to 5 tons except by special permit allowed on hearing by the Board of Selectmen or Trustees of any town or village.' And the laws of the State of West Virginia authorize the State Highway Commissioner to 'make regulations for the protection of roads.'

**A**T least in the states mentioned, the operator of a motor truck has no means of ascertaining what the law of the road is from day to day. The state statutes merely delegate the right to regulate motor trucks to numerous county and township boards. Such regulations, of course, can be changed at will by the board that promulgated them. Trucks may be allowed to operate thru one township and be stopped at the boundary line of the next. This exact situation occurred in Ohio in 1916 under the state law in effect at that time, when motor trucks hauling milk from milk stations maintained by farmers between Elyria and Cleveland could operate thru all but one township on the route. Every time they came within this township the drivers were arrested for the benefit of the local justice of the peace and henchmen. The route was finally abandoned until the 1917 Legislature convened and the state law was amended making its regulations specific statutory requirements instead of delegating authority to counties and townships to make and enforce their own regulations.

It is apparent, therefore, that present laws are not definite, and this results, principally, because state legislatures, instead of prescribing specific regulations under which motor trucks may be operated, delegate authority to the minor political subdivisions to make their own laws and regulations, with the result that the motor truck operator has no means of knowing what load he can carry, how fast

he can go or where he can travel, and I doubt whether it would be possible for him to ascertain what the regulations of the townships thru which he operates are from day to day unless he had a lawyer traveling ahead of him to call on the justice of peace and the township trustees to ascertain daily whether such officials had spent a peaceful night and felt kindly toward motor trucks which would pass thru their jurisdiction on that particular day.

Do our present state laws permit the hauling of reasonable-sized loads on adequate rubber tires at reasonable rates of speed?

"This phase of the state laws is highly technical and it would be tiresome to quote to you examples from the various laws, giving weights, tire widths and speeds required and allowed. The diversity in the statutes is amazing and shows an ignorance of the matters legislated about that is astounding. For instance, in Vermont you cannot haul over 5 tons gross weight—vehicle and load—without a special permit, while in Massachusetts and Maryland you may haul 14 tons gross weight. New York, Pennsylvania, Washington and Ohio permit a gross weight of 12 tons. In a number of states the weight of load which may be carried ranges from 200 pounds per lineal inch of width of tire in the State of Washington to 800 pounds per inch in the State of Maine. Speeds allowed vary similarly in the different states. It is apparent that between the two extremes there must be a reasonable weight of load which can be carried on a reasonable width of tire at a reasonable speed."

**I**T is certain that we are becoming more and more keenly alive to the economic value of the motor truck. It is equally certain that every year more and more men will want to operate motor trucks on intercity and interstate routes. Even the railroads, which at first fought the motor truck, have achieved a realization of its value to themselves. There are now but two things that can keep the truck down: lack of standardized, common sense legislation as to its use and lack of adequate roads. These obstacles can be overcome by coöperation between the states and by the attention to the road problem by Federal experts on financing and on construction.

A road goes nowhere. The protection of roads is of importance only in so far as it keeps them available for use. Roads that have to be coddled in winter that they may be used in summer are bad roads. They do not need protection, but they do need reconstruction.

It would be unwise, of course, to urge a great nation-wide road building program at this time. The railways cannot carry the material, and there is an embargo on road materials and machinery even if they were physically able to handle the quantity necessary for a big building program. Some roads are necessary now—necessary for speeding up the delivery of war essentials. These roads will undoubtedly be built as soon as the weather permits. But even if we cannot and ought not to urge building now, let us at least put thru the legislation which will enable us to build, maintain and profit by a real highway system after the war. Let us at least have a plan, a practical plan, a plan that will work satisfactorily.

*Ask the Director anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.*

# Here are twelve successful men preparing for still greater success

—and how the lesson they have learned is directly applicable to You!

James Leffel & Company, Springfield, Ohio, make turbine engines—good turbine engines.

Twelve men in this organization are enrolled in the Alexander Hamilton Institute. Most of them are past middle age. Included in this group are the President, Vice-President and General Manager, Treasurer, the Sales Manager, Superintendent, two department managers, a salesman, two draftsmen and two foremen.

The motive that prompted these men to enrol was the determination to better themselves—to learn how to develop their positions—to make themselves and their work just one hundred per cent worth while.

To accomplish this, for these men in their maturity of years, there was only one open course, only one way. There was only one thing to do:

*To master the essentials of business—to acquire a first-hand and practical knowledge of how all business success is built—to absorb for application in their own day's work those business facts and basic fundamentals which underlie all business.*

**These men are acquiring valuable mental capital**

These men have all progressed far along the business highway. But they realized the need for something greater than their own experience to carry them on.

The bigger the man in business, the greater the natural need to absorb more business knowledge—the stronger the desire to have actual contact with other great business minds.

No business brain can be successfully nourished without using as a feeder the best product of other more successful brains.

The function of the Alexander Hamilton Institute is to give you thru its Modern Business Course and Service the best thought and experience of hundreds of successful business men—to bring them to you in the most practical, most interesting and easily readable form for absorption in your leisure time.

This Course and Service gives you a thoro understanding of business fundamentals. Once mastered, they can be applied successfully to *any* business.

If you are an Executive in your own business or another's, to develop yourself and your job, you need the positive helpfulness the Alexander Hamilton Institute can bring.

If your eye is on the Executive desk ahead, you need the business information this Course furnishes. You need it more now than ever because the need for better Executives is greater now than the business world has ever known.

**Wherever the wheel of business turns—the need is great**

Opportunities abound in every field. The demand for trained men is far and away in excess of the supply. The war is forcing thousands of businesses to readjust their Executive staff. Every man called for duty "over there" affects the status of some other one man here.

The sooner you enrol, the sooner there is brought to you the business information that has been successfully applied by hundreds of our subscribers.

Daily we are in receipt of stories of success won by men who have applied the principles the Course explains.

These letters come to us from all sections. From the big cities, the villages, and even the remote and isolated mining camp—proof conclusive that environment is no bar to advancement.

Wherever there is a man with the determination to take the Course and apply the principles, there will be developed a clear-thinking, quick-acting, understanding busi-

ness quantity whose services are always in demand at the highest market value.

## The kind of men enrolled

Presidents of big corporations are often enrolled for the Modern Business Course and Service along with ambitious young men in their employ.

Among the 65,000 subscribers are such men as A. T. Hardin, Vice-President of the New York Central Lines; E. R. Behrend, President of the Hammermill Paper Company; N. A. Hawkins, Manager of Sales, Ford Motor Company; William C. D'Arcy, President of the Associated Advertising Clubs of the World; Melville W. Mix, President of the Dodge Mfg. Company, and scores of others equally prominent.

In the Standard Oil Company 291 men are enrolled in the Alexander Hamilton Institute; in the United States Steel Corporation, 450; in the National Cash Register Company, 194; in the Pennsylvania Railroad Company, 108; in the General Electric Company, 300; and so on down the list of the biggest concerns in America.

## Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Institute.

This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the United States Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W. Jenks, the statistician and economist; and Joseph French Johnson, Dean of the New York University School of Commerce.

## Get further information

A careful reading of the 112-page book, "Forging Ahead In Business," will show you how you can develop yourself for bigger responsibilities, the same as these twelve men in the Leffel Company are doing.

Every man and woman with either a business or a career to guide to bigger, surer success should read this book. Simply fill out and send the coupon below.

In the City of New York Issues Guaranteed Contracts

JOHN P. MUNN, M.D., President  
FINANCE COMMITTEE

CLARENCE H. KELSEY  
Pres. Title Guarantee and Trust Co.

WILLIAM H. PORTER, Banker  
EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

## WINNING THE WAR

(Continued from page 276)

The soldier boys from poor families are gaining also a financial lesson highly valuable. They are learning to work hard, on small pay, with great opportunities for promotion, and greater opportunities for service. Most of them have bought Liberty Bonds, or otherwise given their funds as well as themselves. And they are not allowed to waste a bit of food, clothing, materials or supplies. They are being taught the daily practise of personal thrift.

*Advantage of deeper fellowship.* The war is teaching the soldiers in France to be citizens of the world. Their sensibilities and emotions are being educated in a wonderful way. Broad vision, fine feeling, ready sympathy, are prime qualities in leadership, that our boys will have gained on return.

They are brothers now to the little hungry French children, with whom they share smiles of understanding, morsels of food, and little delicacies from home. They are brothers to high-born American ladies helping to supply the boys with home comforts near the battlefield. And they are brothers to the stalwart men of England, Scotland, France, Italy, Australia, Canada, India, from each of whom a wealth of experience is bound to be gained for the enrichment and enlargement of the American soldier's life. Knocking out the Kaiser means knocking out narrowness, pettiness, provincialism from our own makeup.

*Advantage of higher courage.* Every young man should be given deeds of daring to accomplish. The total absence of the need or exercise of bravery is a misfortune as serious to young men as the lack of bread. We have lost the elemental. We have grown tame. We have trudged too long in the dust of the commonplace, our heads bowed, our eyes blurred, our hands holden, our hearts deprest.

*Advantage of greater religion—*greater in extent and in character. This is the first time that religion has improved war—and war improved religion. Tens of thousands of American soldiers who never before cared much for spiritual things now do their fighting with a Bible in their pocket, and go to the Y. M. C. A. army hut as faithfully as they go to meals. The Y. M. C. A. war work aims to furnish everything a soldier needs while off duty—from baseballs, French dictionaries, talking machines, writing materials, boxing gloves, newspapers and amateur theatricals to song services, "adopted" mothers, moral supervisors, prayer meetings, religious books and other helps of all kinds. The Y. M. C. A. hut is the nearest like home to our boys of anything in France. A new sort of man's religion has thus been created—vital, practical, intimate, strong, sane. Large numbers of men who resisted all evangelistic efforts at home have been converted on the battlefield. They went to fight—and they found God.

The war secretaries of the Y. M. C. A. are not professional Y. M. C. A. men—most of them are merchants, bankers, lawyers, manufacturers, college professors. They, too, are gaining a new conception, and working out a new application, of religion.

*Advantage of stronger purpose.* Whatever makes a man resolve to do or die is good. And if it makes him hold to his resolve, it is superlatively good. The faces of our men at the front are set with a high and holy purpose that none of them ever knew before. All their human powers have been harnessed to a divine determination. The fires of youth have been kindled—the fol-

lies of youth are burning away. The outcome will be physical, mental, moral regeneration.

Can we not remember these advantages to our soldier boys in their supreme adventure, can we not bid them good-bye and Godspeed with our minds calm and our hearts hopeful?

It is estimated that by giving our soldiers all the support of which we are capable, we can shorten the war six months and save to the world billions of dollars and hundreds of thousands of lives. How can we hold up our end?

For the answer to this question, I have consulted military experts, social workers, practical psychologists, Government officials and soldiers themselves from the camps and trenches. Having compared these answers, I have condensed them below. Each of the following things we are willing and able to do means firing a bullet in the face of the German army. Take a pencil as you read, check the items you are best able to handle, go over them a second time, write them down at proper intervals on your memorandum pad for the current year. If the items are for general observance, without regard to special date, you might well copy them on a large sheet of paper, then hang it on the wall of your study or parlor, as a reminder for the whole family.

1. Make a list of a half-dozen soldiers now in training or at the front, whom you know best, and to whom you are bound most closely by family, community or business relationship. Then form a group of the friends of these boys, let the group study this article, follow the suggestions below, see that every soldier on this list comes under the systematic remembrance of one or more people in your group of moral supporters. If any of the soldiers on your list belong to a special organization, the members of that organization would naturally be the first to rally round him. The mere display of a service flag in a window of a home, school, church, club, lodge, or business organization shows a kindly sentiment, but avails nothing for the man who has gone. Every service flag should mean a systematic remembrance and support of the man for whom we raise the flag.

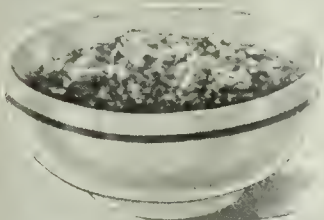

2. Smile when your boy goes, and smile in your letters to him. Don't let him hear one sob, feel one misgiving, see one tear. Hide your heartache, if you can't overcome it. Don't whine how you miss him—tell him how glad and proud you are to have him go, make him feel you expect him to be a great soldier, make his courage double-strength by adding yours. And look forward hopefully to seeing him return a healthier, stronger man, bigger and finer in every way.

3. Write a home letter to the boy of your affection, or be sure that some one else does, every week, or oftener. When a soldier has a fit of the blues and works and fights poorly on account of it, the reason generally is that no word from home has reached him for several days. There is but one cure for homesickness—that is a home letter. Make your letters cheerful, newsy, chatty, brightened with glimpses of home strength and courage, lightened with humorous happenings that may have occurred. A soldier at the front says: "We shall need inspiration constantly; there should be as many home letters as possible, and they should be long and detailed, filled with cheerfulness; I believe this war may be won largely by successful letter-writing on the part of our friends at home."

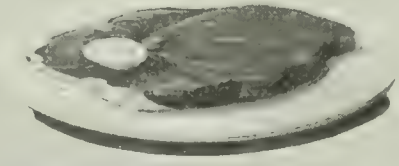

This matter is so important that community organizations have been formed to

# Cost of 1000 Calories

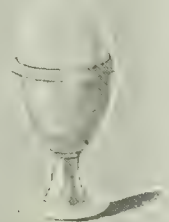

## The Unit of Nutrition

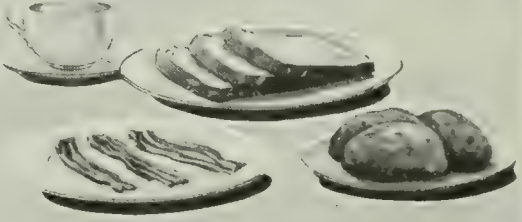

*In Quaker Oats—5 Cents*

*In Round Steak—38 Cents*

*In Eggs—50 Cents*

*In Mixed Diet—20 Cents*

# You Could Live For 12c Daily

## Were All Foods Like Quaker Oats

In Quaker Oats, 1000 calories of nutrition cost 5 cents. In the larger package a little less. So the average daily need—2500 calories—would cost 12 cents in this food.

Of course, one likes mixed diet. But what we urge in these days is—mix in what oats you can. Every dollar's worth used in place of meat saves an average of \$7. Every pound used in place of flour means more bread for our allies.

The oat is Nature's supreme food. No other grain can match it in flavor and nutrition.

Oats are plentiful and cheap. You can serve five dishes of Quaker Oats for the cost of a single egg.

Make this flavory dainty the entire morning meal. Serve it in big dishes. Then mix Quaker Oats with your flour foods. They will add delightful flavor, and will help conserve our wheat.

In these high-cost days—in these war times—more than ever the oat is the food of foods.

# Quaker Oats

## The Exquisite Flakes

Use Quaker Oats because of their wondrous flavor. They are flaked from queen grains only—just the rich, plump, flavory oats.

We get but ten pounds from a bushel, yet they cost you no extra price.

Use them to make your oat foods so inviting that everyone will want them. Their flavor is now doubly important.

**12c and 30c per package in United States and Canada, except in Far West and South where high freights may prohibit**

**The Management**

keep the soldiers of the community supplied with home letters. For example, the people of Kingsville, Texas, have set up a large blackboard and a commodious writing desk in a public place; on the blackboard appear the names and addresses of the soldier boys from Kingsville, and bits of news about each: every day these news items are changed on the blackboard, to keep the citizens watching the board; scrap-books with letters the boys have written home are on the desk; supplies of stationery, pens and ink are also on the desk, so that anybody who feels moved to write one of the absent soldiers may sit right down there and do it. The plan has proved highly successful. Your community might be able to adopt it, or to work out a better one.

4. Limit your correspondence to the boys you know personally. The censorship rules forbid the men of the Expeditionary Force to correspond with strangers, and the practice of writing strangers merely chokes the congested mail service, results in delay and confusion. American soldiers do not want to be "adopted" by American godparents, whether ladies or gentlemen.

5. Send your boy one or more home newspapers regularly. Subscribe for them in his name, have them go direct from the newspaper office, each day; or mail a bundle of them yourself once or twice a week. Make sure the address is officially correct.

6. Work out a plan whereby the soldier gets a small gift once or twice a month. The cost doesn't matter—the affectionate remembrance does. Here is a list of the things the boys like best to receive: handkerchiefs, heavy gloves, good wool socks of medium weight and light color, towels and wash cloths, underwear, shaving and other toilet articles, comfort bags containing needles, pins of all kinds, thread, scissors, etc., boxes of home candy or tins of chocolate, packages of chewing gum, writing materials of different sorts, thin, small pillows with washable cases, photographs of home folks and home doings, clippings, both national and local, on the favorable progress of the war, books and magazines. Be sure that all gifts are most strongly wrapt, and fully and accurately address.

7. Do some good fighting yourself—fight the German propaganda here at home. We have been told by General Pershing that Americans at home will fight Germany best by refusing to listen to the propaganda which accompanies or precedes German offenses. German liars in almost every community of the United States are at work.

Some of the lies they have spread broadcast are as follows: That Y. M. C. A. war work is a failure; that the Red Cross is full of graft; that the army training camps are hotbeds of immorality; that our boys will be likely to freeze and starve because of poor clothing and bad food; that the next Liberty Loan will be an excessive burden, with a sum too large demanded but a rate of interest too low returned; that a famine of salt, bluing and other household supplies is rapidly approaching, and a big stock of everything in sight should be bought and hoarded by the housekeeper; that the aviation corps and other branches of the service are full, no more men need apply; that the Government is trying to starve us in requesting us to sign food cards.

8. Look for the best and be ready for the worst. God has a way of turning the worst things into the best, so to call anything worst may be as impious as it surely is premature. The American soldier has ninety-four chances in a hundred to come back alive.

## Remarkable Remarks

W. J. BRYAN—We need more of everything.

VICE-PRESIDENT MARSHALL—We are not a perfect people.

PROF. GEORGE W. CARVER—We are, after all, a tin can people.

LINCOLN STEFFENS—Trotzky's mind is the international mind.

WOODROW WILSON—We must win and therefore we shall win.

ED HOWE—I believe I can detect a growing interest in common sense.

JOHN D. ROCKEFELLER, JR.—I am proud to say that I come from New York.

HERBERT L. HOOVER—We have but one police force, the American woman.

PREMIER CLEMENCEAU—One of the benefits of old age is that one gets deaf.

FREDERICK HARRISON—The War of Nations is merging into the War of Class.

DUKE ERNST DUNTHOR—We Germans do not hate. Hate is foreign to our nature.

W. H. TAFT—Do not allow yourself to be misled by the thought that peace is near.

THEODORE ROOSEVELT—Don't hit a man if you can honorably avoid it, but if you do hit him, put him to sleep.

EDWARD S. STERLING—You can't take an efficient workman and put him under an inefficient employer and get results.

DAVID LLOYD GEORGE—There is a hot zeal and a cold zeal and the greatest things of the world have been accomplished by the latter.

CHARLES M. SCHWAB—The workman without property, who labors with his hands, is going to be the man who will dominate the world.

ALICE STONE BLACKWELL—Three or four large newspapers spread between the coverings of the bed will give as much warmth as an extra blanket.

EX-AMBASSADOR GERARD—Americans must understand that the Germans will stop at nothing to win the war, and that the only thing they respect is force.

JAVID BEY—It will be one of the first peace tasks of the Turkish Government to find ways and means of making the Armenians forget the sufferings of the war.

LEON TROTZKY—We are the first Government in the world that openly declared that it is carrying on civil war, and we pledge ourselves to carry on this war to the finish.

LORD NORTHCLIFFE—I know that unless there is a swift improvement in our methods the United States will rightly take into its own hands the entire management of a great part of the war.

## The New Plays

Leo Ditrichstein is "the whole show" in *The King*, a gay and improper French farce. (George M. Cohan Theater.)

*The Madonna of the Future*, starring Emily Stevens, is rather shockingly amusing—extremely well done and decidedly refreshing. (Broadhurst Theater.)

Ethel Barrymore makes the most of a chance for really great acting in *The Lady of the Camellias*, translated from Dumas. An admirable production. (Empire Theater.)

*The Cohan Revue 1918* is very much like boarding-house hash—the ingredients of previous successes are all there, but the general effect is rather disappointing. (New Amsterdam Theater.)

The Greenwich Village Players haven't hit the right note yet. *Karen*, their present production, is an old-fashioned "radical" play of sex psychology, not particularly well acted. (The Greenwich Village Theater.)

# Because a shut-down would cost money!

Down in "dominant" Dayton, in the Tool Inspection Room of a nationally-known plant,\* stands an Art Metal safe.

Nothing in it but tools! But the loss of those special tools would temporarily stop production.

And a shut-down costs real money,—whether it's in the shop or the sales department.

Protect your business—this of all years.

## FARMER JOHN AND THE WAR

(Continued from page 267)

ucts. With proper publicity among the country communities and appeals that will reach the man riding the plow results will come—for the farmer is today in a better position to help the country than ever in his history. When states like Kansas, Nebraska, Iowa and the Dakotas have a motor car for every ten persons, when player pianos are selling by the hundreds, when bank deposits are at high tide, the ability to help is there.

So is the disposition. Enlistments from the Middle West have been abreast of the nation's call. Scores of counties had none to send to the first draft call because their quota had already enlisted. Farmer boys are cheerfully going to the camps, often at a sacrifice not felt by the boys from town.

Farmer John will soon be riding on his plow again planting the largest possible acreage of corn not only for the income but that he may help feed the nation. He will have to work longer hours than ever, for two of the boys are gone to war and help is mighty scarce. It will be lonesome out in the field—but all the time he will be thinking. His thoughts are broader than a year ago. Into them will come pictures of the sons in camp or over seas; visions of marching armies going to victory—and with it all instead of indifference and aloofness, a deep personal acceptance of his own part as a factor in the world drama.

The prairie country never lacked in patriotism. Time was needed before it awoke to full expression in visible form.

That time has come.

Abilene, Kansas

### CAPITAL COPY

If your salary or wages amounts to \$83.33 a month you must make an income tax return.

The register of all German Alien Enemies will be on the 4th, 5th, 6th, 7th, 8th and 9th of February.

It is mandatory for American sailors sailing in the war zone after February 1 to take out insurance.

And now all manufacturers and dealers in foods for live stock must take out a license under Mr. Hoover.

The Food Administration warns all meat dealers not to raise their prices on account of the railroad congestion.

The President has given his official endorsements to the various State War Conferences now being held in all the states.

The Department of Agriculture advises all farmers to be sure to save enough seed corn, for the supply is much below normal.

The Secretary of Agriculture has 100,000 tons of nitrate at \$75.50 a ton for distribution among the farmers of the land.

"Lumberjacks" to the number of 6000 are wanted immediately to go to France to get out of the French forests timber lumber and other material for the American army.

The railroads are forbidden to grant any more free passes or to employ further "high priced attorneys" engaged in the performance of other than necessary legal work for the companies.

Lord Rhondda cables that unless the United States can send the Allies 75,000,000 bushels of wheat over and above what we have exported up to January 1, he cannot take the responsibility of assuring our people that there will be food enough to win the war.

The Department of Agriculture says there are more than 100 different ways of cooking potatoes. Before you try all, can you cook them thus: Boiled, chips, Lyonnaise, mashed, browned, salad, baked, hashed browned, chowdered, shoestrings, washed fried, stuffed, plain fried, French fried, gauffe, soufflé, riced, hashed, sauté, creamed, croquets, au gratin, soups, stewed.

will help you wonderfully to reduce the high cost of living. It is read by tens of thousands, professionals as well as amateurs, as an authoritative guide to all garden work, both for Vegetables and Flowers.

R. L. ALSAKER, M.D.

# Do Germs and Climate Cause Catarrh?

By R. L. ALSAKER, M.D.  
Author of Educational Health Books

**C**ATARRH of the head is annoying—and filthy. In the throat it causes irritating cough. When it is seated in the chest it is called bronchitis. If allowed to continue, the bronchitis becomes chronic and robs the individual of refreshing sleep, comfort, and health. It weakens the lungs and paves the way for pneumonia and consumption.

Catarrh of the stomach and intestines points toward indigestion. So does catarrh of the liver, which produces various ills, such as jaundice and gall-stones, often ending in disagreeable and painful liver colic.

Catarrh sometimes causes earache, headache, and other forms of pain, and it lays the foundation for many diseases.

Some think germs and the climate are to blame, and as germs and climate are everywhere, we are helpless. It is a tragic fate, or would be, if it were true, for we can't escape the omnipresent germs and climate.

*But neither germs nor the climate cause catarrh.* Catarrh is due to improper eating—so are coughs and colds—and these conditions can be prevented and cured through right eating. And here is how it happens:

When people eat as they should *not*, they get indigestion, which fills the stomach and bowels with acid, gases, and poisons; a part of these abnormal products are absorbed into the blood, which becomes very impure and the whole body gets acid.

The right kind of food, properly eaten, makes pure blood and produces health, vigor and strength. The right kind of food builds a sound body, puts catarrh, pimples and blotches to flight, and paints roses on the cheeks.

Catarrh can be conquered quickly, surely and permanently. It has been done in thousands of cases. *If you have catarrh you have eaten your way to it.* You can cure yourself—you can eat your way out of catarrh into health, and while you are losing your catarrh you will rid yourself of other physical ills: The dirty tongue, that tired feeling, the bad taste in the mouth in the morning, the gas in the stomach and bowels, the headache, and other aches, pains, and disabilities will clear up and vanish. It is marvelous what proper eating will do, when other means fail.

I have written a book on the cause, prevention and cure of Catarrh, Coughs, and Colds. It is entirely free from fads and is written without the use of so-called scientific words such as calories, vitamins, etc. There is no attempt to exploit anything in it—except the truth. The book outlines a plan of living that will teach the sick how to get well and keep well. There is nothing mysterious or technical about these instructions. A plain, simple, dependable plan of living is given you that any one, young or old, can understand and follow. No hospitals, no sanitariums, no drugs, or serums—just a pleasant, common sense home treatment that harmonizes with and helps Nature.

I have instructed my publisher—Frank E. Morrison, New York,—to price the book so low as to place it within the reach of every reader of this article. Health is your greatest and most productive asset. You can have health if you want it and you have the knowledge right at hand that will show you how to get health and keep it if you follow the simple directions in this instructive little book.

**THE PUBLISHER'S ANNOUNCEMENT:** R. L. Alsaker, M.D., as the New York Tribune says, is a "competent professional authority." He has put the net result of years of experience with sick people into his writings and it is a real pleasure for me to recommend them because I know from personal experience that good results *always* follow an observance of his simple instructions. Dr. Alsaker has written several remarkable books of health instruction for those who want to get well and stay well. These books are: A—"Curing Catarrh, Coughs, and Colds," B—"Dieting Diabetes and Bright's Disease," C—"Conquering Consumption," D—"Curing Constipation and Appendicitis," E—"Getting Rid of Rheumatism." Send one dollar with ten cents additional to pay for postage and packing for the book that interests you most and learn how you can regain your health and remain healthy. Money returned if you follow instructions for one month and are not entirely satisfied with the improvement in your health. Frank E. Morrison (Established 1889), Publisher of Educational Health Books, Dept. 123, 1133 Broadway, New York.

Efficiency: The science that love of Country should bring many to teach and all to learn.

## The Bedaux Efficiency Course For Industrial Application

By CHAS. E. BEDAUX

The Course That Teaches  
**SHOP EFFICIENCY**

Now taken by some of the most successful men in the country.

The author has reorganized industry in practically every nation in the world. He was recently recommended to the Government by one of the leading engineering societies.

The student taking the course proceeds to the actual reorganization of a factory.

The course comprises twenty-four practical lessons. All examination papers are corrected and rated by practical engineers.

Form a class comprising your progressive executives. Make it possible for them to take the Bedaux Efficiency Course. One will soon become your Industrial Engineer.

Send for the program.

**The Bedaux Industrial Institute**  
Grand Rapids, Mich.

Mail, finally going over to the New York Tribune to do "The Conning Tower"; a jump from an evening paper to a morning paper which, said many, was a bad plunge. He made it successfully and he told about his lack of sleep when employed on an afternoon paper in verse, the last stanza as follows:

Take my thankfulness, warm and deep,  
Sir, at your shrine I burn this taper;  
I have found it a cinch to sleep  
Since I've come to your well known paper.

Colyumists are really afflicted with chaotic paragraphitis one phase of which is jinglemania. When a man has big doses of these in his system he is on the way to a good salary and a job that few can pry away from him.

In the days when Adams was an engineer, he enjoyed the travel that went with his job and doubtless next to conducting the colyum the adventure of going here, there and everywhere appeals to him most. When he wants to go off for a trip, he writes a note to the managing editor thru the colyum and doesn't let the managing editor forget it by reminders in frequent issues. Then when the day comes, off he goes, with merely a day's copy ahead and the loyal contribs send in their stuff and in a day or two will come from Adams's pen the human things met with in travel and when having such a good time that he is crowded for time to write, he prints the interviews that other newspaper men write, all of which keep the home fires going while he is away.

"The Diary of Samuel Pepys," which he happened to read on a vacation, gave him an idea and for a long time he chronicled his own doings written in seventeenth century English, parading the style and eccentricities of that unique Englishman.

A day's story of "The Diary of Our Own Samuel Pepys" tells the day's doings thus:

February 7—To Mistress Ada Van Zandt's for breakfast, which she did cook, and we had grapefruit and eggs and bacon and fish and coffee, all very good. And then A. Samuels and I did play upon the piano, I the treble and he the bass, as I can play with but one finger, but fairly well, nevertheless. To the office, there till evening, and thence to Nelly Tyler's for dinner, and home and to-bed.

In quite the same way he introduced Horace, and made thousands familiar with the classics. The contribs took Horace up. "Bossing the contribs" is one of the day's joyous occupations for "F. P. A."

A song hit like "Tipperary" is bound to bring from "F. P. A.'s" pen the song done in a dozen ways as a dozen m.or l. (more or less to quote "F. P. A.") w.k. (well known) writers would do it, if it was original with them.

Adams has an extended knowledge of type, which leads him to set his column in style that is unusual to say the least. He made a hit with telling advertisers about type in verse. Here's one that tells its own story:

TO ADVERTISERS:

John Alden type is short and fat;  
Gothic Condensed is skinny;  
Runic? We have a lot of that,  
And 14-point DeVinne.

Another fad of F. P. A.'s is to find old songs popular a generation ago and publish them. Many of them produce a smile. Peculiar effusions, preposterous sort of rime, that only can be printed in instalments, he discovers or finds in his mail. His readers had a lot of fun over some doggerel until "F. P. A." found that the old lady who had written it many years ago was in an almshouse. It was Christmas time and F. P. A. asks his "contribs" to "come across," and they did handsomely.

Dulcinea's letters—one bromide to an-

other—instantly caught on and it wasn't long before the contribs were writing "The letters of Dulcinea" themselves.

One essential for a columnist is a broad understanding of humanity, which Don Marquis of "The Sun Dial" has to a marked degree. "The Sun Dial" oozes with good nature. He is one of the best natured men one can meet in a day's travel.

One the ease of writing a colyum, which has been his daily stunt for a number of years, he says:

Webster has the words, and I  
Pick them up from where they lie,  
Twist and turn them one by one  
And give them places in The Sun:

Here a word, and there a word—  
It's so easy, 'tis absurd!  
I merely range them in a row,  
Webster's done the work, you know!

Word follows word, till inch by inch,  
I have a column! What a cinch!  
I take the words that Webster penned  
And merely lay them end to end!

Mr. Marquis pokes fun at himself and does it so that you chuckle with him. Two on paragraphing tell their own story:

If all the paragraphs we've penned were laid together, end to end, they'd reach from Newark to South Bend, but all the folks that ever took the good advice we pulled and shook won't fill one cottage in Bound Brook.

It always strikes us when we write a string of paragraphs that if we were really so darned wise as we pretend to be when we write paragraphs, we'd be doing something else with all this wisdom.

"Our Own Wall Mottoes," "The Thoughts of Hermoine," pure satire and "Archie's" observations in free verse make Don Marquis the popular idol of the Night Circle of readers that he is. As for his serious verse, he gets requests to reprint a year or two after it first appeared and he draws from contribs splendid contributions in verse because of the high standard that he maintains, all of which he receives, free, gratis, for nothing.

One can get an idea of a colyumist's day from the following address to contributors: We do not solicit manuscripts of any sort for the *Sun Dial*.

If you send them, in spite of that, please do not inclose stamps with them. We go thru our mail and what we want we take and what we don't want we throw away. We do not want to be bothered by returning them to you.

We get forty or fifty manuscripts a day and it is absolutely impossible for us to write a column and answer all those letters besides.

We are not ungrateful for all the good stuff that has been given to us. We are, in fact, very chesty, because some notable verse from contributors has appeared in this column during the past four years.

These rules are set forth not because we are unappreciative but we must protect ourselves from too much routine work apart from writing or get old before our time. We can't act like the whole staff of a magazine every day and write anything fresh of our own to boot, and when our stuff loses whatever freshness it has we'll be thru as a colyumist.

Dearly beloved, we aren't scolding you. We're just telling you.

Hermoine and her little group of serious thinkers, which incidentally has been put between covers, Mr. Marquis does in monolog form. To further one's acquaintance with Hermoine, here is a fair presentation of the lady:

Aren't you just crazy about prison reform? The most wonderful man talked to us—to our Little Group of Advanced Thinkers, you know—about it the other evening.

A small desk calendar with this design in colors will be sent on receipt of 3c. postage. Mail coupon.

## Vacant Chairs Mean Additional Work for Executives

The "Y and E" System Service (given without charge) is a factor in successful business management

**B**USINESS conditions being what they are, you must expect to make certain readjustments before long. To help in this process and without accepting fees, we maintain a representative in every territorial district, engaged upon *System Service*.

If you wish to accomplish more work with what help you have, or to get along without filling the "vacant chairs," or to get a closer grasp of affairs in your business through new, perfected systems—talk the matter over with our representative and see if he—trained as he is in the most modern office methods and backed by the best and oldest technical resources in the country—cannot help you to a solution. Two heads—two directions of experience—are better than one.

Our men know how to simplify methods that have become complex, how to work up useful records about your business, how to combine records, eliminat-

ing the non-essentials, how to put records into the most convenient form to handle, how to establish accuracy; and they can give you first-hand information about new devices that can save time and work in your office. This knowledge, with your own, assures best possible results in handling many of the war-time problems.

Our service dates back for a period of over twelve years, and is being used by such well-known concerns as: Western Union Tel. Co.; Edison Storage Battery Co.; Standard Oil; Southern Pacific Railway Co.; Western Electric Co.;

Westinghouse Electric and Mfg. Co.; Pierce Arrow Motor Co.; Remington Arms U. M. Co.; Victor Talking Machine Co.; Pan American Union; International Y. M. C. A.; Hartford Fire Insurance Co.; Pittsburgh Steel Co.; and National Biscuit Co.; besides U. S. Government, American Red Cross, etc.

Attach this coupon to your letterhead and mail to the "Y and E" store in your city or to headquarters at Rochester.

*The leading American Seed Catalog*

216 pages, 103 colored illustrations of Vegetable and Flower Seeds. It is mailed free to those who write for it. Write for your copy today, and mention this paper.

**W. Atlee Burpee & Co. PHILADELPHIA**

It made me feel I'd be willing to do anything—simply anything—to help these poor, unfortunate convicts. Collect money, you know, or give talks, or read books about them, or make any other sacrifice.

Even get them jobs. One ought to help them to start over again, you know.

Tho as for hiring one of them myself, or rather getting Papa to—well, really, you know, one must draw the line somewhere!

But it's a perfectly fascinating subject to take up, prison reform is.

It gives one such a sense of brotherhood—and of service—it's so broadening, don't you think?—taking up things like that.

And one must be broad. I ask myself every night before I go to bed: "Have I been broad today? Or have I failed?"

Tho of course one can be too broad, don't you think?

What I mean is, one must not be so broad that one loses one's poise in the midst of things.

Poise! That's what the age needs!

I suppose you've heard wide-brimmed hats are coming in again?

"Ye Towne Gossip" by K. C. B. (Kenneth C. Beaton) is a new kind of colyum, quaint humor written in free verse and presented typographically to attract the eye. Mr. Beaton has been called "the Charlie Chaplin of New York journalism," in that he provides a bit of fun daily. The colyum is printed two columns wide, and has a headpiece showing Father Knickerbocker reading the *New York American* with a tailpiece of Mr. Beaton and whoever the day's gossip is about, ending with "I Thank You," which he has so impressed upon New Yorkers that the words are more in use today than when Mr. Beaton came out of the West.

Of all the colyumists of today, probably Frank L. Stanton, of the *Atlanta Constitution*, has the record for one man in continuous service and poems and his paragraphs "Just from Georgia" is copied by exchange editors all over the country. Much of Mr. Stanton's verse has been put into book form from time to time.

The late Ambrose Bierce snapped a satirical whip when he was colyuming in the *San Francisco Examiner* under "Prattle." The dean of Pacific Coast writers, who disappeared in Mexico and has been given up for lost, was a welcome guest at the breakfast table of Californians who over their bacon and eggs or butter and rolls enjoyed his "Prattle." Here's his bit of verse on the constant dangers of the hostile environment constantly surrounding the wayfarer in life:

I'm safe, is that what the physician said?  
What! Out of danger? Then, by heaven,  
I'm dead!

Marylanders like the "Bentztown Bard" of the *Baltimore Sun*, who is Folger McKinsey. Mr. McKinsey's output is from one to half a dozen poems a day; and he never misses a day!

When Mr. McKinsey is not writing verse it may be a bit of homely philosophy:

I like the fellow that never gives in.

That they can never quite knock down:  
That comes back unto his task with a grin  
Instead of a grouch and frown.

Judd Mortimer, of the *Houston Daily Post*, slips in his colyum whenever the occasion presents itself his pet hobby, finding homes for orphans. Here's one sandwiched in between jingles:

Thirty pounds of boy for adoption. One package consists of twenty pounds; a real, sure 'nuff white hope. The other package weighs ten pounds—perhaps a little more after dinner. Each is looking for a job at making some childless couple happy.

"Uncle Judd" Lewis must have many a

## THE 1918 EDITION OF THE AMERICAN YEAR BOOK IS NOW READY FOR YOU

You can obtain the Year Book from no other source for less than the regular price—\$3.00. THE INDEPENDENT is \$4.00. Our price for both is only FIVE DOLLARS.—Address

THE INDEPENDENT - 119 West 40th Street, New York

warm corner in hearts of boys and girls and grown-ups. It might not be amiss to note that "Uncle Judd" succeeded O. Henry on the *Houston Post*. What a colyumist Sidney Porter would have made for New York!

Another colyumist was the late Col. Lampton, father of the "yawp," more familiarly known as verse libre. Col. Lampton enjoyed being a free lance.

What "B. L. T." does in Chicago, "F. P. A." and Don Marquis in New York, so likewise do Ted Robinson in Cleveland, thru the *Plain Dealer*; Philander C. Johnson, in Washington, thru the *Post*, putting many a remark and bit of wisdom on Senator Sorghum; Edgar A. Guest, in Detroit, thru the *Free Press*, and many others scattered in various cities.

Luke McLuke, of the *Cincinnati Enquirer*, devotes a good deal of his colyum to paragraphs, many of them worth reprinting, among others, this as a sample:

Too many old men put in their last years buying stained-glass windows for churches, when they ought to be learning to shovel coal.

Last but not least among the colyumists is Mrs. Clara Chapline Thomas, the only woman colyumist in America. Every day for three hundred and sixty-five in the year she does her stunt for the *Minneapolis Tribune* and like her brothers of the colyum she puts a laugh across with it.

Which is the mission of a colyum.  
New York City

## Pebbles

Her Husband—Yes, sir! Roosevelt is the most bellicose man of this century.

His Wife (absent-mindedly)—Aren't you thinking of Taft, dear?—*Nebraska Awgwan.*

"My!" said Mrs. Comler, inspecting her friend's house, "why do you have such a high bed for your little boy?"

"So we can hear him if he falls out," replied Mrs. Housler. "You have no idea what heavy sleepers my husband and I are."—*Truth.*

"He's perfectly quiet, ladies," remarked the jobmaster to the two girls who were about to hire a horse and trap, "only you must take care to keep the rein off his tail."

"We won't forget," they replied.

When they returned the jobmaster inquired how they got on.

"Splendidly," they exclaimed. "We had one rather sharp shower, but we took it in turn to hold the umbrella over the horse's tail, so there was no real danger!"—*Exchange.*

## TH' GLORY OF WAR

Once they sang uv th' Glory uv War—

Poit an' peasant, an' Emperor!

'Ow shall they know uv th' things that are—

Th' 'orrer, th' stink, an' th' shime uv war? Premier, Guverner, Emperor,

'Ow shall they know ol.th' shime uv war?

'Ow can they know uv th' blud that drips, Drips frum th' 'ollers that once were lips; Wot do they know uv th' shell, that rips Mussel an' flesh frum a cocky's 'ips!

Wot do they think uv th' burstin' shell, Sendin' a dozen ter 'eaven—or 'ell— Say, 'ave they smelt uv th' powder's smell, 'Urd ther best cobber's larst dyin' yell?

Know wat it is ter feel scared ter die? Scareder ter live—wi' a shattered thigh? Laid in th' nite time, beneath th' sky, Wond'rin' if this is ter be good-bye?

Oh, they tork uv th' glory uv war— 'Ave they seen wimen lie ded on th' floor? Premier, Guverner, Emperor, Wot do they know uv th' Glory uv War?

—From the volume of *Australian verses* entitled "Billjim," by Peter Austin.

# Become a Stenographer

## Learn the New Way at Home

## Entire Course on Trial

A wonderful new method of teaching shorthand and typewriting has been discovered which has completely revolutionized all old teaching standards. No longer is it necessary to be anything less than an expert stenographer. Instead of learning slowly, laboriously, imperfectly and expensively, the New Way enables you to learn quickly and perfectly at home at very little cost, and so easily that in a few short weeks you become more competent than many stenographers with years of experience.

## Remarkable New Way

### Amazingly Easy!

The New Way is so amazingly easy to learn, so simple, so fascinating that any one who can read—even boys and girls of 15—can now quickly acquire the highest-grade ability. Beginners who never could write one word in shorthand are writing 125 to 150 words a minute, and can instantly read every word of their shorthand notes. And instead of typewriting 15 to 20 words a minute with one or two fingers, they can typewrite 80 to 100 words a minute blindfolded, using ALL fingers, writing with amazing ease, and without errors!

The secret of the New Way in Shorthand is borrowed from the methods used in teaching children to read! In a short time you can take practice dictation.

The NEW WAY in Typewriting includes Special Gymnastic Finger Training which brings results in days that ordinary methods will not produce in months.

## Send Now for Particulars

We have prepared a catalog which tells all about these wonderful new systems, which is free to those interested. Send in the coupon or write a postal today. With the catalog we will send you our special reduced price offer to new students in each locality.

You are here given the most complete—the most thoroughgoing—commercial training available in America today. Without one penny of extra charge, right along with your shorthand and typewriting, you will be fully trained in Business English, Letter Writing, Office Methods, Secretarial Work—everything needed to earn \$25 to \$40 a week from the start.

If you are ambitious to get started right in Shorthand and Typewriting—if you are ambitious to get ahead quickly, don't wait a single minute before sending for our new free book. Address

## Cashing Your Checks Abroad

A New Banking Convenience for Americans Overseas

THIS Company has inaugurated a new banking service for Americans abroad. It is available to the depositors of any bank or trust company which has made the necessary arrangements with us.

Through this service the depositor can cash, up to an agreed amount, at the Paris Office of the Guaranty Trust Company of New York, and at numerous correspondent offices of this Company throughout France, his personal checks drawn on his bank in this country.

This means that the depositor while abroad can have, to a considerable degree, the checking account facilities to which he is accustomed at home.

We shall be glad to give full information regarding this service to those who expect to go abroad, and to relatives and friends of those who are already "over there."

Inquiries from banking institutions are particularly invited. Full information regarding this service, which is at the disposal of banks and trust companies whether our customers or not, will be sent on request.

is now ready  
See page 292

## Independent Opinions

We found the reactions of two of our readers to Amy Lowell's poem, "Sugar," published in the December 29 issue of The Independent, so amusing that we print them below. Milton O. Nelson writes:

Please  
Tell Amy  
Lowell  
That sugar beets  
Are not  
"Little Red Balls"  
"Red as the eyes of cats in firelight."  
Nor anything like  
"Carbuncles under a lemon moon,"  
Nor are they  
"Round as apples."  
Neither are they  
"Top-shaped beets,"  
But they are  
Approximately  
Oblong and irregular in form,  
Shaped like unto a  
Mangel wurtzel  
And in color a  
Dirty white:  
Sort of a  
Second hand  
Dishwater color  
Wholly unpoetical,  
Something like  
Amy  
Lowell's  
Vers Libre.  
If you  
Don't think so,  
Ask anybody  
Who  
Has ever seen a  
Sugar beet.

Minneapolis. Minnesota

Mrs. William S. Schoppe continues the song with:

I write to inquire  
If Amy Lowell ever saw  
A sugar beet—as it grows  
On the wide plains.  
In Montana, the sugar beets  
Are dirty white, and shaped, not  
Like tops  
Or little red balls.  
But like parsnips.  
Not top-shaped, not blood-skinned,  
But like a carrot which has fainted  
And bled to death.  
Perchance Amy knows more  
About poetry  
Than about beetery.  
And then, again,  
Perhaps the joke is on me.  
If so, I will agree to laugh  
As heartily at myself  
As we have been obliged to  
At those little red balls.  
May I crave the indulgence  
Of an answer?  
Enclosed find  
Stamp.

Bozeman, Montana

And from Mrs. D. U. Oliver:

TO AMY LOWELL

Dear Amy Lowell,  
Has ever seen the sugar beet beneath its native skies?  
Crimson coat? Blood-skinned coat? forsooth!  
Sooner lemons under a carbuncle moon than the reverse.  
Tan coats, biege coats,  
Dirty pale cream-colored coats:  
Never top-shaped, but dwindling lengthily to a point;  
Worth indeed their weight in gold, with precious saccharine therein.

Has ever seen  
The creaking, grumbling loads of beet pulp?  
Or inhaled their aroma—not of Araby the Blest?  
But giving nourishment and strength supreme  
To flocks of sheep and herds of cattle.  
Dear one, thank thy lucky stars that thy constellation hath not placed thee  
Adjacent to a pile of beet pulp:  
Pale and glistening, akin somewhat to sourkraut in its aspect:  
Not gleaming like felines' eyes,  
Nor as the ruby's glow,  
But sickly, dirty, unkempt and pale as the sweet globe beneath the plains.

Oh, Amy Lowell,  
It is to laugh!  
Carbuncles, mosaics, cats' eyes!—Oh dear me!  
Loveland, Colorado

## Pebbles

First Soldier (looking at pictures of himself)—Which do you think is the best, Mike?

Second Soldier—Well, personally, I think the one of you in the gas mask is best.—*Froth.*

Smith (at the wheel)—Do you know, I have a new theory about saving tires—

Nervous Companion—Good heavens! What was that noise?

Smith (wearily)—Only another theory exploded.—*Baltimore American.*

"By George, yes. I'm the very Devil on germs and microbes, and all that sort of dope. I sterilize and filter everything I can lay hold of. Now, for instance, only last"—

"Great Cæsar! It must be pretty rough on the other people in the house?"

"Oh, I s'pose so. Even my relations are strained."—*Sydney Bulletin.*

"All right, Oswald, now you ask me how to get down from an elephant. Understand? All right, shoot!"

"Oh, I say, Oscar, can you inform me as to the best way of getting down from an elephant?"

"Why, my dear boy, I'm surprized at your ignorance. You don't get down from an elephant, you get it from a goose."—*Lehigh Burr.*

The village idiot gaped so long at the village grocer that that worthy man became irritated.

"Look here, what you starin' at? If you can find a man homelier than yourself, kill him!"

The village idiot went in search of a man uglier than himself, and one day he found one.

He tapped him on the shoulder.

"I've got to kill you," he said, smiling amiably. "You're homelier than me."

The stranger turned and looked at the other for a full minute.

"Am I?" he said. "Then for goodness sake kill me!"—*New Idea.*

The fussy old gentleman asked the chance traveling companion:

"Have you any children, sir?"

"Yes, sir; a son."

"Does he smoke?"

"Ah, sir, he never so much as touched a cigarette."

"So much the better, sir; the use of tobacco is a poisonous habit. Does he frequent clubs?"

"He has never put his foot in one."

"Allow me to congratulate you. Does he never come home late?"

"Never. He goes to bed directly after dinner."

"A model young man, sir; a model young man. How old is he?"

"Just six months."—*London Opinion.*

On a clear, cool evening in the early spring a man on a horse crossed the ridge of a Kentucky mountain, and, seeing a cabin in the valley, turned his horse in that direction. The cabin was whitewashed and clean. The mountaineer and his family sat on the porch. Several children played in the yard. The stranger arrived at the gate and was invited in and sat down.

"Stranger," asked the mountaineer, "are you interested in our oil up here?"

"Well, no," said the stranger, "I haven't much faith in oil. I hear of these people who suddenly strike it rich, but I never find them."

The old man chuckled and said: "I am one. Yesterday I was poor; today I am rich. I was just asking my family, now that we could have things, what they would rather have. Now John, here, he wants a horse, and Molly wants a new dress, and Susie says she'll take books. By the way, wife, what would you rather have?"

The old lady never hesitated a minute. "Well," she said, "I'm pretty tired cutting wood with a dull ax; I'll take a new ax."—*Bubble.*

© Vanity Fair

Every Issue of

## Vanity Fair

is a Boost for the Morale of the Nation

"For God's sake, cheer up the people of France," said Pershing, when they asked him what America could do to help win the war. Morale, and the "cheero spirit" in France, in England, and in America will do more to beat Germany than any other single thing. Lack of it will give victory to the Hun.

Vanity Fair cannot build ships. Or move freight. Or go over the top with an Enfield. But it can help to dispel gloom. It can keep cheerful the men who go and the men and women who stay. It can chronicle that side of the war which refuses to be dark—its unquenchable humor, its unconscious heroism, its outstanding figures, and mirror—cheerfully—the swift current of war-time life at home. That is our "bit" in this war.

Vanity Fair covers the war. It publishes serious articles on serious phases of it. It shows portraits of the men who are in the forefront. It treats as they deserve those incidents and accidents of war-time life which call for humorous appreciation or caustic comment. It also publishes—as always—everything entertaining

and amusing in civil life. It is a sort of headquarters for the mind, a front-line trench in the affairs of the world, a listening post for news of the theatres, arts, sports, gaieties and fashions; a special official communiqué from General Headquarters—once a month—on the latest news from our artistic and social fronts.

## Read Vanity Fair Yourself! Send it to Your Soldier!

Not only should you have on your library table those publications which treat only the most serious aspects of the war in the most serious way. But with them you should also have Vanity Fair, which echoes the songs of the Sammies, the skirl of the pipers, and does its best to maintain the cheero spirit here at home.

The men who have gone to camp have left their familiar worlds behind them. They are hungry for news. They need laughter. They want something amusing to read. There is nothing you could give them that would more exactly fit their needs than Vanity Fair.

## 9 Issues of Vanity Fair for \$2

ten, if you mail the coupon now

If you do not know Vanity Fair, or would like to know it better, you may have the next nine issues for \$2—and even ten, if you mail the coupon now.

You think nothing—in your poor deluded way—of spending \$2 for a single theatre ticket, or two faded gardenias. Yet for that very \$2 you may have ten months of Vanity Fair, and with it more entertainment than you would get from a winter of problem plays, or a five-foot shelf of novels.

Attention! Eyes right! Salute the coupon! Tear it off, fill it out, and let Vanity Fair keep you—for ten months—in step with the times.

VANITY FAIR, 19 West 44th Street, New York City  
 Please send me the next NINE issues of Vanity Fair. I will  
 remit \$2 on receipt of some bill (O.R.) I enclose \$2 herewith.  
 (Canadian send \$3) If the order is received in time, I will  
 receive all the current issues, making TEN issues  
 in all.

# THE NEW BOOKS

## Briefs for Two Belligerents

**L**UIGI CARNOVALE has written a highly documented defense of the recent foreign policy of the Italian Government under the title *Why Italy Entered the Great War*. The book is a large one in itself and is made doubly so by being printed in Italian as well as in English. The first part is devoted to an account of the atrocities of Austrian rule before the unification of the country and, while these undoubtedly explain and almost justify the heritage of hatred and distrust felt by the Italians for the Hapsburg Empire, they can hardly be considered relevant to the problems of the present time. More to the point, the expressed in a rhetorical manner that awakens some distrust, is the discussion of Italian sentiment in the "unredeemed" provinces still under Austrian rule and of Italy's position and duties as a member of the society of nations equally obliged with others to resist the aggressions of the Central Powers.

*America's Case Against Germany*, by Lindsay Rogers, is devoted principally to a chronicle of the negotiations between the two countries over unrestricted submarine warfare on merchantmen and to a discussion of those aspects of international maritime law bearing on the matter. We presume that few loyal Americans now doubt the extent and gravity of Germany's invasion of our rights at sea, but this book will be useful to those who wish to know in just what respects Germany infringed international law and it will play a valuable part in answering in a definite manner the misrepresentations with which apologists for the German cause have endeavored to confuse the issue.

*Why Italy Entered the Great War*, by Luigi Carnovale. Italian-American Publishing Company, Chicago. *America's Case Against Germany*, by Lindsay Rogers. E. P. Dutton Company, New York. \$1.50.

## For the Reader and Writer

**F**OUR recently published books will especially interest any one who loves literature, or who wishes to learn the art of writing.

*Three Centuries of American Poetry and Prose*, a companion volume to "Twelve Centuries of English Poetry and Prose," includes selections from the time of Captain John Smith to that of Emily Dickinson. The three editors have shown much taste and discrimination in selecting the best from three hundred years of American writing. In spite of the fact that they have brought everything into the compass of a convenient volume of 876 pages the selections are ample. It is delightful to find full extracts from such writers as Colonel William Byrd, of Westover, and John Woolman, reminding us anew that the writers of Colonial times were not mere literary names but people as human as ourselves. It would have been equally delightful if the editors could have included some of our twentieth century material.

*Readings in English Prose of the Nineteenth Century* has a somewhat similar aim. In this case, however, the editor makes no attempt to be inclusive. He has chosen thirteen of the major prose writers of the nineteenth century, seven of whom are represented in the first volume. The names are all so great, and the selections so altogether

admirable, that the reader does not regret the omission of the industrious Southey, the gypsy-loving Borrow, or other good prose writers of the century. The lover of really good prose finds every selection entirely happy. Not the least interesting and illuminating, from a point of view of subject matter, are the famous scathing reviews by Jeffrey, Wilson, Croker and other writers, chosen from the slashing days of the *Edinburgh Review*, *Blackwood's* and the *Quarterly*.

*A Book of Narratives* has a more practical purpose. It presents some thirty-five more or less famous short stories, very happily without annotation, arranged under such suggestive headings as "How to See a Story in Everyday Life," "How to See Imaginatively," "How to Describe Charac-

that will appeal to the reader. To this end they give numerous examples from writing of the present day.

*Three Centuries of American Poetry and Prose*. Selected and edited by Alphonso Gerald Newcomer, A.M., Late Professor of English in the Leland Stanford University. Alice E. Andrews, A.M., Teacher of English in the Johnson High School, St. Paul, and Howard Judson Hall, A.M., Assistant Professor of English in the Leland Stanford University. Scott, Foresman & Company. \$1.75. *Readings in English Prose of the Nineteenth Century*. Edited by Raymond MacDonald Alden, Professor of English in Leland Stanford Junior University. Houghton, Mifflin Company. \$1.65. *A Book of Narratives*. Edited by Oscar James Campbell, Jr., Assistant Professor of English, University of Wisconsin, and Richard Ashley Rice, Professor of English, Smith College. D. C. Heath & Company. \$1.50. *Facts, Thought and Imagination*, A Book on Writing, by Henry Seidel Canby, Ph.D., Frederick Erastus Pierce, Ph.D., Willard Higley Durham, Ph.D., of the Department of English, Sheffield Scientific School, Yale University. The Macmillan Company. \$1.30.

## Secrets of Polar Travel

**T**HIS book might well have been simply a fine-print appendix to Rear-Admiral Peary's "The North Pole," explaining the methods of travel and equipment by which he accomplished his monumental achievement of reaching the pole; and the incidents by which the value of his arrangements are here illustrated would have added further enlivenment to that volume. They do enliven this book, which otherwise has a minor interest to the casual reader. It will, however, be of extreme value to any one who may venture, hereafter, into the region of eternal ice, and will form a handbook for his guidance of the foremost authority. The chief lesson inculcated is that which has been so forcibly urged since by Asmundsen and especially by Steffanson, that health, comfort and success depend upon adopting the Eskimo clothing, food and methods of life, developed by the constant residence of the natives under the conditions every explorer must meet. The book is liberally illustrated.

*Secrets of Polar Travel*, by Rear-Admiral Robert E. Peary. The Century Company. \$2.50.

## Rewriting the Revolution

**W**HEN the historians get thru with American history it will bear little resemblance to its old self. *The American Revolution in Our School Textbooks*, by Charles Altschul, is devoted to an intensive study of the chief texts in use today and those used twenty years ago with the object of showing that the present generation of voters has been brought up in practical ignorance of the fact that the leading English statesmen of the period took the side of the American colonies. Professor Shotwell, of Columbia University, contributes a preface. *The Unpopular History of the United States*, by Harris Dickson, is written to show that voluntary enlistment has always failed as a means for the creation of an efficient army. Most of his examples are drawn from the Revolutionary War and from the War of 1812, and the chief source of material is General Upton's "Military Policy of the United States." In fact the book is nothing but a summary and popularization of Upton's work.

*The American Revolution in Our School Textbooks*, by Charles Altschul. New York: Geo. H. Doran. \$1. *The Unpopular History of the United States*, by Harris Dickson. New York: Frederick A. Stokes. 75 cents.

REAR-ADMIRAL PEARY

ter" and "How to Present a Moral Issue." The collection is thoroughly enjoyable and, with the somewhat slight editorial equipment that is given, leads to considerable appreciation of the story-telling art. The book will be a practical help to any one who wishes to gain power in short story construction.

Another book on writing, *Facts, Thought and Imagination*, is notably original and stimulating. The writers say that "A large part of the human race will not tell the truth, and another large part cannot if they try." They therefore take up the subject of composition where the elementary rhetorics leave off, and discuss the principles of writing, that lead to telling of things as they are, and presenting thought in a way

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.  
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY  
SECTION I. COMPOSITION.

The Story of the Week.

1. Imagine that you are a true-hearted Russian patriot. Write an appeal to your countrymen, based on the real needs and future interests of Russia.
2. Imagine that you were on board the "Tuscania" when it was torpedoed. Write a vivid letter to one of your friends telling of your experiences, and especially of your emotions at the time.
3. Give a patriotic talk in which you show how Brazil may give valuable aid to the Allies.
4. Give a speech in which you enumerate Belgium's losses, and demand compensation by Germany. Make your speech rise to a climax.
5. You hear a man say: "I don't know anything about Ukraina. Where is it, and what is it?" Tell him about Ukraina, its situation, its people, its resources, and the reasons why Germany will gain great advantage from the peace treaty with Ukraina.
6. Give a talk in which you draw a striking contrast between the two types of diplomacy—open covenants, and secret agreements. Show the present importance of the subject.

Editorial Articles.

1. Write a précis of "The Question of Africa." Tell why you agree or disagree with the article.
2. Explain orally exactly what is meant by mobilizing labor, and tell what advantages might come from the plan.
3. Give a speech of welcome to our new citizens in the Virgin Islands. Indicate what advantages will come to them as citizens of the United States.
4. From the article on "What Czernin Said" show how an error in composition, accidental or intentional, may lengthen the war.

The Battle Cry of Freedom.

1. You have been asked to write an article to increase loyalty in your school. Prepare the article. If your teacher says that it is satisfactory present it for publication in your school paper.

An Article from the United States Government. The Lost Provinces.

1. Give a short summary of the facts in regard to Alsace-Lorraine.
2. Show in what ways the spirit of Alsace-Lorraine has for centuries been the spirit of France.
3. Write a paragraph in which you show how Germany has continually inflicted wrongs upon Alsace-Lorraine since the forcible annexation in 1871.

What Is a Worthy American? By Vice-President Marshall.

1. Give a short account of the life of Vice-President Marshall.
2. Write an emphatic summary of Vice-President Marshall's beliefs as to what makes a worthy American.

Rochester's Bit. By Donald Wilhelm.

1. Prepare a brief for an argument in which you show that the Rochester Plan should be widely adopted.

Corporal Bill on a Hike.

1. What are the characteristics that make this letter interesting? How does the letter differ from letters such as you are accustomed to write?
2. Deduce from this article a series of rules for the writing of interesting personal letters. Give short illustrations to explain the rules you suggest.
3. Write an interesting letter about some actual experience you have had.

The Battle Cry of Freedom.

1. Write paragraphs based on the following sentences: "It is given to the schoolboy as well as to the soldier to help in the struggle for freedom." "Because we are a composite people we have grown in idealism and in unselfishness." "The great task of our past is still the task of our present and of our future."

SECTION II. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words in the article by Vice-President Marshall: isolation, mature, crucial, potentate, imbued, immaterial, apropos, crisis, evolved, untrammelled.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.  
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. A Campaign for Intelligent Patriotism—"Men of a Hundred Races," "What Is a Worthy American?"

1. According to the first article, what is the "mission of all teachers and all leaders of thought in this nation"?
2. Justify the statement: "Because we are a composite people, we have grown in idealism and in unselfishness."
3. Compare the statements made in the two articles about the influence of the immigrant upon American ideals.
4. How does Mr. Marshall justify his statement: "Democracy . . . is not a system of government"?
5. What is his attitude upon the subject of free speech? Do you agree with him?
6. Mr. Marshall says: ". . . this war shall furnish a new definition of patriotism." Formulate this definition upon the basis of these two articles.

II. War Aims and Peace Terms—"The Two Battles," "What Czernin Said," "A Momentous Message," "Lloyd George's Speech," "Diplomatic Cards on the Table," "The Ukrainian Treaty," "Russia Withdraws from the War," "Trotsky's Opinions."

1. Prove that the President is justified in saying: (a) "Count Czernin seems to see the fundamental elements with clear eyes." (b) "Count von Hertling's reply is . . . very vague and very confusing."
2. Is the President's message a peace message or a war message? How about Lloyd George's speech?
3. What evidence do you find in the various news items that the President's ideal, viz., "open covenants, openly arrived at" is on the way to realization?
4. Locate the new Ukrainian republic on a map and indicate, as far as you can, the borders established by the Treaty of Brest-Litovsk.
5. In what sense is this treaty "the first step toward a lasting peace"? Is Russia's withdrawal another step toward peace or a danger signal which requires a more vigorous prosecution of the war in the west?

III. Alsace-Lorraine—"The Lost Provinces."

1. "The Rhine has always been the natural boundary between the Germanic and the Gallic races." What are the evidences of this?
2. What was the relation of Alsace to the Holy Roman Empire? Under what circumstances did it become a part of the French kingdom?
3. "The German Junkers . . . treated the country as a conquered French province," etc. What are the proofs?
4. What is the present status of the "Lost Provinces"?

IV. European Interests in Africa—"The Question of Africa."

1. "The partition of Africa between the powers had been accomplished . . . just before the war." Trace the steps in the history of this partition.
2. Why is Africa regarded as "the greatest territorial stake in the war"?
3. What proposals for the settlement of the African question have thus far been made? What is the trend of present opinion?

V. The Coming Industrial Democracy—"Mobilizing Labor," "Rochester's Bit," "Report on Labor Unrest."

1. How far does the evidence in the above article and the news item "indicate to those responsible . . . that there is a better way at hand"?
2. "As a nation we know . . . nothing virtually about labor," etc. Are the English in advance of us in this respect?
3. Show how the Rochester business men have (a) coordinated industry in their city, (b) carried out many of the recommendations of the President's Mediation Commission.

VI. The New South—"The South on Easy Street."

1. "Thanks to the present price of cotton, the South is coming into her own." Write a paragraph proving this statement.
2. Explain the sentence: "Cotton is still king; but he is no longer the tyrant and slave driver," etc.
3. How has the Federal Reserve Banking System helped in the economic development of the South?

# THE EQUITABLE

LIFE ASSURANCE SOCIETY OF THE U. S.  
120 BROADWAY, NEW YORK

By the thrift of the people the Nation is strengthened. The most effective teacher of thrift is life insurance.

The Equitable's Outstanding Insurance now aggregates \$1,754,868,908. The New Insurance paid for in 1917 amounted to \$251,344,000, an increase of \$41,637,000 over 1916, and the largest single year's business in the history of the Society.

Its payments to policyholders in 1917 totaled \$62,831,172.

The following items are from the 58th Annual Statement, which will be furnished on request:

ASSETS, December 31, 1917.....		\$576,837,343
INSURANCE RESERVE.....	\$471,914,234	
OTHER LIABILITIES.....	13,620,304	\$485,534,538
SURPLUS RESERVES:		
For Distribution to Policyholders in 1918 ..	\$ 16,065,192	
Awaiting apportionment on deferred dividend policies .....	63,592,355	
For Contingencies. ....	11,645,258	91,302,805
		<u>\$576,837,343</u>

During the year the Equitable invested \$45,889,556 at an average yield of 5.24%.

The Mortality Rate in 1917 was the lowest for the last twenty-five years.

The Equitable issues the following special policies in addition to all varieties of Life, Endowment, and Annuity contracts:

- A LIFE INCOME POLICY under which the insurance is paid to the Beneficiary in the form of a monthly income for life.
- A GROUP POLICY by which an employer protects his employees.
- A CORPORATE POLICY to protect business organizations.
- A CONVERTIBLE POLICY which can be modified to meet changing conditions.
- A BOND providing an income for the declining years of a man or a woman.
- A LIFE ANNUITY providing an immediate income, under which the total return may be more but can never be less than the price paid for the Annuity.
- A NEW POLICY under which if the Insured becomes totally and permanently disabled he will receive a *life income* without reducing the amount payable at his death to the Beneficiary; and under which the Beneficiary will receive *double* the face of the policy if the Insured's death is the result of an accident.

For full particulars apply to the Equitable or to any of its agencies.

W. A. DAY,  
President

# The Independent

WITH WHICH IS INCORPORATED  
HARPER'S WEEKLY

## THE TWO BATTLES

**I**N his address to Congress last week President Wilson dealt another hammer blow at the wedge between Austria and the military and annexationist party in Germany. The address was a reply to the recent statements of the German Chancellor and the Austrian Foreign Minister. But the spirit of his comment on the words of Count von Hertling is altogether different from that of his references to the words of Count Czernin. Of the former he said, "Count von Hertling's reply is, I must say, very vague and very confusing. It is full of equivocal phrases and leads it is not clear where. . . . Is it possible that Count von Hertling . . . is, in fact, living in his thought in a world dead and gone?" Of the latter, on the contrary, the President spoke in no such critical terms. He said: "Count Czernin seems to see the fundamental elements of peace with clear eyes, and does not seek to obscure them." In comparing the words of the two statesmen, he said, "Count von Hertling's reply . . . is certainly in a very different tone from that of Count Czernin, and apparently of an opposite purpose."

This is a sound distinction and one which it is the part of skilful and wise statesmanship to emphasize. Just at this moment Germany has secured, more by good luck than by good management, the unquestioned advantage of the elimination of Russia from the ranks of her enemies. The result is an enormous increase of her fighting power on the

western front. It will take time for that increase to be neutralized by the steadily swelling contribution of the United States. It can and will be not only neutralized but overborne. Germany will be defeated by force of arms, if no other road shall be opened to the peace which means the rendering impotent of the lawless power of German militaristic aggression. For the four great champions of human rights, England, France, Italy and the United States, are an indomitable unit in their determination to achieve that end. But there may be another parallel way by which that sacred purpose may be accomplished. If only Austria, the slave and the dupe of German Kultur, can be won away from that suicidal allegiance, that road may yet be traveled.

The President is clear sighted in his recognition of the fact that we are fighting two battles: one to crush the military power of Germany, the other to arouse the decent and right-thinking sections of the German and Austrian peoples to desert that malevolent power and commit themselves to the path of justice and righteousness. It is plain that he realizes that neither battle can be neglected in favor of the other. To win either one is to win both. It is the function of the American nation to pour out its energy and its resources, material, intellectual and spiritual, in the relentless prosecution of the two ends without distinction.

## WHAT CZERNIN SAID

**A**MERICANS were at first puzzled to understand why the speech of the Austro-Hungarian Foreign Minister on the President's peace terms created such indignation among the militarists of Germany. As reported in our papers Count Czernin's remarks to the Austrian Reichsrat were appended in a fragmentary form to Chancellor von Hertling's address to the German Reichstag and it seemed that Vienna was merely echoing Berlin, altho in a somewhat more friendly tone. It was no wonder that Washington, as well as London and Paris, questioned Count Czernin's sincerity when, as it appeared, in the same breath he coupled a desire for peace with a declaration that Austria would defend to the end Germany's possession of Belgium. The passage as transmitted to the foreign press by the Wolff Bureau of Berlin read:

I think there is no harm in stating that I regard the recent proposals of President Wilson as an appreciable approach to the Austro-Hungarian point of view, and that to some of them Austria-Hungary joyfully could give her approval. But she must first lay down this principle—that in so far as these propositions concern her allies, whether in the case of Germany's possession of Belgium or in the case of Turkey, Austria-Hungary, faithful to her engagements to fight to the end in defense of her allies, will defend the possessions of her allies as she would her own. That is the standpoint of our allies, in regard to which there is perfect reciprocity.

We should have expected that an unequivocal pledge of Austrian support to Germany's predatory designs would have pleased the militarists and disappointed the anti-annexationists. But Count Czernin's speech was received quite the other way in Germany. The Socialist journals alluded to it as "a kiss of peace" and the Pan-German press came as near to calling him a traitor and a deserter as the amenities of the alliance would permit.

To this mystery was added another when Count Czernin said, on the following day, that he had been talking to President Wilson as much as to his auditors and that he had taken measures to see that his message went straight to the President. He did. The American Legation in Switzerland later transmitted the speech entire and in a version that reads very differently. It is much more cordial in its reception of Mr. Wilson's proposals than it appeared to be and the sense of the crucial passage quoted above is quite reversed. The Wolff Agency—in order to save telegraph tolls or for some other reason—telescoped two sentences and left out one word. Where the original reads that Austria-Hungary will defend as her own *den vorkriegerischen Bestand*, "the pre-war possessions," of Germany the word "pre-war" was somehow lost out of the message in transit thru Germany. Then this sentence was hooked up to

# CARTOON COMMENT

## THREE ALLIES AS THEY SEE THEMSELVES

THE ONLY INDUSTRY IN RUSSIA

"Nori Satirikon," of Petrograd, presents this sketch of Russia's progress—industries neglected and falling into decay, the only worker the poisonous spider spinning his web of inertia and death

"THEY SHALL NOT PASS"

Italy proves her right to the phrase that France made famous, according to "Il Numero's" cartoon of the meal of swords that awaited the pack of hungry Teuton wolves on the Italian plains

THE LION'S SHARE

The impregnable German "pill box" is no defense against the British lion. Cartoon from the "Westminster Gazette," England

the preceding one so as to make what he said about the German pre-war possessions apply to Belgium! In the translation received at Washington *via* Switzerland instead of *via* Germany the part of the passage we have italicized reads:

As far as these proposals relate to our Allies—and in them there is mention of the German holding of Belgium and of the Turkish Empire—I declare that faithful to the duties of the alliance which I have accepted I am determined to go to every extreme in defense of our Allies. The state of property of our Allies before the war we shall defend as our own.

What Count Czernin said was that there shall be no dismemberment of empires—just what President Wilson said. Instead of supporting the demands of the extreme German expansionists he is arguing for the *status quo ante bellum*. It may be that he is prepared to back up Germany in holding her conquered territory—but he very ingeniously avoided saying so and that is what angered the Pan-Germans. He leaves the question of the German conquests to Germany and the question of the integrity of the Ottoman Empire to Turkey, just as Chancellor von Hertling refused to discuss the question of Austria's conquests in the Balkans. In the same way the British Government has stated that if France insists upon fighting till she gets back Alsace-Lorraine and Italy till she gets the Trentino, England will stand by them. Both alliances are held together by an agreement that no one country shall make peace without the consent of all the others.

That the Austrian Foreign Minister is desirous of agreeing as far as possible with the President is shown by his acceptance of the proposal to abolish secret diplomacy, altho he, like Mr. Balfour, doubts its practicability. That his speech is not improperly called "a bid for peace" appears from his plain language in conclusion:

As may be seen, then, from this comparison of my views with those of Mr. Wilson, we agree not only on great principles in general, according to which the world is to be newly regulated after the end of this war, but our views also approach each other on several concrete peace questions.

The remaining differences do not seem to me great enough to lead to the belief that a discussion at this point should not bring clearness and *rapprochement*.

This situation, which probably arises from the fact that Austria-Hungary and the United States of America are the two great powers among the two groups of enemy states whose interests least conflict, suggests the thought that an exchange of ideas between these two powers might be the starting point for conciliatory discussions between all states which have not entered into peace conversations.

I trust Mr. Wilson will use the great influence he doubtless has on all his allies that they explain conditions on which they are willing to negotiate and he will have gained the immeasurable merit of having called a general peace conference to life.

Bismarck once said in denouncing an opponent: "He lies like a telegram." Nobody knew better than Bismarck how to make a telegram lie, for by a slight condensation of the Ems dispatch he turned the Emperor's frank refusal into a rude rebuff and so precipitated the Franco-Prussian War. It is possible that the Wolff Bureau, by adopting the Bismarckian tactics, may become responsible for as many months of war.

## MOBILIZING LABOR

WE invite the attention of the Government of the United States and its various subdivisions to the article published elsewhere in this issue entitled "Rochester's Bit" by Donald Wilhelm. It should indicate to those responsible for getting things done that there is a better way at hand. A plan has already been worked out on a municipal scale, which if applied nationally would solve labor's chief war time problem.

Governmentally, labor in America is about as intelligently handled as one might expect in South Africa. We are in a savage, aboriginal state. With transportation good enough to permit labor to flow evenly in accordance with demand and supply there is no intelligent direction given its flow. There is talk of labor shortage; and no one knows, and the

Government does not, whether there actually is a shortage. And tho a reorganization of the Department of Labor is at last approved by the President and even by the Secretary of Labor, this reorganization comes late, but better of course late than never—which is also good South African idiom, by the way.

As a nation we know something about our interior resources—much about forest conservation, for instance, a little about coal, a little, more or less, about nearly every national resource, yet nothing virtually about labor, nothing about its quantity. The Government does not know thus how many men there are, even in the present crisis, out of employment. It does not know how many are out of employment in any particular state; it hardly knows how many are out of employment in any particular city. It knows practically nothing about how many men are misemployed. Recently a Connecticut munition company, to illustrate, requested from the department about one hundred skilled machinists. The department sent that number of mere machine operators. The Government does not know how many women are now employed in mechanical work or in any other kind of work, whereas the English Government not only knows precisely all about the qualifications and distribution of its men workers, but it has a well established bureau of experts and engineers in what it calls "The Dilution Section" of the Ministry of Munitions, which is engaged in determining scientifically just what work women in munition plants and other plants can do and in just what instances women can supplant men, who are released accordingly for the army.

Let the Department of Labor, forthwith, consider the feasibility of organizing on a national scale the industries of the nation as Rochester has organized hers within her boundaries. The need is imperative. The opportunity must be seized, if democracy is to provide the material of the war quickly and efficiently.

## OUR NEW CITIZENS

THOSE who assume that expansion means exploitation and imperialism is synonymous with oppression may read with profit the St. Thomas *Bulletin* of January 17. It will be remembered that when the Virgin Islands were purchased from Denmark the inhabitants were given until that date to decide whether they wished to remain subjects of the King of Denmark or become citizens of the United States. Needless to say but few chose the former alternative and the islanders have added Citizenship Day to their already long list of holidays. The occasion was appropriately celebrated in the good old-fashioned Fourth of July style; flags on all the buildings and in everybody's hands, parade of the school children, fire brigade, Boy Scouts, labor unions and Good Templars, baseball, tug of war and torchlight procession, not forgetting the greased pole and pig. The orator of the day, Mr. Leroy Nolte, undoubtedly expressed the sentiments of the new citizens when he said

I cannot avoid looking backward to that memorable day, not quite a year ago, when we assembled on this very spot and with mingled feelings of sorrow and gladness witnessed the lowering of the dear old flag under which we were born, and the raising of the new emblem of nationality—sorrow at parting with the tried and true, gladness at having come at last under the banner for which we had for generations longed. By annexation to the United States, Denmark saw a flourishing prospect for the islands, and the islanders, who had long clamored for the change, shared that view. Its realization surely begins from today.

The speaker reminded his hearers that citizenship brought its duties as well as its advantages, and closed with the expression "of our profound satisfaction and gratitude and sincerest desires for success to our distinguished First Citizen, Honorable Woodrow Wilson, to our valiant army and navy, and to our own United States of America."

This is an annexation in which America can take unalloyed pride. The transfer had the consent of the Danish

Parliament and people, the approval of the American President and Senate and the acclamation of the islanders. We do not believe they will ever regret it. None of our annexed territories has ever regretted it, whether they were obtained by purchase like Louisiana and Alaska or gained by conquest like New Mexico and California or joined as independent states like Texas and Hawaii. The war has prevented our taking as much interest in the development of the Virgin Islands as we otherwise should, but that will come later. If, as the local legislature proposes, the islands follow the example of many of our states in adopting prohibition they will do more for their own prosperity and happiness than any outsiders can do.

May all future annexations by the United States be as honorable and beneficial as this.

## THE RETURN OF T. R.

THEODORE ROOSEVELT has never returned from a strenuous and dangerous journey, whether to the battle-fields of Cuba, the hunting grounds of Africa, or the fever-haunted waters of the River of Doubt, without receiving a hearty welcome from the American people. No less sincere and whole hearted is their greeting to him as he emerges into safety from the uncertainties of the operating room and the discomforts of the hospital bed. The whole nation returns thanks for his steady progress on the road to recovery. We cannot spare him yet.

## THE QUESTION OF AFRICA

THE greatest territorial stake in the war is Africa. Whichever side wins and however complete the victory there will be no very extensive changes of boundaries in Europe. Asia Minor may be more altered, but Asia Magna, the two Americas and Australasia will not be materially affected. But the entire continent of Africa is involved in the war and the larger part of it may form the victor's spoils. The partition of Africa had been accomplished, with the exception of Abyssinia, just before the war, but now the map may be altogether rearranged.

All countries now realize the potential value of tropical possessions as sources of raw materials and visions of Africa dazzle the eyes of the Chauvinists of every nationality. The Germans dream of establishing in Africa "an enticing Garden of Eden for all the Germanism on the earth which is weary and oppressed and has had its courage broken in this unhappy world-catastrophe by English and North American persecution." To quote further from Herr Zimmermann in the November *Preussische Jahrbucher*:

The Great War will establish the development of mankind for the next hundred years. If it makes Central Africa German, fifty years hence 500,000 and more Germans can be living there by the side of 50,000,000 blacks. Then there may be an army of 1,000,000 men in German Africa, and the colony will have its own War Navy like Brazil. It will be a valuable ally for South America against North American aggressions, and with such a sphere of power the United States will have to reckon.

On the other hand the British press and Government have declared that never again shall any of the poor natives be put back under German tyranny. Italy, as we learn from the secret treaty published by the Bolsheviks, was promised by England and France a free hand in Abyssinia, the last of the independent African states, except Liberia.

But recently there has been growing a conviction that the African question might be settled in some better way than "the good old rule, the simple plan that those should get who have the power and those should keep who can." The British Labor Party last year published and approved the plan of Morel's pamphlet, "Africa and the Peace of Europe," which proposes putting all the central African colonies under the permanent control of a League of Nations. This proposal was brought forward in the House of Commons, May 16, 1917, by Commander Wedgwood as follows:

Is there not a possibility of safeguarding the situation and yet safeguarding the face of the German nation by internationalizing the tropic colonies in Africa? It seems to me that if the Germans give up the same area as we gave up, and the French gave up, and also the Belgians, and the Portuguese, possibly, and you put that area as a belt right across Africa, under international control, preferably with an American executive head, so that every nation could trade alike in that area and the blacks would be treated with the greatest possible consideration, as they always are treated by the Americans because after all the Philippines are possibly better run under America than are the best of our colonies—you will safeguard the native races and at the same time prevent that scrambling for raw materials coming from tropical Africa which exists at the present time.

The Bolsheviks propose to treat the African savages the same as the Alsations and Poles and have them settle their sovereignty by a popular referendum. This is reducing democracy to an absurdity. Equally absurd and equally characteristic of the opposite type of mind is the German counter proposal that certain African tribes having fought on the side of the Germans, this fact should be regarded as conclusive proof of their desire to remain subjects of the Kaiser. Hardly less absurd is Lloyd George's proposal that the native chiefs should decide the question of the future of the country. In the old days it was easy for German, British or French agents to get native chiefs to sign away any desired territories for a handful of gewgaws and a bottle of rum. That is the way Africa was formerly partitioned, but both the Premier and the President now agree that the African claims ought to be settled by an impartial international conference with special reference to the interests of the natives.

We must recognize three facts:

First, that Africa cannot much longer remain in savagery. All the waste places of the world will have to be cleared up and their natural resources developed by industry and spread by commerce for the benefit of every land. This may be done by one nation, by various nations or by international organization.

Second, that the uncivilized natives of Africa cannot, in their present state of development, be expected to compare the various types of administration, existing or proposed, and determine which would be to the greatest advantage to their posterity and the outside world. The question of sovereignty must be settled soon and settled for the present by Europe and America with little help from Africa.

Third, as the President says, "in determining such questions of sovereignty the interests of the population must have equal weight with the equitable claims of the government whose title is to be determined."

This points the way to a settlement of the African problem by some sort of international organization. Whether this organization shall determine merely the fate of the German colonies or whether it shall consider other readjustments conducive to peace or whether it shall assume permanent jurisdiction of part or all of central Africa are questions yet to be answered. The seven powers that have taken part in the colonization of Africa are England, France, Spain, United States, Italy, Germany, Belgium and Portugal. These of course should have seats around the council table, but probably also an invitation should be extended to other belligerent or neutral powers. There should also be representatives of Union of South Africa, Egypt, Algeria, Tunis, Morocco, Tripoli, Liberia, Abyssinia and other African countries, which can send spokesmen qualified to set forth their interests. Such a conference called after the war might be actuated by more soberness and less selfishness than the African conferences in which America formerly took part, that of Berlin in 1884 and that of Algeciras in 1906. Altho Africa affords the greatest danger of international conflicts it also offers the best opportunity for international adjudication, for the continent is still so sparsely settled and the boundaries still so elastic that rival claims can be adjusted by compromise without the wrongs and resentment that would follow such readjustments in Europe.

# THE STORY OF THE WEEK

## A Momentous Message

President Wilson apparently is succeeding in getting diplomacy out of its underground hiding-places. Each of his messages on war aims, delivered nominally to Congress, but really to the world, has been a blow at secret international bargains and for a democratic peace. His reply of February 11 to the recent statements of the German Chancellor and the Austrian Premier marked an advance in this method.

President Wilson makes a clear distinction between the reply of Chancellor von Hertling and that of Count Czernin. In this he differs from the recent pronunciamento of the Supreme War Council at Versailles. President Wilson notes Count Czernin's friendly tone. "He seems to see the fundamentals of peace with a clear eye; and does not seek to obscure them." The President expresses the view that Count Czernin "would have gone much farther had it not been for the embarrassments of Austria's alliances and of her dependence on Germany."

Count von Hertling's reply the President subjects to a merciless analysis. The President states:

It is full of equivocal phrases and leads it is not clear where. But it is certainly in a very different tone from that of Count Czernin, and apparently of an opposite pur-

## THE GREAT WAR

*February 8*—Spain removes embargo on supplies to Pershing. Central Powers demand peace of Rumania.

*February 9*—Ukraine makes peace with Central Powers. Poles capture Smolensk from Bolsheviks.

*February 10*—Ex-Sultan Abdul Hamid dies. Russia withdraws from the war and demobilizes all armies. Pershing reports two wounded and ten deaths from disease.

*February 11*—President addresses Congress in reply to German and Austrian peace proposals. Pershing reports four killed, six wounded, three captured and three deaths from disease.

*February 12*—Lloyd George addresses Commons on peace terms. Lithuania declares independence.

*February 13*—Red Guards losing ground in Finland. Pershing reports six wounded and seven deaths.

*February 14*—U-boats sink thirteen British merchantmen over 1600 tons, six smaller and three fishing craft. Pacifist motion in Parliament defeated, 159 to 28.

the body of any final settlement. He is jealous of international action and of international council. He accepts, he says, the principle of public diplomacy, but he appears to insist that it be confined, at any rate in this case, to generalities, and that the several particular questions of territory and sovereignty, the several questions upon whose settlement must depend the acceptance of peace by the twenty-three states now engaged in the war, must be discussed and settled, not in general council, but severally by the nations most immediately concerned by interest or neighborhood.

He will discuss with no one but the representatives of Russia what disposition shall be made of the peoples and the lands of the Baltic provinces; with no one but the Government of France the "conditions" under which French territory shall be evacuated; and only with Austria what shall be done with Poland.

Unequivocally President Wilson rejects the sort of peace that the Chancellor's message would seem to offer, a peace "of shreds and patches." The individual items of the peace each will affect the whole world. They cannot be discussed separately or in corners. Each must be "submitted to the common judgment whether it be right and fair, an act of justice, rather than a bargain between sovereigns."

The President sets forth the American attitude in a notable paragraph:

Is Count von Hertling not aware that he is speaking in the court of mankind, that all the awakened nations of the world now sit in judgment on what every public man,

pose. It confirms, I am sorry to say, rather than removes the unfortunate impression made by what we had learned of the conferences at Brest-Litovsk.

His discussion and acceptance of our general principles lead him to no practical conclusions. He refuses to apply them to the substantive items which must constitute

TEN THOUSAND SOLDIERS IN THE MAKING

Just a part of the morning drill at one of our army camps—it's an impressive sight, isn't it, both from the point of view of numbers and of army excellence—ten thousand men going thru their setting up exercise with all the vigor and precision of a smooth-running machine

## THE BASES OF PEACE

### From President Wilson's Address of February 11

*The principles to be applied are these:*

*First, that each part of the final settlement must be based upon the essential justice of that particular case and upon such adjustments as are most likely to bring a peace that will be permanent;*

*Second, that peoples and provinces are not to be bartered about from sovereignty to sovereignty as if they were mere chattels and pawns in a game, even the great game, now forever discredited, of the balance of power; but that*

*Third, every territorial settlement involved in this war must be made in the interest and for the benefit of the populations concerned and not as a part of any mere adjustment or compromise of claims against rival states; and*

*Fourth, that all well defined national aspirations shall be accorded the utmost satisfaction that can be accorded them without introducing new or perpetuating old elements of discord and antagonism that would be likely in time to break the peace of Europe and consequently of the world.*

*A general peace erected upon such foundations can be discussed. Until such a peace can be obtained we have no choice but to go on.*

of whatever nation, may say on the issues of a conflict which has spread to every region of the world? The Reichstag resolutions of July themselves frankly accepted the decisions of that court. There shall be no annexations, no contributions, no punitive damages. Peoples are not to be handed about from one sovereignty to another by an international conference or an understanding between rivals and antagonists. National aspirations must be respected; peoples may now be dominated and governed only by their own consent. "Self-determination" is not a mere phrase. It is an imperative principle of action, which statesmen will henceforth ignore at their peril.

President Wilson reiterates that the war had its roots in the disregard of the rights of small nations, and he insists that covenants must be entered into to "render such things impossible for the future." Justice and the rights of peoples, he states, are as important as fair and equal conditions of trade. Alone the military and annexationist party of Germany stands in the way of a just peace. "The tragical circumstance," says Mr. Wilson, "is that this one party in Germany is apparently willing and able to send millions of men to their death to prevent what all the world now sees to be just."

Summing up, the President says:

Our whole strength will be put into this war of emancipation—emancipation from the threat and attempted mastery of selfish groups of autocratic rulers—whatever the difficulties and present partial delays. . . .

We believe that our own desire for a new international order, under which reason and justice and the common interests of mankind shall prevail, is the desire of enlightened men everywhere. Without that new order the world will be without peace and human life will lack tolerable conditions of existence and development. Having set our hand to the task of achieving it, we shall not turn back.

His fourteen provisions for peace, offered on January 8, President Wilson compresses into the four principles, to be applied in any further discussion, which are republished verbatim at the top of this page. He states them particularly for Count Czernin. They are the sort of principles that lie close to the heart of every American.

The message called forth a remarkable outburst of enthusiasm in the liberal British press.

#### Lloyd George's Speech

As formerly the British Premier and the American President deliver their addresses on peace terms almost simultaneously and, as formerly, they are substantially in unison on the main points. But on one point ex-Premier Asquith is in closer agreement with Mr. Wilson than is Mr. Lloyd George, and that is in regard to the German and Austrian proposals. Mr. Asquith who, tho belonging to the same party as the Premier, now plays the role of leader of the opposition, in replying to the King's speech at the re-opening of Parliament said:

The President discriminated justly, both in regard to the tone and substance, between the declarations of the German and Austrian Chancellors. It would seem as tho, as President Wilson said, the military party in Germany alone rejected and would have nothing to do with a peace based upon lines which, in principle at any rate, the whole of the rest of the world is ready to accept.

But Premier Lloyd George, in answering Mr. Asquith, said:

It is perfectly true, as far as the tone is concerned, that there is a great difference in the Austrian and German speeches. But I wish I could believe there is a difference in substance. I cannot altogether, and I regret it, accept the interpretation of the Czernin speech. It was extraordinarily civil in tone and friendly. But when you come to the real substance of the demands put forward by the Allies it was adamant. It put Mesopotamia, Palestine and Arabia in exactly the same category as Belgium. They were to be restored to the Turks on the same conditions presumably as those on which Germany was to restore Belgium.

Mr. Lloyd George could not believe that Chancellor von Hertling was serious in suggesting that England should relinquish her coaling stations in all parts of the world, for they had always supplied coal to German merchant and naval vessels as well as English. In regard to the situation in France he

spoke more pessimistically than ever before:

Up to the present the Allies have had an overwhelming majority of troops upon the western front. Gradually, even rapidly, that superiority has diminished, especially during the last few weeks. In spite of the undertaking given by the Germans to the Russians that during the period of the armistice no troops would be moved from the east to the west, they are moving them as speedily as railway and transport arrangements will allow. Up to this year there was no attack which the Germans could bring to bear upon either our army or upon the French army which could not in the main have been dealt with by the reserves of each individual army.

The situation has been completely changed by the enormous reinforcements brought from the east to the west, and the allied representatives at Versailles had to consider the best methods of dealing with a situation which was a completely different one from what it was before.

It is absolutely essential that the whole strength of the armies of France, Britain, Italy and America should be made available for the point at which the attack comes. Where would the blow come? Will it come here, or there, or there? Who can tell? All we know is that it is preparing. They have a gigantic railway system behind, which can swing it here and there, and it is essential that arrangements should have been made by which the Allies should treat their armies as one to meet the danger and menace, wherever it comes.

The Premier flatly refused Mr. Asquith's demand for information as to what action the recent conference of the Allies at Versailles took in regard to securing unity of command for the Allied armies. A pacifist resolution by Richard Holt, radical, expressing regret that the Versailles War Council had declared "the prosecution of the military effort to be the only immediate task of the Government," was voted down by 159 to 28.

## THE SALUTES OF FOUR NATIONS

There is an interesting comparison in this photograph, taken in France, of the different methods of salute in the Allied armies. At the extreme left is the French salute, then the English, the Scotch and the American

## The American Sector

It is known in a general way that the American contingent is stationed on the south flank of the German salient of St. Mihiel, but the extent of the front entrusted to their charge is not given out. The Germans reported in December the capture of Americans on the Marne-Rhine canal, which is east of Nancy, and in January on the front near Sivry, which is straight north of Nancy. But either these were small detachments perhaps sent into the front trenches for practise or the position of the Americans has been shifted, for Washington now reports them "northwest of Toul." The only village specified is Seicheprey, eleven miles east of St. Mihiel, and it is surmized that the American sector extends for several miles along this front between Flirey and the forest of Aprement. The line east and west of the American position is held by French forces.

So far operations on this front have been confined to artillery duels, aeroplane observations and the capture of patrols by both sides. An American patrol of fourteen men, sent out into No Man's Land on the evening of the 8th to inspect the enemy entanglements, was suddenly attacked by the Germans, throwing grenades and yelling "Kamerad!", the customary sign of surrender. Five of the Americans were captured, four killed and two wounded. The fight lasted only about a minute and a half. The American artillery promptly directed its fire on the German trenches and they were showered with shrapnel all the next day.

## The "Tuscania" Victims

Of the 2179 soldiers who were on the "Tuscania" when she was torpedoed on February 5, there have been recovered sixty-four bodies and 1842 survivors are reported. Many of the bodies cannot be identified either because they were so mu-

tilated by being dashed among the rocks or because the tags hung on their necks had not yet been stamped with numbers. The coast of Scotland on which they were cast is barren and not enough lumber could be found to make coffins even by cutting down the only clump of trees, so forty-four bodies were wrapt in canvas and buried in one grave.

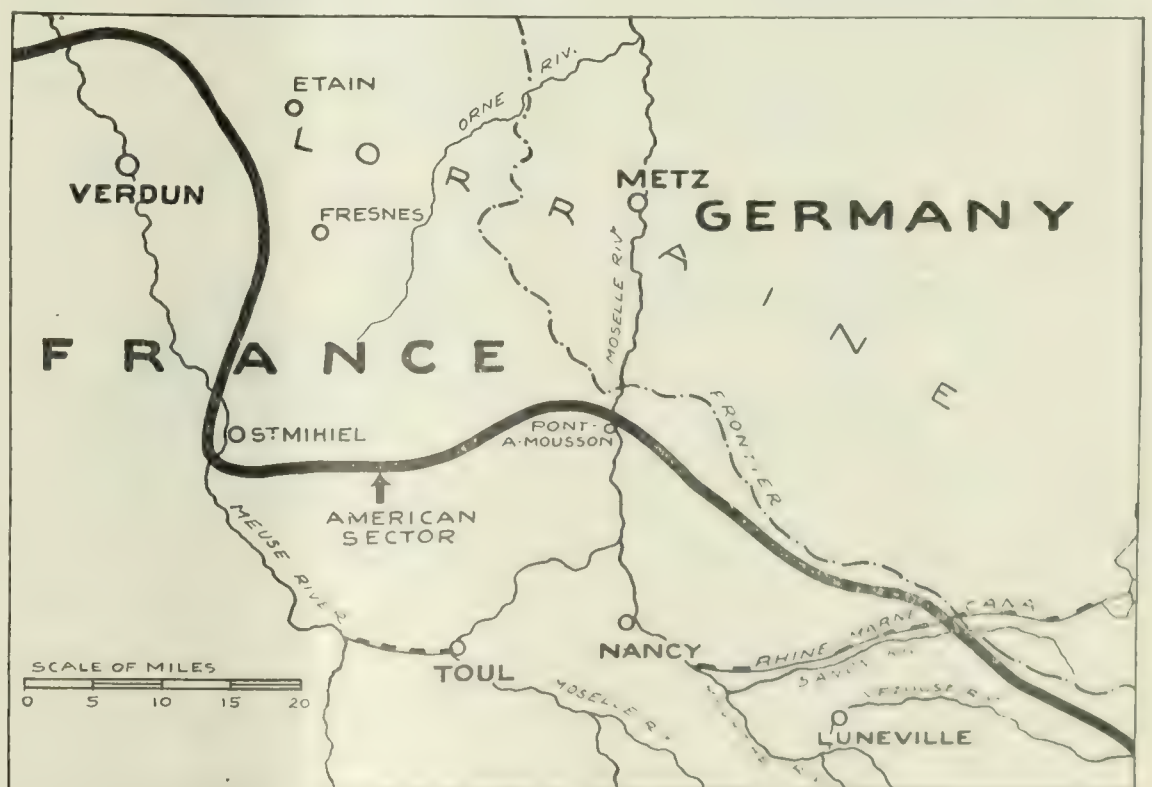

The "Tuscania" was struck at six o'clock on the evening of Tuesday, apparently by a submarine that had been lying in wait for the convoy. Two torpedoes are said to have been fired, one of which passed astern and the other exploded on the starboard side near one of the boilers. Most of the eight lifeboats on that side were disabled and the ship listed rapidly in that direction. The electric lights were instantly put

out all over the ship and as it was then quite dark with no moon, the boats were launched with difficulty. The American soldiers lined up promptly at their appointed posts with lifebelts on and maintained perfect order until they were taken off as the ship went down two hours later. As they stood on the deck of the sinking ship they sang "The Star Spangled Banner," which was soon echoed by the strains of "God Save the King," from the marines on the British destroyers coming to the rescue. Some of the Americans, thrown out by the capsized boats or carried down with the vessel, were in the water for several hours before being picked up by trawlers, but by four o'clock next morning most of the survivors were landed safely at Irish and Scottish ports. The effect of the disaster on America was to stimulate recruiting as soon as the news was received.

## Our Futurist Shipping

If some ancient mariner were to return to one of our eastern ports these days he would think the shipping world had gone mad. The submarine has called forth the camouflage artist, and the camouflage artist has painted our transatlantic vessels with bizarre designs in all colors of the rainbow. Imaginative writers used to dwell on the kaleidoscope of shipping in great harbors like New York. The term is thoroly applicable today, for our harbors are as colorful as operatic pageants. Half of some great ship will be painted a delicate baby blue and the other half will be an arrangement in great circles and stripes and bands in black, green, yellow and pink. Another vessel will appear drest in a succession of waving colors ranging from pink to purple. A steamship no longer resembles a steamship. It looks like a futurist nightmare.

There are two rival schools of marine camouflage. One works on the theory of low visibility and the other

## THE AMERICAN SECTOR

The American troops in France have been assigned to an important post near the boundary dividing French from German Lorraine, and directly between the German fortress of Metz and the French fortress of Toul. If the Germans should direct their spring drive from the Lorraine flank this would be the pivotal point.

one strives for what is called the dazzle effect. The low visibility camouflage paint the ships in waving lines with the basic light-ray tones—reds and greens and violets—with the idea of having the vessels merge with the atmosphere and disappear. The dazzle school goes in for a system of marvelous designs and colors calculated to confuse the aim of enemy gunners. Even our battleships have succumbed to the lure of strange pigmentation. The sober "fighting gray" battleship color is a thing of the past. Our fighting craft go to their grim business in the war zone made up like a Russian ballet.

**The Ukrainian Treaty** The treaty signed at the Brest-Litovsk conference begins with a preamble stating that the Ukrainian people, having declared their independence of Russia, desires

To take the first step toward a lasting world's peace, honorable to all parties, which shall not only put an end to the horrors of war, but also lead to the restoration of friendly relations of the peoples in political, legal, economic and intellectual realm.

The western boundary of the new republic is the only one defined. This begins at Tarnograd on the northern border of Galicia and follows an irregular line northward along the old division between Poland and the Ukraine. It does not appear that Austria consents to sacrifice any of the territory in Galicia or Bukovina inhabited by the Ruthenians, who, being of the same race as the Ukrainians, are anxious to join the new nation. But it is stated in regard to the boundary that

This will be fixed in detail by a fixed commission according to ethnographical conditions and with a regard to the desires of the population. Should the Ukrainian people's republic yet have common frontiers with another of the powers of the quadruple alliance special agreements will be made thereon.

Diplomatic and consular relations are to be at once established and commerce resumed. Provisions are made for the evacuation of territory, the exchange of war prisoners and interned civilians, for the care of burial plots of those fallen in enemy territory, and for the release of merchant vessels. No indemnities are claimed on either side, except for civil damages caused by the laws of war or by acts contrary to international law:

The contracting parties mutually renounce the reimbursement of their war costs—that is to say, the state expenditure for carrying on the war, as well as indemnification for damages, that is to say, those damages sustained by them and their subjects in the war, as their military measures, including all requisitions made in the enemy's countries.

**The First Peace** At two o'clock on Saturday morning, February 9, the representatives of the new Ukrainian republic and of the Quadruple Alliance of Germany, Austria-Hungary, Bulgaria and Turkey signed a treaty of peace at Brest-Litovsk. Dr. Richard von Kühlmann, the German Foreign Minister, opened the sitting with the speech:

Gentlemen: None of you will be able to close his eyes to the historical significance of this hour at which the representatives of the four allied powers are met with the representatives of the Ukrainian people's republic to sign the first peace attained in this world war.

This peace, signed with your young state, which has emerged from the storms of the Great War, gives special satisfaction to the representatives of the allied delegation. May this peace be the first of a series of blessed conclusions—peace blessed both for the allied powers and for the Ukrainian people's republic, for the future of which we all cherish the best wishes.

The president of the Ukrainian delegation, Mr. Sevruiuk, said in response:

We came here in the hope that we should be able to achieve a general peace and make an end of this fratricidal war. The political position, however, is such that not all of the powers are met here to sign a general peace treaty. Inspired with the most ardent love for our people, and recognizing that this long war has exhausted the cultural national powers of our people, we must now divert all of our strength to do our part to bring about a new era and a new birth. We are firmly persuaded that we conclude this peace in the interests of great democratic masses and that this peace will contribute to the general termination of the Great War.

**Russia Withdraws from the War** On Sunday, February 10, the very next day after the

Ukraine had made peace with the Central Powers, the president of the Russian delegation at the Brest-Litovsk conference announced that "while Russia was desisting from signing a formal peace treaty, it declared the state of war to be ended with Germany, Austria-Hungary, Turkey and Bulgaria, simultaneously giving orders for complete demobilization of Russian forces on all fronts."

Diplomatic and commercial relations will be immediately resumed. In fact,

**THE BIRTH OF A NATION** Ukraine, or the People's Republic of the Ukraine, which comes into existence by a treaty with the Central Powers at Brest-Litovsk, comprises some 40,000,000 inhabitants and an area larger than France or Germany. The western boundary, as defined by the treaty, gives the new nation a considerable slice of Polish territory. The other boundaries are undetermined. Rumania has taken possession of Bessarabia. Crimea has declared independence. On the west the Ukrainian claims conflict with those of the Don Cossacks. The Bolsheviks are fighting the Ukrainians and claim to hold Kiev and Kharkov

German and Austrian commissions are already in Russia making arrangements for the purchase of grain, meat and metals. All the German and Austrian prisoners in Russia and Russian prisoners in Germany will now be allowed to return to their native land if they like. But the German and Austrian authorities have established a political quarantine along the frontier and refuse to admit those of their men who have imbibed revolutionary principles while imprisoned in Russia.

But Germany and Austria will not receive so much immediate relief from Russia in the way of supplies as might be expected, for Petrograd and the northwestern provinces are on the verge of famine. This part of Russia is always dependent upon the grain fields of Siberia and Ukrainia and now it is impossible to get the necessary amount. The Ukrainians have declared their independence of the Bolsheviks at Petrograd and opened their doors to the Austrians. The Cossacks hold the Don region to the east of the Ukraine and a Cossack army under General Semenov is advancing westward from Harbin, Manchuria, with the design of seizing the trans-Siberian railroad as far as Tomsk.

The railroad trains are running irregularly or not at all. Bands of soldiers board them at will and rob the passengers of their baggage and even of their clothes. Those who have grain are hoarding it because the paper rubles which the Bolshevik presses keep printing off are of very little value.

By abolishing the middlemen the Bolsheviks have cut the connection between producer and consumer. By declaring the confiscation of all privately owned land they have thrown all agriculture into disorder and crops cannot be put in, for nobody knows what land he will be allowed. To meet this emergency Bolshevik agitators have been sent out into the provinces under the following instructions from Premier Lenine:

We have taken the land to give it to the poor peasants. Do not let the rich peasants or exploiters get the agricultural implements. Pit ten poor peasants against every rich one. The police are dead and buried and the masses must take affairs in their own hands.

External war is finished or is being finished now. Internal war begins, but not a war with arms. This is an economic war. The masses must take back what has been stolen from them. The rich, who have hidden their wealth, think the masses will pull them thru. Somehow, we must uncover the hidden wealth or, otherwise, the Bolshevik Government is bankrupt. The republic needs 28,000,000,000 rubles annually. Its prospective income is only 8,000,000,000 rubles.

**The Losses of Belgium** Many of the losses of Belgium thru the ravages of the war are obviously incapable of calculation in pecuniary terms. Those which can approximately be thus computed have been recapitulated by the Belgian Government to the amount of about \$1,600,000,000. These comprise enforced war contributions, \$288,000,000; special war contributions and penalties exacted, \$80,000,000; abstracted industrial equipment and material, as estimated by a

#### AN ATTACK, FOR PRACTISE, OVER THE LABYRINTH OF TRENCHES

There are samples of many sorts of trench construction in the terrain of this army camp—the men in digging them learned how to meet the various problems of trench defense. Now they are practising attack and the trenches have become for the moment enemy possessions to be captured

German authority, \$400,000,000; and losses thru the stoppage of industries and the destruction of property. These figures may be regarded as an earnest of the demands for Belgian restoration which will be presented to Germany at the end of the war.

**Brazil as a Belligerent** Indications multiply that Brazil, strongly sympathizing with the United States, and bitterly resenting German intrigues and overt acts against her integrity and peace, may soon enter the war as an active belligerent of no inconsiderable strength. The thirty German ships which Brazil seized upon her formal declaration of war with Germany have been turned over to France, being chartered by the latter for war transportation purposes. They have a total tonnage of about 120,000, and will probably first be used in carrying to Europe the 2,500,000 tons of wheat recently purchased in Argentina by the Allies.

This will of course relieve some of the pressure upon American shipping and enable this country to transport more troops and their supplies to France.

The Brazilian Government has also entered upon a notable increase and mobilization of its army. Before the war that army consisted of only 18,000 men, tho with officers enough for more than twice that number. Now it is being increased to a first line of 100,000 and a second line of 500,000, while according to Senator de Mello Machado its numbers will reach 2,000,000 before the end of the year, and several hundred thousand will be sent to the battle front in France. Since Brazil has a population of nearly 24,000,000, not counting Indians, the creation of such an

army would not be impossible, and in the present spirit of the Government and people the sending of a considerable levy to Europe would not be at all surprising.

#### Diplomatic Cards on the Table

The New York *Evening Post* has printed the full texts of the secret treaties and documents of the Russian Foreign Office, made public by the Bolshevik Government, which we discussed in *The Independent* of January 12. Hitherto these interesting documents had appeared in this country only in fragmentary form. Their appearance at this time gives a peculiar point to President Wilson's recent statement of his first condition for a durable peace, viz., "open covenants, openly arrived at, after which there shall be no private, international understandings of any kind, but diplomacy shall proceed always frankly and in the public view."

The most startling of the documents, one not hitherto made public here, is a telegram from the Russian Chargé d'Affaires at Berne telling of a series of conferences there last September between certain German, Austrian and French bankers, and including an English financier, at which terms of agreement were discussed whereby Germany could yield something to the Allied demands and compensate herself at the expense of Russia, particularly by pursuing a policy of separatism for Russia, to split her up into small states which could be dealt with separately. This is, of course, the policy Germany is pursuing today, without protest from the other powers.

The secret agreements of the Allies

whereby Italy and Rumania were to receive specific territorial compensation for entering the war had been printed in part before, but not with such a wealth of detail. The extent of the Italian "concessions," agreed to under the signatures of Sir Edward Grey, Jules Cambon, Marquis Imperali for Italy and Count Benckendorf for Russia, are a bit staggering. One clause of this treaty of sixteen separate articles specified that the Pope was to have no voice in the peace conference.

A curious phase of the documents is contained in a confidential Russian report on Rumania, which indicates that the Czar's Government did not find the Rumanian disaster disagreeable. The statement throws a light on why the Russian reinforcements for Rumania never came.

#### Doing Our Bit Better

President Wilson's system of open diplomacy, setting forth our war aims and peace terms clearly before the world and constantly amplifying and clarifying them, has had a tonic effect on the morale of the nation. It is apparent that an ounce of frankness is more effective than tons of hate propaganda in welding the people together.

A prominent public man remarked the other day that the number of traitors seemed to be decreasing. Now that we are emerging from our period of frenzied chauvinism, there is a general realization that in the main traitors are made, not born. They are made by intolerance, autocratic methods in high places, deportations, mob violence. They have been killed off in great numbers by President Wilson's frank statements.

Here and there, it is true, they are still being manufactured. This week a mob of "patriots" in southern Illinois dragged two "alleged I. W. W. leaders" from their homes and tarred and feathered them, but such cases are becoming less common. Less and less is patriotism being confused with rash injustice. More and more is a distinction being made between doing one's bit and merely champing at it.

**The Giant Strides Ahead** The stumbling giant, as Senator Wadsworth called Uncle Sam, was moving forward on his toes this week.

Secretary Baker turned his sword into a shears and did some effective cutting of red tape. He effected a complete reorganization of the General Staff into five coördinated divisions, as follows:

An executive division having chiefly to do with coördinating the work mapped out for the others and incidentally having the military intelligence, service promotions and assignments and the militia bureau under its control. A war plans division. A purchase and supply division. A storage and traffic division. An army operations division.

President Wilson got the heads of the Food and Fuel Administrations, the Director of Railroads, and Chairman Hurley, of the Shipping Board, to coöperate in a comprehensive plan to clear up the railroad tangle and rush to the seaboard for shipment supplies of food and other necessities urgently needed by the Allies. Some 300 carloads were got under way—a substantial start. It was announced that thousands of tons must be shipped immediately, even if the program of the National Army is held up temporarily. Railroad Director McAdoo put an embargo of several weeks' duration on all freight not vitally essential to the production of food, fuel, ships and munitions. Plans were also arranged for eliminating non-essentials from our ocean-going ships.

Under milder weather the railroad conditions so improved that the "fuel-less Mondays" thruout the eastern part of the country, originally decreed to last until March 24, were discontinued. All round there was a distinct evidence of increased cohesion and momentum in our war effort.

**A Contrast in Labor** The first of a series of labor mass meetings under the auspices of the American Alliance of Labor and Democracy was held in New York on February 10. On the same day reports of a remarkable speech made by Arthur Henderson, leader of the British Labor Party, insisting that peace, when it comes, be a people's peace, and demanding that the Allied terms be restated and purged clearly of all traces of imperialism, was cabled to American newspapers, and reports of the full text of the remarkably comprehensive outline of war aims and peace terms adopted by the recent British Trade Union Congress arrived in New York by mail.

No echo of British labor's democratic

Darting in New York Tribune

#### THE WEAK PLACE IN THE LINE

program found voice at the meeting in New York. Officers of the American Federation of Labor who spoke emphasized the idea that they were opposed to any concrete discussion of war aims or peace on the part of American labor. Reading the excerpts from these speeches and also the views of the British labor leaders, in the newspapers next morning, one was conscious of a curious discrepancy.

Leaders of the American Federation of Labor have backed the Administration heartily in every phase of its war activities, and the President has had occasion to commend their loyalty. At the same time the leadership of American labor has been singularly inarticulate

Mr. August Phillips

**THE NEW MINISTER FROM HOLLAND** The tendency to insist on straightforward business methods in international dealings nowadays is bringing a new type of man into diplomatic circles—a man of executive ability, progressive policies and dynamic personality. Holland's recent appointment of a minister to the United States is a case in point. Mr. August Phillips has achieved distinction in his own country as a progressive thinker and a successful business man. He is one of the youngest ministers to be appointed to so important a position

late so far as any constructive suggestion is concerned on the sort of world we are to live in after the war. During the past year French labor has made its voice heard on several occasions. Its opposition to imperialist aims was largely responsible for the downfall of the Ribot cabinet. The far-sighted plans of the British Labor Party are attracting attention the world over. Its leaders are both coöperating with and amplifying President Wilson's aim for a democratic peace.

**Report on Labor Unrest** The final report of the President's Mediation Commission, headed by Secretary Wilson, which has been prosecuting an extensive investigation into labor disturbances thruout the western half of the country, was made public during the week. As was to be expected from the character of the members of the commission, much sound sense and dispassionate analysis is compressed in its twenty-one pages.

In its summary of the causes of labor unrest, the commission says:

Broadly speaking, American industry lacks a healthy basis of relationship between management and men. At bottom this is due to the insistence by employers upon individual dealings with their men. Direct dealings with employees' organizations is still the minority rule in the United States. In the majority of instances there is no joint dealing, and in too many instances, employers are in active opposition to labor organizations. This failure to equalize the parties in adjustments of inevitable industrial contests is the central cause of our difficulties. There is a commendable spirit thruout the country to correct specific evils. The leaders in industry must go further. They must help to correct the state of mind on the part of labor; they must aim for the release of normal feelings by enabling labor to take its place as a coöperator in the industrial enterprise. In a word, a conscious attempt must be made to generate a new spirit in industry.

In its seven recommendations the commission calls for the elimination of all profiteering "to the utmost practical extent during the war," it declares as "indispensable" some form of "collective relationship" between management and men in big industries, favors the eight-hour day, asks for "a continuous administrative machinery for the orderly disposition of industrial issues," and insists that "when assured of sound labor conditions and effective means for the just redress of grievances, labor should surrender all practices which tend to restrict maximum efficiency."

The commission declares that labor is at heart as devoted as any other class to the war purposes of the Government. If here and there its enthusiasm is tepid, the explanation is to be found in the conditions of the industrial environment. Such things as unrestricted profiteering and false claims of loyalty on the part of employers in response to demands for social justice stimulate this feeling. "Too often," says the commission, "there is a glaring inconsistency between our democratic purpose in this war abroad and the autocratic conduct of some of those guiding industry at home. This inconsistency is emphasized by such episodes as the Bisbee deportations."

# ROCHESTER'S BIT

BY DONALD WILHELM

AUTHOR OF "THE STORY OF STEEL"

**R**OCHESTER, as all New York State and nearly all the nation know, is the home of cannon, optical instruments and button shoes. It is the native place, too, of a thousand other products, big and essential products, minor and non-essential products, and the home of some large manufactories. Among the large manufactories notable in Rochester in the years 1915 to 1917 were large gun and shrapnel plants. These got their orders from the Russian and English governments, on a cost-plus basis. The only attention they paid to other local manufacturers was the attention necessary in drawing away from them all the skilled labor that could be drawn away. Rochester was up in arms against these munition plants, accordingly, and glad, very very glad, very much relieved when early in 1917 these plants were, for one reason and another, principally because Russia ceased to give contracts and England transferred to Canada many of hers, closed.

Then the war came to America, early in April, as the Germans recall!

The Ordnance Department said to these munition makers at Rochester: "We need every gun and every shell you can produce."

Not long afterward Major Jamieson of the Ordnance Department met at luncheon all the chief business men of Rochester. The major said:

"I understand the situation here quite well. The munition makers aren't in favor. Of course, they would like to be in favor, but that is not why I came here to address you. The fact is, the United States needs every shell and gun it can get. These munition makers have been assigned a big part to do. They can do it—but they have got to have your coöperation, every bit of coöperation you can give."

Said one of the forty-five business men there, "The major wrapt the American flag around him, and say, if he didn't get us up on our feet, crazy to do our bit, why—!"

"He had some of us actually at the point of putting our arms around those munition makers that we had hated fifteen minutes before," added another.

*"Not a single machine has gone idle in Rochester, because of the lack of a hand"*

Immediately following that meeting the major went to his hotel and the business men got together.

The first suggestion was that in view of the things the business men had done in the past they ought to finance a full and adequate centralized control. "We'll get everybody in Rochester ready to deliver his quota of men to the gun plants," we agreed. Then the forty-five swore that if any man refused they'd "get him."

The next day they told the major what they they had done and said they wanted a man—an employment expert, one with a lot of tact—to take hold.

"I can tell you just the man," the major answered enthusiastically. "But you've got to pay him \$15,000 a year."

In the months following June of last year the Rochester expert and his corps of assistants, four of whom are on the road continuously, reported that there were neighboring vicinities that had been affected adversely by the war, and had therefore labor to spare. There was one town, for instance, nearby, that was fed by trolley systems which drained the surrounding country. This town had more trained men than it really needed, and it could easily spare two hundred. But before that discovery was made the business men of Roches-

ter had sworn a solemn oath that no tool and no machine in any of the Government plants—plants now operated precisely as if they were Government plants—should be idle a single day for want of a trained mechanic, and that no wheelbarrow or pickax should want a laborer. "And to date," says the Ordnance Department, "not a single machine has gone idle in Rochester, because of the lack of a hand." The business men, in a word, gave up their own men.

The Rochester business men first underwrote their plan and made every business man in Rochester sign. Assessments were based on the number of employees in each plant and the assessments—about three dollars for every trained hand and seventy-five cents for every laborer—proved to be the best investment the Rochester business men ever made.

In three days money was in hand and the whole plan was under way—a plan to see that workers were supplied to the Government plants even if every machine in private industry was stilled and to see that every worker in the Government plants was housed properly and transported with all possible comfort and dispatch. It became necessary thus to call in the traction company. The traffic manager discovered that with his equipment, that is, without any new equipment, he could, by dint of the coöperation of the manufacturers, who quite by chance are located in two principal groups at opposite sides of the town, and by the agreement of these manufacturers and other business men, to adjust their hours of opening and closing to the traffic conditions, carry the tide of traffic first in one direction, then back in the other, in such a way that the utmost use was made of existing equipment.

Very soon, by careful avoidance of dealing thru any existing agencies that were prejudicial to labor the complete support of the local labor organizations was secured.

A method was devised to determine exactly in advance just what wages would probably have to be paid. Or to come at this [Continued on page 327]

# The Third Message from the United States Government to the American People

Presented each week in The Independent by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

## THE LOST PROVINCES

PRESIDENT WILSON has said: "All French territory should be freed and invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interests of all."

In reply to him, the Kaiserite in this country is heard arguing: "I tell you it's no business of ours. France took those provinces away from Germany to begin with, and the Germans took them back. That's all there is to it. It's nothing to us."

And in this instance, as in so many others, the Kaiserite is a stranger to truth. Neither Alsace nor Lorraine was ever taken from Germany.

The Rhine has always been the natural boundary between the Germanic and the Gallic races. Alsace and Lorraine were Gallic territory in Cæsar's time. They were part of the France of Charlemagne. After the empire of Charlemagne broke up, they were governed by local rulers. More than three hundred and fifty years ago the ruler of Lorraine acknowledged the sovereignty of the King of France. A hundred years later Alsace was ceded to the French crown by the Holy Roman Empire, which was not a state, nor even a nation, but an aggregation of principalities, bishoprics, electorates and free towns. Neither Alsace nor Lorraine was ever subject to Prussia, and it was the King of Prussia who wrested them both from the French republic in 1871. And neither was ever a part of the German empire, for the German empire was not formed until after Prussia had won the war of 1871.

Moreover, the people of Alsace and Lorraine, for nearly a hundred years previous to 1871, had been free citizens of the free French republic, and they had remained freely loyal to the French Government. When the first French revolution dethroned the King of France, the National Assembly of Alsace in 1790 proclaimed: "The time has passed when kings can dispose like owners of what they call their flocks. The Alsatian people have expressed their wish to be united to France. Their wish alone has accomplished and legalized the union, and they have become French because they wished to." During the hundred years that preceded 1871, there was never any faint-

est whisper of doubt that these provinces, French in nationality, in tradition, and in spirit, were loyal to the republic which their elected representatives helped to govern.

IN 1870, when it became known that the annexation of Alsace-Lorraine was to be demanded by the German warlords, the German workmen themselves protested against it, just as they are now protesting against the similar annexation of Polish and Russian provinces. Their leaders, who signed a manifesto, were arrested and imprisoned. The German Socialist deputies, Bebel and Liebknecht, spoke against annexation in the German Parliament of the Confederation of the North, and they were imprisoned for two years. The representatives of Alsace-Lorraine in the French National Assembly issued an eloquent protest against the German injustice. "All unanimous," they declared, "the citizens who remained at home as well as the soldiers who rushed to the colors, the former by voting, the latter by fighting, declared to Germany and to the world the immovable will of Alsace and Lorraine to remain French." The same representatives again in 1871, when the peace terms were being finally accepted, announced for the people of Alsace and Lorraine their "unalterable attachment for the country from which we are being violently torn" and repeated their determination to "wait with full confidence in the future until France, regenerated," could welcome them back into "the common family." There was then no pretense whatever by the Germans or by anybody else that France had taken those provinces from Germany and that Germany was taking them back. That lie had not yet been invented.

It had not yet been invented, and its invention was not yet even foreseen. On the contrary, the German Government proceeded to act in a way that made a record to refute the falsehood before it was thought of. The German junkers were so far from suspecting that they would ever claim Alsace-Lorraine as an original part of Germany that they treated the country as a conquered French province and its inhabitants as enslaved French. They made Alsace-Lorraine not a state of the Confederation but "a Land of the Empire" for German colonists. Two hundred thousand of the people of Alsace-Lorraine left their homes and migrated to

France. Those who remained were governed against their will.

They remained French in sympathy, and they were consistently persecuted for so remaining. The use of the French language was forbidden, and even women and children were imprisoned for speaking it. The young men were drafted into the German army, but they opposed military subjection with a passive resistance. Since the present war began, twelve thousand of them have succeeded in deserting from the German ranks to join the French, in spite of the elaborate precautions taken by the military authorities to prevent such desertions. What has been occurring recently in Belgium has been occurring also among the civilians in Alsace-Lorraine. There have been the same wholesale deportations, denunciations, and imprisonments. There has been a "Reign of Terror" so inhuman that it was denounced in the Reichstag, on March 23 last, by the German Socialist, Hermann Wendel. "If some day," he said, "these people are able to tell the story of their fate, there will be a cry of indignation from the whole world."

THEY are not yet able to tell that story. They are gagged by the military power and the German censorship. And it is these people, crushed into silence under a Reign of Terror—it is these people whom the Kaiserite in the United States pretends to consider a German people returned to the arms of the Fatherland after an age-long alienation by the French.

When it was first proposed, in 1870, to annex them to the Fatherland, the German workmen, in Germany itself, protested: "This policy of annexation will have no other result than to perpetuate the military despotism in Germany and to provoke, in the future, the slaughter of Germans and French by one another." It has had that result. The policy of further annexations which the German militarists now propose will have a similar result, if they are allowed to carry it out in the Russian provinces as they carried it out in Alsace-Lorraine. Their policy of annexation must be frustrated, and Alsace-Lorraine must be freed. "in order that peace," as President Wilson says, "may once more be made secure in the interests of all." And the lies of the Kaiserites in this country must not be allowed to deceive us about that fundamental truth.

"WHAT WE DEMAND IN THIS WAR IS NOTHING PECULIAR TO OURSELVES. IT IS THAT THE WORLD  
BE MADE FIT AND SAFE TO LIVE IN."

## MEN OF A HUNDRED RACES

By ARTHUR M. WOLFSON

**P**ATRIOTISM is a matter of the nation. As long as there is a man or emotions. It cannot be taught woman, native born or foreigner, who like arithmetic or grammar, nei- does not understand the principles upon ther can it be implanted in the which this republic was founded and mind by mere argument or by the the ideals which have animated its lengthy processes of reasoning. It is leaders from George Washington to useless to hope that we can stir the Abraham Lincoln and President Wil- emotions of a great people like ours son, as long as there are people who profoundly unless we can arouse in do not believe in the cause for which we are fighting, we are harboring a living center of opposition which will thus far been the salvation of this re- continue to be a fruitful source of public, until we can implant in their weakness and decay. Our task is to minds a belief in the destiny of this make clear to the doubter and to the nation as a bearer of good tidings to scoffer, to those who still dwell in the all the peoples of the world. darkness, the glory of the light which is the sign of a coming day.

Often those of us who think we have seen a great vision become impatient because our neighbors and our friends refuse to accept us as prophets; we are tempted to force our convictions on others, but in times like these it is well to remember that no worthy emotion was ever aroused by suppression, that it is the duty and the privilege of lead- ers to make clear to the people the justice of the cause for which they are fighting, the permanence of the ideals of the nation of which they are a part. Real patriotism can only grow where men are converted rather than forced to conform.

Every man and woman, every boy and girl in the United States who has completed the course in our elementary schools has studied the history of this country and knows something of our form of government, but these are the mere bones and flesh of the body. Be- fore we can arrive at a clear vision of the destiny of this nation, we must breathe into our history and into the understanding of our form of govern- ment the quickening breath of the spirit of our institutions.

This is the mission of all teachers and of all leaders of thought in this

We need to fill every member of the community—the capitalist, the skilled mechanic and the day laborer, the preacher, the teacher and the com- munity worker, the son of the slave and of the most recent immigrant with a desire to live up to his political and social opportunities so that we may work all together for the fulfilment of our common ideals.

Each good citizen has something to contribute to the welfare of his com- munity and of his country. It is given to the schoolboy as well as to the sol- dier to help in the struggle for freedom. No girl and no woman is relieved of re- sponsibility. Merchant and miner, shop- keeper and mechanic, doctor, professor and lawyer, each in his sphere is charged with the duty of understand- ing and spreading the common heritage of all men who claim the United States as their home.

Every good American should know the groundwork on which American history was erected, and the ideals which were in the minds of our fore- fathers; he should know the story of the pain and the labor with which the men of bygone generations built the

# of Freedom

To teach loyalty to the United States in the schools, colleges, homes, offices and workshops of the Nation; to help Americans to make their citizenship most effective. A series of weekly articles written by Professor Albert Bushnell Hart, of Harvard University; Professor Robert McNutt McElroy, of Princeton University; Dr. Arthur M. Wolfson, Principal of the High School of Commerce, New York City.

structure over which the flag of our country floats. He should study the problems, national and international, which confront American society and the American citizen. He should realize that the days of privilege, of personal and national selfishness, of narrow individualism belong to the times that are past. In this way and in this way only can we hope to attain to real freedom, freedom for the individual and for the nation. In this way and in this way only can we hope to keep this republic safe for democracy and make democracy safe for the world.

This nation is made up of men of an hundred races. Each has contributed something to the development of our common ideals. Anglo-Saxon, Dutchman and Frenchman, Scotchman, Irishman and German, Italian, Russian and Greek, has landed upon the shores of this continent, each seeking in the western continent a haven from political, religious or social oppression, each seeking a freer and larger economic opportunity, and each in his turn, in proportion as he has learned the lesson of political democracy, has been assimilated as a citizen of the New World. Each time the men of the older generation have been worried lest the new tide of immigration should wipe out the evidences of our earlier civilization, but each new race has gradually adopted the ideals of our fathers and has itself added something to the ideals of the generations which followed.

Because we are a composite people, we have grown in idealism and in unselfishness; from generation to generation we have seen a newer and a better vision. If this nation had remained narrowly provincial, we should still be a group of thirteen colonies—English, Dutch, Huguenot-French and Scotch-Irish. If we had not welcomed the alien and given him a chance to develop, if we had not sent our younger genera-

tions out into the western wilderness, if we had not broadened and deepened our belief in democracy, if we had not taught the men of all countries who settled on the shores of the Atlantic and in the valley of the Mississippi, who migrated into the north country and across the western mountains, to think and speak of George Washington, James Monroe, Andrew Jackson, Daniel Webster and Abraham Lincoln as the knights errant of ideals which they all held in common, this continent today, like the continent of Europe, would be divided into a score of individual nations each striving to maintain a national ideal.

The great task of our past is still the task of our present and of our future. The ideals of the founders and builders of this republic, the inheritance of a profound belief in democracy, the belief in the Divine Right of the majority of the people even when opposed to the inherited rights of kings and of the aristocracy, the conviction that states with different local interests can live in harmony together under a federal constitution, the belief that nations as well as individuals can pursue their commercial purposes without coming into conflict with each other, that weak nations have the right to exist and to pursue their destinies side by side with strong nations, that the nation should offer equal opportunity to men of lowly degree as well as to men whose ancestors have established themselves in wealth and in honor, that men can differ in religion and speech and in actions and still live amicably together, are still the heritage of all dwellers in our country.

To the schools and to the leaders of public opinion is given the privilege of keeping these ideals and these beliefs alive in this Republic. The alien must still be welcomed whenever he comes to escape from [Continued on page 323]

# WHAT IS A WORTHY AMERICAN?

THESE are hours when the ordinarily thoughtful man is looking backward, looking forward, looking around, looking within. He observes that America has not been exclusively a land where only men thoroly imbued with the principles upon which it was founded might build for themselves homes. Isolated from the beginning by countless leagues of sea, it was never dreamed that it could become involved in the politics and policies of Europe. This isolation led the rulers to throw its gates open to all who might care to enter. These came in unnumbered thousands and for reasons, oftentimes, remote from those purely of government—some to advance their fortune and some their social standing; others to divorce themselves from distressful conditions—social, economic, political, or religious.

So thoughtless and indifferent were we to the shrinking of the ocean by steam and electricity that we rejoiced to observe everywhere business being conducted and social energies evinced under the hyphenations of European-American citizenship. We took no trouble to protest against it. Our isolation made it immaterial to us whether there was any difference between loyalty and patriotism, and true to a thousand years of tradition, we did not face the question until it became of moment.

The years drew us closer and closer to Europe in the ties of commerce and the friendly relations of travel. More and more we became a part of the world; and suddenly a mad monarch, drunk with military power and crazed with the idea that he was divinely ordained to rule the world, plunged Europe into a war so awful that all wars which had preceded it paled into insignificance.

In less than three years we discovered that there was a vast difference between loyalty and patriotism. The hearts of men flamed up very largely in response to the blood that flowed in their veins. Patriotism showed itself as dependent, not upon place of residence or political ideas, but rather upon heredity.

It is unnecessary to engage in any hair-splitting, altho there seems to be much discussion as to whether this war is being waged "to make the world safe for democracy" or "to make democracy safe for the world." Of course, it was meant by the President, when he spoke of making "the world safe for democracy," of making it safe for real democracy.

But in many quarters there seems a disposition to question the meaning of the word Democracy. The Germans, who consider themselves true democrats, in a sense, attempt to sneer at the meaning which we Americans give to the word. Their idea, judged by what has been printed in the German newspapers, apropos of the President's latest message to Congress, is that American democracy means world dominion.

Democracy, to begin with, is not a

BY THOMAS R. MARSHALL

VICE-PRESIDENT OF THE UNITED STATES

system of government. Indeed, democracy may find its expression in any one of numerous systems. The people's rule does not depend upon the number of votes nor necessarily upon the system of government under which they vote. Good or bad government must go back to good or bad citizenship, to intelligent or ignorant, to honest or dishonest electors. Democracy means the rule of the people under whatever form of government they may choose to express it, but when once the rule of the people has been expressed, thru their chosen representatives—and particularly in the hour of war—however much any of us may think that certain of the policies are mistaken policies, free speech, free press, and liberty of conscience do not justify criticism, for criticism, however unintentional, invariably gives aid and comfort to the enemy.

DEMOCRACY is constructive, not destructive; it is advisory, not critical. I would not have it understood that it is our duty to walk over the dead bodies of our convictions even to attain success. I admit that failure with honor is preferable to success with disgrace; but, believing as I do in the justice and necessity of our cause, I beg those who speak to speak whole-heartedly for the cause in which we are engaged, and not to criticize until mature thought and consideration have convinced them that by criticism they can advance the cause of our country and of universal democracy. I would have all men with us in this cause from a sense of duty, if for no other reason, but I would preferably have all enter into it from a higher sense, that of living sacrifice for generations yet unborn.

Common gratitude to the fathers and savers of the republic demand that we pour out the last drop of blood and expend the last dollar of money in the cause in which we have engaged. This, loyalty demands; but objectives in crucial hours assume new forms. Martin Luther thought he died a loyal Catholic; instead he died the founder of a new church. Abraham Lincoln thought he was called to the Presidency to preserve the Union; instead he died the emancipator of the black man.

So whatever the original causes of this war and whatever the motives in its earlier prosecution may have been, they have now resolved themselves into a conflict between the two great systems of government—autocracy and democracy.

So far as devotion to duty is concerned, no new springs have been discovered. Under like circumstances, conduct is apt to be much the same now as it was fifty-six years ago. It was given me then to hear the views and to grasp, altho imperfectly, the great questions which resulted in the war for the preservation of the Union.

Within a month after Sumter was

fired upon, Stephen A. Douglas, in a speech at Chicago, fixed the attitude of more than ninety per cent of his followers and, next to Abraham Lincoln, was, under God, a compelling force which saved the republic. I, as a boy, read what he then said and now in my old age, when confronting another crisis in the history of the republic, I gladly quote from that speech as follows:

But this is no time for a detail of causes. The conspiracy is now known. Armies have been raised, war is levied to accomplish it. There are only two sides to the question. Every man must be for the United States or against it. There can be no neutrals in this war; only patriots or traitors. The greater our unanimity the speedier the day of peace.

This speech ended—and ended forever—the hopes of the South to win its fight because of a divided North, with the intention thereafter to conquer the conquerors. It set brother against brother and son against father and there were few Douglas democrats who did not see clearly their duty to shoulder arms, forget blood and creed, and kill and slay, if need be, members of their own household, that the Union might be preserved.

If my people could, as they did, take up arms against their blood relatives of the South, then any American citizen of German birth or German origin can do the same in this sad hour and, failing to do it, he is not worthy of the republic.

Let us not forget there are now only two grades of citizens, patriots and traitors, and only one party, the Party of the Union.

WHAT, therefore, is the lesson of the hour?

I speak only for myself, and yet I would that it might be for all my readers also. That lesson is, that this war shall furnish a new definition of patriotism. The word shall no longer mean the land of a man's birth, or the land of his adoption, the language he speaks, or the place where those he loves reside. It shall have evolved into a different meaning. It will demand of every one who owes allegiance to any prince, or potentate, or autocratic power on earth, that he renounce that allegiance, and renounce also allegiance to every purely selfish pursuit and aim; that he subordinate the material interests of this government to its ideals; that he take an oath of allegiance to an invisible government which believes, which teaches, which holds that all men are both free and equal, that governments derive their just powers from the consent of the governed, that none is fit to rule save of the free and untrammelled consent of the majority of those over whom he rules, that wealth is good and honor is better, but above all, that democracy is best.

Whoever believes these things is worthy to be an American; whoever does not, is unworthy.

Washington, D. C.

# CORPORAL BILL ON A HIKE

"We had a war, you see, between the Reds and the Blues"

"To get our guns in position we had to roll them by hand for about seventy-five yards." This gun is camouflaged by straw

DEAR Old Jim—

We just got back from a three-days' artillery hike, and oh, boy, I had the time of my life!

We were out two nights, and it was more fun than hunting wildcats on the upper Guadalupe. I reckon I got in about two hours' sleep, but I was full of pep every minute. Everybody was. We had a little mock war, you see, up in Comal and Bexar Counties between the Reds and the Blues. I was a Blue. I think the Blues won the big battle easily, but the major who refereed said the fight was a draw. The Reds claim they beat us a mile. That's like them.

We left at the break of day last Thursday. Jim, if I could describe that sight to you! It gave me a queer kind of feeling—as if I wanted to cry tears and shout "hurrah!" at the same time, like an old negro mammy getting religion. There, in a long train, were those trim-looking gun carriages and caissons, the big, strong, glossy horses, and the finest looking set of men (officers and privates both) I ever set eyes on. I felt as proud of the red guidon flying at the head of the column as if I owned it all by myself.

Do you fellows in the navy ever feel that way? I reckon you do. And I have a hunch (as the city fellows say) that this feeling is going to make us whip the Germans. I never knew before how much it meant to be an American, did you, Jim?

While we were riding along I noticed Rod Milam on the caisson (ammunition wagon) ahead of me. You haven't forgotten how shiftless he used to be; how long his hair grew, how bowed his shoulders were, and how he used to drawl out his words as if he were too lazy even to talk. Well, the old Rod is dead, Jim; yes, really dead. He grew weaker and weaker and finally cashed in his checks. This Rod on the

caisson was a different man. His hair was trimmed close, his uniform was the neatest in the battery, his back was straight as a ramrod, and when he talked his words snapped. Yes, sir. *Snapped.*

Maybe you can guess why Rod changed. At first the captain made it mighty hard for him—had him doing all kinds of extra duty until what Rod said would have made a west Texas cowboy blush. The B. C. seemed to have it in for him. Then one day he promoted Rod to a corporal. Rod had made good; passed the captain's test, you see. If any one wants to say anything against the B. C. now, he had better be sure that Rod isn't around.

Talk about this army life not being healthful! Why, Jim, in the last two months our battery has made an average gain in weight of six pounds per man; the captain has the records in his office to prove it. Nobody answers sick call any more unless it's some chap who wants to skip a day's work, and mighty few of that brand belong to old Battery A.

BUT to get back to the hike. As the morning wore along it got hot and dusty, and I drank nearly all the water out of my canteen. I asked a sergeant where we would stop to get another supply. This is what he told me:

"You'll get no more water 'till we make camp this afternoon, buddy. That canteen should last you for twenty-four hours. Do you reckon that if we let you drink water wherever you liked that you wouldn't get sick sometime? The Government needs you to fight, son; so, buck up."

What do you know about that? The Government is so careful of our health that the water we drink must pass a Board of Censorship first. I call that going some.

At noon we made a halt. We un-

hitched the horses, ate a cold snack and rested in the shade of some big, cool cottonwoods on the Salado Creek. At one o'clock we hitched up and started on.

At about four o'clock we halted to go into camp for the night. The place was a flinty slope behind a screen of cedars. An "old-timer" came along, and I asked him what the B. C. meant by stopping here.

"Good drainage in case of a rain-storm," he answered, "and the enemy's scouts can't see us behind these trees."

Jim, the B. C. is right every time. I've tried to catch him doing something wrong or foolish, but as you used to say, "it can't be done." I certainly do admire our captain. Every man in Battery A is back of him, and we hope we'll have a chance to prove it soon "over there."

MY, how we hustled! There was a pile of work to do—grooming the horses, stretching the picket line, preparing the mess outfit for supper, drawing water from a near-by tank, setting up our "pup" tents and a million other things. Our swing driver was detailed for kitchen police, and I had to take care of his two horses. I took the big grooming brush and went to work with pride. I wiped away every speck of dust that I could find until the two big animals were as sleek and shining as a pair of kittens.

Then a sergeant named Bates spoke up from behind me:

"Say, do you call that grooming? Open your eyes a little, buddy. Look at that spot and that one and that one. Get 'em off. You're not on the farm now. You're in the army."

I hate to admit it, Jim, but he spoke the truth. Things aren't done on the farm as they are in the army. The army is a whole lot more thoro, even when it comes to taking care of animals.

But what he said made me hopping mad. I felt myself turning red, and I wanted to beat him up then and there. Several times before, I had decided to give him a real licking on account of his uppish ways. However, I have not done so yet. He weighs two hundred pounds and they say he has a strain of Lipan in him.

For the next two hours I worked harder than a harvest hand. It was dark before Baldwin, a New Mexico boy, and I found time to set up our "pup" tent. This is a curious little trick that isn't really big enough for one man's-sized man, altho two must use it.

Each man carries in his roll a shelter-half, or one side of the tent. When camp is made the two pieces of canvas are buttoned together at the top. Two small folding tent poles fit under the ends, and the sides are held down by wooden pegs. There is enough room inside for two men lying down.

My roll held one O. D. woolen blanket, a suit of underwear, two pairs of socks, a towel, a cake of soap, a toothbrush and a comb. Besides this I had a poncho, or slicker.

We had just finished digging a ditch around the tent to keep the water out if it rained when somebody yelled, "Come and get it!" Say, boy, you should have seen the stampede. There was a wild hunt for mess kits and then a scramble to get over to the "chow." I was fifth in line; how's that? It cost me a torn shirt, tho.

The "chow" was in big, steaming cans lined up across the entrance of the tent. A man stood behind each one and ladled out the portions as we filed past. I came away with two big potatoes, a chunk of roast beef, some apple jelly, a spoonful of butter and two thick slices of bread. Of course I was careful to sit down as near to the mess tent as possible, and I went to work without any delay. Jim, I've seen men put away food mighty fast during the thrashing season, but I passed all records that night. By the time the first line had been served I was back for my second helping. And, Jim (I know you'll laugh), I went back a third time. Yes, sir, I was that hungry. I never expect to taste apple jelly as good as that again—not even mother's or Aunt Maud's.

Of course, we had to clean our own mess kits. I suppose you have them in the navy. Ours are very neat. They consist of a shallow pan with a lid, a knife, a spoon and a fork. You can use the pan and the lid for plates, and your canteen holder serves as a cup for coffee.

Well, you would suppose that after supper we would go to bed and rest till the next morning, but no such luck. A Blue scout had brought in word that a Red battery was lined up on a hill about two miles away. To get our guns in posi-

tion in case of an attack we had to roll them by hand for about seventy-five yards. When we got them there we found the slope to be too steep. A detail was named to cut down the grade. I was given a pickax.

At midnight Lieutenant Smith told us to go to bed. I pulled off my heavy shoes and rolled into my blanket, thankful even for the sharp flints underneath.

At 12:30 a. m. by my funny little wrist watch some one shook me and said in a low voice:

"Get up quick. We've got to move out of here. A battery has our range. Never mind lacing those shoes."

I don't suppose you know what a job this meant, Jim. Breaking up camp and moving out in broad daylight is hard, but it's a stiff proposition on a black night when you can't use lights because of the enemy's gunners. But we worked as cheerfully as a crowd of Sunday school picnickers.

Finally we moved out. Can you guess how far we went? That was the saddest part of it. Two hundred yards. Yes, sir, that was all.

We had no time to set up the "pup" tents and lay out our blankets. We had to bivouac, or lie down on the ground just as we were. I sat down on a branch of thorns and a moment later a frog or some other little varmint scampered over my hand.

All the good places were taken, but at last, on the edge of a small gully, I stumbled over the feet of an "old-timer," the battery saddler.

"Lie down, buddy," he muttered. "We can nap for an hour, anyway."

"An hour!" I exclaimed.

"You bet. We're at war, remember. We're fighting Kaiser Bill, aren't we?"

"You bet," I answered and dropt off to sleep.

At three a. m. the whistle blew, and we were up and at it again. We had a breakfast of strong coffee, thick bacon and fried potatoes. That food was great. I feel downright sorry for the way I ate it. I'm glad mother didn't see me.

Just before we moved out Lieutenant Smith spoke to our section as follows:

"We expect to meet the Reds this

morning at about ten o'clock. The battle will last all day and all night. We'll be kept pretty busy; so, be up on your toes every minute."

At about ten o'clock we *did* meet the Reds. We saw their infantry in plain view on a slope about six hundred yards away. We unlimbered the pieces, and our gun crews got busy. Say, Jim, the Reds almost lost their "dough boys" right there. Their captain was in a bad fix, being some distance from cover. We were inflicting heavy casualties when the Red artillery got our range and nearly wiped us out. We didn't want to do it, but the officers made us retreat.

Of course, we were only using blanks, but it was a pretty good imitation battle. I don't believe real fighting is a lot of fun, tho, and I'm sure I'm not going to make any grandstand hero "over there." But I've made up my mind on one thing, Jim. I'm going to do my bit to prove that Americans are better men than the Germans, and I mean every word of that.

We certainly had one good joke on the Reds. The night before one of our cannoneers (a vaudeville actor in civil life) slipt away and located the Red artillery. He walked into their camp as big as day, and demanded something to eat. The handkerchief on his hat was blue, all right, but in the faint lantern light the color didn't show. The Reds, thinking he was one of their scouts, told him all about their plans for capturing our battery. Then he went down to their guns and slipt the firing pin out of every piece!

If they hadn't provided themselves with extra pins the war would have ended in our favor right there. You should have seen this fellow strut after the B. C. praised him. I heard him sass his section chief twice the next day.

Early in the afternoon we clashed with the Reds again. We took a position on a hill above them, and from the start they had the worst of it. Pretty soon their infantry began to draw back out of sight; then their artillery firing stopped and we saw them moving out in a cloud of dust. By heck, they were retreating, Jim! We yelled like a band of Comanches. In two minutes we were limbered up and on their trail.

They stopped running about sundown. Their infantry and ours went into sure-enough trenches that had been constructed several weeks before. Battery A made camp, but we had to break it up in about an hour, for the Red artillery was making it hot for us again. We moved back in the hills a couple of miles and trained our guns on the Red trenches.

Shortly after dark the fireworks commenced. Say, Jim, that night battle was wonderful. Away down there in the valley we could see {Continued on page 322}

"Uncle Sam's firing it so that before we can set sail for Europe we'll know a lot about trench warfare." I call that longheaded!

One of those gold mines down in Dixie

THE president of a national bank in a medium-sized Southern city adjusted his gold rimmed spectacles, and reaching successively into two pigeonholes of his desk, drew out two thick gray leaflets just the size of a letter envelope and spread them flat side by side in front of his visitor with unmistakable satisfaction.

"These statements tell the story," he said, and his forefinger traveled over the first leaflet, which was dated in September, and rested on the item "deposits"; then it pointed to a similar item on the second leaflet, which was dated the latter part of October. The first figure was approximately \$600,000; the second was over \$1,000,000. The amount loaned out by the bank had only slightly increased, and the difference was mainly in the form of cash and gilt edge bonds.

Where did all this money come from, he was asked.

"Cotton," was the laconic reply. "You see, the farmers are getting nearly 30 cents a pound for cotton, and the money finds its way into the banks. These farmers have about paid all they owe, and some of them are becoming lenders instead of borrowers. The same process gives the country merchant more money than he ever had before. The banks in the South, especially throughout the cotton producing region, have hitherto been heavy borrowers of money in New York at this season of the year. Last year the process was reversed, and this year is an exaggerated repetition of last year. Here in this bank we may have a trifle more than our share, but I doubt it. All the banks, especially in Georgia and the other cotton producing states, are in very easy circumstances."

The case of this bank is merely typical; it is an actual example cited to illustrate banking and economic conditions generally in the South at this time. Thanks to the present price of cotton, the South is coming into her own. The great borrowing section is a borrower no longer, but is beginning to lend. At the very time when the East is being drained of its liquid capital in order to provide the sinews of the war for America and her allies, that self-

# THE SOUTH ON EASY STREET

BY

WILLIAM HURD HILLYER

*Mr. Hillyer writes from a broad business experience as a broker and banker in Atlanta, Georgia, and is an accepted authority on the economic situation of the South.—THE EDITOR*

same South, which for a hundred years prior to the outbreak of the present war furnished the only commodity capable of turning the balance of trade in our favor and drawing the yellow gold from Europe, now proves to be the world's last great reservoir of liquid capital.

In this respect the South has astonished all the prophets and belied all criticism even in her own borders. When the Great War broke out, the cotton producing state with one accord put on sackcloth and ashes and announced that starvation and ruin were their inevitable portion. This sentiment culminated in the hysterical "buy a bale" movement, which was about like giving chloroform to a man suffering from sunstroke. Yet in spite of all this and in spite of the very real curtailment of demand due to the closing of the 4,000,000 bale market in Germany, the world was not slow in waking up to the fact that it wanted cotton and more cotton, and no substitute for cotton. The recovery was rapid and the rest of the story is common knowledge. From 6 cents a pounds in the fall of 1914, cotton has recovered to 28 cents a pound at this writing with every prospect of going higher.

It is not within the province of this article to discuss the merits of the present price of cotton. Suffice it to say that in the opinion of trained economists and experts the world over, cotton is still relatively cheap. Measured by the twin standard of actual economic use and price-comparison with other commodities, the intrinsic value of cotton is still higher than the market value and the staple should sell at not less than 40 cents per pound.

Of course it must not be supposed that all of this tremendous rise is net profit. The cost of production has risen enormously during the past three years. The margin of profit, however, is still large enough to afford the Southern farmer a handsome surplus and should indeed amortize his entire capital indebtedness in two or three years.

It is popularly supposed that the present high price of cotton is due solely to conditions brought about by the present war. This is a mistake. It is not generally realized that without the

© Underwood & Underwood

The economic emancipator of the South

drastic reforms which were instituted three years ago on the floor of the New York Cotton Exchange as a result of the laws passed at that time by Congress, and particularly the so-called Lever Law, the cotton farmers could not have reaped the benefit of the increased demand, resultant upon present conditions. The form of cotton contract which had been used for more than a generation on the New York Cotton Exchange so discriminated against the farmer that it was indeed impossible for him to get a just price for his product. The Lever bill, fostered and put thru by Senator Hoke Smith of Georgia and other senators and congressmen who had made a long study of the cotton situation both from the standpoint of the grower and the spinner, enabled the farmer to sell his product on an honest contract which gave him the benefit of the actual worth of the particular grade delivered, instead of arbitrarily basing the price on inferior grades.

The financial and economic emancipation of the South is really the result of many causes. Among these may be mentioned the diversity of crops which had its beginning during the lean years of 1914 and 1915. Nothing short of those extremely adverse conditions could have forced the Southern farmer into depending upon crops other than cotton for his subsistence. The hard times were thus a blessing in disguise. Cotton is still king; but he is no longer the tyrant and slave driver; he holds his feudal allegiance under the real master of the soil—the farmer himself. Corn, oats, alfalfa, peas, beans and many other crops, now pour their rich tribute into the coffers of the South. Where formerly the cotton was sold to buy food, the South is now virtually self-sustaining and the cotton is largely velvet.

This brings us to the third great cause of the South's present comfortable position, namely, the Federal Reserve banking system. Without the establishment of such a system, the South would have been unable to mobilize her liquid capital rapidly enough to reap the benefits of the other factors working in her be- [Continued on page 325]

Easily installed on any type of home heating plant.

## Western Electric Heat Regulator

*It replaces the human element in heat regulation—makes it electrical, automatic and helps you cooperate with the United States Fuel Administrator.*

### Saves Fuel

When the drafts are open and your house temperature rises above 68 degrees—the standard set by the fuel administrator—then you are wasting coal and losing heat through the open windows and up the chimney.

This Heat Regulator automatically adjusts the dampers for an even temperature all day long. A variation of one degree in the room temperature regulates the drafts, giving you comfort and saving considerably more than the asked-for shovelful each day.

### Morning Comfort

With this Heat Regulator, you can set the indicator and clock for a lower temperature at night and 68 degrees for morning, then your home will be warm, but not overheated. The dampers open automatically. No more shivering trips to the cellar to coax heat from a low fire.

The No. 100 outfit has a spring motor and costs \$38.50; the No. 200 outfit has an electric motor and costs \$55.00. (Prices slightly higher west of the Rockies.) Buy from your electrical contractor; he will install it in a few hours' time, at a reasonable cost.

Write for your copy of the new booklet No. 71-BJ,  
"Temperature—As You Like It."

## Trotsky's Opinions

WHEN the poor Jew journalist was called from New York's ghetto to become Acting Czar of All the Russias his ideas suddenly became of importance to the whole world. If he were, as was too hastily assumed at first, a paid agent of the Kaiser, it would not matter what he thought; but as it has become evident he is a man of intense convictions to which he is willing to sacrifice himself or a million other people we turn with intense curiosity to what he has written. Three years ago we went to reading Treitschke to discover how the war started. Now we go to Trotsky to see how the war is coming out. Our curiosity is in a measure gratified by the volume of his recent writings now published in English under the title of *Bolsheviki and World Peace*.

In this book Trotsky makes it perfectly plain where he stands. The peace terms that he has specified here are virtually the same as he has since thrust in the face of the German and Austrian Foreign Ministers at Brest-Litovsk. They are:

- Immediate cessation of the war.
- No contributions.
- The right of every nation to self-determination.
- The United States of Europe, without monarchies, without standing armies, without ruling feudal castles, without secret diplomacy.

This sounds in part as tho it might have been a message from the President to Congress, but it must not be assumed that Trotsky stands for what we know as Americanism. He is doubtless, as the publisher tells us, anti-Hohenzollern and anti-Hapsburg, but he is also and almost equally anti-American. He is too extreme to get along with the orthodox Socialists in any country. He is the most sinister of the Left. He is more Marxian than Marx. His party is what is known in the Russian language as the "Bolsheviki," in Latin phraseology as "Maximalists" and in American political parlance as the "whole hoggers." He is not an evolutionist but a revolutionist. He does not want to ameliorate the lot of labor but to overthrow capitalism. He does not believe in patriotism but internationalism. He does not consider himself bound by established laws or bourgeois morality. He is not working for a democracy but for the rule of the proletariat. He is trying to put a stop to the war of nations so as to clear the way for a bigger one — the war of classes.

From this standpoint Trotsky, in the present volume, discusses the issues of the war with great acuteness and thoro acquaintance with socialistic literature in various languages. We naturally turn first to what he says of the part Russia is to play:

The year 1914 spells the complete bankruptcy of Russian liberalism, and makes the Russian proletariat the sole champion of the war of liberation. It makes the Russian Revolution definitely an in-

© Underwood & Underwood

LEON TROTSKY

tegral part of the Social Revolution of the European proletariat.

In our war against Czarism, in which we have never known a "national" truce, we have never looked for help from Hapsburg or Hohenzollern militarism, and we are not looking for it now. We have preserved a sufficiently clear revolutionary vision to know that the idea of destroying Czarism was utterly repugnant to German imperialism. Czarism has been its best ally on the Eastern border. The fate of the Russian Revolution is so inseparably bound up with the fate of European Socialism, and we Russian Socialists stand so firmly on the ground of internationalism, that we cannot, we must not for a moment entertain the idea of purchasing the doubtful liberation of Russia by the certain destruction of the liberty of Belgium and France, and—what is more important still—thereby inoculating the German and Austrian proletariat with the virus of imperialism.

Trotsky's message as exprest in this volume is not directed to the outside world but against the more moderate men of his own party, against the Socialists who believe it right to defend their own country and possible to realize their aims thru gradual development and political methods rather than by some sudden upheaval. But for that reason the volume all the better reveals the mind of the author than if he had written it for the wider circle of readers it will now reach. It is appropriately

introduced by Lincoln Steffens, who became acquainted with Trotsky in Petrograd and is much in sympathy with his views.

*The Bolsheviki and World Peace*, by Leon Trotsky. New York: Boni and Liveright. \$1.50.

## The War in Retrospect

WHAT Arthur Guy Empey did for the profession of arms, has been duplicated by Hugh Gibson in his *A Journal From Our Legation in Belgium* for what we may rightly term the American diplomat at the front. While the two spheres of service are, of course, distinct if not always separate, Mr. Gibson went to his job of tackling explosive German commanders, looking frightfulness and the rest squarely in the face to size up just what it all amounted to, then proceeding straightway to yank some sort of justice and relief on behalf of the war-stricken out of it, in the same characteristically fine American spirit with which Empey went Over the Top. One does not have to read far into Mr. Gibson's pages to discover that he became suddenly an extraordinarily busy man in assisting Brand Whitlock at the American Legation in Brussels. His is indeed a wonderful narrative of diplomatic encounters, and rapid journeys thru Belgium and elsewhere to the end of some object he was determined to accomplish in spite of the rebuffs and obstacles. Thus, his trip to Louvain in company with the Mexican Chargé d'Affaires by the singular name of Don German Bülle should prove a classic of burlesque tragedy, an adventure the like of which has surely never been written before. A journal of an entirely different vintage, tho in its place to be taken in hand with due regard to the cleverness of its authorship, is *The Diary of a Nation*, by E. S. Martin. Herein we have republished in book form a critical weekly review of the war from August 13, 1914, to the date of our formal entry, lacking nothing in brilliancy of wit and caustic satire directed upon Germany and those in this country who favored her cause. Arthur J. Brown writes from personal observation of *Russia in Transformation* a generally informing review of the great revolution, its political and social causes,

present phases, and probable trend to an ultimate triumph of true democracy. While Dr. Brown is cautious in not venturing on too certain prophecy, yet the reader gathers that a bright future awaits Russia in the near future. *Russia in Transformation* is the kind of book which should be welcome in a library for popular reading.

*A Journal From Our Legation in Belgium*, by Hugh Gibson. Doubleday, Page & Co. \$2.50. *The Diary of a Nation*, by E. S. Martin. Doubleday, Page & Co. \$1.50. *Russia in Transformation*, by Arthur J. Brown. Revell. \$1.

Press Illustrating

Leon Trotsky left this basement editorial office of the "Nory Mir," located in New York's East Side, where he earned \$20 a week, to become Foreign Minister of Russia

THE BATTLE CRY OF  
FREEDOM

(Continued from page 313)

oppression and to seek freedom of opportunity. Each new generation must be educated to understand the things for which men in the past have struggled. Free speech and honest difference of opinion must still be allowed to all citizens whose purpose is honest. The banner of democracy must still be carried forward as it was carried by Andrew Jackson and Abraham Lincoln. The conviction that the rights of labor are sacred must be fostered as it never before has been fostered. The new vision of international peace guaranteed by nations which are willing to trust their destinies to the will of the whole people rather than to the will of men who have set themselves up by force as the leaders must be made clear to our enemies. We must purge this nation of all selfish purposes. We must fight with all the weapons of education to make this vision clear to the people of our country.

In that way and that way only can we preserve the inheritance of the century and a half of our history as a free people. In that way and that way only can we make good our mission as the leaders in a new era of international peace and friendship among all nations. In that way and that way only can we once more highly resolve "that this nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth."

## The Finest Resort Hotel in the World is at Asheville, N. C.

Grove Park Inn is but a little over three hours from Spartanburg. Your family could be entertained up there in the mountains and you could spend week-ends with them. You could telephone them every day as easily as you could from your office to your home.

It is the finest Resort Hotel in the World. It is absolutely fireproof and open all the year.

The 120-acre, 18-hole, golf course is the finest in the South—it is a blue grass course. All the water used at the Inn comes from the slopes of Mount Mitchell, the highest mountain east of the Rockies, nearly seven thousand feet altitude. The milk and cream come from Biltmore Dairy on the estate of the late Geo. W. Vanderbilt.

It is the cleanest, most sanitary hotel ever built. Every floor is tile. Every bedroom has Mosaic tile covered with French rugs made at Aubusson, France. The foods are the finest money can buy. The kitchen is spotless white tile to the roof and pure white Mosaic tile floors. The buildings are built of great mountain boulders—some of the walls are five feet thick.

We are three and a half miles from the railroad. The street cars are not allowed to come near enough to be heard. Automobiles are not allowed near the building during the night. We have pure air, common-sense, digestible food, quiet in the bedrooms at night, and an atmosphere where refined people and busy business men with their families find great comfort and a good time.

Information and photographs at all Southern Railway offices or telephone at our expense.

Stamford, Conn.

## CORPORAL BILL ON A HIKE

(Continued from page 319)

the star shells bursting, making everything as clear as day—they look something like Roman candles. The infantry firing sounded like the beating on a drum; fast now; then slower for a while; then fast again. Occasionally the artillery boomed out like a rumble of thunder. And every now and then the cheers of the "dough boys" as they went over the top drifted up to us.

We showed the Red artillery a thing or two that night, Jim. We changed position three times, and they didn't get our range once, for their two big searchlights couldn't find us. If we had used real shells their trenches would have been wiped out.

I reckon a veteran of the World War would consider that mock battle a pretty tame affair, but I thought it was great. I was gladder than ever that I was fighting for Uncle Sam. He's fixing it so that before we even set sail for Europe we'll know a lot about trench warfare. I call that pretty longheaded, don't you?

The fight lasted all night, and about dawn we limbered up and set out for the barracks. Everybody was black and dirty and tired out and happy as a lark.

Just before we reached the barracks, the captain (the cleanest, squarest captain in the whole United States Army, Jim) turned around in his saddle and called out to us, "Start a song, boys." And we answered him like this, putting pep into it: "Artillery, artillery, we're on our way to France;

Artillery, artillery, to spank the Kaiser's pants.

The infantry, the cavalry, the dog-gone engineers,

Oh, they couldn't make artillery in a hundred thousand years!"

And the "dough boys" we passed only grinned at us. I reckon they admitted that what we sang was true.

Well, I must stop writing. There goes tattoo now! Fifteen minutes to get back to the barracks and undress before "lights out." And I've got to take charge of a clean-up detail tomorrow, which is some job. So long till next time, Jim.

Your friend,

BILL, Corporal.

P. S.—Did you get that "corporal"? I saved it for the last as a sort of surprise. I got promoted yesterday. Feeling fine. Well, write soon and the best of luck.

BILL.

### Capital Copy

The War Department wants and proposes to send 100 "hello girls" to Europe.

The President has issued a proclamation forbidding the holding of any aircraft exhibitions in the United States during the war.

The Department of Labor proposes to import soon into the United States over 100,000 common laborers from Porto Rico and the Virgin Islands.

On January 17, 1918, the residents of the Virgin Islands became American citizens. The day was observed as a public holiday with patriotic celebrations.

The free lance feminine war worker over there is a thing of the past. No woman can now get passports to go to France except those imperatively required by some relief organization.

"Victory Bread" must have no more than 80 per cent wheat flour. The Food Administration says the remaining 20 per cent may be made up of ingredients which include corn flour, corn meal, barley flour, oat meal, rolled oats, rye flour, rice and rice flour and potato flour.

# The 1918 Edition of The American Year Book

*Will be ready for delivery early in February*

**A Record of Events and Progress During the Greatest Year  
in History—1917**

**THE AMERICAN YEAR BOOK** is made for busy men, editors, contributors, professional men, teachers, scientific workers and everyone who wishes to verify or confirm questions that arise in his mind. It is a short cut to accurate knowledge of current events and the progress of the world. Here you will find everything worth knowing that has happened during 1917—the Greatest Year In History. It covers every department of learning and human affairs. Yet with all its comprehensiveness, **THE AMERICAN YEAR BOOK** is far from being a mere collection of dry facts and statistics. It is neither an almanac nor an encyclopedia. *It is absolutely unique.* You need The American Year Book as a supplement to your encyclopedia.

**NOT ONLY A REFERENCE BOOK BUT A FASCINATING STORY OF THE PROGRESS OF CIVILIZATION.** The American Year Book is a wonderfully interesting, inspiring narrative, written by more than one hundred of the most eminent men in America—men who know—men who do. Each of these men is

a specialist in some important subject, in many cases the greatest living authority in his field.

One by one these men take up all the great departments of learning and human activity—history, politics, government, legislation, industry, science, the arts, the professions, the trades, foreign relations, literature, education and many others. In each sphere they show just what has been accomplished during 1917. It is more interesting, more thrilling and more inspiring than any novel you ever read. How can the creation of one man's imagination approach in intensity of interest the facts of human achievement during the past year?

**EVERY BUSY MAN AND WOMAN NEEDS THE AMERICAN YEAR BOOK.**

From no other source can you get the information you ought to have, with no waste of time and effort, as from The American Year Book. In order to get the information that is packed into this handy volume of 900 pages you would have to read hundreds of books, magazines and newspapers. Think of the time this book will save you. No other book in your library contains this information. You need The American Year Book. The analytical index containing 6000 subjects will enable you to find easily just the subject on which you wish to be posted.

## The Independent's Remarkable Offer

By special arrangement with the publishers, Messrs. D. Appleton and Company, we are able to supply our readers with this valuable work at practically the manufacturing cost in combination with a renewal of their subscription to The Independent.

### SEVEN DOLLARS FOR FIVE DOLLARS

The American Year Book can be obtained from no other source for less than the regular price of Three Dollars. The yearly subscription price of The Independent is Four Dollars. However, while our supply lasts, we shall renew your subscription to The Independent for one year (provided you reside in the United States) from present date of expiration and deliver to your address charges prepaid a copy of the 1918 edition of The American Year Book for only Five Dollars. The Independent may be sent to one address and the Year Book to another address (both must be in the United States) in case you wish to use either as a gift to a friend. This offer also applies to new subscriptions.

### THIS COUPON IS WORTH TWO DOLLARS

THE INDEPENDENT, 119 West 40th Street, New York  
Please renew my subscription one year from present date and send charges prepaid the 1918 American Year Book. Enclosed find Five Dollars.

# Does Sugar Cause Diabetes?

By R. L. ALSAKER, M.D.

Diabetes is called the sugar disease, because the kidneys allow sugar to escape from the blood. In healthy individuals the sugar in the blood is either turned into fat or it is burned (united with oxygen) to form heat and energy. It is a common belief that the sugar we eat causes diabetes.

**D**IABETES is a disease of the entire body, and it comes principally from the digestive organs. The most important cause is wrong eating not only of sugar, but of practically all foods. Meat, alcohol, cream, fried potatoes, rich sauces and gravies and seasonings are some of the things that help to produce diabetes.

The diabetes is an advanced stage of degeneration, an advanced stage of bad health. The body should always remain sweet, but before diabetes comes on the stage it turns sour. And it turns sour (acid) principally because the eating is wrong. You will notice that it is those who "live well" and "set a good table" who usually become diabetic. They neither live well nor set a good table; they are eating themselves into disease, and if they wish to get well they have to eat themselves out of it again, by mending their mode of eating and drinking.

It is not necessary to remove all sweet and starchy foods from the diet of the diabetics. The best treatment is to put them on a balanced diet, and this will include a moderate amount of starch and sugar.

Diabetes is curable. Like every other disease, if it is neglected too long it will reach a stage where the patient cannot fully recover. But those who take it before it has ravaged the body severely have a splendid chance to get well. The patient has to eat so as to overcome the sour condition of the body and make it sweet again. He has to live so as to be well. This is truly a pleasant cure. Even those that are so far advanced that they are incurable can increase their comfort and prolong their life.

These facts are so important that I have written a book, called "DIETING DIABETES AND BRIGHT'S DISEASE," in which I have explained in detail how to eat so as to get rid of diabetes. You will also learn how to prevent it. You will be surprised how easy and simple it is, and how it appeals to your good common sense.

**PUBLISHER'S NOTE.** There is nothing mysterious about Dr. Alsaker's plan for curing Diabetes. You need not go to health resorts. You need not take drugs or medicines of any kind. It is simple, good, workable common sense that you can apply without expense right in your home.

R. L. Alsaker, M.D., is a "competent professional authority," says the New York Tribune, and G. G. Porter, of Syracuse, N. Y., says of him: "It is a real pleasure for me to recommend his works, because I know from personal experience that good results always follow an observance of his simple instructions."

Send one dollar for this book of health instruction, with ten cents additional to pay for postage and packing, to Frank E. Morrison, Dept. 124, 1133 Broadway, New York City. Follow Dr. Alsaker's plan of treating Diabetes for one month; then if you are not entirely satisfied with the improvement in your health, return the book and your money will be refunded.

A copy of "Building Health" will be sent free on request.

## Wonderful Chance

Join the army of Duratex Money Savers and Money Makers. The Duratex Army is made up of prosperous men. They get their own supplies at wholesale rates and they enjoy steady incomes from an agreeable, dignified business—a business admirably suited to their needs—some devoting part time, many their entire attention. All are profitably engaged under our most convenient and practical method.

### More Than 3,000 Helped

During our many years in business selling direct to the consumer through local representatives, we have shown thousands of men the way to get the needed money—to meet the increased cost of living. You, too, can free yourself from worries and have money coming in.

It is easy to get customers as every one has confidence in our products because of our sweeping guarantee.

6 Months  
Wear

Guaranteed  
or  
Replaced Free

**DURATEX**

Shirts, Cravats, Hosiery,

## THE SOUTH ON EASY STREET

(Continued from page 320)

half. It is common knowledge that under the old system, the Southern banks were every year whipsawed between their depositors' demands and the caprices of the New York money market. Every autumn a vast amount of currency was required to finance the cotton crop, and the only way this currency could be obtained was by drawing it out of the local banks. The local banks were thus drained of their deposits at a time when the demands of their borrowers were greatest. The banks had no recourse but to borrow from their New York correspondents, and the New York banks in turn had but one way of providing this money, and that was to call their loans on stock exchange collateral.

This naturally tended to disturb values and impair confidence, resulting in a withdrawal of deposits even from the New York banks, and a sharp rise in the call money rate, call money being the arbitrary standard of interest, the rates charged by the New York banks on their interior loans were thus automatically moved up and a vicious circle was formed which may best be characterized by the statement that the higher the price of cotton, the more money the South needed, and the more money she needed, the less she could get. The Federal Reserve banking system, by providing an elastic medium of credit, the details of which are so fully understood that it is not necessary to repeat them here, changed all this and enabled the Southern farmer to conduct his business on a sound financial basis, and emancipated the Southern banker from the annual nightmare of crop moving in the fall.

This system furthermore helps the policy of diversification by making crops other than cotton, such as peas, beans, etc., a basis of credit, which was impossible under the old system.

Among other causes of the South's economic independence may be mentioned vast stores of raw material, such as iron, coal, timber and a dozen others, which the demands of the Great War have recently brought to the attention of the entire civilized world. These raw materials were exploited only to a small extent so long as the supplies lying nearer to the great centers filled all requirements. But now that the demands of warfare are drawing upon all available supplies, the world is waking up to the fact that the Southern section of America is not only, as we have just seen, the last reservoir of liquid capital, but the world's most available storehouse of permanent wealth.

The inevitable conclusion is, that the South cannot be seriously crippled during any reasonable prolongation of the war, and that upon the return of peace, will assuredly get her share of the expected wave of prosperity; and that share, for the reasons which we have just examined, will be very large indeed.

New York City

The Chinese missionary, at the close of his talk on the benighted heathens, added a short prayer, then requested that several of the country congregation also pray. The pastor's wife responded, invoking help for the faraway ones.

There was a pause, then another penitent feminine voice prayed thus:

"O Lord, we have shunned these Thy children because of their pigtailed and crooked eyes. But, O Lord, we are sorry for we have this day learned that they, too are made in Thy image."—*Harper's Monthly.*

## ROCHESTER'S BIT

(Continued from page 309)

this phase from another approach, each plant in the association, each business man, each manufacturer submitted each week to an executive of the association his list of wages for certain defined classes of workers. This executive then devised a list showing the relative rank in point of payments made of the members of the association. Soon the members were bidding for high place, and those that were lagging were teased into a healthful kind of uplift—that is, into raising their wages steadily.

A method was devised to determine well in advance what would be the needs of each business man in point of workers. As this is written the statement has just been issued showing what will be the labor requirements and the expectancies five months in advance.

Comparisons were also worked out between the wages paid in Rochester and in competing towns, with the result that Rochester is assured that it can keep the labor that it has and also all the trained workers. Comparisons were also worked out between the wages paid in current years and in 1913 and 1914.

One of the first problems that had to be remedied was that of housing. Arrangements have been worked out to house all the laborers that are required. A concerted program of newspaper advertising was undertaken, and the entire city is now co-operating to house every one needed in the Government plants.

Competitive bidding between employers is a thing of the past in Rochester. The very fact that all the big industries went into the proposition was made known to a central labor bureau and arrangements were made with the coöperation of that bureau to have all labor requirements cleared thru it. A few minor cases of members of the association trying to get the best of things came up, and in every case the Rochester Association let out "a howl" and kept on howling until breaches of the common law became the rarest thing in the world.

The labor turn-over in the months since the plan in Rochester was adopted has been lower in spite of all the war work, which amounts to about a thirty-five per cent addition to the normal production requirements of the city—a tremendous burden for any city to carry, one that would cause untold confusion in nearly ninety-nine communities out of a hundred, one that invariably disrupts industrial conditions in the little places quite as it has done on a tremendous scale in the nation.

Rochester, thus, tho it isn't a very big city, has done in a few months, indeed it did in a few weeks, what the nation should have done long before the war, if not in this form surely in some form.

In miniature it has done what in large the Department of Labor must do.

### Pebbles

"How do you like being a soldier?"  
"All right," answered the enlisted actor.  
"But our manager is a fiend for rehearsals."  
—Judge.

"Give me some money for coal, George?"  
"Why waste money on coal? Throw the pound notes right into the fire. That's the cheapest way."—Nebelspalter, Zurich.

Higgs—I hear your daughter is to marry a man of means.

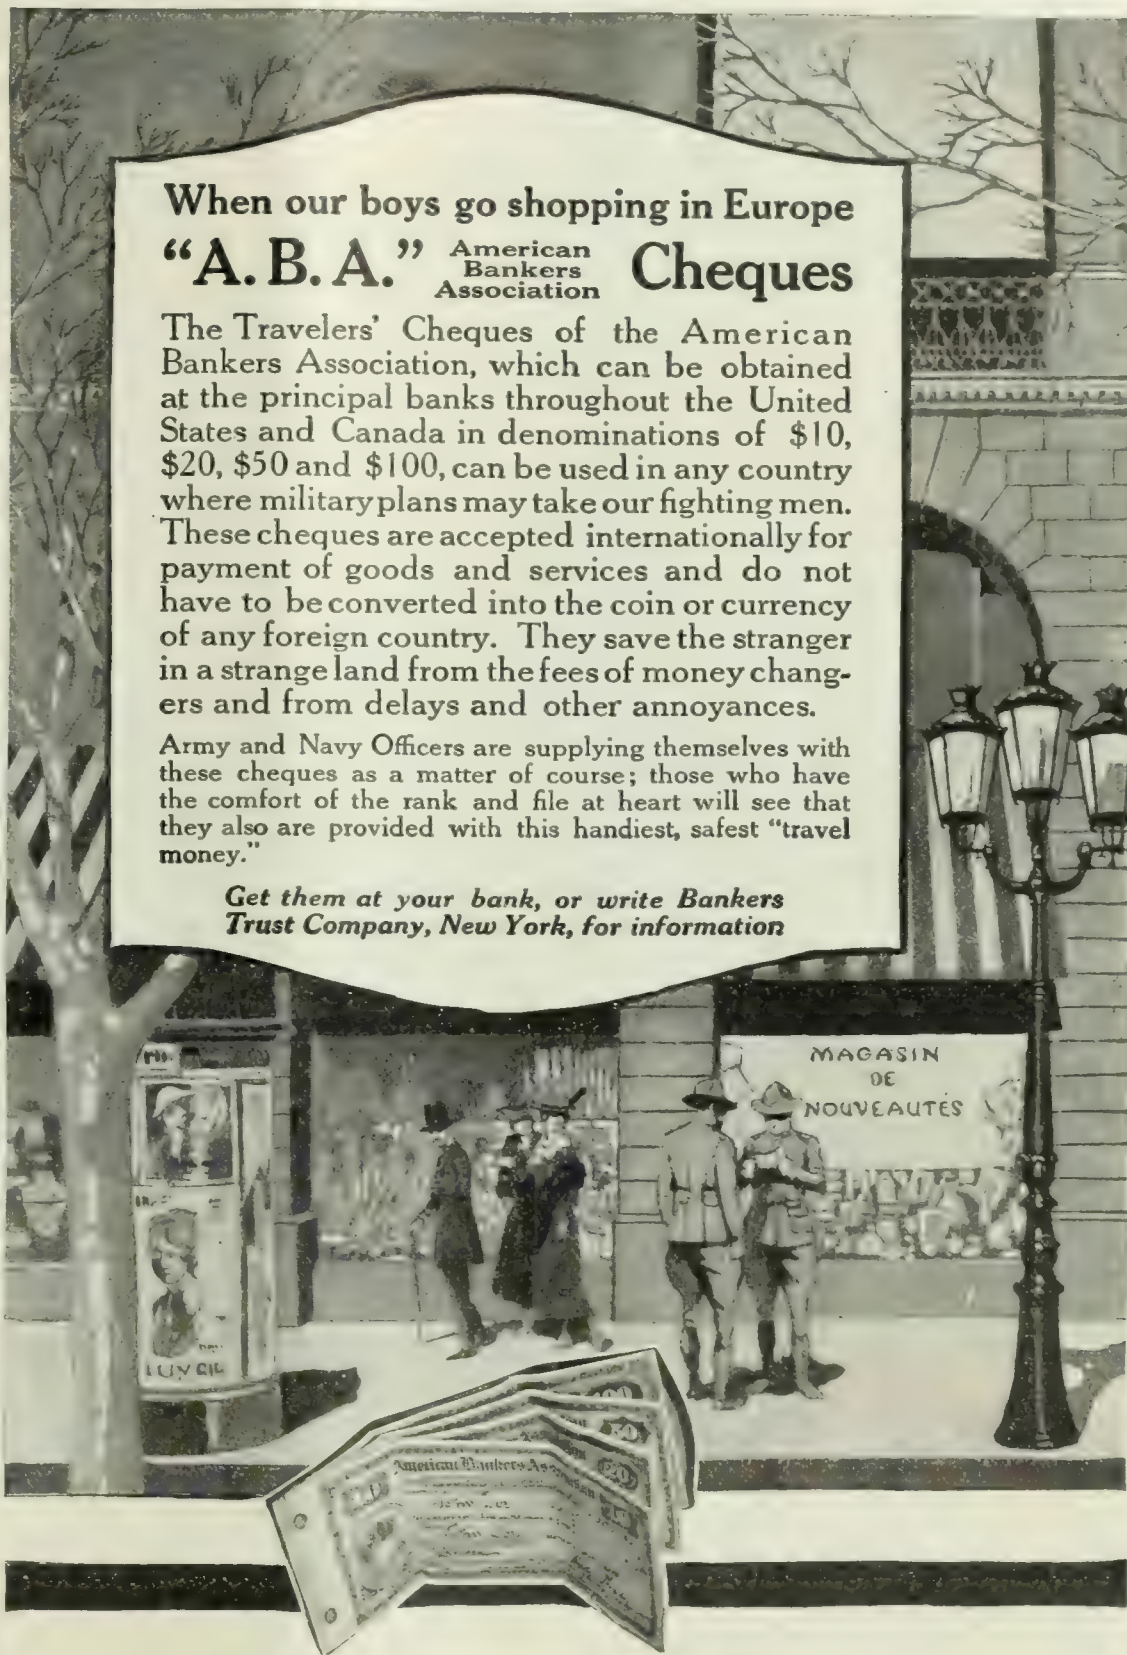

Briggs—Well, I don't know what he means or she means, but that's what her mother means.—London Opinion.

## When our boys go shopping in Europe "A. B. A." American Bankers Association Cheques

The Travelers' Cheques of the American Bankers Association, which can be obtained at the principal banks throughout the United States and Canada in denominations of \$10, \$20, \$50 and \$100, can be used in any country where military plans may take our fighting men. These cheques are accepted internationally for payment of goods and services and do not have to be converted into the coin or currency of any foreign country. They save the stranger in a strange land from the fees of money changers and from delays and other annoyances.

Army and Navy Officers are supplying themselves with these cheques as a matter of course; those who have the comfort of the rank and file at heart will see that they also are provided with this handiest, safest "travel money."

Get them at your bank, or write Bankers Trust Company, New York, for information

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

which is sincere, reliable, entertaining, and instructive. The Pathfinder's weekly review is published clearly, fairly, briefly—here it is. Send 15c for a copy of the Pathfinder's weekly review. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

## IMPROVING THE MOVIES

BY MARY GRAY PECK

**W**HAT can women do to improve the standard and quality of motion pictures in their community?

This question is asked so often by women who want to do something practical along the line indicated that it may be helpful to set down some things which have weathered the storm of experience.

First, let us remember that if we should make motion pictures perfect, the majority of imperfect men and women, and particularly children, would automatically cease attending them, and return to more questionable amusements, or to that idle vacancy which the devil prefers to all other states.

Second, let us look a few facts in the face. The first fact is that the motion picture has been improving right along without any organized help from the public. This is significant. The second fact is that the better it has become the more grumbling against it on the part of the best elements of the public has been heard. The third fact is that legislation purporting to regulate the material conveyed in the movies by means of censorship has broken down. The fourth fact is that legislation purporting to restrict the attendance of children at the shows has also broken down. A well known city official in New York said recently that if there were two policemen detailed to every child in the city, the law providing that no child should attend a moving picture show unaccompanied by parent or guardian could not be enforced. All other children are just like New York children.

Far from being mystified or discouraged by these facts, we should seek to understand and profit by them. We should be vastly comforted that the movies have "just grown" better. We should be comforted that the grumbling about them on the part of serious and critical people arises from the fact that the motion picture has risen to the plane on which these people live. They are taking it in hand to fit it for its new environment. The more intelligent and organized this serious grumbling becomes, the better the pictures will become. If there is one thing the producers say often, it is that their chief object in life is to "give the public what it wants." We should rejoice and be glad that government regulation thru censorship of the movies in the few states where it has been tried has done just what repressive, mechanical legislation always does—and that is nothing. Let us cultivate gladness, likewise, about the failure of legislation to keep children out of the movies. We may as well be "glad," since the children are twinkling their fingers from the ends of their cherubic noses at us anyhow!

Having thus become joyful over the things which natural law has brought about for us, let us see what we can do by "artificial selection" to hasten her processes in bettering the movies.

The women of every community which supports a picture theater are, whether they know it or not, censors of the pictures exhibited there. What they say to the manager, or what they leave unsaid, determines whether the pictures are good or bad. In residence districts women have usually made the character of the screen drama superior to that of any other popular entertainment. They have done this by means of free expression of approval and disapproval, coupled with their power to provide or withdraw patronage.

Interchange of opinion, mutual understanding, mutual respect, these are the basis of coöperation between public and producer, these are the essential conditions of progress. Distrust and suspicion cannot live in the air of open and hearty intercourse. If the managers and the women of a community can only get acquainted, the motion picture question of that community is well on the way to solution. It will not be an instantaneous or "perfect" solution, but when all communities get in touch with all managers in this conscious way, public opinion will have a definite means of expressing itself to the makers of pictures. That is the only effectual kind of censorship.

A second practical line of action to take in support of the movement for better films is the encouragement of special programs for young people. Women all over the country have been quick to see the desirability of doing for the film drama what has been done for books in public libraries, for magazines in the world of journalism—namely, the desirability of setting apart that part of the film drama suited to the needs and comprehension of children from twelve to sixteen in special programs, regularly presented.

Nobody questions the need of getting children out of the ordinary miscellaneous show. How to go about it, however, is something about which there is by no means the same unanimity of opinion. Legislation has proved a flat failure.

Where managers, parents and police have in rare instances been known to coöperate, the children never have shown the slightest intention of being legislated out of the movies. It would be as hopeful to try to legislate them out of the swimming hole or the circus. We may as well reconcile ourselves to the fact that the lure of the moving picture is irresistible to childhood, and shape our course accordingly.

The demand for children's films is increasing to such an extent that the producers and exchanges are taking steps to meet it with measures which will make it easy to give young people special programs for long or short series as the locality may desire.

The National Committee on Films for Young People, affiliated with the National Board of Review of Motion Pictures, offices at 70 Fifth Avenue, New York, have prepared lists of plays suitable for such performances, which may be had on application to the secretary. Information and practical suggestions as to how to go about starting children's matinees, together with a monthly bulletin containing new lists of plays, notes from the various cities where performances are successfully established, and other valuable matter, will be furnished to any civic group desirous of joining the movement.

The standardizing of programs for young people is the first step toward specializing programs for differing types of audiences. Up to now, the ordinary show has aimed to hit everybody by assembling miscellaneous features in its program. While each feature usually does please a part of the audience, it is quite as likely to displease some other part. Undoubtedly the time is at hand when the film drama will enter upon the path of specialized types which has been pursued by every other art, in which is a course productive of ever higher excellence.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### SECTION I. ORAL AND WRITTEN COMPOSITION.

##### The Story of the Week.

1. You are a member of a society organized to study the geography of the war. Give a report on the formation of the Ukrainian republic. Use a map in illustration of your talk.
2. Give a similar report concerning the Don Cossacks. If possible, begin your report by telling what you or your hearers may have seen of Cossacks in this country.
3. Show in what ways the story of General Kaledine is like the story of Brutus in "Julius Caesar."
4. You are at a meeting held in honor of soldiers from your neighborhood. Tell them, by referring to the reorganization of the British command, what effect American counsel has had in the conduct of the war, and explain how American soldiers may be the deciding power.
5. Imagine that you were present at the capture of Kiev. Give a graphic word picture of the event. Make your story personal in interest.
6. You are at a neighborhood meeting. Tell your hearers the circumstances of Germany's renewal of war with Russia, showing thereby how necessary it is for the United States to exert itself to the utmost in the present war.
7. Give a clear oral explanation of the reasons why Rumania wished to conquer Bessarabia, and of the means whereby Rumania has practically accomplished her purpose.
8. Give a talk in which you explain the action of the United States in relation to the neutral steamships.

##### Editorial Articles.

1. Write an outline of "The Ukraine People's Republic."
2. Write short, explanatory items concerning the following names in "The Ukraine People's Republic": Robert Emmet, Wendell Phillips, Toussaint L'Ouverture, Patrick Henry, Kosciuszko, Byron, Mazeppa, Sienkiewicz, "With Fire and Sword," Maria Theresa.
3. Write a summary of what is said concerning the history of the Ukraine.

##### The Heritage of Freedom. By Robert McN. McElroy.

1. Give patriotic talks in relation to the present war, based upon the following: "Our loyalty belongs to principles, not to races"; "We follow ideals rather than idols"; "The greatest forces in the world are moral forces"; "Governments derive their just powers from the consent of the governed."

##### Can Germany Revolt? By Countess Alida von Krockow.

1. Write, or give orally, a précis of the author's answer to the question.

##### The Biggest British Blunder. By Charles M. Sheldon.

1. Show how the author gains emphasis by the use of specific instance.
2. Prepare a spirited oration on the subject of national prohibition in time of war and in time of peace.

##### The Countryside.

1. Give a clear oral presentation of any matter of household or garden interest in this number of The Independent.
2. Give a talk based on any picture of house or garden in this number of The Independent.

#### SECTION II. LITERATURE.

##### "I. H. S." By Charles H. Crandall.

1. Explain the appropriateness of the title. Show its definite relation to the poem.
2. Prove the following statement: The poem is characterized by sympathy, tenderness, and loyalty to American ideals.
3. Read the poem aloud in such a way as to present its feeling and its beauty.

##### The New Books.

1. Explain to a body of citizens the peace terms proposed by "Our Foremost Private Citizen."
2. Explain the following expressions: A chatty, informal, instructive discussion. The situations are forced. Continuity of action. A comprehensive critical review. A keynote flamboyantly and frequently struck. Prochure.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. A Campaign for Intelligent Patriotism—"The Heritage of Freedom."

1. "We are fighting to destroy war," etc. What are the facts?
2. Justify the statement: "We have been taught by Washington, Jefferson, Jackson and Lincoln to think always of the many, not of the few," etc.
3. Can you recall any other statements of kings or princes similar to those of Frederick II and the Kaiser?
4. "Our ancestors . . . left behind them the theory of the divine right of kings and classes," etc. Give a brief statement of the facts.
5. "Public opinion as the basis of government is part of our heritage of freedom." How does this opinion make itself known?
6. "The Revolution . . . was not a local conflict," etc. Show how this Revolution influenced the history of America and Europe.
7. Upon what facts in history does the author base his belief that the choice in the present struggle is between "The heritage of Freedom and the heritage of Violence"?

##### II. Our Shipping Program—"A Menace Ended," "More Shipping for France."

1. What was the cause of the trouble in the shipbuilding industry as revealed by the news item? Has the trouble been permanently ended by the action of the President?
2. Comment on the President's statement: "It is the duty of the Government to see that the best conditions of labor are maintained . . . as it is also its duty to see that there is no lawless and conscienceless profiteering."
3. Summarize the regulations adopted for the purpose of putting foreign trade under control. What will probably be the effect?

##### III. The Muddle in Southern Russia—"The Ukraine People's Republic," "The Formation of the Ukrainian Republic," "Bolsheviki Capture Kiev," "The Don Cossacks," "Rumanians Conquer Bessarabia."

1. Follow the text references by locating provinces, towns, rivers, etc., on a map. Does this geographical study justify the title of the topic?
2. How many of the topics treated in the editorial are also mentioned in your text book? Study the index.
3. Why is the loss of Ukraine a great commercial as well as a great agricultural blow to Russia?
4. What chances has the Ukrainian republic to survive?

##### IV. Prohibition in England—"Is England's Biggest Blunder to be Ours?" "The Biggest British Blunder."

1. "We are fighting three enemies; . . . and the greatest of these is Drink." If this is so, how do you account for the opposition to prohibition in Great Britain?
2. What is the relation of the drink problem in Great Britain to the food problem in that country and in America?
2. Have we Americans any effective way of helping the British in their fight for better conditions?

##### V. The German Social and Political System—"German Efficiency," "Can Germany Revolt?"

1. "A great deal of German efficiency is of just that quality . . . brutally direct, unsentimental." Explain the reasons for this statement and give illustrations.
2. Contrast the methods of German efficiency with "the efficiency of a great democracy."
3. "The German people have been made like sheep." What did Liebknecht mean by this statement?
4. "The millions of Kleinbürger and the middle class suffer," etc. Why, then, do they still cherish faith in the Government?
5. How does Countess von Krockow explain the large Social-Democratic vote in Germany?
6. What is the significance of the allusion in the last sentence of the article, "Can Germany Revolt?"

##### VI. The Progress of the War—"Reorganization of British Command," "Germany Renews War on Russia."

1. Explain the significance of the parliamentary crisis in England.
2. What, as far as you can determine, are the military purposes of the Germans and Austrians in the East?

# A Better Memory In One Evening

Because the  
first Lesson  
sticks

David M. Roth is the acknowledged memory expert. Mr. Roth will teach you his Method by mail to your full satisfaction. He teaches you how to remember *what* you want to remember.

He has prepared his complete memory method in a Home Study Course of 7 lessons, which has all the fascination of a game.

You can learn how to remember names, addresses, numbers, people, and business figures—easily and quickly.

DAVID M. ROTH, Memory Expert

## WHAT CAN BE DONE BY HIS METHOD

### The New York Tribune said:

"David M. Roth gave a practical demonstration of memory at the lunch meeting of the Rotary Club at the Hotel McAlpin.

"Mr. Roth asked the men at any four tables to call out their names. This they did—32 of them. Then the speaker turned his back and they changed chairs. Mr. Roth then proceeded to call each one by name and went through them without error. \*\*\* Other astonishing illustrations were given."

### The Seattle Post Intelligencer said:

"Of the 150 members of the Seattle Rotary Club at a luncheon yesterday not one left with the slightest doubt that Mr. Roth could do all claimed for him. Rotarians at the meeting had to pinch themselves to see whether they were awake or not.

"Mr. Roth started his exhibition by asking sixty of those present to introduce themselves by name to him. Then he waved them aside and instructed a member at a blackboard to write down names of firms, sentences and mottoes on numbered squares, meanwhile sitting with his back to the writer and only learning the positions by oral report. After this he was asked by different Rotarians to tell what was written down in various specific squares and gave the entire list without a mistake.

"After finishing with this Mr. Roth singled out and called by name the sixty men to whom he had been introduced earlier, who in the meantime had changed seats and had mixed with others present."

## WOULD YOU LIKE A MEMORY LIKE THAT?

Mr. Roth says: "There is not a thing that I do with my memory that any other person of average intelligence cannot learn to do—probably more easily and quickly than I.

"You may not want to give a performance, but would you like to remember telephone numbers—engagements—names and faces?

"In the first evening you spend on my first lesson you will discover a mental power that you never dreamed you possessed. I know this is true because my pupils—thousands of them—have so testified."

## A BAD MEMORY IS A HEAVY HANDICAP

There is no longer any excuse for the man who has a poor memory. He makes needless trouble for himself and everybody around him. He does not deserve to succeed, and unless he has marked capacity in other directions, usually does not. "I forgot" is the most inefficient phrase in the English language.

## "I FORGOT" HAS LOST MANY A JOB

Your memory is the most wonderful instrument in the world if you only know how to use it. It can be readily taught to do things that look marvelous, but are really only the result of your natural mental faculty properly controlled and applied.

No matter what your work is you will find Mr. Roth's Memory Method a priceless aid to achievement and a money making instrument of efficiency.

Mr. Roth is the most successful memory trainer in the country, his Method is the shortest, most direct, most interesting, and most practical, of any that we have seen.

## THE FEAR OF FORGETTING

will vanish the minute you learn Mr. Roth's method of remembering.

Then you will be delighted at the new sense of confidence and power that has come to you, when speaking on your feet, or in business discussion, or in making a selling talk, or in holding up your end of a conversation.

## SPEND ONE EVENING

with Mr. Roth. Study the first lesson of his Memory Course. And you will see how a new world of names, faces, facts, figures and mental picture-records opens up to you the next day.

Mr. Roth's method makes the act of remembering a pleasure. By his method it is an easy, natural, and automatic process of the mind. You can summon the right fact, name, or number, for use when you need it most. It all lies in *knowing how*.

Mr. Roth's method will be a revelation to you. You will realize the power of your own mind as you never realized it before.

## THESE LESSONS WILL START YOU RIGHT

1. The Basic Secret
2. The Power of Mental Preparedness
3. How to Remember Names and Faces
4. Reading and Public Speaking
5. How to Remember Numbers
6. How to Study and Spell
7. Practical and Entertaining Applications

Mr. Roth shows in his first lesson the underlying scientific principle of his method by which the average mind can be made to remember—like a flash—anything that the occasion demands.

## Independent Corporation

I enclose \$5.00. Please send me the Roth Home Study Course for memory training, with the agreement that I may keep it three days for examination and if not entirely satisfied may send it back and you will refund my money without question.

Name

Address

Post Office

State

## One well known pupil

### C. Louis Allen

President of the Pyrene Manufacturing Company

### says:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure *pleasure* all the way through. I have derived much benefit from taking the course of instruction and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

The other six lessons teach the practical application of this principle to the various daily requirements of the human mind and memory.

**YOU NEED THIS COURSE.** It will teach you to remember—quickly and easily—

Names and Faces	Business Figures
What You Read	Statistics
Speeches You Hear	Facts
Talks	References
Business Details	Sermons and Lectures
Selling Points	Business Reports
Legal Points	Good Stories
Conversations	School Lessons
Pictures	Household Duties
History and Dates	Business Appointments
Streets and Numbers	Social Engagements

Mr. Roth's fee for personal instruction to classes limited to fifty members is \$1,000. He has authorized the Independent Corporation to offer his complete Course of Seven Lessons at a nation-wide introductory price of

**ONLY \$5**

Mail the coupon today with this amount and the complete course of Seven Lessons will be sent you, with a booklet containing *fifty letters* of hearty recommendation from executives of the largest business houses from Seattle to New York City.

## ABSOLUTE GUARANTEE

If after 3 days you are not satisfied with the course return it to us and your money will be refunded in full and without question. *The Independent has been established for 70 years.*

Take advantage of the low introductory price. Act now—lest you FORGET.

# The Independent

WITH WHICH IS INCORPORATED  
HARPER'S WEEKLY

## IS ENGLAND'S BIG BLUNDER TO BE OURS?

**I**T is a strong indictment that Dr. Sheldon brings against England in his article on another page? But it is no stronger than many Englishmen of the most loyal have drawn up themselves. There can be no question that the British Government has been unwilling or believed itself unable to meet the drink question head-on and dispose of it once for all for the duration of the war. England has undoubtedly paid the penalty of this failure in a costly loss of efficiency.

But are we any better off? Have we met the question squarely and disposed of it in clean-cut and decisive fashion?

We have not. We have done well in going half way to the goal, but we have been neither consistent nor thorough. We have not done well enough.

The President, acting under authority of the law passed by Congress, has prohibited the use of foodstuffs for the manufacture of distilled liquors during the war. But he has not extended the prohibition to the brewing of beer. It should be so extended forthwith. We and our Allies need the food that is being used up to make beer.

The bakers of the country are forbidden to make bread that has not some other cereal product mixt with the wheat flour. Grocers are forbidden to sell wheat flour except as customers buy a designated proportion of other flour at the same time. One of the other cereal substances that we are compelled to use in making our bread is barley. We are also urged to eat corn and rice. As a nation we have responded gladly.

But meanwhile fifty million bushels of barley were used last year in making beer. Thirteen and a half million bushels of corn and two and a third million bushels of rice were eliminated for food purposes in the same way.

Is this right? Is it efficient? Is it doing our best to win the war?

Every man, woman and child in the United States is asked so to modify his or her eating habits as to release food for our soldiers and our Allies. But no brewer or

drinker of beer has been asked to modify his habits a particle.

The American people have responded nobly and generously to the appeal. They have surprised their Allies with what they have been able by voluntary sacrifice to accomplish. A responsible British official declares that the best estimates of what we would be able to send them in the way of meat have been exceeded by 150,000,000 pounds in the case of bacon and 25,000,000 in the case of other meats. It is a record of which we need not be ashamed.

We have made it by responding cheerfully to the request that we observe wheatless, meatless and porkless days.

But where is our Beerless Day? Men, women and children must abstain from meat on Tuesday, from wheat on Monday and Wednesday and Friday, and from pork on Saturday. But no man or woman need abstain from beer on any day of any week. It would be absurd if it were not so serious.

A serious responsibility rests upon the Federal Administration. The use of any foodstuffs whatever in the making of alcoholic liquors should be interdicted without a moment's delay.

At the same time we should inform our Allies, in all good feeling but with inflexible decision, that our continuing to supply them with foodstuffs in the quantities they require will depend upon their ceasing to destroy foodstuffs to make drink.

The other side of the picture, which Dr. Sheldon paints so vividly—the effect upon those who must win the war of the drinking of alcoholic drinks—we shall not elaborate upon. But the case for the elimination of both the manufacture and the sale of alcoholic drink for the duration of the war is incontestable. This is one of the great decisions that we as a nation must face if we are to be true to our high duty of making the world safe. We must face it, make it fearlessly and without reservation, and make it without delay.

## BANK IT, MR. GARFIELD

**S**EVERAL Independent readers have taken us to task for a part of our editorial, "The Amazing Order," which dealt with the now historic Fuel Saving order of Mr. Garfield. We quote the offending passage:

"One reason advanced by Mr. Garfield for his revolutionary order is that there has been a deficit in the year's production of bituminous coal of 50,000,000 tons, and half the country must stop using coal for fourteen days in order to catch up. The cause of three-quarters of this deficiency in production, according to Mr. Garfield, is 'car shortage.' We do not understand the explanation. Cars carry coal, they

do not mine it. Have the miners ceased mining and the hoisting engines ceased lifting it out of the mines simply because there were no cars to carry it away? What was the Fuel Administrator thinking of to permit such a deficiency in production to exist? What was he doing to prevent it?"

Our correspondents hasten to assure us that we know nothing of coal mining—which is largely true—and that we are woefully mistaken in the suggestion that coal can be mined when there are no cars to carry it away—which we are not prepared to admit.

It is unquestionably true that in the ordinary way of

# CARTOON COMMENT

## GERMANY, RUSSIA AND PEACE

### PEACE AT ANY PRICE?

The Prussian serpent, trying to swallow Poland, Lithuania, Riga, Moon Islands and \$4,000,000,000 indemnity at one gulp reminds Darling in the "New York Tribune" of the slogan of the pacifists, "Peace without annexations or indemnities"

### SAID THE SPIDER TO THE FLY

The Italian opinion of Germany, Russia and peace is forcefully presented in the cartoon below from "L'Asino." The spider, planning to trap unwary victims, is Germany; the spider web is labelled Peace

### THE IDLER

"Mucha," of Moscow, apologizes for Russia standing idle while the rest of the world fighting. "Don't look at Russia America is saying. "Let him keep his hands in his empty pockets. The boulder will roll over the edge without his help"

### SAVING THE FATHERLAND

"If I can't save the fatherland, I'll save what I can," says the pacifist looting Russia's resources. "Novi Satirikon," Petrograd

### THE NEW AUTOCRAT OF THE RUSSIAS

Anarchy has seized the throne that overthrow of Russian royal left vacant. Cartoon by Kirby in the "New York World"

coal mining it is the accepted practise to load the coal into cars directly from the tippie at the mine mouth. The coal, as we understand it, is mined only so fast as the cars can carry it away. The obvious result is, no cars, no coal. That is clearly the accepted practise.

We had no intention of saying that it was not. We merely wished to suggest that this is no time for slavish adherence to "accepted practises." This is a time for the scrapping of time-honored methods and the taking of short-cuts to required ends.

We are strongly inclined to believe that it is perfectly possible to mine coal and store it somehow, somewhere, near the mine mouth, until cars are ready to carry it away. Such a method of procedure might be troublesome, it doubtless would be more expensive. But this is no time to boggle at trouble or at added expense. We must have coal to win the war; unless we win the war our trouble saved or added expense avoided will do us little good.

Until some one can prove to us the contrary we shall continue to believe that the mines should have gone on producing coal regardless of "car shortage," and that the Fuel Administrator should have seen that they did it, no matter how many traditions he upset or how many accepted practises he revolutionized in the process. We are strengthened in this belief by the following excerpt from the columns of the *New York World*:

At some collieries they [the miners] declined to work on Thanksgiving. Newspapers had just reached their communities containing pictures of the coal the Delaware & Hudson had stored at South Carbondale, and the men argued that there could be no reason for working on a holiday if the companies were only going to "bank" what was mined.

The Delaware & Hudson has explained officially that the "banks" at South Carbondale were built because it could not get cars to move the coal to market. When the "banks" had grown to nine in number, each containing from 35,000 to 40,000 tons, the company began storing loaded cars between Scranton and Carbondale. Within a short time three tracks were filled for the entire distance of fifteen miles.

Scranton, within sight of these two huge accumulations and still unable to supply her own needs, has had her doubts about the company's inability to get cars. Newspaper attention that went unchallenged was called to the fact that the "banking" was done while higher rates for coal were under consideration—rates that would have made this store worth about \$175,000 more than before.

Here was a coal company that was able to "bank" coal when it could not—or would not—transport it. What one mining operator could do, others might do as well.

We realize that the coal "banked" by the D. & H. was anthracite, while Mr. Garfield was talking about bituminous. But we are sceptical about any difference between the two kinds of coal which makes it possible to "bank" the one and not the other.

Our entire contention is that in times of emergency and stress the mining of coal should go on at top speed without interruption, and emergency measures devised to take care of the coal when it reaches the surface of the ground, in case there are no cars ready to receive it. We maintain that the Fuel Administrator should have required this to be done last summer. We insist that he must see to it that it is done this summer or fail in his great responsibility to the American people.

## THE FEELING OF BEING STARED AT

DO you know that if you stare at the back of anybody's head long enough he or she will get to feeling uncomfortable and finally look around? If you do, this is one of the cases comprized in Josh Billings' aphorism: "It's better not to know so many things than to know so many things that ain't so." For the psychologists of Stanford University have been experimenting with the alleged "power of the human eye" and they find that it "ain't so." That is not the language in which they express their con-

clusion. No, indeed. The way they put it on p. 167 of their Monograph No. 1 of "Experiments in Psychical Research" is

Sensory and motor automatisms, from incipient to hallucinatory grade, are shared by both normal and sensitive reagents, and constitute the *inner experience* of "the feeling of being stared at" and of thought transference, but, so far as our experiments (which number in the aggregate 14,500) are qualified to indicate, bear no causal relation to the external processes or facts to which they refer.

Which is the psychological way of saying "nothing in it." Certainly they seem to have settled the question for good and all. They tried it on skeptics and on those who were firmly convinced of their ability to stare or feel a stare. They tried it on men and on women. They tried it with and without warning. They tried it for various lengths of time, with divers angles and at different ranges. They tried it singly and in batteries of twenty-four eyes trained on one cranium.

But in all cases the right and wrong guesses came out fifty-fifty, or as close to that chance ratio as one would get in twirling a coin the same number of times. So we may as well lay this theory away in the limbo of outworn superstitions together with other popular beliefs that receive a knock-out blow from this bulky volume. But still, if anybody thinks he can sense an unseen stare doubtless the psychical researchers of Stanford will reopen the case and give him a fair chance to demonstrate his power to them.

## THE DIFFERENCE

GERMAN propaganda in America—to substitute lies for the truth.

American propaganda in Germany—to substitute the truth for lies.

## THE UKRAINE PEOPLE'S REPUBLIC

THREE years ago there was much speculation as to which nation would be the first to make peace, but none of the prophets named the right one, for it was a nation not then in existence. Twice has German aggression generated republicanism, in 1871 the republic of France, in 1917 the republic or republics of Russia. So tyranny de-thrones tyrants and Satan casts out Satan. It seems that malevolent monarchies may do more for the liberation of an oppressed people than benevolent republics have done. The fable is reversed and wind accomplishes what the sun could not.

Whether these new born nations, Finland, Poland, Lithuania, Ukrainia, will perish in infancy of internal disorders or be strangled in their cradles by the Teutonic midwife or survive to grow to maturity we may not predict, but they have at least been brought into being long enough to be christened. "There never was, is not and never can be a Ukrainian language or nationality," so decreed the Russian Government in 1863. Whether this was true as regards the past is a question that may be left to the historian and philologist to argue over; but no czar can bind the future. There is now a Ukrainian language and nationality, whatever obstacles yet remain before its right of self-determination.

That the defection of Russia is a severe blow to the Allies cannot be denied. It prolongs the war indefinitely and throws an appalling burden upon the United States. It substantiates the imperial regimes that we are endeavoring to overthrow. But were it under happier auspices we might rejoice in the regeneration of the Ukraine. We know the Ukrainians. A half million of them have sought refuge in the United States. We have listened to their songs in exile. We have sympathized with their sufferings and aspirations. We have contributed to the cause whenever the

collection boxes have passed our way. It is a part of the American tradition to aid any people in revolt against king, kaiser, czar or sultan. In the good old days when Friday afternoon school time was given over to public speaking, the patriotism of small peoples was the theme of the favorite selections. Then the walls of the schoolroom rang with shrill voices declaiming Robert Emmet's last speech, Wendell Phillips' *Toussaint L'Ouverture*, Patrick Henry's "Give me liberty or give me death," "Freedom shrieked when Kosciusko fell," "At midnight in his guarded tent the Turk lay dreaming of the hour," and

"Bring forth the horse!"—the horse was brought  
In truth, he was a noble steed  
A Tartar of the Ukraine breed.

So Byron thru "Mazeppa's Ride" gave to many of us our first interest in the Ukraine, and whenever afterward we read that the Czar was trying to crush out Mazeppism, as southern secession was called, we pictured the distressed people as a naked youth bound by bloody bands upon a wild horse bounding over the steppes. In later years when the American public became enamoured of Sienkiewicz's "With Fire and Sword," our sympathies were divided, for the heroes of this immortal trilogy of romances are the Poles who are fighting to resubjugate the Ukraine. In 1648 the Ukrainians under the leadership of Hmelnitski, the hetman of the Cossacks, declared their independence, but after six years of struggling to establish it Hmelnitski called together the people at Kiev and said: "We have lived for six years without a sovereign in bitter tribulation and now we must choose one. We have the choice of four, the Sultan of Turkey, the Khan of Crimea, the King of Poland and the Czar of All the Russias. The first and the second are Mohammedans. The King of Poland has treated us worse than dogs or Jews. The Czar is of our own Orthodox faith and promises us fair terms." When the question was so put to them all the people of the Ukraine hailed the Czar as their ruler.

This treaty of 1654 is the Magna Carta of the Ukraine. Both parties appeal to it and each interprets it in his own way. The Muscovites or Great Russians claim that thereby the Ukraine became an integral and inseparable part of the empire. The Ukrainians or Little Russians claim that it assures autonomy.

Great Russia having the power enforced its own interpretation and for the last two hundred and fifty years has endeavored to crush out the language—officially nonexistent—and to extinguish the sentiment of nationality. This oppression reached its climax in 1876, when announcement was made that "the Emperor has graciously deigned to decree" that no books or translations in Ukrainian be printed or imported and that no plays, songs or speeches be allowed in the language.

But, as in the case of Poland, the Ukraine was united by being divided. That part of the Ukrainian territory which remained under Polish rule—readers of Sienkiewicz will remember why—fell to the lot of Austria when Poland was divided with Russia and Prussia. Galicia, which Austria acquired in this way, is inhabited in the western half chiefly by Poles and in its eastern half chiefly by Ukrainians, called there Ruthenians.

The dividing line of the Ukraine is drawn rather sharply at the fortress of Przemyśl, which in the present war was taken by the Russians after a long siege. But the two races are in all this borderland intermingled with the Poles, forming the noble or landowner class, and the Ukrainians, forming the peasantry, and the Jews, largely in the cities, as a middle or mercantile class.

Maria Teresa and her successors upon the Austrian throne have generally followed the policy of favoring the Ukrainians as an offset to the Poles. A Ukrainian university was established at Lemberg, the capital of Galicia, and this served as a center for Ukrainian literature and nation-

alist propaganda while they were prohibited in Russia. When in the present war the Russian armies invaded Galicia as far as Przemyśl the country was declared re-annexed to Russia—altho as a matter of fact it had never belonged to Russia but was, up to the time of its acquisition by Austria, under Polish rule. The Ruthenian (Ukrainian) newspapers were suppressed, the flag and language prohibited, and the instruction in the university of Lemberg stopped. Professor Hrushevsky, the historian of the Ukraine, was arrested and transported. The Ukrainians in America petitioned our Government to intercede for his release, but no action was taken.

Now, by the whirligig of fate, which is revolving with unprecedented rapidity, Professor Hrushevsky is head of the Ukrainian Rada or National Council, Austrian arms are supporting the Ukrainian republic against the Petrograd Bolsheviks and Austria has concluded a peace which grants to the new republic a generous slice of old Poland, much to the disgust of the Poles. But Austria shows no disposition to cede to Ukrainia the eastern end of her own Galicia, altho its population is more purely Ukrainian.

The Bolsheviks are proving more tyrannical than the Czar and it is natural that the Ukraine should still desire as much as ever to be independent of Petrograd. With an area of over 300,000 square miles Ukrainia will be the largest country in Europe except Great Russia—and Great Russia may be Little Russia if the fission process continues. Russia entered the war with the avowed purpose of obtaining a more southerly port at Constantinople, but she seems likely to lose what poor ports she had, Riga by the secession of Lithuania, Vladivostok by the secession of Siberia and Odessa by the secession of the Ukraine.

The new nation will probably start out in life with a population of thirty millions or more, which will rank it next to Italy. But with a fair chance it may become as rich and populous as any European country, for it contains the famous "Black Earth" belt between the forest and the steppes which has served as the granary of western Europe. It also produces seventy per cent of Russia's output of iron.

The natural plane of cleavage of any country is between the north and south. Here the break is most apt to occur in case of strain. The reason is that lines of longitude are imaginary while lines of latitude stand for real differences of climatic conditions.

We see the tendency toward the divergence of north and south in Germany, Italy, Ireland, Spain, China and the United States. All travelers note a difference between the Great Russians or Moscovites of the north and the Little Russians or Ukrainians of the south. The latter are smaller, darker, livelier, quicker tempered, more vivacious, more artistic, less disciplined, less industrious. The Great Russians may be regarded as Slavs with the Teutonic temperament, the Ukrainians as Slavs with the Latin temperament. As for the speech it would not be safe to venture an opinion as to whether Ukrainian is a dialect or a language. Suffice to say that it differs from Great Russian as much as does Catalan from Castilian, English from Scotch or Provençal from French. If not a language it may be made one and if it has not a literature it may get one now the iron hand of the Czar is removed from it.

While the streets of Kiev are running red with the blood of a class war, with foes on the north, east and south and a dangerous friend on the west, it is impossible to say whether the peace of Brest-Litovsk means the dawn of a new era for the Ukraine republic or the loss of her last chance.

But it is unfortunate that in this crisis the People's Republic is receiving recognition and aid from the Central Powers while the Allies, pledged to champion oppressed nationalities, must stand aloof and averse.

# THE STORY OF THE WEEK

## THE GREAT WAR

**February 15**—Bolo Pasha condemned to death for treason in France. Pershing reports two wounded and eight deaths from disease.

**February 16**—Air raid on London. Dover shelled by U-boat. Pershing reports four killed, one wounded, two missing and eight deaths from disease.

**February 17**—Sir William Robertson removed as Chief of British Staff. Russo-German armistice expires.

**February 18**—Germans advance toward Petrograd and Dvinsk. Pershing reports six killed and four deaths from disease.

**February 19**—Lenine and Trotzky declare willingness to make peace on German terms. Pershing reports two killed, four wounded and four deaths from disease.

**February 20**—Riots, pogroms and robberies in Petrograd and other Russian cities. Draft treaty between Great Britain and United States signed. Pershing reports six wounded and two deaths.

**February 21**—British Admiralty reports loss of twelve merchantmen over 1600 tons and four smaller vessels. British war expenditure now \$32,000,000 a day.

The president of the Rada is Professor Michael Hrushevsky, former professor of the history of the Ukraine at the University of Lemberg, Galicia, Austria, and author of a history of the Ukraine of which eight volumes have appeared, coming down to the seventeenth century. Professor Hrushevsky was a Russian subject. Last July, the Ukrainian Central Rada nominated the cabinet for Ukraine, called "General Secretariat," after the name of the cabinet of the Ukrainian Cossack republic of the seventeenth century. It also elaborated a preliminary constitution for Ukraine, and then submitted both to the government of Kerensky for approval. He hesitated to do so, but on July 15 he finally accepted the Ukrainian propositions without any change. This caused the Constitutional Democrats (Cadets) to leave his cabinet.

This provisional parliament of Ukraine, the Ukrainian Central Rada, was to be replaced by the Constituent Assembly, but it seems that this has not been called, on account of the civil war waged by the Bolsheviki against the Rada, called by them

"bourgeois" for the reason that it contains about one-third of non-Socialists.

The Don Cossacks to the east of the Ukraine are mostly Russians. The population of the Don Cossack province is 4,000,000, half of whom are Cossacks and the other half peasants. The difference is that the Cossacks have nearly twice as much land as the peasants, and besides the latter have to pay to the support of the higher nobility of Cossacks, mostly retired generals, some \$600,000 a year. Altho only twenty-five per cent of them are Ukrainians, they are now turning toward the Ukraine because they are afraid of the Bolsheviki. The Kuban Cossacks in the Caucasus, however, are the Ukrainians. These are the descendants of the old Ukrainian Zaporog Cossacks. Some of them spread also to the neighboring provinces of Terek, Stavropol and the Black Sea province. These are for Ukraine, but they want her to form a unit of the federative republic of Russia, as they would not like their "mother-Ukraine"—as they used to say—to leave them alone in the Caucasus.

## The Formation of the Ukrainian Republic

Soon after the outbreak of the revolution the Ukrainians started to convoke at Kiev different All-Ukrainian congresses, so there were Ukrainian workers' congress, Ukrainian peasants' congress, Ukrainian military congress, Ukrainian Cossacks' congress, Ukrainian coöperative congress, Ukrainian Social-Democratic congress, Ukrainian Socialist-Revolutionaries' congress, Ukrainian Socialist-Federalist congress, and so on. The most important were the congresses of the Ukrainian peasants, who represent eighty per cent of the population, and of the Ukrainian soldiers, who represent mainly the same peasantry.

All the congresses elected delegates to the supreme Ukrainian body which had to organize the reborn Ukraine. This body was then called the Ukrainian National Council (Rada). It caused, however, dissatisfaction among the minorities of Ukraine, namely, among the Jews, Russians, Poles, and so on, who were not included. The Ukrainian Rada yielded and consented to admit to the Rada twenty-five per cent of the representatives of minorities of Ukraine. This was accepted by them, and the Rada was reorganized in accord with this scheme, having changed its name from the Ukrainian National into the Ukrainian Central Rada. Now it has over 750 members, twenty-five per cent of whom are non-Ukrainians, and about two-thirds being Socialists, for the most part Socialist-Revolutionaries and Social-Democrats.

THE RUSSIAN CHAOS

As regards Bessarabia, this province is mainly Rumanian, but the northern portion as well as the southern is Ukrainian. The Rumanians seem to agree that Ukraine shall take the Ukrainian portions, leaving the main Rumanian part to them. A joint army of Ukrainians and Rumanians under Russian officers is now engaged in driving the Bolsheviks out of Bessarabia.

As regards the four millions of Ukrainians in eastern Galicia and the northern part of Bukovina, they certainly want to be united with the Ukrainian People's Republic (Ukrainska Narodna Republika). They recently made a great disturbance in the Austrian parliament over the report that Austria promised those provinces to the future Polish kingdom, but the Austrian Government reassured them that this will not be done. They openly demanded that the Austrian Ukraine be reunited with Kiev. Such demands were raised also at the Brest-Litovsk conference, but they were not satisfied, tho possibly the Austrian delegation may have given some assurances to the delegation of the Ukraine to the effect that in case Austria cedes western Galicia to Poland the eastern part of the province, as well as the northern part of Bukovina, will go to Ukraine. But if not, doubtless the Austrian Ukraine may get full measure of autonomy.

#### Germany Renews War on Russia

The armistice which was started on December 15 in order that the representatives of Russia might confer with those of the Central Powers at Brest-Litovsk came to an end on February 18 and on that date, according to previous announce-

ment, the German armies began their advance. The Brest-Litovsk conference opened with an apparent prospect of an agreement, for the Germans and Austrians seemed at first willing to concur with the Bolshevik peace formula of "no forcible annexations, no indemnities, and self-determination for all nations." But when they came to the discussion of concrete terms it appeared that the Germans were determined to retain all the Polish and Russian territory occupied by their forces, assuming that to be desire of the inhabitants. Leon Trotsky, the Bolshevik Foreign Minister, refused to sign any such treaty and when the Central Powers recognized the independence of southern Russia as the People's Republic of the Ukraine, he withdrew from the conference and ordered the demobilization of the Russian armies at the front.

Accordingly the Germans and Austrians met with no opposition when they crossed the eastern front, which had remained almost immovable for more than a year. The Dvina River, between Riga and Dvinsk, where Hindenburg was held in check, is now unguarded and the Germans passed over the river into Livonia and Esthonia without a fight. These provinces contain a large and influential German population, who doubtless would welcome annexation, but the lower classes, mostly Slavs, would prefer autonomy or independence. All the landowners, mostly German, have been outlawed by the Bolsheviks and several hundred of them have been seized and imprisoned in the fortress of Kronstadt, where they are held as hostages under threat of death if the German armies advance. Their homes have been looted and their lands seized by the peasantry.

As soon as the German advance toward Petrograd developed Lenine and Trotsky sent out by wireless a message to Berlin announcing their willingness to accept the German terms of peace.

#### Bolsheviks Capture Kiev

While the Ukraine has gained a nominal independence recognized by the Central Powers they have lost their capital, Kiev, known as "the mother of Russian cities," since by its foundation over a thousand years ago the Russian empire may be said to have originated. In Kiev, as in every other city of Russia, the class war was started by the Bolsheviks, who are determined everywhere to overthrow and expropriate the property owners. But the Ukrainian Rada (parliament), tho composed largely of Socialists, was concerned with establishing national independence and refused to follow the Bolsheviks of Petrograd in their reign of terror. So the Petrograd Government sent against them a force of Bolshevik troops under Colonel Muravieff, who defeated Kerensky. While he besieged the city the working classes rose inside and for several days and nights the battle raged in houses and street. The Bolshevik aviators flew over the city dropping bombs on the buildings held by their enemies, who, firing from roofs and windows, filled the streets with dead and wounded. Finally the ammunition of the Ukrainians was exhausted and they could no longer hold the monastery where they had made their last stand. It is reported from Petrograd that 4000 persons were killed and 7000 wounded in Kiev before its final capture by the Bolsheviks on February 8.

The Ukraine Government has established its headquarters at Jitomir, eighty miles west of Kiev. Austrian troops are moving eastward from Galicia to aid the Ukrainians in their fight for independence from Petrograd. Lenine has declared all members of the Ukrainian Rada traitors and they are being treated as such whenever caught by the local Bolsheviks.

#### Rumanians Conquer Bessarabia

Rumania entered the war with the avowed purpose of taking Transylvania from Hungary because it was chiefly populated by Rumanians. In this she was foiled, for, as we now know from the Bolshevik revelations, the Germans received information of her plans from the Czar's ministers. So the Rumanian troops were allowed to invade Transylvania without serious opposition, but once they were on the Hungarian side of the mountains they were cut off and captured.

But now the Rumanians, since they have lost hope of gaining those of their race who live to the west, have turned their attention toward the east where a million Rumanians lived under Russian rule. The western part of Bessarabia was annexed by Russia in 1878, altho it is chiefly peopled by Rumanians and Rumania had just given valiant aid to Russia in her war with Turkey. The collapse of Russia resulting from the revolution has given Rumania a chance to regain her lost prov-

#### GREAT BRITAIN'S MILITARY SHAKE-UP

The British Chief of the Imperial Staff, Sir William Robertson (at the left), refused to retain his office in view of the limitation imposed by the establishment of a central war office of all the Allies by the Supreme War Council of the Allies at Versailles. Sir Henry Wilson (at the right) has been appointed to succeed him. General Wilson acted as Lloyd George's military adviser at the conference in Rome of the British Premier and the Prime Ministers and Ministers of Foreign Affairs of the Allies.

### THAT TANK THE TEUTONS TOOK

The British tanks were chiefly responsible for the Allies' victorious advance at Cambrai—an advance that gained strategically important territory and took several thousand prisoners—but in one long-contested point they lost, for a tank at last was captured by the Germans. Berlin has publicized the capture widely and has shown the tank in various cities thruout Germany, making its appearance a pseudo-triumphal procession and appealing to popular applause. But the greatest advantage to the enemy in capturing the tank lies in the opportunity of discovering its construction and duplicating it, if machines and materials can be obtained, by tanks which have been "made in Germany"

ince, so the Rumanian troops crost the Pruth River into Bessarabia and took its capital, Kishinev, which was in the possession of the Bolsheviki. The Petrograd Bolsheviki are powerless because the Ukraine cuts them off from Petrograd. But the Bolsheviki of Odessa have seized the Rumanians in that city and threaten to kill one of them for every one of their men killed by the Rumanians.

The Russian soldiers who have been stationed on the Austro-Rumanian front have, like most of the other troops, been infected with Bolshevism, but they being on the other side of Rumania are not able to join their Russian brethren, for the Rumanians disarmed them and held them back.

The Petrograd Government has sent an ultimatum to Rumania demanding the evacuation of Bessarabia, the restitution of the munitions and other property seized by the Rumanians, the transfer of the Russian troops across Rumanian territory and the extradition of the Russian officers who are aiding the Rumanians.

By the secession of the Ukraine Rumania is shut off from Russia as she has been from the other Allies, so the remaining half of Rumania must fall into the hands of Austria at any time he chooses to undertake the conquest of it.

It is said that peace negotiations have already begun between Austria and Rumania probably on the understanding that Rumania may seek compensation in Bessarabia for any territory on the other side that she may have to relinquish to Bulgaria or Austria.

It is hard enough to ascertain what is going on in the nearer side of Russia, at in regard to the regions beyond the

reports are so confused and contradictory that we can form only a vague idea of the momentous events there occurring.

The military caste of Cossacks established in the valley of the Don River were always the main reliance of the old autocracy and it was naturally expected that here, if anywhere, would rise a reactionary movement against the revolution. General Kaledine, who was elected hetman or leader of the Cossacks last July, led an army against Petrograd during the Kerensky regime. This was one of the causes of the overthrow of Kerensky, for it revealed his weakness and he was suc-

ceeded by the more extreme and unscrupulous Bolsheviki rule of Lenine and Trotzky.

On January 1 the Republic of the Don was organized and declared its independence of Petrograd. General Kaledine was its president and prime minister and the government was set up at Novo Cherkask, near where the Don flows into the Sea of Asov. The older Cossacks at least adhered to him and he was joined by certain of the Constitutional Democrats and of the Kerensky faction who wished to keep Russia in the war against Germany in accordance with her agreement with the Allies.

The most notable of these adherents was General Michael Vassilievitch Alexieff, formerly Chief of the Russian General Staff. General Alexieff collected an army of 30,000 men and set out northward to encounter the Bolsheviki who were coming down the Don. It is rumored that Alexieff and Kaledine had quarreled and that Alexieff's expedition was not approved by Kaledine. Alexieff met the Bolsheviki troops under General Muravieff near Voronesh on the upper Don and was defeated on February 7. Another wing of the Cossack army under General Erdelli was defeated on February 9, and Erdelli was wounded. Alexieff fled to Novo Cherkask, but the government here was demoralized.

The action of General Kaledine in granting land and self-government to the peasants does not seem to have won them over and even some of the younger Cossacks went over to the Bolsheviki.

The Novo Cherkask government gave up in despair and voted to resign and transfer its power to the local Workmen's and Soldiers' Council (the Soviet). Thereupon General Kaledine went into an adjoining room and shot himself.

General Nazaroff, who succeeded Kaledine as hetman of the Cossacks, is

### GETTING THE GREEK ARMY IN SHAPE

The young King Alexander (at the left) is consulting here with the French General Branaud sent by the Allies to direct the reorganization of the Greek army so as to make it an important factor in the military plans this spring. General Branaud was formerly with the French army on the fighting front.

determined to continue the fight against the Bolsheviks.

The navy of the Black Sea, both the Russian and Rumanian, seems to be in the hands of the Bolsheviks and this gives them control of the coast towns from Odessa at the mouth of the Dniester to Taganrod at the mouth of the Don.

**Reorganization of British Command** When Premier Lloyd George returned from the Supreme War Council of the Allies held at Versailles he found himself in hot water. The pacifists and those who, like Lord Lansdowne, favor opening negotiations with the enemy were dissatisfied because the Versailles Council refused to consider peace proposals. The militarists were disturbed by rumors that the supreme command of all the Allied forces was to be placed in the hands of some foreign general or civilian body. The jealousy between the British army leaders, which has caused so much friction during the war, was revived in a virulent form when it became known that General Robertson had been removed as Chief of Staff. Various factions joined in a demand to know what action was taken at Versailles.

To this demand Lloyd George returned a positive refusal. He was willing, he said, to resign but he could not repudiate the policy decided upon unanimously by all the Allies and he would not reveal that policy because that would betray to the enemy the plan of campaign. He said there were difficulties arising from national feeling, historical tradition and mutual suspicion such as hamper every alliance and from professional conservatism, which hates changes in traditional methods. The American delegation was, he said, most insistent upon the necessity of a military command:

I hesitated for some time whether I should not read to the House of Commons the very cogent document submitted by the American delegation, which put the case for the present proposal. It is one of the ablest documents ever submitted to a military conference. The only reason why I do not read it to the House is that it is mixed up with the plan of operations.

If I should read the document submitted by the Americans there would be no need to make a speech. The case is presented with irresistible power and logic.

What happened? We altered the proposal here and there. There was a good deal of discussion, which took some hours, but there was not a single dissentient voice so far as the plan was concerned.

The Premier explained that Versailles had under the new arrangement become the central war office of all the Allies and would have the power to throw certain troops promptly at any point where danger threatened. Sir William Robertson refused to retain his office as Chief of the Imperial Staff under these limitations and he declined the offer of the Government to appoint him the British military representative on the Versailles Council. Major General Sir Henry Seymour Rawlinson has been selected for the post at Versailles. General Rawlinson has been twice removed from command in France, as he was re-

**THE NEW SENATOR FROM WISCONSIN** Irvine L. Lenroot, now Republican representative in Congress from the eleventh Wisconsin district, has been nominated Senator by Governor Philipp to succeed the late Senator Husting

garded as responsible for the mismanagement of the British offensive at Ypres and at Neuve Chapelle, but he has apparently regained the confidence of the King and the Government.

#### More Shipping for France

All the foreign trade of the United States was put under license on February 16 by a proclamation of the President. With this action the Government took under control all imports and exports and commerce with every nation of the world. It is the first step toward cutting down the non-essential commodities in ocean tonnage. The new order, it is estimated, will make available at least 1,000,000 additional tons of

#### LEADER OF THE WOMEN'S OVERSEAS HOSPITAL UNIT

The National American Woman Suffrage Association has established its first hospital unit in the Aisne region of France. Its head physician is Dr. Alice Gregory and under her are four doctors, several nurses and pharmacists and about forty auxiliary aides

shipping to carry troops and munitions and supplies to France.

Trade to South America and the Orient will be affected principally, and it is said that certain exports and imports will be reduced by one-half, but the Government will make the necessary readjustments in our commerce with as little disturbance for business as possible.

The War Trade Board has announced that within a short time all American tonnage fit for overseas service will be withdrawn from coastwise, South American and Pacific trade. The recent agreements with Holland and other neutrals bring within control of the Government some 500,000 tons of shipping available for this non-European trade. French sailing ships will also be used to take the place of some of the diverted American tonnage.

#### A Menace Ended

A strike of carpenters in the private shipyards doing Government work along the Atlantic coast, which had grown to such proportions that it menaced the Government shipbuilding program and thru that our whole war schedule, was called off on February 18 in response to a sharply worded appeal by President Wilson. The matters in dispute between the carpenters and their shipyard employers will be adjusted thru the Labor Adjustment Board. Officers of the carpenters' union have not as yet promised to abide by the decision of the board, which they declare has given unsatisfactory rulings in recent disputes, but in any event it is unlikely that the shipbuilding program will be interrupted again.

The strike had been gathering headway for several weeks. Pleas by Chairman Hurley that the men return to work pending adjudication of the dispute met with no result. The strikers wanted a closed shop. They objected that they were paid much less than the Pacific coast rate of \$6.60 a day, and in many cases carpenters were rated as common laborers and received in some instances only \$3. They declared that the nominal rate paid them was \$4.88, which is the navy yard rate, but this was unfair in a private yard. In the navy yards the men have permanent jobs, secure meals and food at low prices from the Government commissary, and enjoy a thirty-day vacation. The strikers asked the Government to take over the shipyards.

President Wilson's telegram was addressed to Will L. Hutcheson, general president United Order of Carpenters and Joiners of America. "No one," said the President, "can strike a deadlier blow at the safety of the nation and of its forces on the other side than by interfering with or obstructing the shipbuilding program." He concluded:

I must say to you very frankly that it is your duty to leave to it the solution of your present difficulties with your employers and to advise the men whom you represent to return at once to work, pending the decision. No body of men have the moral right in the present circumstances of the nation to strike until every method of adjustment has been tried to the limit. If you do not act upon this principle, you are undoubt-

edly giving aid and comfort to the enemy, whatever may be your own conscious purpose.

I do not see that anything will be gained by my seeing you personally until you have accepted and acted upon that principle. It is the duty of the Government to see that the best possible conditions of labor are maintained, as it is also its duty to see to it that there is no lawless and conscienceless profiteering, and that duty the Government has accepted and will perform. Will you cooperate or will you obstruct?

On the day the President's telegram was sent, the executive committee of the American Federation of Labor, concluding a seven-day session at Washington, issued an emphatic call to American labor for renewed effort in war work.

**A Labor Peace Program** The radical laborites had their innings at a national convention in New York City February 16 and 17, attended by 500 delegates from twenty-seven states representing some 125 labor and radical organizations. Peace aims were discussed and an after-the-war program adopted which reads like a summary of the prospectus of the British Labor Party.

The National Labor and Radical Congress, as it called itself, laid much emphasis on the necessity of world-organization in the days to come. It recommends the establishment of an international assembly, its members to be elected by popular vote in the different countries, as the chief agency for world-legislation and world-administration after the war. "For the purpose of constituting the international assembly," says the program, "a world congress should assemble at the close of hostilities. In this congress all participants should be representatives of the people, so elected as to give proportional representation to substantial minorities."

The program demands that "all diplo-

matic affairs should be carried on in the open and should be subject to parliamentary and popular discussion and control." It insists that all existing secret treaties should be declared void.

Full political and civil liberties for all, complete international disarmament and the end of munitions production are demanded as part of the peace terms. Free seas, free trade and unrestricted migration form part of the schedule, and the public ownership of all resources, public utilities, financial agencies and other economic opportunities, which "should be open to all nations upon equal terms." An important clause of this labor peace program says: "No nation should be responsible for the investments of its citizens in any other country."

The convention selected James H. Maurer, president of the Pennsylvania State Federation of Labor, to represent it at an Allied labor conference to be arranged by the British Labor Party. Morris Hillquit has already been selected to represent the American Socialists at any such meetings. Over a year ago passports were refused to three American Socialist delegates selected to attend a labor conference at Stockholm, but conditions are changed since then. The Socialists and the radicals generally are supporting President Wilson's methods of open diplomacy. The Socialists have always been in favor of playing heavily for a German revolution, and the recent exposures of German duplicity at Brest-Litovsk have intensified the party's traditional hatred of the German autocracy.

**The Hog Island Investigation** In addition to an investigation by a Senate committee, which has been in progress for several weeks, Attorney General Gregory is

probing, at the request of President Wilson, the charges of waste and extravagance in the construction of the Government's fabricating shipyard at Hog Island, Philadelphia. The President has instructed Mr. Gregory to institute criminal proceedings in case the facts justify it. The Attorney General was called in at the request of Chairman Hurley, of the Shipping Board, who declared that there was such apparent negligence and disorganization in the construction work that it might be necessary to cancel the contract.

The Hog Island yards are being built by the American International Corporation, of which Frank A. Vanderlip is chairman of the board of directors. The original estimate for the work was \$21,000,000, but it is charged that \$25,000,000 has already been spent and the total cost will more than double that figure.

Testimony before the Senate committee has shown that land was bought for the plant at \$2000 an acre which a few months before had been on the market at \$1000. It was asserted before the committee that the work on the plant was four months behind. Witnesses asserted that not ten per cent of the efficiency of the yard was used, and lumber was purchased at \$6 above the market price per thousand feet. It was alleged that waste and extravagance went on unchecked.

John W. Towle, an engineer sent by the Emergency Fleet Corporation to supervise the work, told the Senators that there was general incompetence and inefficiency, and a reckless prodigality in the handling of the public funds.

"Did you notice any patriotic desire on the part of contractors to sacrifice profit?" asked Senator Vardaman.

"Very seldom," replied Mr. Towle.

#### THE AMERICAN WOUNDED IN FRANCE

This is the first photograph we have had of our soldiers convalescent at a hospital somewhere in France, looked after by the American Red Cross and entertained to the tune of "Pack Up Your Troubles."

"They seemed, for the most part, to be trying to squeeze all they could out of the Government."

In addition to its \$21,000,000 contract the American International Corporation has an agreement with the Government to build at the yard some 200 ships worth about \$200,000,000 on a commission of 4 per cent. Officers of the corporation have promised to assist the Attorney General. They assert that the added costs were inevitable in a case where speed was the primary requisite.

**War Birds Flying East** The first of America's war birds have been hatched in our factories and already are flying East to peck out the Kaiser's eyes. That is the gist of Secretary Baker's announcement of February 20 that a consignment of American-built battle planes, the forerunner of a mighty flock, was on its way to France. The machines are equipped with twelve cylinder Liberty motors, the first from machine production. In recent tests one of them surpassed all records for speed and climbing for planes of that type. The planes are appearing several months ahead of schedule.

This prompt production represents a triumph of American technical skill. The making of a battle plane represents a most complex and delicate engineering problem, a problem that changes from day to day as ingenious new developments arise from airplane practice. When we entered the war we had practically no airplane engineering staff and no modern fighting planes. There was in this country almost a total lack of advanced airplane engineering knowledge. The airplane industry was a negligible thing. The rapid upbuilding of all the complicated processes of this industry has surpassed expectations.

**The Task of Mr. Hays** Following the selection of Will H. Hays, of Indiana, as Chairman of the Republican National Committee, at a conference held at St. Louis, has arisen a flood of political gossip. The elevation of Mr. Hays, a young man with a record of brisk party leadership in his state, has been hailed as a victory for the Progressive element in the Grand Old Party, that is, for the faction headed by the inevitable George W. Perkins. Already Mr. Perkins and some of his henchmen are laying plans for the nomination of former President Roosevelt as the Republican standard bearer in 1920. Colonel Roosevelt, still in the hospital but rapidly recovering from his illness, held several conferences with men returning from the St. Louis powwow.

Meanwhile it is clear that the Roosevelt adherents will do well to reckon with Senator Hiram Johnson, the Demosthenes of the Pacific Coast. Senator Johnson stepped into the limelight this week with the most pretentious speech he has made since he took his seat in the Upper Chamber in Washington, a speech in which he attacked the American International Corporation for the Hog Island scandal, char-

#### TRYING OUT A GAS MASK

The American soldiers test their use of gas masks by going down into a trench at camp filled with the fumes of asphyxiating gas. It not only proves the efficacy of the masks but it gives the men confidence and valuable training

son's speech was widely quoted in the newspapers and doubtless will make a broad appeal.

Another aspirant who is sawing wood steadily is Governor Whitman, of New York. Mr. Whitman has built up in his state a strong political machine and has made conscious efforts to establish himself in the good graces of the farmers. But thus far his political resourcefulness has not appeared as impressive as that of the redoubtable Colonel or the Senator from the Golden Gate.

One thing is obvious. The Republicans lost the last election west of the Mississippi River. In the twenty-two states in this section of the country live one-third of the American electors. In 1908 Mr. Taft carried thirteen of these states and in 1916 Mr. Hughes carried four.

The next Republican nominee will have to be a man who can restore the lost provinces of Republicanism in the West. In order to have a chance in that country he must exhibit a sufficient brand of radicalism to satisfy that powerful agrarian-labor combination, the Non-Partisan League.

**High Jinks on Broadway** During the week a young man stepped out of the Arabian Nights and for a brief period shared the front pages of the newspapers with Trotzky and the Kaiser. A few weeks back he had been a hotel telephone operator employed at fifteen dollars a week. He got some first-class clothes and began his career by registering at one of New York's palaces as "the Marquis di Castillot," confidential envoy of his dear friend, King Alfonso of Spain.

The metropolis likes to be fooled, and apparently the Marquis had no trouble in getting accepted by persons of standing. He had an amiable habit of mislaying crested letters address to himself and signed "Alph," obviously from his royal friend, and on several occasions he dropt telegrams bearing the signature "Jusserand." Such documents started gossip which credited him with intimacy with the great. A credulous young woman of wealth loaned him \$10,000. Mr. W. E. D. Stokes, who has figured in previous romances of Broadway, was persuaded to let him have \$500 in an emergency to entertain Ambassador Jusserand at luncheon.

It was to Mr. Stokes that the Marquis eventually confided his great plan. If his master the King could borrow \$50,000,000 from some American banking firm, Spain would enter the war on the side of the Allies. He produced letters purporting to show that he was empowered to clinch the bargain.

Mr. Stokes took up the matter with J. P. Morgan and Company. Unfortunately, the prosaic banking house communicated with the State Department, and then the Secret Service men swooped down and brought to an end the bogus Marquis's adventure in the realm of ambassadors and kings. Another page was turned in the book of Broadway.

# THE BIGGEST BRITISH BLUNDER

## Fighting Three Enemies: Germany, Austria, Drink; and the Greatest of These Is Drink

I am in hopes that the American public will be interested in a plain account of present conditions in Great Britain concerning the Drink question as it touches the war, and the effect of "The Trade," as it calls itself, on the United States.

May I ask those who may read this "Log" to excuse the personal note in the narrative? It seems necessary, in order to state the facts, as I know them, concerning a very remarkable, and, I believe, very little known condition that exists in Great Britain at the present time, a condition that will have a very serious influence on the issues of the war, both now, and after the war is over.

A few months ago, in the little university town of Bangor, Wales, Lloyd George, the Prime Minister of Great Britain, made a famous speech, one sentence in which has become historic. He said: "We are fighting three enemies: Germany, Austria, and Drink; and the greatest of these is Drink."

Lloyd George has not retracted that statement since it was made. And because thousands of the best and most prominent English people believed it then, and believe it now, many of them considered the present time specially favorable for an educational campaign on the prohibition of the liquor traffic in Great Britain.

The Prime Minister is right. Drink is the greatest and most terrible feature of English life even in the midst of the greatest war of history. There is nothing to compare with it for the misery and brutality and horror and destructiveness it causes. Even war, yes, *this* war, is not so destructive, so brutal, so unfeeling to womanhood and children, to wifehood and motherhood as drink in old England at this very moment. And the astounding fact is, that while the Prime Minister of Great Britain has made the statement that the greatest enemy England faces is drink, the power that really sits on the throne of England today is the Brewer, and the Government of England is more afraid of him than of the German or the Austrian.

Picture a queue of women, three hundred and fifty in number, stretching around three sides of a block in a city, waiting for a public house to open, so that they can get their daily glass of whisky! The temperance people thought they had scored a great victory when the Government cut the hours of sale of liquor in the United Kingdom from sixteen hours a day to five and a half. But what happened? Let one of the great men in England tell the story under the heading "Prohibition Dead."

Sir Barclay Peat, chairman of Samuel Allsopp & Sons, Limited, presiding at the annual meeting of that company in London today, pointed out that their profits had risen from £13,048 in 1914, and £31,825 in

BY CHARLES M. SHELDON, D.D.

*Dr. Sheldon has just returned from a campaign in Great Britain which took him into fifty cities and towns in less than fifty days, meeting in that time in monster gatherings over 150,000 people. He was invited by friends in England to take part in this campaign in order to give the story of what prohibition has done for America, and especially for his own state of Kansas, where for many years Dr. Sheldon has been one of the best known of pastors, writers and reformers. For the benefit of English readers of this article we may add that Dr. Sheldon first gained his nationwide reputation as the author of "In His Steps," a book that has had an enormous circulation in the United States and thruout the world. We comment on Dr. Sheldon's article in our editorial pages.—THE EDITOR*

1915, and £60,796 in 1916, and to £127,165 in 1917.

Dealing with the subject of total prohibition, the chairman said that it was a vision of a mere visionary. He thought the movement was dead, and he knew it was defeated. It had been described as the "strength of Britain" movement, but the real strength of Britain was the community of munition workers who asked for a modest supply of beer without which they could not do their work.—*London News*, December 28, 1917.

I said "one of the great men" of England. You notice it is Sir Barclay Peat, who boasts of the great profits of Allsopps. Sir Barclay Peat. In other words, if a man in Kansas or any other of the twenty-seven prohibition states of the United States makes and sells intoxicating drink, we send him to jail.

DOCTOR SHELDON

But in good old England, if a man does the same thing and does it so successfully as to make a big fortune out of it like Allsopps, the great Empire of Britain thru its King, knights this man, confers high honors on him and sends him to the House of Lords. And there you have one difference between good old England and Kansas.

The shortening of the hours of sale has been a great boon to the "Trade." They work one-third as long as they did before the war, and make ten times as much. Instead of lessening drinking and drunkenness, it has increased both, and especially in the case of women whose husbands and relatives are at the front.

Read this, you who think the average Prohibitionist is a crank, and perhaps think the writer of this a particularly obnoxious one. Read this little history of one case out of thousands similar to it occurring in England every day while men die like dogs in the trenches.

HE was just an average Tommy fresh from the trenches on his fourteen days' leave. I first saw him at the end of a platform of a small town where I had to change trains and wait for connections with the main line.

He had the regulation kit, steel helmet, army rifle, canvas bag and all the rest, over one hundred pounds in all. He had come right thru from Charing Cross without stopping to clean up.

He was saying to the old station porter, "Am goin' on to Carnsford. Han't been 'ome fer two year. Goin' to see 'er an' the kiddies, I am."

"It's nigh on eight mile," I heard the porter say.

"An' I'll be there afore dark," says Tommy, and off he goes, the old porter watching him as he waded thru the mud on the way to Carnsford.

Early next morning I was at the same station again on my way back from the meeting of the night before, and while waiting for my train, I was aware of the same Tommy, standing almost at the same spot on the platform. The old porter was asking him rather personal questions, and I confess I went near enough to hear most of them, and I shall feel more or less guilty to my dying day, but Tommy was saying with the brutal openness of 'Arry and 'Arriet that cares naught for concealment, "An' wen I gets 'ome, I finds the ole lady drunk. God blime 'er, an' the kiddies runnin' like wild animuls, an' another man in the 'ouse. I went over the top onto 'im, an' then I come away. An' I'm off again for the front, an' I'm d——d if I cares wot comes o' me now!"

He was not an interesting modern Enoch Arden. He did not talk like the Tommy Atkins of Mr. Kipling, and at first I felt disappointed in him. He was very dirty. [Continued on page 384]

# GERMAN "EFFICIENCY"

## The Fourth Message from the United States Government to the American People

Presented every week in  
The Independent by George Creel,  
Chairman of Committee  
on Public Information, appointed by  
President Wilson

**T**HE farmer who cuts down an apple tree in order to gather the fruit—you would not call him "efficient"? You might consider him thoro, perhaps. And ruthless, certainly. You might even be struck by the brutal directness of his methods and the remarkable absence of sentimentality in his mind, particularly if the apple tree were one that should have had pleasant associations for him. But you would never consider him anything but a stupid fool as a farmer, would you?

A great deal of German efficiency is of just that quality. It is thoro, brutally direct and unsentimental. It attains its immediate end admirably. It gathers all the fruit with the greatest possible ease and dispatch. But is it really as efficient as it seems at the first glance?

Take, as a typical instance, the German treatment of prisoners of war.

In the days of the first German drive thru Belgium and northern France, the greatest speed and freedom of movement were necessary to the success of the German plans. As the French and British armies retreated, outflanked, thousands of wounded and unwounded prisoners fell into German hands. They required nurses or guards, food and transportation at a time when nurses and ambulances were scarce, all the guards were needed on the fighting line, the food supplies had failed to keep up with the speed of the advance, and the lines of transportation had been destroyed by the enemy as he fell back. In these circumstances prisoners were a serious impediment to the German movements. What was to be done with them?

The Germans solved the difficulty with characteristic directness. How they did it a Doctor-Major Chon, of the 14th French Hussars, tells in his report to the French Ministry of War, dated August 20, 1915. He was made prisoner at Etbe, in Belgium, on August 22, 1914, while he and his ambulance men were tending French and German wounded on the battlefield. As he was taken to the rear, he passed a German execution platoon. "In front of it," he says, "on a little slope, at the side of the road, lay in a heap about fifty bodies of French prisoners, who had just been shot. We approach, and we see by their blue waistcoats, and their armlets, that they are our unfortunate little attendants, who have not been spared. A non-commissioned officer is finishing

off with a revolver those who still move. "He calls to us. He makes us put down our stretchers. He commands us in German to point out to him which of our men still breathe. We reply that we will not do this; that we are there to take care of men and not to kill them; that we prefer to suffer the same fate as they. Furious, he repeats his command and acts as if about to shoot us.

"Very fortunately, just at this moment, the German officer who had the ambulance turned out where we were taken, arrives on the bank. We go up to him and explain what they ask of us.

"He replies, at first, that the laws of war require that those who have shot on the troops be killed, and that German justice gives no quarter in such cases.

"We draw his attention to the fact that among the men who have just been shot there are ambulance men who had been disarmed in front of us, who not only had not shot, but still better had been made prisoners for having wished to take care of the German wounded with us, and that this manner of acting in regard to the ambulance men is contrary to the laws of war. "After a few instants' hesitation, the officer seized with pity and perhaps remorse, gives the command to stop the shooting.

"We remain and ask him further for permission to take with us those of our unfortunate fellows who are not dead. He finally grants us this, after having told us, however, that it would be better to finish off immediately those who are too far gone. We oppose his proposal.

"This conversation took place in German. Speaking French, we address our poor men: 'Courage! All those who can, come with us. We will take you.' It was a heartrending sight to see those men, miraculously escaped from death, pitifully disengage themselves from the heap of bodies. One man, with his nose completely torn off, was horrible to see. Others, wounded in the legs, begged us to come and take them. We thought that after having delivered our wounded to a German ambulance station, we should be able to return and fetch those whom we were not able to take immediately. Nothing of the sort. Several of these poor wretches died, doubtless without the least attention, in the place where they had been shot."

Such a solution of the problem of caring for prisoners was not the idea of a local military genius upon whose section of the front Major-Doctor Chon happened to be captured. The diaries of German soldiers taken in later engagements showed that the killing of prisoners had been general all along the line. Detailed orders found on other soldiers proved that the executions had been carried out under instructions from the high command. One of these orders, issued on August 26, by General Stenger, commanding the 5th German Brigade, says curtly: "After today no more prisoners will be taken. All prisoners are to be killed. Wounded, with or without arms, are to be killed. Even prisoners already grouped in convoys are to be killed. Let not a single living enemy remain behind us." And letters from German soldiers printed, in their home newspapers, show that this policy met with the approval of the German people. It was simple, direct, thoro and ruthlessly efficient in attaining its immediate end.

But was it really efficient in the long run? Apparently not. It made the French and British fight with the frenzy of men to whom no quarter was given. It led to reprisals. It aroused the horror of the world. When it came to the Germans' turn to retreat, after the battle of the Marne, they ran with the fear of retribution at their heels. And the German military authorities changed their orders. They found that they had made a mistake. They discovered that they had been inefficient—that the accepted rules for the treatment of prisoners were not merely sentimental regulations, but precepts of experience in the efficient conduct of war.

"This is our opportunity to demonstrate the efficiency of a great democracy, and we shall not fall short of it"

The French and British made no such mistake as the Germans. They discouraged reprisals. They welcomed prisoners. They knew it was easier to end a war by capturing enemies than by killing them. They encouraged the Germans to drop their arms and cry "Kamerad!"—until the Germans surrendered in such numbers that it became dangerous to receive them, and the front-line trenches had to warn off deserters who came across No Man's Land in squads.

The Germans, having learned that they had cut down the tree in order to gather the fruit, reformed their methods and began the second lesson in their education. They removed their prisoners to the interior of Germany, and, instead of cutting down the tree, continued merely to saw off the top branches. That is to say, they continued to treat prisoners of war as an unwelcome liability, as criminals for whom there were not enough prisons, as enemies who must not be killed openly but might be quietly tortured to death.

Behind the German lines, the captives were gathered together with impatient harshness, under the escort of soldiers who kicked and beat them on the slightest provocation and shot them on the slightest excuse. They were herded into cattle cars, in which they were locked without sufficient food or water or any means of caring for themselves, and they were transported to the interior of Germany, on journeys that took in some cases five days and five nights. They arrived in a condition that need not be described. Inadequate preparations had been made to receive them. At the Munster camp 24,000 were penned up in a field without shelter. They had neither tents nor sheds. They dug holes in the ground and covered themselves with tufts of grass. Under the circumstances, as Charles Petit, of the French Artillery, deposes conservatively, "the mortality was considerable." In the camps where huts had been built, the accommodations were so insanitary that epidemics broke out. Of 15,000 Russians in the Cottbus camp, 5000 died. In practically all the camps, the guards and their officers treated the prisoners with unreasoning brutality. In the Gustrow camp, where the prisoners were starving, the kitchen contractor and his cook used to put the table leavings outside the kitchen door in a pan, and lie in wait until

famished men crept up to filch some of this garbage, and then attack them and beat them with sticks, to the amusement of "a large audience of hilarious Landsturms." (Doctor Monsaigeon of the Reserve, reporting to the French Ministry of War, September 26, 1916.) In the camp at Senne, "the Germans amused themselves by making men who had been punished by imprisonment run for hours on sandy soil in the full heat of the sun in the month of June. The unfortunate man had to fall before this running was stopped. Then the guards raised him again by means of kicks, and turned him around and around rapidly on the same spot, until, completely exhausted and giddy, the man fell again, absolutely worn out. Then the German non-commissioned officer pretended to feel the pulse of the patient and even feigned to speak to him in a friendly manner." (Doctor Chon.) And so on—and on—and on—thru page after page of the official French report of the depositions of exchanged prisoners now interned in Switzerland.

The point is not the atrociousness of this treatment of prisoners, but the stupid inefficiency of it. It caused the deaths of thousands of able-bodied men whose labor would have been of the greatest value to the Germans. It sapped the strength and destroyed the health of ten times as many as it killed. The French and British were welcoming prisoners in order to encourage surrenders. They were feeding the men well to keep up their strength, housing them carefully to protect their health, clothing them warmly, and treating them with kindness so that they might be contented

and willing to work and safe to use on the roads and in the fields with few guards. That was a policy of professional efficiency. The Germans behaved like distracted amateurs with a problem which they could not handle. It was the middle of 1915 before they learned their second lesson, realized that prisoners were a labor asset, and began to try to put them to work.

And here again, with heartrending stupidity, they made another mistake. They tried to compel Frenchmen to work in German munition factories. They forced them into mines where the work was dangerous because the prisoners were not miners. Others were set draining swamps, up to their waists in water, and housed at night in sheep-pens. Those who revolted

against these hardships were punished with barbarities that destroyed their value as workmen by destroying their strength.

Conditions similar to these still prevail in the German workyards where prisoners of war are employed, but the military authorities have established "show camps" open to neutral inspection where the conditions are good, and they have also established "reprisal camps" in which various brutalities are inflicted on prisoners in revenge for pretended injustices inflicted upon Germans in Allied countries. The reprisal camps are an excellent example of the German Government's ingenious stupidity. In order to excuse their own prison atrocities, they accuse the Allied governments of similar practices; and in order to prove their own faith in their own lie, they open reprisal camps to avenge the imaginary victims of Allied ill-use. Meanwhile, neutral investigation of the German charges find that the accusation against the Allies is unfounded. With true German absurdity the reprisal camps are continued, none the less.
